and observance of the legal rights of each State within the Colorado River Basin.

It is a thousand pities that this bill, so narrow in its conceptions, so devastating to Arizona in its results, so flagrant in its disregard of the Constitution, has failed to rise to the grand opportunity of the hour, but I do not entirely despair; I realize that the active protagonists of this bill have fallen victims to that imponderable which inheres in those public men who surrender the good of the future to the expediency of the hour.

The alluring temptation to bring to existing constituents some temporary advantage; to placate those who can vote to-day; to achieve something immediate and tangible, which apparently is beneficial, although it be at the cost of sacrificing durable benefits and vital rights which could easily be preserved if justice instead of expediency were made the guide, has always been the Circean spell that has, down through the ages, distracted the mind, deflected the purpose, and weakened the fiber of statesmen.

In the discussion of the bill I shall be obliged to use many technical terms, and, therefore, at this juncture it may be helpful to translate some of these technical terms into common expressions.

One second-foot of water is a flow of 1 cubic foot of water per second.

One second-foot of water is approximately 7.5 gallons.

A flow of 1 second-foot for 24 hours would approximate 648,000 gallons. (There are 86,400 seconds in 24 hours.)

A flow of 1,500 second-feet of water daily approximates 3,000 acre-feet.

A flow of 1,500 second-feet daily would approximate 972,000,000 gallons daily.

The city of Los Angeles is now demanding and insists that it requires, 1,500 second-feet daily of the waters of the Colorado River for potable purposes. Fifteen hundred second-feet daily of potable water would supply a city of 2,430,000 persons with 400 gallons daily per capita, or to employ Chicago's consumption of water as a basis of comparison, the 1,500 second-feet ($972,000,000 gallons) would supply a city of 3,400,000 persons with 285 gallons per capita daily, and the highest present daily consumption of any city, so far as I know, is the city of Chicago, which is about 285 gallons per capita daily.

One acre-foot is a volume of water sufficient to cover 1 acre 1 foot deep; 16,400,000 acre-feet of water would submerge the District of Columbia over 400 feet.

A horsepower is a rate of work equal to lifting 33,000 pounds 1 foot per minute. Originally based on observations of dray horses, it greatly exceeds the average performance of an ordinary horse.

The combined peak demand on all power plants in the District of Columbia in 1920 was 95,000 horsepower.

The total development at Niagara in 1916 was 575,000 horsepower.

The installed substation capacity on the Chicago, Milwaukee & St. Paul Railway electrification is 180 horsepower per mile.

At 200 horsepower per mile, 4,800,000 horsepower would serve 24,000 miles of electrified railroad, which roughly approximates the total railroad mileage in Arizona, California, Colorado, Nevada, New Mexico, Utah, and Wyoming.

POWER

A vast amount of power is dissipated in the fall of the Colorado River. Imaginative France calls water power "white coal," and this brilliant characterization suggests a coal free from dust, cheaper, easier handled, a supply inexhaustible, which after used flows on to the projects below and may be used again and yet again.

Thus on the main stream of the Colorado River below the junction of the Green and the Grand known power sites on the river have 6,000,000 potential horsepower, and of this 6,000,000 potential horsepower 4,000,000 thereof would be developed and generated in the State of Arizona.

The percentage of water which the States within the Colorado River Basin contribute, respectively, to the Colorado River is about as follows:

	Per cent
Arizona	28
California	00
Colorado	53.7
Nevada	.3
New Mexico	1
Utah	7
Wyoming	10
Total	100

I now read the following letter, which is self-explanatory:

UNITED STATES DEPARTMENT OF THE INTERIOR,
GEOLOGICAL SURVEY,
Washington, April 2, 1926.

Hon. HENRY F. ASHURST,
United States Senate.

MY DEAR SENATOR ASHURST: In response to your letter of March 31, I am inclosing a statement in tabular form which I believe will supply the information you desire respecting the flow of Colorado River at Lees Ferry and points below. Attention is called to the fact that the averages for the stations at Bright Angel Creek and Lees Ferry are based on records extending over but three and four years, respectively, and are probably below a long-time average inasmuch as the years 1924 and 1925 were years of low run-off in Colorado River Basin.

Flow in second-feet may be converted into acre-feet by multiplying by the number of days that the flow existed and that product by 1.98. If the rate of flow of a stream is 15,000 second-feet the run-off in one day will be 29,700 acre-feet; in a 30-day month it will be 891,000 acre-feet; and in one year 10,840,500 acre-feet. The computations may be reduced and results obtained within 1 per cent by using 2 as the factor instead of 1.98.

Yours very cordially,

GEORGE OTIS SMITH, *Director.*

Annual flow of Colorado River at points in Arizona

Gauging station	Years of record [1]	Second-feet			Acre-feet		
		Maximum year	Minimum year	Average	Maximum year	Minimum year	Average
Lees Ferry	1922–1925	22,300	15,800	19,400	16,100,000	11,400,000	14,000,000
Bright Angel Creek	1923–1925	23,500	16,100	19,200	17,000,000	11,700,000	13,900,000
Topock	1918–1925	29,800	16,200	22,900	21,500,000	11,700,000	16,600,000
Yuma	1903–1924	36,000	13,600	23,700	26,100,000	9,870,000	17,200,000

[1] Years ending Sept. 30.

The Colorado River is our most remarkable and dramatic river in its value for irrigation and hydroelectric energy. It combines concentration of fall, sites for power plants, reservoir sites for controlling the river flow, and a vast volume of water for irrigating several million acres of land.

Other rivers may be used, either for irrigation or for hydroelectric power, but no other river in the Western Hemisphere presents such opportunity for the use of waters for both irrigation and generating electrical energy.

In approaching the problems of a river so pregnant with possibilities for development it is important that all the factors connected therewith—engineering and economic—should be fully evaluated and that expediency shall play no part therein.

It is the opinion of all experts that there is no surplus water in the Colorado River, therefore in any plan of developing that river extreme care should be exercised so that no practicable potentiality shall be needlessly sacrificed.

MAGNITUDE OF THE PROPOSED PROJECT

The project authorized by this bill is majestic in its proportions. The figures involved are stupendous.

The proposed dam will be 675 feet high from bedrock to its crest; 125 feet below and 550 feet above the present water level, or nearly twice as high as any other dam in existence.

It is stated in the Twenty-fifth Annual Report of the Bureau of Reclamation that the total capacity of all of the reservoirs at storage dams authorized by Congress to be constructed by the Bureau of Reclamation, and including reservoirs at dams on Federal reclamation projects which were financed and constructed by agencies other than the Reclamation Bureau, when completed will be only 13,863,123 acre-feet of water. The hydroelectric power now installed by the Bureau of Reclamation is 55,000 horsepower.

The Boulder Reservoir, when full, will hold 26,000,000 acre-feet of water and store 20,000,000 acre-feet. It is proposed to install machinery to develop 1,000,000 horsepower, of which 550,000 horsepower will be firm power; in other words, this dam will create a reservoir which will store approximately twice as much water as all the Reclamation Service reservoirs combined and will represent an electrical installation of ten times as much as that now installed by the Bureau of Reclamation.

The total construction cost of all of the projects constructed by that bureau as of June 30, 1916, was $166,532,562.36. The estimated cost of a portion of this project will be $125,000,000. The members of the Federal Power Commission and many engineers who have testified concerning the project state that these cost estimates for the project are too low.

Secretary Work, in submitting to Congress the Weymouth report on the Boulder Dam and this project, said that this project presents "engineering difficulties attractive to ambitious engineers if not to Government or private capital."

ARIZONA

Ninety-three per cent of the entire area of the State of Arizona is within and constitutes 43 per cent of the total area of the Colorado River drainage basin.

Arizona contributes about 30 per cent of the waters of the Colorado River. The population of Arizona residing within the Colorado River Basin and dependent entirely upon its waters is equal to, and probably exceeds, the combined population furnished to the Colorado River Basin by the other Colorado River Basin States.

Of the 6,000,000 firm horsepower of potential hydroelectric energy in the lower basin, seven-eighths thereof is in Arizona, but the Boulder Canyon plan of development, as proposed in S. 728, would deprive Arizona of the benefit of this hydroelectric power.

Of the lands in Arizona susceptible of irrigation, practically all thereof to be irrigated must obtain their water from the Colorado River or its tributaries in Arizona; they have no other waters from which to draw.

The Colorado River enters Arizona from Utah near what is called the Crossing of the Fathers and flows through Arizona on a meandered line 315 miles to the Arizona-Nevada State line, in Iceberg Canyon. From this point the river on a meandered line forms the western boundary line of Arizona for a distance of 400 miles to the point where it intersects the boundary line between Arizona and Old Mexico.

CALIFORNIA

Only 2½ per cent of the Colorado River drainage basin is in California.

California contributes practically no water to the Colorado River.

The Boulder Canyon plan of development allots to California 38 per cent of the estimated constant water supply of the Colorado River.

[At this point some priveleged matters intervened, which appear under the proper heading.]

California has 18,000,000 acres of land irrigable by waters other than by the waters of the Colorado River.

Of the potential hydroelectric energy, California has 9,000,000 horsepower which may be developed within her borders on streams other than the Colorado River or its tributaries.

This bill sedulously and intentionally proposes to sever Arizona's jugular vein.

The bill is intended to be, and is, an attempt to coerce Arizona. One administration unsuccessfully attempted to coerce Arizona into joint statehood with New Mexico. Another administration unsuccessfully attempted to coerce Arizona upon certain provisions of her constitution, and those who are attempting by this legislation to coerce Arizona will ultimately discover that they have simply been standing like large locomotives on a sidetrack, without driving rods, wasting their steam in vociferous and futile sibilation.

TITLE I

STATEMENT OF SPECIFIC OBJECTIONS

I object to this bill for the following reasons:

1. Because the bill authorizes an invasion of the State of Arizona without its consent and over its protest; it is a trespass upon the sovereignty of Arizona and is therefore unconstitutional.

2. Because the bill proposes (sec. 12 (c), p. 20) to deny to Arizona her right to use the public lands within that State (which comprise 63 per cent of the total area of the State) for the purpose of building canals or other works, to enable citizens of that State to use the water which falls upon the soil and which runs in the brooks, creeks, washes, and rivers of Arizona, for domestic and agricultural purposes, and also proposes to deny to Arizona the use of public lands for the building of transmission lines for the purpose of delivering electrical energy developed on streams which are within the State, and also proposes to deny to Arizona the right to obtain a permit from the Federal Power Commission to build dams on streams wholly within Arizona, to utilize water for the development of electrical energy to which the citizens of Arizona have already acquired the right to the exclusive use thereof.

3. Because if the bill (sec. 8 (c)) were passed in its present form it would plunge the State of Arizona into expensive and protracted litigation. Because it denies the authority of Arizona to amend her own constitution.

4. Because Arizona joins with the upper-basin States in asking (quoting Governor Dern, of Utah, Senate hearings on S. 728, p. 132) "that no legislation proposing the construction of any project upon the Colorado River should be enacted by Congress or otherwise authorized by any Federal agencies before the negotiations now in progress have been completed and every reasonable effort exhausted to reach such an agreement between the seven States."

5. Because the construction of any large storage project on the main Colorado River in the absence of a specific allocation of water to Arizona will make water available for use in Mexico and thereby ultimately deprive the lands in Arizona of its use.

6. Because the bill proposes the invasion of the State of Arizona by the Federal Government and the usurpation of the use of the bed of the Colorado River, its banks and the lands within the State, for the construction of a dam for the storage of water and the delivery of this water to another State to the detriment of Arizona. The water in question is a natural resource over which the State of Arizona claims the exclusive right (except as it affects navigation) to control within its own boundaries, and to share the control of its use where the river forms the boundary between Arizona and another State, subject only to the limitation that the water shall not be depleted in such an amount as to deprive a prior and beneficial user in another State, of the water appropriated by him. (Boquillas Cattle Co. *v.* Curtis, 213 U. S. 339, and Colorado *v.* Wyoming, 259 U. S. 419.)

7. Because under the terms of the bill, Arizona will be deprived of the use of water essential for her future growth and prosperity which could be made possible by the development of power and the irrigation of her lands.

8. Because of the misleading language in the bill which, whilst declaring that a large irrigation project in California shall bear the cost of the canal and of appurtenant structures (sec. 1, p. 2, lines 13 to 17; sec. 9, p. 16) necessary to irrigate the lands in California, the provisions of the bill, in truth and in fact, will require the power resources of Arizona and Nevada to underwrite the repayment of the cost "of the main canal and appurtenant structures connecting Laguna Dam with the Imperial and Coachella Valleys in California," including operation and maintenance charges (sec. 2; also lines 13 to 17, p. 2, of the bill).

9. Because the amount of water apportioned to California (sec. 5, p. 7) is not warranted in equity, law, justice, or morals.

10. Because the bill provides that when the canals, power plants, and structures in California are paid for they be turned over and delivered to the districts which use them in that State. (Sec. 7, p. 12.) But the bill does not provide that the dam and power plants be turned over to or inure to the benefit of the States of Arizona and Nevada when the Government is repaid. (Sec. 5, p. 7, line 16.)

11. Because the bill provides that the Imperial irrigation district and other California districts may be given rights in the Laguna Dam which they do not now possess and which are the property of the Yuma County Water Users' Association, for which the Secretary of the Interior is acting as trustee, and an arbitrary action by the Secretary as authorized under this bill (sec. 7, p. 12; sec. 10, p. 18) would force the Yuma County Water Users' Association to engage in costly litigation to protect its interests.

12. Because the bill proposes to authorize the Federal Government to become a party to a conspiracy to impose a boycott upon Arizona and to enforce against her the terms of the Colorado River compact, when approved by six States, as it affects the upper basin States (sec. 12 (a), p. 19, and particularly 12 (c), p. 20) and to impose upon Arizona the conditions of a subsidiary compact to be made by two States (sec. 8 (b), p. 14), affecting the lower basin, and to enforce these compacts against Arizona under terms of the bill (sec. 12 (c), p. 20.)

13. Because the bill authorizes the expenditure of $50,000,000 of Federal funds to irrigate lands owned largely by private land speculators in California in units in excess of 160 acres. The records show that of the 785,400 acres of land in Imperial Valley, one corporation alone owns 47,000 acres of these lands and only 167,100 acres are Government lands. (S. Doc. 142, 67th Cong., 2d sess., p. 80.) This report was made in 1922 and the Government acreage has probably decreased since that time.

14. Because the bill authorizes California, which comprises only 2½ per cent of the Colorado River Basin and contributes no water, to appropriate (sec. 5, p. 7, lines 4 to 13) over 38 per cent of the estimated constant water supply available in the main Colorado River for all seven States in the basin and for Mexico. (House hearings on H. R. 2903, p. 841, sec. 19, report of Herman Stabler; also Senate hearings on S. 320, December 19, 1925, p. 533, E. C. La Rue; also S. Doc. No. 142,

67th Cong., 2d sess., p. 37, table and text; also Water-Supply Paper No. 556, U. S. Geological Survey, 1925, p. 122.)

15. Because the bill fails to provide for a review and approval of the plans of the project by engineers of large ability and experience as to the adequacy of the plans and specifications and the safety of the proposed dam.

There is no remorse so deep, so poignant, and so inveterate as that which will come when we shall some day realize that we omitted to avail ourselves of the opportunity to see to it that, as far as science may do so, it has secured the safety of this dam. Fortune, success, and opportunity soar aloft on high and rapid wing and must be seized as they pass by. It is difficult, if not impossible, to overtake them once they have left us behind or found us asleep or afraid. However, if the dam is to be constructed, it is not yet too late to guarantee its safety.

(At this point Mr. ASHURST moved that the Senate proceed to the consideration of Senate bill 1762, the San Francisco Bay bridge bill; the roll was called on the motion, and no quorum appearing, much time was consumed in securing the attendance of absent Senators.)

Mr. ASHURST. Mr. President, I offer an amendment to the committee amendment, which I send to the desk and ask that the same be read.

The PRESIDING OFFICER (Mr. LA FOLLETTE in the chair). The Secretary will state the amendment to the amendment.

The LEGISLATIVE CLERK. On page 1, line 4, strike out the word "navigation" and insert the words "interstate commerce," so as to read:

> That for the purpose of controlling the floods, improving interstate commerce, and regulating the flow of the lower Colorado River—

And so forth.

STATES ARE ENTITLED TO EQUALITY OF RIGHT UNDER THE CONSTITUTION

Mr. ASHURST. Mr. President, the United States Supreme Court has declared that "One cardinal rule underlying all the relations of the States to each other is that of equality of right. Each State stands on the same level with all the rest. It can impose its own legislation on no one of the others and is bound to yield its own views to none." (Kansas *v.* Colorado, 206 U. S. 48, 97.)

In another case the court stated: "It (a State) finds itself in possession of what all admit to be a great public good and what it has it may keep and give no one reason for its will." (Hudson Water Co. *v.* McCarter, 209 U. S. 356.)

The latter may be the legal and constitutional right of the State of Arizona, but it is not the policy of the State or of its representatives in offering opposition to the Boulder Canyon project legislation.

Arizona's demand is merely for equality of right with the other States. But Arizona denies the right of other States to impose their will upon her.

The representatives of the State of Arizona recognizes that the Colorado River is an interstate and international stream. The water in the river originates wholly in the United States, but the mouth of the river is in a foreign country. The representatives of the State of Arizona recognize that the strict application of the doctrine laid down by the United States Supreme Court in the case of Wyoming *v.* Colorado (259 U. S. 419) would probably result in the appropriation of the water of the river by the States best able to put it to immediate use and that this would be extremely detrimental to the interests of the upper basin States and it would also probably inspire a race for competitive development of agricultural lands, which economic conditions do not warrant.

The representatives of Arizona have stated repeatedly that they are willing to accept and enter into a compact with the other States in the Colorado River Basin, provided the State of Arizona is given the protection under the new laws equal to that which is given to all the other States. Or, stated in another way, Arizona is asking that if the law of prior appropriation is to be set aside and water is to be apportioned by a compact among the States, that Arizona be given the same protection against Mexico and California that Colorado, Wyoming, Utah, and New Mexico are asking for themselves.

BOULDER DAM IS PRIMARILY FOR POWER

The dam authorized by this bill is primarily for the purpose of obtaining a water power to lease to States, subdivisions of States, or to private individuals (sec. 5, p. 6), and thereby make available certain incidental benefits. In substantiation of this statement, I call attention to the substance of the following provisions of the bill:

> 1. No dam shall be constructed and no work be performed unless power revenues are adequate to pay for the interest and amortization and the operation and maintenance of the entire project. (Sec. 4 (b), p. 5.)
>
> 2. No charges are to be made for the storage, use, or delivery of water for domestic purposes. (Sec. 1, p. 2, lines 15 to 17.)
>
> 3. No charges are to be made for the storage, use, or delivery of water for agricultural purposes. (Sec. 1, p. 2, lines 15 to 17.)
>
> 4. Priorities to the use of water from the reservoir shall be in the following order:
>
> (a) Water for use of lands under "a canal connecting Laguna Dam with Imperial and Coachella Valleys." (Sec. 1, p. 2, lines 10 to 13.)
>
> (b) Domestic use.
>
> (c) Agricultural use.
>
> (d) Power.
>
> (e) Navigation.
>
> Sections 4 (a), 5, 6, 8 (b), 12, and 14 of the bill and Article IV of the Colorado River compact. (See especially sec. 12 (b) of the bill.)
>
> 5. If there be any surplus revenues, Nevada and Arizona are each to receive 18¾ per cent of such excess revenues. (Sec. 4, p. 5.)
>
> 6. Leases on power are not to be for longer than 50 years. (Sec. 5 (a), p. 7.)
>
> 7. Preference to the use of power is given to States, subdivisions of States, and private agencies in the order given. (Sec. 5 (c), p. 9.)
>
> 8. Any agency making a contract for 100,000 horsepower is required to reserve one-fourth of its transmission line for the use of other power contractees. (Sec. 5 (d), p. 10.)

The legislative fiction that one of the primary purposes of the bill is to "improve navigation," is destroyed by the provisions of the bill itself (sec. 16 (b), p. 20), which approves the Colorado River compact which if applied would make this provision of the bill read:

> The rights of the United States in or to waters of the Colorado River and its tributaries * * * for navigation * * * shall be subject to and controlled by the said Colorado River compact, which declares (art. 4) "inasmuch as the Colorado River has ceased to be navigable for commerce and the reservation of its waters for navigation would seriously limit the development of its basin, the use of its waters for purposes of navigation shall be subservient to the uses of such waters for domestic, agricultural, and power purposes."

But "with its flow unregulated, the river can not be successfully used as a highway for commerce; in its regulated form it will provide a safe and dependable flow below the dam that can be used by power boats and other small craft. The reservoir created by the dam will be the largest artificial lake in the United States and capable of successful navigation."

To summarize: The bill provides there shall be no dam unless the power revenues are adequate to repay the Government; there shall be no charge for the use of water for domestic or agricultural purposes; water shall be used, first, for domestic use and agricultural purposes; next, for power, and then if these agencies do not divert all of the water and thereby dry up the stream, it may be navigated by motor boats.

"IMPROVING NAVIGATION" ON COLORADO RIVER IS LEGISLATIVE FICTION

The committee inserted, on lines 3 and 4 on page 1, and on line 8 on page 11, the words "improving navigation." These words do not appear in the original bill. The purpose for inserting them was an endeavor to circumvent the Constitution of the United States.

To assert that the primary purpose of this bill is to improve navigation is ridiculous. The purpose of inserting this language is to attempt to have the Congress authorize this legislation under its authority "to regulate commerce with foreign nations and among the several States and with Indian tribes." (Art. I, sec. 8, par. 3.)

There is testimony in the hearings of both the House and the Senate that the Colorado River, in its natural state, was a navigable stream from its mouth to a point above the proposed site for the Black Canyon, or Boulder Canyon Dam; but there is also uncontradicted evidence in the hearings that the Colorado River from its mouth to the site of the proposed dam is not now used for navigation, and there is not on file or in the records a single petition, request, or demand that the Colorado River be improved for the purposes of navigation. On the contrary, the petitions and requests in the hearings and before Congress are for legislation to enable the States further to deplete the flow of the Colorado River and thereby render it wholly nonnavigable.

The bill authorizes the approval of the Colorado River compact, which in article 4 A provides:

> A. Inasmuch as the Colorado River has ceased to be navigable for commerce and the reservation of its waters for navigation would seriously limit the development of its basin, the use of its waters for purposes of navigation shall be subservient to the uses of such water for domestic, agricultural, and power purposes.

There is no evidence in the record that if the river were made navigable there would be a single ton of freight carried on the river as the result of such an improvement.

TREATY OBLIGATIONS DO NOT REQUIRE THE ENACTMENT OF THIS LEGISLATION

International questions do not give authority to Congress to pass this bill.

Unless the United States negotiates a treaty with Mexico in which the United States binds itself to assume some degree of control and management of the river, it would have no authority to pass this legislation under the assumption that it was to carry out treaty obligations. There are no treaty obligations at this time the fulfillment of which requires the passage of this legislation. In the absence of such obligations this legislation can not be predicated upon that authority. There is now no treaty, compact, or agreement requiring the United States to send any of the waters of the Colorado River into Mexico, and all the waters of that river which Mexico now receives are allowed to go into Mexico purely as an act of grace.

THE COLORADO RIVER COMPACT

THE CONGRESS MAY NOT IMPOSE A COMPACT UPON THE STATES

There is no precedent for a bill such as we are now considering, and as was stated by Mr. John L. Gust (hearings on S. 728, p. 105):

If such a bill as the Swing-Johnson bill had been introduced into Congress in the early years of our constitutional history, it would have rocked the very foundation of the Union. If it were offered to-day against one of the old and powerful States it would create considerable commotion even to-day. The fact that it is directed against a young and weak State makes it dangerous. If the principles upon which it is based should become established, Congress could force any State into any kind of compact with another State or with a foreign power—because the power of making compacts is just as broad with respect to foreign powers as it is with States with respect to each other—by providing that until such compact was approved each State should receive no Federal aid for road construction, no forest-reserve funds for roads or schools, no money for harbor improvement, no public buildings, and no water from its own streams. That is the extent to which this bill goes, if I read it aright, and I think I am not mistaken as to its provisions, and I feel confident that such broad powers as that do not exist in Congress under the Constitution under which this Nation exists.

Congress can not impose a compact or the terms thereof upon the States. In Article I, section 10, of the Constitution of the United States, among other provisions there occurs the following language:

No State shall enter into any treaty, alliance, or confederation * * *. No State shall without the consent of Congress * * * enter into any agreement or compact with another State or with a foreign power * * *.

This provision of the Constitution makes it clear that the power in the States to make agreements or compacts not having been delegated to the United States by the Constitution nor prohibited by it to the States is reserved to the States, with the single restriction that the consent of Congress is necessary to the validation thereof.

It therefore must necessarily follow that the Congress can not impose upon a State or States the terms of a compact to which said State or States refuse to give consent. It must also necessarily follow that Congress can not authorize "two" or "six" (sec. 8 (b) and sec. 12 of the bill) States to confederate and enter into an alliance and to apportion among themselves natural resources which are the common heritage of seven States and to do it over the objections of the protesting State or States.

This bill (secs. 4 A, 5, 6, 8 A and B, 12 A, B, C, D, and 14) binds this legislation to the provisions of the Colorado River compact.

The bill is an attempt to apportion water, as it approves the Colorado River compact (secs. 4A and 12), which is a proposed agreement which, if approved by the seven States, parties to it and with the approval of Congress, would repeal the water laws in the Colorado River Basin as they now exist and are defined by the United States Supreme Court. The compact proposes to substitute for the water laws, based upon prior appropriation and beneficial use, the allotment of a definite quantity of water to the "upper basin" and "lower basin" States.

The authority to make such a compact rests in the States and not in the Congress. The States have not ratified the compact, therefore it is not a valid agreement.

This bill attempts to rivet the provisions of the compact onto the seven States. The bill goes further and authorizes the State of California to appropriate and consume a large proportion—estimated to be 38 per cent—of the water available for use in the Colorado River above Laguna Dam. (Sec. 5, p. 7, lines 4 to 12, inclusive.) And it authorizes two States to make a compact to bind three States. (P. 14, line 18.) I deny that the right exists in Congress to apportion this water.

Any attempt on the part of "six States" so far as their actions relate to the entire basin or of "two States," so far as their actions relate to the "lower basin," even with the consent of Congress, to enter into an alliance or confederation to deprive a seventh State of the right to utilize and enjoy the benefits of its natural resources is equivalent to a conspiracy. The States only can make a compact and divide the water; Congress can not do it for them. In this connection I again quote John L. Gust (hearings on S. 728, p. 121):

In our opinion the Colorado River compact, if executed by six but not by seven States, will be wholly void for the following reasons:

First. Considered as a contract it is legally impossible of performance when made.

Second. Considered as a contract it is illegal, because it is a plain attempt on the part of the States that are parties to the agreement to control the property and resources of another State for their own benefit.

Considering the proposition first above stated, it is a principle of the law of contracts that contracts impossible of performance when made are void. The Colorado River compact purports to divide the water of the river between an upper basin and a lower basin which are both included within the boundaries of seven States. Each of those States has a right in the waters of the river. This is established by Kansas *v.* Colorado (206 U. S. 46) and Wyoming *v.* Colorado (259 U. S. 419).

One of the States having a large interest in such waters declines to enter into the compact. Thereupon the remaining six purport to execute the compact and carry it out exactly as written for the seven.

In other words, these six purport to apportion the water just as it was proposed to be apportioned by the act of the seven.

This means that the six undertake to divide the water among the seven without the consent of the seventh. Manifestly this can not be legally done. Arizona can not be bound without its consent, and if Arizona is not bound the agreement simply will not work. The six States are undertaking to do something wholly beyond their power.

Considering the second proposition, it seems plain that any attempted agreement on the part of six States to parcel out the property and rights and prerogatives of seven States without the consent of the seventh State is necessarily illegal. Can the law recognize and uphold an agreement in which certain States undertake to dispose of the property and rights and prerogatives of another State to suit their own pleasure and for their own profit and against the will of the other States? It can not be said that the six-State compact does not undertake to dispose of Arizona's property rights. By its express terms it applies to the property rights of Arizona as well as to the property rights of the other States.

Moreover, the California resolution adopting the six-State compact declares it shall not become binding on California until Arizona is subjected to the compact by the power of the United States. Said resolution is a proposition by the State of California to enter into a conspiracy with the United States for the purpose of depriving Arizona of her constitutional rights.

In connection with this proposal that Congress shall usurp authority, I direct attention to a decision of the Supreme Court of the United States:

Should Congress under the pretext of executing its powers pass laws for the accomplishments of objects not intrusted to the Government, it would become the painful duty of this tribunal, should a case requiring such decision come before it, to say that such an act was not the law of the land. (McCulloch *v.* Maryland, 4 Wheat. 316, 423.)

PRESENT STATUS AND WHAT THE STATES ARE CONTENDING FOR WITH REFERENCE TO THE COLORADO RIVER COMPACT

The States of Colorado, Wyoming, and New Mexico have ratified and desire ratification of the compact by all seven States. This compact will reserve for the present and future requirements of the upper basin States the water allocated for their use by the Colorado River compact.

Resolved, That it is firm belief of the representatives of the four said upper basin States, as assembled at Denver, Colo., this 19th day of December, 1927, that no legislation proposing the construction of any project upon the Colorado River should be enacted by Congress or otherwise authorized by any Federal agency before the negotiations now in progress have been completed and every reasonable effort exhausted to reach such agreement between the seven States.

W. H. Adams, Governor of Colorado; George H. Dern, Governor of Utah; Frank C. Emerson, Governor of Wyoming; Edward Sargent, Lieutenant Governor of New Mexico; Delph E. Carpenter, interstate river commissioner for Colorado; William L. Boatright, attorney general of Colorado; Francis C. Wilson, interstate river commissioner for New Mexico; L. Ward Bannister, counsel for the city of Denver; M. C. Mechem, representing New Mexico.

(Senate hearings on S. 728.)

Utah: The State of Utah, speaking through its governor (hearings on S. 728, p. 143), defined the demands of that State to be as follows:

1. Seven-State ratification of the Santa Fe compact.

2. A treaty with Mexico preserving to the United States the right to any water of the Colorado River made available through development in the United States, including equitable rights to the natural flow.

3. Acknowledgment that water within the State is the property of the State.

4. Acknowledgment that the State of Utah is the owner of that portion of the bed of the Colorado River which lies within its borders.

5. Full acknowledgment that the States have a right to and receive compensation for the use of their lands and waters.

The qualified ratification of the Santa Fe compact, as adopted by the Legislature of Utah January 26, 1927, was as follows:

Be it enacted by the Legislature of the State of Utah:

SECTION 1. Colorado River in Utah and Green River in Utah declared to be navigable streams: That the State of Utah does hereby declare that the Colorado River in Utah and the Green River in Utah from time immemorial and at the time of the admission of Utah into the Union as one of the States of the United States of America were and ever since have been and now are navigable streams.

SEC. 2. Title to bed of all navigable rivers vested in State of Utah, when—Exceptions: That the title to the beds of said rivers and of each of them, as well as the title to the beds of all other streams and lakes which at the time of said admission of Utah into the Union were navigable in fact, vested in the State of Utah at the time of its said admission into the Union and said title has at all times thereafter been and now is vested in the State of Utah, except such portion or portions thereof as may have been heretofore disposed of by the State of Utah pursuant to law, by express grant.

SEC. 3. Intent with respect to paragraph (a) of Article IV, of the Colorado River compact—Colorado River navigable for intrastate commerce: That the State of Utah does hereby declare that its adherence to paragraph (a) of Article IV of the Colorado River compact as set forth in chapter 5, Laws of Utah, 1923, which paragraph reads as follows:

"(a) Inasmuch as the Colorado River has ceased to be navigable for commerce and the reservation of its waters for navigation would seriously limit the development of its basin, the use of its waters for purposes of navigation shall be subservient to the uses of such waters for domestic, agricultural, and power purposes. If the Congress shall not consent to this paragraph the other provisions of this compact shall nevertheless remain binding." (Hearings on S. 728, p. 170.)

Nevada: The State of Nevada desires ratification of the Colorado River compact by the seven States and a supplementary compact which will recognize the right of that State to the use of 300,000 acre-feet of water (Senate hearings on S. 728) and the acceptance of the principles of the Pittman resolution, which is found on page 131 of the 1928 Senate hearings on S. 728.

[Resolution offered by Senator KEY PITTMAN on behalf of the Nevada commission to the conference of governors and the commissioners of the Colorado Basin States in session at Denver, Colo. Adopted at Seven States' Conference on the Colorado River at Denver, October 4, 1927, by affirmative votes of Arizona, Colorado, Nevada, New Mexico, Utah, and Wyoming—California not voting]

Whereas it is the settled law of this country that the ownership of and dominion and sovereignty over lands covered by navigable waters within the limits of the several States of the Union belong to the respective States within which they are found, with the consequent right to use or dispose of any portion thereof, when that can be done without substantial impairment of the interests of the public in the waters, and subject always to the paramount right of Congress to control the navigation so far as may be necessary for the regulation of commerce with foreign nations and among the States; and

Whereas it is the settled law of this country that subject to the settlement of controversies between them by interstate compact, or decision of the Supreme Court of the United States, and subject always to the paramount right of Congress to control the navigation of navigable streams so far as may be necessary for the regulation of commerce with foreign nations and among the States, the exclusive sovereignty over all of the waters within the limits of the several States belongs to the respective States within which they are found, and the sovereignty over waters constituting the boundary between two States is equal in each of such respective States; and

Whereas it is the sense of this conference that the exercise by the United States Government of the delegated constitutional authority to control navigation for the regulation of interstate and foreign commerce does not confer upon such Government the use of waters for any other purposes which are not plainly adapted to that end, and does not divest the States of their sovereignty over such waters for any other public purpose that will not interfere with navigation: Therefore be it

Resolved, That it is the sense of this conference of governors and the duly authorized and appointed commissioners of the States of Arizona, California, Colorado, New Mexico, Nevada, Utah, and Wyoming, constituting the Colorado River Basin States, assembled at Denver, Colo., this 23d day of September, 1927, that—

The rights of the States under such settled law shall be maintained.

The States have a legal right to demand and receive compensation for the use of their lands and waters, except from the United States, for the use of such lands and waters to regulate interstate and foreign commerce.

The State or States upon whose land a dam and reservoir is built by the United States Government, or whose waters are used in connection with a dam built by the United States Government to generate hydroelectric energy are entitled to the preferred right to acquire the hydroelectric energy so generated or to acquire the use of such dam and reservoir for the generation of hydroelectric energy upon undertaking to pay to the United States Government the charges that may be made for such hydroelectric energy or for the use of such dam and reservoir to amortize the Government investment, together with interest thereon, or in lieu thereof to agree upon any other method of compensation for the use of their waters.

All the interested States agree that, if the compact is approved, Nevada shall be granted the right to take such water as may be beneficially used in that State, which is estimated to be 300,000 acre-feet.

California: The demands of California and her policy concerning the compact are outlined in chapter 33, assembly Joint Resolution No. 15, adopted by the Legislature of California in 1925. This resolution ratifies the Colorado River compact with the following provisos:

Provided, however, That the said Colorado River compact shall not be binding or obligatory upon the State of California, by this or any former approval thereof, or in any event until the President of the United States shall certify and declare—

(a) That the Congress of the United States has duly authorized and directed the construction by the United States of a dam in the main stream of the Colorado River at or below Boulder Canyon, and to create a storage reservoir of a capacity of not less than 20,000,000 acre-feet of water; and

(b) That the Congress of the United States has exercised the power and jurisdiction of the United States to make the terms of the said Colorado River compact binding and effective as to the water of the Colorado River.

This bill meets and conforms to the full demands of California.

With reference to an allocation of the water available under the Colorado River compact for use in the "lower basin," California demanded as an "irreducible minimum" 4,600,000 acre-feet of the allocated water and one-half of any surplus water unallocated by that compact, available for use in the main stream. (Testimony Charles L. Childers, Senate hearings on S. 728.)

Arizona: The Colorado River Commission of Arizona defined the position of Arizona with reference to the Colorado River compact to be as follows (hearings on S. 728, pp. 19, 46):

(1) Arizona will accept the Santa Fe compact if and when supplemented by a subsidiary compact which will make definite and certain the protection of Arizona's interests, as follows:

(2) That before regulation of the Colorado River is undertaken, Mexico be formally notified that the United States Government reserves for use in the United States all water made available by storage in the United States.

(3) That any compact dividing the water of the Colorado River and its tributaries shall not impair the rights of the States, under the respective water laws, to control the appropriation of water within their boundaries.

(4) That the waters of the streams tributary to the Colorado River below Lees Ferry and which are inadequate to develop the irrigable lands of their own valleys be reserved to the States in which they are located.

(5) That so much of the water of the Colorado River as is physically available to the lower-basin States—but without prejudice to the rights of the upper-basin States—shall be legally available to and divided among Arizona, California, and Nevada, as follows:

(a) To Nevada, 300,000 acre-feet per annum.

(b) The remainder, after such deduction as may be made to care for Mexican lands allotted by treaty, shall be equally divided between Arizona and California. (With reference to par. 5 (b) of the Arizona statement, Arizona agreed to accept a proposal for a division of the water which was suggested by the Governors of Utah, Wyoming, Colorado, and New Mexico that the water available for the use of the lower basin be divided approximately as follows (Senate hearings on S. 728, p. 349), each State to have its tributary waters before they

enter the main stream: To Nevada, 300,000 acre-feet; to California, 4,200,000 acre-feet; to Arizona, 3,000,000 acre-feet. All available surplus water to be divided equally between Arizona and California.)

(6) That the right of the States to secure revenue from and to control the development of hydroelectric power within or upon their boundaries be recognized.

(7) (With reference to pars. (6) and (7), the Arizona representatives insist upon the acceptance of the principle of the Pittman resolution in a compact (Senate hearings on S. 728 and S. 1274, p. 131). That encouragement will be given, subject to the above conditions, to either public or private development of the Colorado River, at any site or sites harmonizing with a comprehensive plan for the maximum development of the river's irrigational and power resources.

(8) That Arizona is prepared to enter in a compact at this time to settle all the questions enumerated herein, or Arizona will agree to forego a settlement of items 6 and 7, and make a compact dividing the water alone, provided it is specified in such compact that no power plants shall be installed in the lower-basin portion of the main Colorado River until the power question is settled by a power compact among the States. (The contention of Arizona, with reference to power revenues, stated briefly and succinctly, as it relates to the development proposed to be made under this act, is that the State expects to derive a revenue from the hydroelectric power developed on the project, equivalent to what it would receive in taxation, if the project was developed by private enterprise.)

CONTROL OF WATER BY WESTERN STATES IS RECOGNIZED BY CONGRESS

In admitting the Western States into the Union "on an equality with all the other States," Congress has conceded that no constitutional right was vested in the Federal Government to retain jurisdiction over appropriations of water for irrigation, domestic, power, or other uses excepting as they might affect navigation. In fact, the United States Supreme Court, in the case of Boquillas Cattle Co. *v.* Curtis (213 U. S. 339), in an opinion sustaining a decision of the Territorial Supreme Court of Arizona, declared "the doctrine of appropriation" was in force in Arizona before it was annexed to the United States.

The Congress of the United States first recognized the necessity for local customs to govern the use and appropriation of water in the semiarid Western States when it adopted section 9 of the act of July 26, 1866 (14 Stats. 266; sec. 2399, Rev. Stats.). This section reads:

That whenever, by priority of possession, right to the use of water for mining, agricultural, manufacturing, or other purposes, have vested and accrued and the same are recognized and acknowledged by the local customs, laws, and the decisions of the courts, the possessors and owners of such vested rights shall be maintained and protected in the same; and the right of way for the construction of ditches and canals, for the purposes aforesaid, is hereby acknowledged and confirmed.

Under the terms of both the United States reclamation law and of the Federal water power act, the United States is required to obtain the consent of the States to use the lands and waters of the States before it may proceed with the erection of any dam for the purposes of utilizing the water for domestic, irrigation, or power purposes.

Section 8 of the United States reclamation act (32 Stat. 388, 1902), reads:

That nothing in this act shall be construed as affecting or intending to affect or to in any way interfere with the laws of any State or Territory relating to the control, appropriation, use, or distribution of water used in irrigation, or any vested right acquired thereunder, and the Secretary of the Interior, in carrying out the provisions of this act, shall proceed in conformity with such laws, and nothing herein shall in any way affect any right of any State or of the Federal Government or of any landowner, appropriator, or user of water in, to or from any interstate stream of the waters thereof: *Provided*, That the right to the use of water acquired under the provisions of this act shall be appurtenant to the land irrigated, and beneficial use shall be the basis, the measure, and the limit of the right.

The Federal water power act, approved June 10, 1920, provides in section 17 thereof as follows:

That nothing herein contained shall be construed as affecting or intending to affect or in any way to interfere with the laws of the respective States relating to control, appropriation, or distribution of water used in irrigation or for municipal or other uses, or any vested right acquired therein.

(At this point Mr. ASHURST made some remarks on the cloture rule and submitted sundry amendments, which were read and which appear in the current copy.)

Mr. ASHURST. Mr. President, I read at this juncture an article from The Nation. No one would accuse The Nation of being a conservative organ. The article was printed on November 9, 1927, and is entitled "The Colorado River controversy," written by Mary Austin, and is, in part, as follows:

THE COLORADO RIVER CONTROVERSY

By Mary Austin

Wyoming, Utah, Colorado, Nevada, New Mexico, Arizona, and California are all involved in the project for converting the rampageous Rio Colorado into irrigation ditches and hydroelectric power. But from the beginning the situation of California was somewhat apart from the other intramontane States. The others are all relatively undeveloped, anxious to restrain development rather than to hurry it. California, on the other hand, is involved in an inflated economic complex which by its own momentum has outrun its own resources. Unless new resources can be found, southern California—it is only the section southwest of the San Bernardino Mountains which is affected—must suffer a serious check to her characteristic expansion. And California's claim on the Colorado is not quite in the same case as the other States. Hers is the smallest fragment of the basin, and she contributes no flow to the waters of the river, her natural right resting on 300 miles of State line along the Colorado. Her chief claim is to the waters already taken out of the river for irrigation in Imperial Valley, and to uncompleted filings for domestic water for coastal cities. And at the original conference California was, of all the seven States, most alive to the possibilities tied up with the river project. At that conference a compact was drawn up which secured to the four upper basin States—Wyoming, Colorado, Utah, and New Mexico—50 per cent of the flow. of the river in perpetuity, leaving the other 50 per cent to be divided among Nevada, California, and Arizona. Nevada, in view of the small amount of land suitable for irrigation, was easily contented with 2 per cent of the lower half of the river, Arizona and California being left to agree on the partition of the remainder; until such agreement had been arrived at Arizona refused to ratify the compact. A little later California withdrew from it altogether. And then Utah. And in August of 1927 a second conference was called to uncover the roots of the situation.

It is always a little difficult to deal with southern California as one deals with other localities. In southern California boosting has become a religious duty; and the divine right of that section to all it can get, by any method whatever, is unquestioned. Naturally, California wanted more than half of the water left by the compact to be shared between her and Arizona, and was hurt because Arizona evidently didn't mean to surrender it. A great many people in the Southwest felt California's way about it; such is the glamor over all the American view of the immediate and the outside enterprise. Even Mr. Hoover called Arizona rebellious, though what she rebelled against was the forced limitations of the development. Arizona has practically all her lands in the basin subject to irrigation, and contributes the major portion of the southern basin flow. Moreover, she has lands that would produce in due time exactly the citrus fruits and subtropical crops that are grown in California. Arizona, therefore, continued to insist that a 50-50 allocation was not only fair but generous. Also, there was the question of power control. Suppose Arizona should continue to insist on the natural logic of natural resources. It was much to California's interest to build a dam at Boulder Lake as soon as possible. This would take care of all southern California's necessities and do very little for Arizona. It would benefit the five other States not at all. But the dam would be on Arizona's soil and subject more or less to her State control. California withdrew from the Santa Fe compact and initiated the Swing-Johnson bill.

Detailed discussion of the Swing-Johnson bill is reserved for all citizens of the United States who have an interest in the question of the Federal control of State resources, for all people who have an interest in power, both present and prospective, and for those who see in any move toward the socialization of natural resources either an advantage or a menace. Also, the six intramontane States, whose chief natural asset is the Colorado River, are intimately concerned. The power to be developed by the proposed Boulder Creek Dam is estimated as about equal to the sum of all the existing power development in the United States. A few of Arizona's reasons for objecting to the Swing-Johnson bill are that irrigation demands are sacrificed to power prospects; that the bill utilizes the natural resources of Arizona and Nevada to develop California; that the bill initiates the taking of natural resources from one State to another without compensation. There are 23 other reasons set forth in the statement of Arizona which can be had by applying to her governor; quite enough to stiffen the resolution of the whole State and quicken the apprehensions of five others. It was to clear up the general situation, baldly and too briefly outlined here, that the Denver conference was called.

One of the omitted items relates to the use of water by landowners in Mexico below the State lines. The general usage of waters for irrigations in our Southwest follows the old Spanish law of prior use. Landowners in Mexico are now entitled to all the water they are using or can put to beneficial use before the United States takes action by advising them that the remaining flow of the Colorado is about to be impounded for use within the United States. This can hardly take

place until an agreement is reached by all the States affected. Thus the flow available for future irrigation north of the international boundary is steadily being diminished by the amount that is increasingly used below the boundary. This makes for urgency in point of time in settling the allocation of interstate waters. But as it is reported that California capital is invested in these Mexican irrigation schemes, the urgency is greater on the six other States than on California. There are also claims of water users in California for flood and silt protection, but, as these are freely conceded by the other States, they do not materially affect the problem. And over the whole situation hangs the Swing-Johnson bill, which California is steadily pressing and all the other States are preparing to resist.

Perhaps this is the time to mention a factor that is definitely operative and singularly unaccounted for: A widespread disposition on the part of the press to minimize and definitely to misrepresent the situation. Even while the present conference was in session many newspapers throughout the country carried reports of its proceedings which were explicitly contradicted by the facts. Such misrepresentative reports reaching citizens of the seven States unable to come into more direct relation to the facts will undoubtedly affect the reaction of those States to their own problems. The general implications of the reports in question were, first of all, that the Swing-Johnson bill is more certain to pass than anyone is at present warranted in assuming; and, secondly, that the responsibility for the failure of agreement rests primarily on Arizona. One never quite knows whether the American press means anything by its freely expressed biases, or whether it is simply not sufficiently interested to form an intelligent opinion. If that is the case, it is much the worse for the American people, for what really transpired at the conference was the swing of the whole subject away from a two-State contest to a national policy.

There was no question that the five States already contented with their allocation of waters had met to hear out the matter of the other two with sympathy and without rancor. The details of the discussion would hardly interest a public unacquainted with "acre-feet" and "miners' inches." At the end of the discussion a committee of the governors of the four upper-basin States was appointed to effect such compromise as was thought advisable. To the compromise thus proposed Arizona finally consented. And in the end California still stood out for a larger share, the exact amount of which would mean nothing to the uninitiated. For possible beneficiaries of either the Arizona or the California contention, there are the printed statements of each side. But for the country at large there are far more serious considerations than the matter of a few hundred thousand acre-feet of water for irrigation. As a matter of executive convenience at the conference, an effort was made to keep these larger factors in the background of the earlier meetings. But when the conference reconvenes on November 7 the real problem of the Colorado must be faced.

To understand it in its national implications, it must be realized that the Colorado Basin is the United States' last large-sized opportunity for peaceable territorial expansion. For a territory the size of the Republic of France all Europe would gladly permit itself to be torn to tatters. It is a goodly land, immensely varied in climate, topography, mineral wealth, and crop possibilities. It has in an unusual degree the new and imperfectly estimated possibility of hydroelectric power. It has the beginnings of a strongly marked regional culture. It beckons from every hill and valley with the last opportunity for the rise of a superior English-speaking culture within the territory of the United States. Should the Swing-Johnson bill pass and California have her way, or even the dominant position in the distribution of benefits, many of these opportunities would pass away forever from the people of the United States. Probably, outside of Arizona, this is only half realized even by the people whose immediate future is at stake.

Let me not be misunderstood as imputing any special iniquity to southern California in making every effort to secure the advantage of her own territory. It is the tradition of American expansions that we should tussle over our natural advantages and the devil take the hindermost. While our resources seemed practically unlimited it was useless to try for a more considered and far-looking method of dealing with them. But this adventure of the Southwest can never happen again. What will happen if she has her way is that southern California will continue for a time her phenomenal material expansion. She will produce more of the same thing in the same limited district of the identical limited type of what goes by the name of "prosperity." And large areas of Arizona capable of producing not only the same thing that southern California produces but other things, and more of them, will remain forever undeveloped. There is practically no agricultural development in the Southwest without water; and owing to factors of climate and soil formation water will go further in Arizona than in the parts of California where it is proposed to use the waters of the Colorado. It can also be done more cheaply in Arizona than by lifting the water out of its natural basin over the divide onto the California coastal plain.

This is the first, but only one item. There are unhappy possibilities among the six remaining States, of other struggles for the remainder of the river's possibilities, of opposing interstate interests, instead of the unified development of an intramontane culture such as is suggested by the natural configuration of the land. And there is the beginning of the usurpation of State control by the Federal Government and the exposing of natural resources unreservedly to political intrigue rather than the checks of private enterprise which have so far regulated such matters in the United States. The beginning is inauspicious for those who favor Federal control of national resources, for no way of arguing the Swing-Johnson bill can make it seem other than the rape of the natural resources of one State against that State's consent for the advantage of another State. There is no manner of doubt that, unanimously as California seems to be fighting for the Swing-Johnson bill, Arizona will fight against it, and on constitutional grounds. So that even the convinced advocate of the Federalization of such control must see that the forcing of Arizona's hand would heavily prejudice the whole project of Federalization.

That the people of the United States must eventually face this possibility, this closing of the doors of individual enterprise, this sharp regional struggle for portable advantages, we have all known. The real question is, Are we ready to face it now and on this layout? It must not be forgotten that there is an international factor involved, and that the Colorado River is not the only source of water for irrigation divided between the United States and Mexico. There is also the Rio Grande, with the two growing States of Texas and New Mexico having somewhat different interests. This international situation has not yet got beyond the reach of reasonably diplomatic control. But it does afford, in the possibility of a protracted struggle among the Southwestern States, an easy loophole of advantage for Mexico.

These are the most salient aspects of the situation being dealt with in the conference of governors and their advisers at Denver. There is probably no one at that conference who does not fully realize the national reach of the problem and its almost fatalistic relation to the American future. The one thing most needed to aid them in coming to decisions which will have the good of the country in full regard is that the country itself should awake to a proper share of its own interest.

Mr. President, I realize how tedious and boresome it is for a speaker here or elsewhere to discuss the law of a case, but I believe an exposition as to the law will be welcome. It may not be listened to by many at this hour; I could not expect it to be; but surely there are those who will read it. I believe that if the Senators from California would read it they would be convinced, because they are lawyers of high attainments, and it becomes my duty to lay before the Senate the law of this controversy as I see it. I would be remiss in my duty if I failed to do so; it is an obligation I owe not only to my State, not only to the country, but to the Senate and no less to myself.

Mr. President, the Colorado River is in law a navigable and an interstate and international stream, although its navigability has been destroyed for reasons which I shall discuss later. The water in the river originates wholly in the United States, but the mouth of the river is in a foreign country. The strict application of the doctrine laid down by the United States Supreme Court in the case of Wyoming *v.* Colorado (259 U. S. 419) would probably result in the appropriation of the water of the river by the States best able to put it to immediate use, and this would be extremely detrimental to the interests of the upper basin States. It would also probably inspire a race for competitive development of agricultural lands which economic conditions do not warrant.

STATES ARE ENTITLED TO EQUALITY OF RIGHT UNDER THE CONSTITUTION

The Constitution of the United States provides and the United States Supreme Court in a long line of decisions has consistently upheld the theory upon which our Union of States is founded—that each of the States is sovereign, is entitled to the use of its natural advantages, and stands on an equality with all of the other States.

The United States Supreme Court has declared in the case of Kansas *v.* Colorado (206 U. S. 97) that—

> One cardinal rule underlying all the relations of the States to each other is that of equality of right. Each State stands on the same level with all the rest. It can impose its own legislation on no one of the others and is bound to yield its own views to none.

In Hudson Water Co. *v.* McCarter (209 U. S. 357), the court stated:

> It (a State) finds itself in possession of what all admit to be a great public good, and what it has it may keep and give no one a reason for its will.

In Trenton *v.* New Jersey (262 U. S. 185) the court stated:

> The State undoubtedly has power and it is its duty to control and conserve the use of its water resources for the benefit of all its inhabitants.

In Coyle *v.* Oklahoma (221 U. S. 559, 573) the Supreme Court stated that—

> Equality of constitutional right and power is the condition of all States of the Union, old and new.

In Kansas *v.* Colorado (206 U. S. 92) the court stated:

> The powers of the National Government within the semiarid States are the same—no greater and no less—as those within the limits of the original thirteen.

In Hammer *v.* Dagenheart (247 U. S. 273) the court stated:

> There is no power vested in Congress to require the States to exercise their police powers.

The cases which have been cited leave no room for doubt that the State of Arizona is entitled to the same protection and to the application of the same principles of law which the other States in the Colorado River Basin are afforded by any legislation authorized by Congress.

If the present and existing laws which govern the appropriation and use of water in the Colorado River Basin—as they are interpreted and enforced by the decision of the courts, and particularly, if the laws as they relate to an interstate stream, as they are defined by the United States Supreme Court in the case of Colorado *v.* Wyoming (259 U. S. 419)—are to be repealed, Arizona's demand is merely for equality of right with the other States. Arizona insists that the other States have no right to determine their own needs, reserve an adequate supply of water to care for their needs, and then to impose their will upon her.

If Arizona unreservedly consented to and ratified article 4 (a) of the Colorado River compact, she would thereby renounce sovereign and valuable rights which she now possesses in the bed and the banks of that river.

Arizona is asked to surrender rights which she now possesses and to enter into a compact with the other six States in the Colorado River Basin.

The Colorado River compact is primarily an instrument to apportion the beneficial consumptive use of the waters of the river among the several States.

Arizona agrees, in the main, with the principles upon which the proposed compact is based, and declares that when an equitable portion of the water is reserved for her use, she will then enter into the compact in so far as it relates to a division of the water.

The compact, however, contains a provision (art. 4 (a)) which is of transcendent importance to Arizona and to which the State can not agree without a reservation.

The article referred to makes a formal declaration in which the States agree—and Congress is asked to ratify the proposal—"that the Colorado River has ceased to be navigable for commerce." This might be construed to be tantamount to a renunciation by Arizona of sovereign and valuable rights which the State now possesses and a declaration that they shall become extinct.

Arizona agrees, in principle, that a higher use can be made of the water of the Colorado River than to require its use for the purpose of navigation. The State, however, desires to retain sovereign and valuable rights which she possesses in this navigable stream, and insists that before Arizona will agree to ratify the provisions of article 4 (a) of the compact the agreement must provide that Arizona's right to retain and control—as a sovereign, for the use and benefit of her citizens—the bed and banks and the use of the waters of the stream, while they are within her borders, for the development of hydroelectric power. One of the sovereign rights which Arizona desires to exercise as a result of her ownership of the bed and banks of the Colorado River and her rights in the waters of the stream is to derive revenue for public purposes from the development of hydroelectric power.

It is contended that Arizona would have no right to tax a power project constructed by the Federal Government. Arizona agrees that if the United States Government, when it constructs the projects, were exercising a strictly governmental function or even a strictly public function and possibly even in promoting its own proprietary interests, it would not be subject to taxation upon its projects, but Arizona insists that the projects authorized in the Swing-Johnson bill do not meet this test.

The authorized representatives of Arizona have stated repeatedly that they are willing to accept and enter into a compact with the other States in the Colorado River Basin, provided the State of Arizona is given the protection under these new laws equal to that which is given to all the other States. Or, stated in another way, Arizona is asking that if the law of prior appropriation is to be set aside and water is to be apportioned by a compact among the States, that Arizona be given the same protection against Mexico and California that Colorado, Wyoming, Utah, and New Mexico are asking for themselves.

THE COLORADO RIVER, AS A MATTER OF LAW, IS A NAVIGABLE RIVER AT BLACK OR BOULDER CANYON

NAVIGATION—EXPLORATIONS—POPULATION

(Information given under this heading is quoted from Water Supply Paper (295 U. S. G. S., 1916) and was obtained largely from Dellenbaugh, F. S., The Romance of the Colorado River, New York, 1902.)

The history of exploration of the basin of the Colorado is replete with accounts of interesting and romatic incidents, with discoveries, starvations, battles, massacres, and lonely, dangerous journeys. A brief outline of the more important events, arranged in chronologic order, is here presented:

1531. As early as 1531 vague rumors were current of a large river, the mouth of which was closed by a cable stretched across from side to side.

1539. Francisco de Ulloa sailed from Acapulco July 8, 1539, with a fleet of three vessels, and after many difficulties reached shallow water at the head of the Sea of Cortes (now known as the Gulf of California). This seems to have been the first visit of Europeans to the mouth of the Colorado. Ulloa did not see the river but surmised that one might be there.

1540. Hernando de Alarcon sailed in May, 1540, to explore the region north of New Spain, and at last reached the head of the Sea of Cortes. He says: "And it pleased God that after this sort we came to the very bottom of the bay, where we found a very mighty river, which ran with so great fury of a stream that we could hardly sail against it" (spelling modernized). Here began the acquaintance of Europeans with the river now known as the Colorado of the West. Alarcon proceeded up the Colorado in small boats to a point about 100 miles above the mouth of Gila River.

1540. Melchior Díaz in the fall of 1540 explored the Colorado and surrounding country in the vicinity of the Chocolate Mountains. At about the same time (1542) Don López de Cárdenas discovered the Grand Canyon. The canyons of the river, however, remained unexplored for 329 years thereafter—until 1869.

1605. Don Juan de Oñate, governor of New Mexico, made a trip from the village of San Juan on the Rio Grande to the Colorado in the vicinity of Williams River and went down the Colorado to the Gulf.

1618. Zalvidar with Padre Jiménez and 47 soldiers went out to Moki and thence to the Rio de Buena Esperanza (Colorado River), but they evidently encountered Marble Canyon and soon returned.

1680 to 1711. Padre Eusibio Francisco Kino (spelled also Kühn, Kühne, Quino, and in several other ways. Dellenbaugh (op. cit., p. 80) says that Kühn or Kühne is probably the correct form, but long usage gives preference to Kino), an Austrian by birth and a member of the Jesuit order, made many journeys over the whole of northern Sonora and the southern half of Arizona, then comprising the Pimeria Alta, the upper land of Pimas, and Papagueria, the land of Papagos. His base of exploration was the mission of Dolores, which he established in Sonora in 1687. For some 30 years Kino labored in this field with tireless energy.

1744. Padre Jacobo Sedelmair went down the Gila from Casa Grande to the great bend and thence across to the Colorado at about the mouth of Williams River, but his journey was no more fruitful than those of his predecessors in the last two centuries.

1768–1776. Francisco Garcés made five expeditions. The first was made in 1768 and the second in 1770, but in these journeys he did not reach the Colorado. In the third, in 1771, he went down the Gila to the Colorado and descended the Colorado along its banks, possibly to the mouth. In the fourth, in 1774, he went with Captain Anza to the Colorado and to the Mission of San Gabriel in California near Los Angeles. In his fifth and most important expedition, in 1775–76, he again accompanied Captain Anza, who was bound for the present site of San Francisco, there to establish a mission. At Yuma Garcés left the Anza party, went down to the mouth of the Colorado, and then up along the river to Mohave, and after another trip out to San Gabriel he started on the most important part of all his journeys, from Mohave to the Moki towns, the objective point of all expeditions eastward from the Colorado. Leaving Mohave June 4, 1776, Garcés struck eastward across Arizona and passed near the rim of the Grand Canyon, though he did not then see it. Garcés found his way down to the Little Colorado by means of a side canyon, and got up again on the other side in the same way. On July 2 he arrived at the pueblo of Oraibi. The natives refused to allow him to remain at Oraibi, and he left on July 4. He reached the Colorado again July 25, his journey having proved absolutely fruitless so far as missionary work was concerned, and he arrived at his mission of Bac September 17, 1776.

1776. On July 29, 1776, another even greater expedition was begun at Santa Fe by the Fray Padre Francisco Silvestre Vélez Escalante in his search for a route to Monterey. Escalante believed a better road existed to Monterey by way of the north than by the middle route, and a

further incentive to journey that way was probably the rumors of large towns in that direction.

The party went by way of Abiquiu and Chama River and reached the San Juan about where it first meets the north line of New Mexico; thence they crossed several tributaries to the head of Dolores River, which they descended for 11 days. The party made its way across Grand River, the Book Plateau, and White River to the Green (called the San Buenaventura), which was forded apparently near the foot of Split Mountain Canyon. Following the course of the river down some 10 leagues, they went up the Uinta (now called Duchesne) and finally crossed the Wasatch Range, coming down the western side, evidently by way of what is now known as Spanish Fork, to Utah Lake, then called by the natives Timpanogos. Here they heard of a greater lake to the north, but instead of seeking it they turned southwesterly in what they considered the direction of Monterey through Sevier River Valley, calling the Sevier the Santa Isabel, and kept down along the western edge of the high plateaus. It was by this time the 7th of October, and Escalante concluded that it would be impossible to reach Monterey before winter set in; he therefore persuaded his companions that it would be best to strike for the Moki towns in Arizona.

Going on southward past what is now Parowan, they came to the headwaters of a branch of the Virgin, in Cedar Valley, and this they followed down to the main stream, which they left flowing southwesterly. The place where they turned from it was probably about at Toquerville. Trying to make their general course southeast, they passed over the country now known as Kanab, Ninemile Valley, Kaibab Plateau, Horse Rock Valley, and Vermilion Cliffs, and at length struck the Colorado at Marble Canyon. Twice they succeeded in descending to the river, but were unable to cross. On November 8, 1776, they reached the ford now known as the Crossing of the Fathers, about 35 miles north of Lee Ferry, a few miles north of the Utah-Arizona State line. From this crossing to the Moki towns Escalante had a plain trail, and on reaching Santa Fe he and his party had completed a circuit of more than 1,500 miles, mainly through unknown country. This is one of the most remarkable explorations ever carried out in the West.

1779–1781. The authorities, importuned by Captain Palma, the Yuma chief whose devotions and piety had so delighted Garcés, had decided to establish on the Lower Colorado two nondescript settlements, a sort of cross between mission, pueblo, and presidio. Garcés therefore went to Yuma again in 1779 to prepare the way, and in 1780 two of the hybrid affairs were started. One, at what is now Fort Yuma, was called Puerto de la Purísima Concepción, after the little canyon near by which had been so named by Garcés, a canyon 50 feet deep and 1,000 feet long; the other, about 8 miles down, was called San Pedro y San Pablo de Bicuner. There were four padres, Garcés and Barraneche at the upper station and Díaz and Moreno at the lower. Each place had 8 or 10 soldiers, a few colonists, and a few laborers. The Spaniards were obliged to appropriate some of the best lands to till for the support of the missions, and this fact, together with the general poverty of the establishments when he had expected something fine, disgusted Palma and exasperated him and the other Yumas. In June, 1781, Captain Moncada, lieutenant governor of Lower California, arrived with soldiers and recruits en route for California settlements and encamped opposite Yuma. After some of these people had been sent forward or back, as the plans demanded, Moncada remained at the camp with a few of his soldiers. On the 17th of July, without a sign preliminary to the execution of their wrath, Captain Palma and all his band threw piety to the winds and annihilated with clubs Moncada's camp and most of the men in the two missions. Garcés, who had never been to Palma and his people anything but a kind and generous friend, and his assistant, Barraneche, were at first spared, but the rabble declared these two were the worst of all, and under this pressure Palma yielded. The military expeditions sent to avenge the massacre were unsuccessful and the missions on the Colorado were ended. Nearly half a century pasesd before the face of white man was again seen at the mouth of the river.

1808. Two years after the return of the famous Lewis and Clark expedition Andrew Henry crossed over the south pass into the valley of Green River in Wyoming.

1824. Gen. William Henry Ashley having previously organized a fur-trading company in St. Louis, then the center of all western commerce, had established himself in Green River Valley with a large band of expert trappers.

1825. In 1825 Ashley had established a camp at the mouth of Henrys Fork, near Flaming Gorge. During this year Ashley and his party constructed boats to go down the Green for the purpose of trapping beaver. The trip was successful through Flaming Gorge and Horseshoe Canyon, but in Red Canyon their boats were wrecked in a cataract now known as Ashley Falls. Ashley and his party left the river at Browns Park. This was, no doubt, the first attempt to navigate Green River.

1825 to 1839. During this period the Colorado Basin was visited by many trappers and explorers. Some of the most prominent were James O. Pattie and his father (1825), R. W. H. Hardy (1826), Jedediah Smith (1826), Kit Carson, one of the greatest scouts and trappers (1826), Ewing Young, trapper (1827); William Wolfskill (1830); Captain Bonneville (1832); and Thomas J. Farnham (1839).

By the time the third decade of the nineteenth century was fairly begun the trappers were crossing in considerable numbers from the headwaters of the Missouri and the Platte into the valleys of the Colorado and the Columbia.

1840. By the year 1840 the great western wilderness had been traversed throughout by Americans. Only the canyons of the Colorado remained, at least below the mouth of Grand River, almost as much of a problem as before the fur trade was born.

1842. In 1842 Frémont came up the North Platte and Sweetwater Branch, crossing from that stream by the South Pass over to the headwaters of the Colorado. Frémont's explorations of the Colorado and the West covered the period 1842 to 1846.

1847 to 1852. In 1847 the Mormons crossed the Colorado River Basin and settled in Salt Lake Valley. In 1849 the discovery of gold in California led many emigrants to cross the Colorado River Basin. In 1851 Fort Yuma was established. According to Lieutenant Hobbs, the first steamboat came up the Colorado to Yuma in 1850, frightening the Yumas so that they ran for their lives, exclaiming that the devil was coming, blowing fire and smoke out of his eyes and nose and kicking back with his feet in the water. This was the stern-wheel steamboat *Yuma*, which evidently antedated the *Uncle Sam*, usually credited with being the first steamboat on the Colorado. In 1851 George A. Johnson came to the mouth of the Colorado on the schooner *Sierra Nevada*.

1857. Lieutenant Ives with the steamboat *Explorer* and Captain Johnson with the steamboat *Colorado* navigated Colorado River to a point called "the head of navigation." The highest point reached by Lieutenant Ives was Vegas Wash; Captain Johnson took his boat to a point several miles above Vegas Wash.

1859. During the year 1859 Captain Macomb was sent to examine the junction of the Green and Grand. For a considerable distance he followed from Santa Fe almost the same trail that Escalante had traveled 83 years previously. Dr. J. S. Newberry, the eminent geologist, who had been with Lieutenant Ives, was one of this party. Macomb and Newberry succeeded in forcing their way within 6 miles of the junction, there to be completely baffled and turned back.

1866. In 1866 another attempt was made to navigate the Colorado above Mohave. Captain Rogers, who for four years had been on the lower Colorado, took the steamboat *Esmeralda*, 97 feet long and drawing 3½ feet of water, up as far as Callville, near the mouth of the Virgin, which was several miles above the highest point attained by Ives in his skiff, but little if any farther than Johnson had come with his steamboat.

1868. During the winter of 1868 and 1869 Maj. John Wesley Powell made several important journeys in connection with his purpose of exploring the great walled river; one was southward as far as Grand River; a second followed White River to its junction with the Green; and a third went northward around the base of Uinta Mountains, skirting the gorges afterwards named Lodore, Whirlpool, and Red Canyon. In these travels he formed his plans for an attempt to explore fully the remarkable string of chasms. Funds for the proposed expedition were furnished by the State institutions of Illinois and the Chicago Academy of Sciences—none by the Federal Government, so that this was in no way a Government expedition, except that Congress passed a joint resolution authorizing him to draw rations for 12 men from western Army posts.

1869. On May 24, 1869, Major Powell and his party left Green River, Wyo., on their voyage down the Green and the Colorado to the mouth of the Virgin. There were 12 men in the party; three of the four boats were of oak, 21 feet long, and one was of light pine, 16 feet long. During the last week in August, Powell reached his goal, the mouth of Virgin River. Here he left the party, but the others continued down the river to the Gulf, which they reached before the end of September, 1869. Although Powell had demonstrated the possibility of passing alive through the 1,000-mile stretch of canyons on the Green and the Colorado, the scientific results of his hazardous voyage were not what he desired. Owing to numerous disasters many instruments had been lost and he had been prevented by this as many other circumstances from fully accomplishing his intentions. For this reason he determined to make another descent if he could obtain pecuniary aid from the Government. Congress appropriated a sum for a second expedition.

1871. On May 22, 1871, Powell left Green River, Wyo., on his second voyage down the Green and the Colorado. This voyage of exploration of the canyons on the main stream and its tributaries was completed to Lee Ferry in the second week of October. Lee Ferry is at the mouth of Paria River, at the head of Marble Canyon, in Arizona. Here the boats were cached and the party spent the winter in the vicinity of Kanab.

1871. While the Powell party was making its second voyage down the Green and the Colorado another expedition was being made up the Colorado. Lieutenant Wheeler, topographical engineer of the War Department, started from Fort Mohave September 16, 1871, to explore the Colorado to the mouth of Diamond Creek, which he reached October 22. It required four weeks of extremely hard work

to make the voyage up the Colorado from Fort Mohave to the mouth of Diamond Creek, whereas members of the party made the trip from the mouth of Diamond Creek to Fort Mohave in five days.

1872. On August 17, 1872, Major Powell returned to his boats at the mouth of the Paria and started on his second voyage through the Grand Canyon. On reaching the mouth of Kanab Creek, Powell decided to end the river work on account of the extreme high water, which made the rapids in the second granite gorge impassable. The topographic, geologic, and geodetic work of the survey did not cease with his departure from the river but was continued in the territory adjacent to the Grand Canyon.

1877. The Southern Pacific Railroad was completed to the Colorado at Yuma, Ariz., in 1877.

1883. The Atlantic & Pacific Railroad crossed the Colorado at Needles in 1883. The Rio Grande Western crossed the Green in Gunnison Valley, Utah, in 1883; the Union Pacific had been constructed to Green River, Wyo., in 1869.

1889. A new railroad was proposed from Grand Junction, Colo., down the Colorado through the canyons to the Gulf of California, a distance of 1,200 miles. At that time it was difficult to procure coal on the Pacific coast and it was thought that this "water-level" road, crossing no mountains, would be profitable in bringing the coal from Colorado to the Golden Gate.

A company was organized with Frank M. Brown as its president, and surveys were started as the preliminary to the construction of the Denver, Colorado Canyon & Pacific Railway. Brown and his party started from Green River, Utah, on May 25, 1889, to continue the railroad survey down the Colorado, the survey down the Grand having been completed to its mouth. The chief engineer of the proposed railroad was Robert Brewster Stanton. The difficulties encountered in conducting the surveys through Cataract Canyon were enormous. The line was carried to the mouth of the Paria. Boats were not suitable for the river work, and it was decided not to attempt to carry the railroad survey into Marble Canyon. A reconnaissance investigation of this canyon, however, was attempted, and just below the Soap Creek Rapids, in Marble Canyon, Brown, the president of the railroad company, was drowned. A few days later two other members of the party were lost in the river. This second disaster caused Stanton to resolve to leave the river. The remaining members of the party climbed from Marble Canyon at the point known as Veseys Paradise. On July 19, 1889, the party reached the surface of the country, 2,500 feet above the river. By November 25, 1889, Stanton had organized a new party to continue the railroad survey. The trip through the lower canyons on the Colorado was completed March 17, 1890.

1891–1894. Since the Stanton party several successful and unsuccessful descents have been made. The first was the "Best party," representing the Colorado, Grand Canyon & Improvement Co., with eight men and two boats similar to those used by Stanton on his second voyage. The expedition left Green River, Utah, July 10, 1891. The trip was successful to Lee Ferry. No men were lost. The expedition was abandoned at this point.

In 1891 the steam launch *Major Powell*, 35 feet long, equipped with two 6-horsepower engines driving twin screws, was brought out in the summer from Chicago by way of Rio Grande Western Railway to the crossing of Green River and was launched in September of that year. A screw was soon broken and the attempt to go down the river abandoned. In 1892 another effort was made, which was also given up after a few miles, but in 1893 the *Major Powell* was taken down to the junction of the Green and Grand and back, making a second trip in April. Several other steamboats were later put on the river, the *Undine* being the most pretentious. She was wrecked trying to run upstream on Grand River above Moab. In 1894 Lieut. C. L. Potter made a successful voyage from Diamond Creek to the mouth of the Virgin.

1895. September 20, 1895, N. Galloway and William Richmond started from Green River, Wyo., and made the trip to Lee Ferry in flat-bottomed boats. In September, 1896, they started again from Henry Fork, Wyo., and went to the Needles, reaching there February 10, 1897. Since that time Galloway has made several successful descents.

1896. In August, 1896, George F. Flavell and a companion left Green River, Wyo., and successfully descended the Colorado to Yuma, Ariz., in flat-bottomed boats, reaching there December, 1896.

1907. In 1907 three miners, Charles Russell, E. R. Monett, and Albert Loper, with three steel boats, each 16 feet long, left Green River, Utah, September 20, to make the descent. Loper and one damaged boat were left at Hite, near the mouth of Fremont River, while Russell and Monett proceeded. In the beginning of the Grand Canyon they lost a boat, but with the remaining one, after various disasters, finally made their exit from the Grand Canyon January 31, 1908. Their boats of steel were unsuited to the river work.

1909. Julius F. Stone and N. Galloway left Green River, Wyo., September 12, 1909, making a successful descent through the many canyons of the Green and the Colorado.

1911. September 8, 1911, Ellsworth and Emery Kolb left Green River, Wyo., on a photographic trip down the Green and the Colorado. The trip was a complete success. Interesting pictures were obtained, many of which showed the party shooting various rapids. The Kolbs landed at Needles January 18, 1912.

Although many successful descents have been made through the canyons of Green and Colorado Rivers the dangers of such a trip must not be overlooked. In making this trip at the present time it is necessary to take every precaution to make sure that the equipment is complete. No pains should be spared in providing the proper kind of boats. Life preservers should be provided, and care should be taken to provide sufficient food.

THE GOVERNMENT MAY BUILD A DAM ON THE COLORADO RIVER TO IMPROVE NAVIGATION

Considered merely from the point of view of rules of law, clearly and firmly established by the highest court of the land, there appears to be no doubt, if the Congress of the United States determines that it is expedient to take such measures as are necessary to promote the Government's interests in the Colorado River under the commerce clause of the Constitution, that there will be little question of the right of the Government to proceed to improve navigation.

Indeed, it may be admitted, for the sake of this discussion, that the right of the Federal Government to improve the river for navigation is incontrovertible. The Supreme Court in United States *v.* Chandler-Dunbar Co. (229 U. S. 53), Mr. Justice Lurton speaking for the court (on page 62), says:

> It is subordinate to the public right of navigation, and however helpful in protecting the owner against third parties, is of no avail against the exercise of the great and absolute power of Congress over the improvement of navigable rivers. That power of use and control comes from the power to regulate commerce between the States and with foreign nations. It includes navigation and subjects every navigable river to the control of Congress. * * * If, in the judgment of Congress, the use of the bottom of the river is proper for the purpose of placing therein structures in aid of navigation, it is not thereby taking private property for a public use, for the owner's title was in its very nature subject to that use in the interest of public navigation.

In Scranton *v.* Wheeler (179 U. S. 144, at page 815) the court said:

> If the title had remained in the State, the conclusion would be the same. The State would hold subject to the public use and its property right in the submerged soil of the navigable stream would be subservient to the power of Congress to regulate navigation, and the use of such soil as a support for a structure in aid of navigation would not have been the taking of the private property of the State, within the meaning of the constitutional provisions inhibiting it without compensation.

It is contended, however, by the State of Arizona that by this bill it is not the intention of Congress to control the Colorado River for the primary purpose of making it available as an artery of commerce to facilitate the transportation of persons and goods; but that the whole purpose and intent of the bill is to authorize the division of the water of the Colorado River among the seven basin States; to authorize the States to consume the waters allocated to them and to divert a portion of the water entirely outside the drainage area of the Colorado River and to destroy navigation on the Colorado River.

It is further contended by Arizona, if the Government undertakes to build a dam at Black Canyon under the authority of the commerce clause, that the dam must have some real and substantial relation with commerce. The improvement of navigation is not the primary purpose of the projects authorized by the Swing-Johnson bill. No Member of Congress would be so disingenuous as to assert that the primary purpose of this bill is to improve navigation.

BOULDER DAM IS PRIMARILY FOR POWER

The dam authorized by Senate bill 728 is primarily for the purpose of obtaining a water power to lease to States, subdivisions of States or to private individuals (sec. 5, p. 6), and thereby make available certain incidental benefits. In substantiation of this statement, attention is called to the substance of the following provisions of the bill:

1. No dam shall be constructed and no work be performed unless power revenues are adequate to pay for the interest and amortization and the operation and maintenance of the entire project. (Sec. 4 (b), p. 5.)

2. No charges are to be made for the storage, use, or delivery of water for domestic purposes. (Sec. 1, p. 2, lines 15 to 17.)

3. No charges are to be made for the storage, use, or delivery of water for agricultural purposes. (Sec. 1, p. 2, lines 15 to 17.)

4. Priorities to use of water from the reservoir shall be in the following order:

(a) Water for use of lands under "a canal connecting Laguna Dam with Imperial and Coachella Valleys." (Sec. 1, p. 2, lines 10 to 13.)

(b) Domestic use.

(c) Agricultural use.

(d) Power.

(e) Navigation.

Sections 4 (a), 5, 6, 8 (b), 12, and 14 of the act and Article IV of the Colorado River compact. (See especially sec. 12 (b) of the bill.)

5. If there be any surplus revenues, Nevada and Arizona are each to receive 18¾ per cent of such excess revenues. (Sec. 4, p. 5.)

6. Leases on power are not to be for longer than 50 years. (Sec. 5 (a), p. 7.)

7. Preference to the use of power is given to States, subdivisions of States, and private agencies in the order given. (Sec. 5 (c), p. 9.)

8. Any agency making a contract for 100,000 horsepower is required to reserve one-fourth of its transmission line for the use of other power contractees. (Sec. 5 (d), p. 10.)

LAWS PASSED BY CONGRESS MUST COME WITHIN THE AUTHORITY AND SCOPE OF THE POWERS DELEGATED TO THE UNITED STATES BY THE CONSTITUTION

The powers which the people and the several States have given to the General Government are named in the Constitution, and such powers as are not therein named, either expressly or by necessary implication, are reserved to the people and to the States. (Turner *v.* Williams, 194 U. S. 295, Justice Brewer's concurring opinion.) The Federal Government would have authority to erect a dam at Black Canyon or Boulder Canyon in the Colorado River for the purpose of the improvement of navigation and the regulation of commerce.

If the Federal Government undertakes, under the authority of the commerce clause of the Constitution, to build a dam in the Colorado River at Black or Boulder Canyon, the purpose for building the said dam must have some real or substantial relation to or in connection with the commerce regulation. The Supreme Court, in Adair *v.* United States (208 U. S. 178), said:

> Manifestly, any rule prescribed for the conduct of interstate commerce, in order to be within the competency of Congress under its power to regulate commerce among the States, must have some real or substantial relation to, or in connection with, the commerce regulation.

Storing water so that the same may be available for domestic purposes and leasing the use of water for developing hydroelectric power may be desirable purposes in themselves, and assuming for the purposes of argument only that they are within the scope of the powers possessed by the Federal Government, surely these activities have nothing to do with interstate or foreign commerce as such. If these purposes are not commerce, clearly the Government may not invoke the commerce clause of the Constitution as granting and sustaining the right to build a dam at Black or Boulder Canyon.

The National Government has the authority to store flood waters for the purpose of irrigating public lands to develop hydroelectric power to aid in the development of public lands and, incidentally, to sell the surplus water for the irrigation of private lands or for other purposes, and to sell the surplus power; but this authority is derived from another provision of the Constitution, and in so far as the States of Arizona and Nevada are concerned the consent of these States must be obtained before these projects can be undertaken at Black or Boulder Canyon.

Other than the implied right conferred upon Congress to promote, preserve, and control navigation, all sovereign powers, property rights, and interests in navigable streams within the borders of the States are reserved to the States. (Pollard *v.* Hagen, 3 How. 229.)

The Supreme Court, in Adair *v.* United States (180 supra), stated:

> We need scarcely repeat what this court has more than once said, that the power to regulate interstate commerce, great and paramount as this power is, can not be exerted in violation of any fundamental right secured by other provisions of the Constitution.

The Supreme Court, in Hammer *v.* Dagenheart (247 U. S. 274), said:

> The grant of authority over a purely Federal matter was not intended to destroy the local power always existing and carefully reserved to the States in the tenth amendment to the Constitution.

Commerce embraces navigation, but commerce does not embrace the irrigation of lands, the development and sale of hydroelectricity, or the sale of water for domestic purposes.

The Supreme Court, in Hammer *v.* Dagenheart (272 supra; citing Delaware, Lackawanna & Western Railroad Co. *v.* Yurkonis (238 U. S. 439), and other cases), stated:

> The making of goods and the mining of coal are not commerce, nor does the fact that these things are to be afterwards shipped or used in interstate commerce, making their production a part thereof.

A statute must be judged by its natural and reasonable effect. (Collins *v.* New Hampshire, 171 U. S. 30, 33, 34.)

The control by Congress over interstate commerce can not authorize the exercise of authority not intrusted to it by the Constitution. (Pipe Line cases, 234 U. S. 548, 560.)

The maintenance of the authority of the States over matters purely local is as essential to the preservation of our institutions as is the conservation of the supremacy of the Federal power in all matters intrusted to the Nation by the Federal Constitution. (Hannor *v.* Dagenhart, 275.)

The purposes intended (by Congress) must be attained consistently with constitutional limitations and not by an invasion of the powers of the States. (Ibid. 276.)

It is argued that the right to control navigation as an incident to the regulation of commerce implies that when necessity demands the control of flood waters of a river in order to protect agricultural lands and the towns dependent upon them from inundation that the Federal Government has the authority to provide such flood control, even though the agencies employed by the Government to control such waters will invest in the Federal Government, the control of the use of the water. Arizona contends that any dams or other works in the Colorado River must be constructed in conformity with the laws of the States particularly involved.

BARRING A DAM FOR THE PRIMARY PURPOSE OF NAVIGATION—THE CONSENT OF THE STATES OF ARIZONA AND NEVADA IS REQUIRED TO ERECT A DAM AT BLACK OR BOULDER CANYON

The several States of the Colorado River Basin are primarily the proprietors of, and have sovereignty over, the beds and waters of the navigable streams and watercourses within their respective borders, subject only to the rights of the Federal Government under the commerce clause of the Constitution.

The Federal Government has no special rights in these States, because the common-law rule of riparian rights is not recognized, so that no riparian rights exist.

In the case of Martin *v.* Waddell (16 Pet. 367), where the question of tidelands and tidewaters was involved, the Supreme Court of the United States makes this clear and comprehensive declaration:

> For when the Revolution took place the people of each State became themselves sovereign, and in that character hold the absolute right to all their navigable waters, and the soils under them, for their own common use, subject only to the rights since surrendered by the Constitution to the General Government.

The same doctrine was laid down by the court in the case of Pollard *v.* Hagan (3 How. 212), and it was held to apply to the newer States in as full a measure as to the original States of the Union. In this case the court concludes its opinion as follows:

> By the preceding course of reasoning we have arrived at these general conclusions: First, the shores of navigable waters and the soils under them were not granted by the Constitution to the United States, but were reserved to the States respectively. Second, the new States have the same rights, sovereignty, and jurisdiction over this subject as the original States. Third, the right of the United States to the public land and the power of Congress to make all needful rules and regulations for the same and disposition thereof conferred no power to grant to the plaintiffs the land (tidewater land) in controversy.

In the case of Barney *v.* Keokuk (94 U. S. 324) Justice Bradley declares that the correct principles were laid down in the foregoing cases, and then adds:

> These cases related to tidewater, it is true; but they enunciate principles which are equally applicable to all navigable waters.

The rule laid down in the foregoing cases is reaffirmed and amplified with the citation of numerous authorities in the case of Shively *v.* Bowlby (152 U. S. 1).

The States of Arizona and Nevada have rejected in toto the common-law rule of riparian rights. As the ownership of the beds of fresh-water streams navigable in fact is one of the riparian rights, it follows that these rights were also rejected, and that the ownership of the bed of the Colorado River at the Boulder Canyon or the Black Canyon Dam site is in the States of Arizona and Nevada, under whose jurisdiction these waters flow. These States have prescribed or may prescribe how the

use of the beds and banks and waters of the Colorado River may be obtained.

The acquisition of the lands and waters of the States of Arizona and Nevada at Black Canyon or Boulder Canyon by the Federal Government by any method or for any purpose—other than for the improvement of the navigation facilities of the Colorado River, incidental to the regulation of commerce thereon—or in accordance with the laws of those States, as is required by the reclamation act and the Federal water power act, is a transgression of the limitation of its power, and is, ultra vires, the Federal Government.

Consent or ratification by the States of Arizona and Nevada is necessary to the acquisition of exclusive jurisdiction over the dam site at Black Canyon or Boulder Canyon, if the dam site is to be used for any purpose other than the regulation of the waters of the Colorado River for navigable purposes, as an incident to the regulation of commerce on said river and such incidental purposes as might arise as a result of the construction of the dam for this primary purpose, and any attempt by Congress to accomplish such a purpose at the Black or Boulder Canyon Dam site by the authority of the Swing-Johnson bill is a pure, harmless thunderbolt, a brutum fulmen.

It is to be noted, however, that the Colorado River is not now being used for the transportation of persons or property or for the purchase, sale, and exchange of commodities, nor is there any demand at this time from any source that the river be made navigable for this purpose, and there is nothing to indicate that if the river was made navigable that it would be used for commerce.

The primary purpose of the Swing-Johnson bill is to apportion among the States of the Colorado River Basin the waters of the Colorado River and completely to exhaust the same for beneficial purposes and, in fact, to regulate the use of the water so that its flow shall be increased at certain seasons of the year, when the demand for domestic and irrigation purposes is highest, and to decrease the flow of the river at other seasons of the year so that the water may be conserved for domestic and irrigation purposes, even though such regulation were to render navigation on the river wholly impracticable. In order to accomplish this purpose the Colorado River compact in article 4 (a) provides:

> The Colorado River has ceased to be navigable for commerce.

TITLE OF THE STATES IN THE BEDS AND WATERS OF NAVIGABLE STREAMS

The several States of the Union are each primarily the proprietors of, and have the sovereignty over, the beds and waters of the navigable streams and watercourses within their respective borders, subject only to the rights of the Federal Government under the interstate commerce clause of the Constitution (par. 3, sec. 8, Art. I) and to the rights of the Federal Government as owner of the riparian lands (par. 2, sec. 3, Art. IV), which rights will hereafter be discussed.

In the case of Martin *v.* Waddell (16 Pet. 367), where the question of tidelands and tidewaters was involved, the Supreme Court of the United States makes this clear and comprehensive declaration:

> For when the Revolution took place the people of each State became themselves sovereign, and in that character hold the absolute right to all their navigable waters, and the soils under them, for their own common use, subject only to the rights since surrendered by the Constitution to the General Government.

The same doctrine was laid down by the court in the case of Pollard *v.* Hagan (3 How. 212), and it was held to apply to the newer States in as full a measure as to the original States of the Union. In this case the court concludes its opinion as follows:

> By the preceding course of reasoning we have arrived at these general conclusions: First, the shores of navigable waters and the soils under them were not granted by the Constitution to the United States, but were reserved to the States respectively; second, the new States have the same rights, sovereignty, and jurisdiction over this subject as the original States; third, the right of the United States to the public land and the power of Congress to make all needful rules and regulations for the sale and disposition thereof conferred no power to grant to the plaintiffs the land (tidewater land) in controversy.

In the case of Barney *v.* Keokuk (94 U. S. 324) Justice Bradley declares that the correct principles were laid down in the foregoing cases, and then adds:

> These cases related to tidewater, it is true; but they enunciate principles which are equally applicable to all navigable waters.

The rule laid down in the foregoing cases is reaffirmed and amplified with the citation of numerous authorities in the case of Shively *v.* Bowlby (152 U. S. 1).

In United States *v.* Holt State Bank (70 Law Ed. 213) the Supreme Court stated:

> The United States early adopted and constantly has adhered to the policy of regarding lands under navigable waters in acquired territory, while under its sole dominion, as held for the ultimate benefit of future States, and so has refrained from making any disposal thereof, save in exceptional instances when impelled to particular disposals by some international duty or public exigency. It follows from this that disposals by the United States during the territorial period are not lightly to be inferred and should not be regarded as intended, unless the intention was definitely declared or otherwise made very plain.

There is nothing in the enabling act, which granted statehood to Arizona, or in any legislation which was passed during the time that Arizona was a territory which disposed of any of the rights of the State of Arizona in the bed and banks and the use of the waters of the Colorado River at Boulder or Black Canyons.

CONGRESS GAVE ITS CONSENT TO THE STATES IN THE COLORADO RIVER BASIN TO DEPLETE THE FLOW OF THE RIVER AND RENDER IT NONNAVIGABLE IN THE UNITED STATES

The Congress of the United States first recognized the necessity for local customs to govern the use and appropriation of water in the semiarid Western States, when it adopted section 9 of the act of July 26, 1866 (14 Stat. 266; sec. 2339, Rev. Stats.). This section reads:

> That whenever, by priority of possession, right to the use of water for mining, agricultural, manufacturing, or other purposes, have vested and accrued and the same are recognized and acknowledged by the local customs, laws, and the decisions of the courts, the possessors and owners of such vested rights shall be maintained and protected in the same; and the right of way for the construction of ditches and canals, for the purposes aforesaid, is hereby acknowledged and confirmed.

Congress later adopted another provision (16 Stat. 217; sec. 2340, Rev. Stats.), which reads as follows:

> All patents granted or preemptions or homesteads allowed shall be subject to any vested and accrued water rights or rights to ditches and reservoirs used in connection with such water rights, as may have been acquired under or recognized by the preceding section.

Under the terms of the United States reclamation law the United States is required to obtain the consent of the States to use the lands and waters of the States before it may proceed with the erection of any dam for the purposes of utilizing the water for domestic, irrigation, or power purposes.

Section 8 of the United States reclamation act, Thirty-second Statutes, page 388 (1902), reads:

> That nothing in this act shall be construed as affecting or intending to affect or to in any way interfere with the laws of any State or Territory relating to the control, appropriation, use, or distribution of water used in irrigation, or any vested right acquired thereunder, and the Secretary of the Interior, in carrying out the provisions of this act, shall proceed in conformity with such laws, and nothing herein shall in any way affect any right of any State or of the Federal Government or of any landowner, appropriator, or user of water in, to, or from any interstate stream of the waters thereof: *Provided*, That the right to the use of water acquired under the provisions of this act shall be appurtenant to the land irrigated, and beneficial use shall be the basis, the measure, and the limit of the right.

The Federal water power act approved June 10, 1920, contains the following provisions:

> 9. (b) Satisfactory evidence that the applicant has complied with the requirements of the laws of the State or States within which the proposed project is to be located, with respect to beds and banks, and to appropriate diversion and use of water for power purposes, and with respect to the right to engage in the business of developing, transmitting, and distributing power, and in any other business necessary to affect the purposes of a license under this act.
>
> SEC. 27. That nothing herein contained shall be construed as affecting or intending to affect or in any way to interfere with the laws of the respective States relating to control, appropriation, or distribution of water used in irrigation or for municipal or other uses, or any vested right acquired therein.

It is contended, however, that Congress, when it passed these laws, did not surrender the authority to regulate commerce and navigation, and it is argued that in the case of the United States *v.* Rio Grande Irrigation Co. (174 U. S. 690), the Supreme Court, in passing upon the certain statutes relating to the use of water for mining and irrigation purposes, makes the declaration:

> To hold that Congress, by these acts, meant to confer upon any State the right to appropriate all the waters of the tributary streams

which unite into a navigable water course, and so destroy the navigability of that water course in derogation of the interests of all the people of the United States, is a construction which can not be tolerated. It ignores the spirit of the legislation and carries the statute to the verge of the letter and far beyond what under the circumstances of the case must be held to have been the intent of Congress (pp. 706–707).

Arizona contends that the decision is not applicable to the Colorado River because the use of the water for irrigation and navigation is incompatible on that river. The State contends that the destruction of navigation is exactly what was authorized and what has occurred in the Colorado River, and is what is proposed to be ratified by the Swing-Johnson bill.

The States have authorized the use of and are now using the entire normal low flow of the river for irrigation, mining, and domestic uses. It has been established that, four times during recent years, the entire low flow, of the Colorado River, has for several consecutive weeks, been diverted for irrigation and domestic use and that the bed of the river has been dry.

The Government of the United States has constructed dams on the main river and the tributaries for the diversion of water for irrigation purposes, which have contributed to the destruction of navigation on the Colorado River.

The States of Utah and Colorado have authorized, and the Government has consented to, the present annual diversion of 234,000 acre-feet of water in those States, from the Colorado River drainage basin, into other drainage basins. (See p. 173, S. Doc. No. 142; 67th Cong., 2d sess.)

The Government has constructed on the Colorado River and its tributaries the Strawberry and Gunnison tunnels, the Green River, Laguna, Roosevelt, Granite Reef, Coolidge, Ashurst-Hayden, and the Sacaton Dams, and it is also diverting water from the river and its tributaries for the irrigation of Indian lands and for other uses.

Numerous State and private irrigation projects have been constructed upon, and diversions have also been made for domestic, mining and other uses from, the Colorado River and its tributaries.

During the year 1902 the Secretary of State of the United States, in response to a communication from the Department of Justice, requested the International Water Boundary Commission, representing the United States, to investigate the subject of the alleged diversion of the waters of the Colorado River for irrigation purposes. The basic reason for the investigation was that protests had been filed which involved questions of treaties between the United States of America and the United States of Mexico respecting the navigation of the Colorado River.

The investigation made at that time established the fact that the river had been navigated, but that if the proposed diversion of water was made for the use of irrigation in the Imperial Valley the river would be rendered nonnavigable below the point of diversion, which was located within the United States, between the States of Arizona and California.

Following the investigation the irrigators in California were permitted to construct a system to divert water from the Colorado River and to send the same into Mexico and into the Imperial Valley in California.

On October 23, 1918, the Secretary of the Interior of the United States entered into a contract with the Imperial Valley Irrigation District to permit that district to use the Laguna Dam, which was constructed by the United States Bureau of Reclamation in connection with and for the benefit of the Yuma project, Arizona-California, to divert the waters of the Colorado River for use in the Imperial and Coachella Valleys in California. These valleys are outside of the drainage area of the Colorado River basin, and such diversion would cause the Colorado River below Laguna Dam to be practically dry.

The Swing-Johnson bill ratifies all of these diversions of water and ratifies the Colorado River compact, which declares that—

> Inasmuch as the Colorado River has ceased to be navigable for commerce, and the reservation of its waters for navigation would seriously limit the development of its basin, the use of its waters for purposes of navigation shall be subservient to the uses of such waters for domestic, agricultural, and power purposes. If the Congress shall not consent to this paragraph, the other provisions of this compact shall nevertheless remain binding.

The Colorado River compact authorizes the States of Colorado, Wyoming, Utah, and New Mexico to appropriate and to have the annual consumptive use of 7,500,000 acre-feet of water from the Colorado River system in perpetuity.

Article III (d) of the compact provides that the annual flow of the stream in the upper basin may be depleted entirely, provided that from the return flow:

> 3. (d) The States of the upper division will not cause the flow of the river at Lee Ferry to be depleted below an aggregate of 75,000,000 acre-feet for any period of 10 consecutive years reckoned in continuing progressive series beginning with the 1st day of October next succeeding the ratification of this compact.

The Colorado River compact authorizes the lower basin States, viz: Arizona, California, and Nevada, to appropriate and consume 8,500,000 acre-feet of water. The Swing-Johnson bill will enable California to take and consume at least 4,600,000 acre-feet of the waters apportioned by the compact to the lower basin and one-half of any water available for use which is not apportioned by the Colorado River compact.

It is therefore established that if navigation has not already been destroyed, the Colorado River compact, if applied, would destroy it, and the works authorized by the Swing-Johnson bill, if operated in conformity with all of the provisions of the bill, would render the stream nonnavigable.

NO RIPARIAN RIGHTS

A contention has been made that the Federal Government, in its capacity as the owner of public lands bordering on the Colorado River, has as the riparian owner the right to build a dam at Boulder or Black Canyon, use the water to develop power, and to control the appropriation of the waters of the river for the benefit of the public lands over the protest of Arizona.

The Supreme Court of the United States has stated:

> The technical ownership of the beds of navigable rivers in the United States is either in the States in which the rivers are situated, or in the riparian owners, depending upon the local law. (Chandler-Dunbar *v.* United States, 229 U. S. 53.)

The Supreme Court of the United States in the case of Harden *v.* Jordan (140 U. S. 371) has determined that—

> the limits and extent of the riparian ownership is governed by the law of the State in which the land is situated.

Justice Bradley, who delivered an opinion in this case (supra, 384) after discussing the question and citing numerous authorities, concludes as follows:

> We do not think it necessary to discuss this point further. In our judgment the grants of the Government for lands bounded on streams and other waters, without any reservation or restriction of terms, are to be construed as to their effect according to the law of the State in which the lands lie.

The case of Shively *v.* Bowlby (152 U. S. 1) approves of and adheres to this rule, and the following cases indorse and adhere to the rule: Barney *v.* Keokuk (94 U. S. 324); St. Louis *v.* Myers (113 U. S. 566); Packer *v.* Bird (137 U. S. 661); St. Louis *v.* Rutz (138 U. S. 226); Mitchell *v.* Smale (140 U. S. 406); Grand Rapids *v.* Butler (159 U. S. 87); Water Power Co. *v.* Water Commissioners (168 U. S. 349); Kean *v.* Calumet Canal Co. (190 U. S. 452); United States *v.* Chandler-Dunbar Co. (209 U. S. 447).

A declaration contained in the bill of rights adopted by the Territory of Arizona in 1864 recognized that local customs and laws, in addition to the decisions of the courts in the semiarid States of the West, should govern the appropriation and use of water. The section of the Territorial act follows:

> All streams, lakes, and ponds of water capable of being used for the purpose of navigation or irrigation are hereby declared to be public property and no individual or corporation shall have the right to appropriate them exclusively to their own private use, except under such equitable regulations and restrictions as the legislature shall provide for that purpose.

The State of Arizona has never recognized the common-law rule of riparian rights. The constitution of the State of Arizona contains the following provision:

> Arizona: The common-law doctrine of riparian water rights shall not obtain or be of any force or effect in the State. (Art. 17, sec. 1.) All existing rights to the use of any of the waters in the State for all useful or beneficial purposes are hereby recognized and confirmed. (Art. 17, sec. 2.)

The United States Supreme Court and the Supreme Court of Arizona, respectively, have sustained this principle in Boquillas Cattle Co. *v.* Curtis (213 U. S. 339) and in Clough *v.* Wing (2 Ariz. 371).

In Boquillas Land & Cattle Co. *v.* Curtis (213 U. S. 339) wherein the controversy was a question as to whether the owner of a tract of land in Arizona acquired by a Mexican land grant which had been confirmed by treaty was entitled to the use of water as a riparian right. Mr. Justice Holmes, for the court, decided against the riparian rights and said:

It is not denied that what is called the common-law doctrine of riparian rights, does not obtain in Arizona at the present date. (Rev. Stat., Ariz. 1887, sec. 3198). But the plaintiff contends that it had acquired such rights before that statutory declaration, and that it can not be deprived of them now. * * * They (the provisions relating to priority) simply follow what has been understood to be the law for many years (Clough v. Wing, 2 Ariz. 371). The right to use water is not confined to riparian proprietors * * *. Such a limitation would substitute accident for the rule based upon economic considerations, and an effort, adequate or not, to get the greatest use from all available land.

No State in the Colorado River basin, with the exception of California, either in its capacity as a Territory or as a State, has ever recognized the common-law rule of riparian rights. California has never recognized the riparian doctrine as it relates to that portion of the State bordering upon the Colorado River. The provisions of the constitutions of the several States relating to the appropriation and use of water, together with court decisions sustaining them are as follows:

Arizona: The common-law doctrine of riparian water rights shall not obtain or be of any force or effect in the State. (Art. XVII, sec. 1.) All existing rights to the use of any of the waters in the State for all useful or beneficial purposes are hereby recognized and confirmed. (Art. 17, sec. 2.) (Boquillas Cattle Co. v. Curtis, 213 U. S. 339; Clough v. Wing, 2 Ariz. 371.)

New Mexico: The unappropriated water of every natural stream, perennial or torrential, within the State of New Mexico, is hereby declared to belong to the public and subject to appropriation for beneficial use. In accordance with the laws of the State, priority of appropriation shall give the better right. (Sec. 3, art 16.) (Trombley v. Luterman, 6 N. Mex. 15.)

Wyoming: Water being essential to industrial prosperity, of limited amount, and easy of diversion from its natural channel, its control must be in the State which, in providing for its use, shall equally guard all the various interests involved. (Art. 1, sec. 31.)

The waters of all natural streams, springs, lakes, and other collections of still waters within the boundaries of the State are hereby declared to be the property of the State. (Art. 8, sec. 1.) (S. 728 and S. 1274, p. 482.) (Farm Investment Co. v. Carpenter, 9 Wyo. 110.)

Colorado: The waters of every natural stream not heretofore appropriated within the State of Colorado is hereby declared to be the property of the public and the same is dedicated to the use of the people of the State, subject to appropriation as hereinafter provided. (Art. 14, sec. 5.). (S. 728, S. 1274, p. 484.) (Yernker v. Nichols, 1 Colo., 551; Coffin v. Hand Ditch Co., 6 Colo., 443.)

California: The use of all water now appropriated or that may hereafter be appropriated for sale, rental, or distribution, is hereby declared to be a public use and subject to the regulations and control of the State in the manner to be prescribed by law. (Art. 14, sec. 1.) (S. 728 and S. 1274, p. 476.)

Utah: All existing rights to the use of any of the waters of this State for any useful or beneficial purposes are hereby recognized and confirmed. (Art. 17, sec. 1.) (S. 728 and S. 1274, p. 481.) (State v. Xalio (4575), Nov. 25, 1927; Stowell v. Johnson, 7 Utah, 215; 26 Pac. 290.)

The constitution of the State of Nevada is silent upon the use of public water, but the State Water Code of Nevada contains the following provision:

Nevada: All natural watercourses and natural lakes and the waters thereof which are not held in private ownership belong to the State and are subject to appropriation for beneficial uses. (Reno Smelting, Milling & Reduction Works v. Stevenson, 20 Nev. 269; 21 Pac. 317, 4 L. R. A. 60, 19 Com. St. Rep. 364.) (Walsh v. Massey, 26 Nev. 327.)

In the case of Walsh v. Massey (26 Nev. 327) Chief Justice Massey said:

And it has been held by this court that the doctrine of riparian rights is so unsuited to the conditions existing in this State of Nevada and is so repugnant in its operation to the doctrine of appropriation that it is not a part of the law and does not prevail here.

As the ownership of the beds of fresh water streams, navigable in fact, is one of the riparian rights, it follows that this right was rejected and the ownership of the bed of the Colorado River, at Boulder Canyon and Black Canyon, is vested in the States of Arizona and Nevada. It must necessarily follow that the United States has no right to the use of the bed and banks of the Colorado River at Boulder or Black Canyon as a riparian owner of public lands.

The State of Arizona has never conveyed the title to the bed and banks of the Colorado River, at Boulder or Black Canyon, and has never granted a permit, for the use of the water at either site, to anyone.

If the Federal Government did own riparian rights, the Supreme Court, in Barney v. Keokuk (944 U. S. 324) has held that—

with respect to such rights, we have held that the law of the State so declared by the Supreme Court, has control, as a rule, of property.

In Kansas v. Colorado (206 U. S. 92), the Supreme Court intimated that the National Government would not be able to interfere with the flowing waters on a navigable stream, for purposes of irrigation, because of the ownership of lands within the limits of the State, and the court said:

We do not mean that its (the National Government's) legislation can override State laws in respect to the general subject of reclamation.

The Federal Government has no right to utilize the bed and banks and water of the Colorado River at Black or Boulder Canyon, by virtue of any of the provisions contained in paragraph 6 of section 28 of the Arizona enabling act.

It is contended by proponents of the Boulder Canyon Dam bill that the Congress of the United States denied to the State of Arizona certain rights and prerogatives in the Colorado River by virtue of certain provisions in the enabling act which granted statehood to Arizona, and it is further contended that the State of Arizona renounced certain authority and rights in the Colorado River when that State adopted its constitution and accepted statehood on the conditions provided in the enabling act.

The section of the enabling act referred to, reads as follows:

Sec. 28, par. 6. There is hereby reserved to the United States and excepted from the operation of any and all grants made or confirmed by this act to said proposed State all land actually or prospectively valuable for the development of water power or power for hydroelectric use or transmission and which shall be ascertained and designated by the Secretary of the Interior within five years after the proclamation of the President declaring the admission of the State; and no land so reserved and excepted shall be subject to any disposition whatsoever of said State, and any conveyance or transfer of such land by said State or any officer thereof shall be absolutely null and void within the period above named; and in lieu of the land so reserved to the United States and excepted from the operation of any of said grants there be, and is hereby, granted to the proposed State an equal quantity of land to be selected from land of the character named and in the manner prescribed in section 24 of this act.

All that section 28, paragraph 6, of the Arizona enabling act does is to provide that certain lands, which the Secretary of the Interior was to designate prior to February 14, 1917, as actually or prospectively valuable for the development of water power or power for hydroelectric use or transmission, were not to pass to the State of Arizona under the operation of laws then in existence but were reserved as public lands by Congress and the State of Arizona was given other lands in lieu of the lands so retained.

The State did not forfeit any rights, authority, or sovereignty by its acts, nor did the Government acquire any new right, power, or authority over the Colorado River, its bed, and banks and waters, that it did not already have and possess.

The Congress of the United States in disposing of the public lands has consistently acted upon the theory that those lands, whether in the interior or on the coast, above high-water mark, may be taken up by actual occupants in order to encourage the settlement of the country; but that navigable waters and the soils under them, whether within or above the ebb and flow of the tide, shall be and remain public highways and, being generally valuable for public purposes of commerce, navigation, and fishery, and for improvements necessary to secure and promote those purposes, shall not be granted away during the period of Territorial government; but, unless in case of some international duty or public expediency, shall be held by the United States in trust for future States and shall vest in the several States when organized and admitted into the Union, with all powers and prerogatives appertaining to the older States in regard to such waters and soils within their respective jurisdictions; in short, shall not be disposed of piecemeal to individuals as private property, but shall be held as a whole for the purpose of being ultimately administered and dealt with for the public benefit by the State after it shall become a completely organized community.

Grants by Congress of portions of the public lands within a territory to settlers therein, though bordering on or bounded by navigable waters, convey of their own force no title or right below high-water mark and do not impair the title and dominion of the future State when created, but leave the question of the use of the shores by the owners of uplands to the sovereign control of each State, subject only to the rights vested by the Constitution of the United States. (Withers v. Buckley, 61 U. S., 20 How. 84.)

It must logically follow that if a grant by Congress of portions of the public lands within a Territory to settlers convey of their own force no title or right on navigable streams below high-water mark, the reservations made by the Secretary of the Interior, by virtue of the act of Congress, of public lands on a navigable stream above high-water mark do not of their own force reserve rights to the Federal Government below high-water mark.

It will be noted that section 28 of the Arizona enabling act reserves to the United States lands solely, and that nothing but land was so reserved or excepted from the operation of the act. But admitting for the sake of argument—which I do not concede or admit to be a fact—that the Federal Government did reserve certain rights in the bed and banks of the Colorado River, and that the State of Arizona did grant certain authority and rights to the Federal Government in the bed and banks of the Colorado River, Arizona, nevertheless, asserts and contends, and the record discloses, that so far as it relates to those portions of the Colorado River mentioned in the Swing-Johnson bill, in which it is proposed to build dams and hydroelectric power plants, that the Federal Government gained no right, as a result of the reservations in the Arizona enabling act, in those sections of the river, because it did not exercise such right and authority by designating lands at the Black Canyon Dam site prior to February 14, 1917.

The Black and Boulder Dam sites in the Colorado River will utilize, as nearly as may be approximated, lands which when surveyed will be in townships 29, 30, 31, and 32 north, range 23 west, and in townships 29 and 32 north, range 22 west.

The only one of these sections designated and reserved, prior to February 14, 1917, by the Secretary of the Interior, was township 32 N, range 22 W. Therefore, even though the assumption be granted that the Federal Government acquired certain rights under the provisions of the Arizona enabling act and the designation of land by the Secretary of the Interior, in other sections along the river, it did not obtain any of these rights at the Black Canyon Dam site in which it is proposed to construct the proposed dam and power plants.

Any filings made by the Reclamation Service or any other agency of the Federal Government subsequent to February 14, 1917, are on the same basis and subject to the same conditions and reservations as filings of a similar nature in any of the other States.

The Federal Government has no special right to utilize the bed and banks and the water of the Colorado River at Black Canyon by virtue of any filings made on the said river under the provisions contained in paragraph 7, section 20, and paragraph 5, section 28, of the Arizona enabling act.

It is contended that by virtue of certain reservations in the enabling act which granted statehood to Arizona and which were accepted by Arizona, that that State consented to certain conditions which will permit the Federal Government to ignore the lack of consent by Arizona, and over the protests of that State, to construct a dam at Black Canyon under the provisions of the Swing-Johnson bill, which purports to be an amendment to the Federal reclamation act.

The provisions of the Arizona enabling act, which it is claimed gives this authority to the Federal Government, are as follows:

SEC. 20, par. 7. That there be and are reserved to the United States, with full acquiescence of the State, all rights and powers for the carrying out of the provisions by the United States of the act of Congress entitled "An act appropriating the receipts from the sale and disposal of public lands in certain States and Territories to the construction of irrigation works for the reclamation of arid lands," approved June 17, 1902, and acts amendatory thereof or supplemental thereto, to the same extent as if said State has remained a Territory.

SEC. 28, par. 5. * * * The said State, at the request of the Secretary of the Interior, shall from time to time relinquish such of its lands to the United States as at any time are needed for irrigation works in connection with any such Government project.

The power to acquire territory, either by conquest or by treaty, is vested by the Constitution in the United States. The territory which constitutes the States of Arizona and Nevada was obtained from the Republic of Mexico.

The land grants from Mexico to the United States of the vast tract of territory which constitutes the State of Arizona vested in the United States every shred of proprietary and sovereign title that the most favored nation—under like circumstances—could acquire. It was, nevertheless, never a part of our scheme of government that such conditions should be perpetual.

When Arizona was formed out of the territory acquired from Mexico and statehood was granted to her, the State was admitted into the Union on an equality with all of the other States. The law so provides and the proclamation of the President so states.

When a part of the territory of the United States is included within a State the relation of the State to that territory becomes that of a sovereign antecedent and superior to proprietary right. The sovereign right of dominion, which temporarily resided in the United States, is assumed by the State, not transferred to it. This sovereign right of dominion over persons and property exists in every State without qualification, except as modified by the limitations of the Federal Constitution.

The authority of the United States to acquire and to hold land within a State is that granted by clause 17, section 8, Article I, and clause 2, section 3, Article IV, of the Constitution.

The power over the territory or other property of the United States is a granted power and the question, therefore, is not so much what does the Federal Government possess, but what did the people and the States intend to give. Did the people and the States surrender jurisdiction and control of those elements of material prosperity without which State development would be arrested and State ambitions defeated? Did Arizona, when she consented to the provisions in the enabling act which granted statehood to her, agree to divest herself of the control of these elements and resources within the State upon which the very life of the State depends? Arizona declares she did not so intend.

The United States Circuit Court of Appeals, for the District of Idaho, in the case of the Twin Falls Canal Co. (Ltd.) *v.* Foote, et al. (192 Fed. 583, quoting from p. 594) states:

In the construction of works for the irrigation of arid public lands under the reclamation act, June 17, 1902, chapter 1093, Thirty-second Statutes, 388 (U. S. Comp. St. Supp. 1909, p. 596), the United States is not exercising a governmental function nor even a strictly public function, but is promoting its proprietary interests, and such advantage as arises therefrom to the public at large is material, and not governmental.

The reservations made by the Congress, in the Arizona enabling act, if valid, relate solely to the use, by the Federal Government, of lands within the State of Arizona, both public and State, for the sole purpose of enabling the Government to protect its proprietary interests in the public lands under the authority vested in Congress by clause 17, section 8, Article I and clause 2, section 3, Article IV of the Constitution of the United States.

The United States Supreme Court, in discussing the control vested in the Federal Government over public lands in the case of Kansas *v.* Colorado (206 U. S. 46), stated:

The full scope of this paragraph has never been definitely settled. Primarily, at least, it was a grant of power to the United States of control over its property. * * * But clearly it does not grant to Congress any legislative control over the States, and must, so far as they are concerned, be limited to authority over property belonging to the United States within their limits. * * * The powers affecting the internal affairs of the States not granted to the United States by the Constitution nor prohibited by it to the States are reserved to the States, respectively, and all powers of a national character which are not delegated to the National Government by the Constitution are reserved to the people of the United States.

Arizona contends that the reservation in section 20, paragraph 7, of the Arizona enabling act, must be construed in accordance with the provisions of the reclamation act as it was on February 14, 1912; that it does not apply to the projects authorized in the Swing-Johnson bill; and that even if the projects, authorized by the Swing-Johnson bill, are determined to be reclamation projects, that the Federal Government must comply with the provisions of the reclamation act; that the provisions of section 28, paragraph 5, of the Arizona enabling act, relate solely to lands, and was not intended to and does not affect the control of the water and of the bed and banks of the Colorado River by the State of Arizona.

Arizona contends that she did not barter away any of her constitutional and sovereign rights when she accepted the provisions of the enabling act; that the reservations are limited by the provisions of the reclamation act as of February 14, 1912; and that any rights which the Government may have reserved in the Arizona enabling act must be predicated upon the provisions of the reclamation act as of that date.

One of the provisions in the Federal reclamation act reads:

SEC. 8. That nothing in this act shall be construed as affecting or intended to affect or to in any way interfere with the laws of any State or Territory relating to the control, appropriation, use, or distribution of water used in irrigation, or any vested right acquired thereunder, and the Secretary of the Interior, in carrying out the provisions of this act, shall proceed in conformity with such laws, and nothing herein shall in any way affect any rights of any State or of

the Federal Government or of any landowner, appropriator, or user of water in, to, or from any interstate stream or the waters thereof: *Provided*, That the right to the use of water acquired under the provisions of this act shall be appurtenant to the land irrigated and beneficial use shall be the basis, the measure, and the limit of the right.

If the reservations made by Congress in the Arizona enabling act are valid they retain the right to the Federal Government to utilize the bed and banks and the waters of the Colorado River at Black or Boulder Canyon subject to and in accordance with the provisions of section 8 of the reclamation act.

It is conceded that the Federal Government, under the provisions of section 3 of the reclamation act, may make first-form withdrawals of public lands, which are required for irrigation works, and that they have the force of legislative withdrawals and are effective to withdraw from other disposition all lands within the designated limits to which a right has not vested. The withdrawals of public lands by the Secretary of the Interior, in townships 29, 30, 31, and 32, range 23 west, and in township 29, range 22 west, are probably valid withdrawals of the lands bordering on the Black Canyon Dam site under the reclamation act. Arizona, however, contends that the Government filings are subject to all of the conditions provided in the reclamation act including the provisions of sections 5 and 8 thereof.

The very life of this Republic depends upon the preservation of the sovereign rights of the States. Local self-government is the basis of democratic institutions. If the rights of States are destructible the Union is destructible. If it should be found that the Federal Government, under the thin guise of irrigating public lands, may seize the property of Arizona over her protest and embark upon a project to supply cheap electrical energy and municipal water to California cities and irrigate privately owned lands in that State, then there is little left of the rights of the individual States.

The erection of a State and its entry into the American Union is the most symmetrical and the most beautiful creation of political authority known to mankind. Let us not, however, whilst contemplating the beauty of the entry of a State into the Federal Union, forget that the States existed anterior to and created the Federal Union. Some of our States were flourishing in their authority, majesty, and strength before the Federal Union was created. Indeed, in order to have a Union the States voluntarily surrendered a portion, but not all, of their authority, jurisdiction, and power. Therefore, much as I am inclined to eulogize the Federal Union, whose great dome fills and glorifies the world, I never forget that the Union's strength, permanency, and endurance rest upon the States themselves.

We have 48 sovereign States, each one a giant column supporting the Union. Destroy one of the States, or weaken its power, and the same thing will happen to the Federal Union that happens to a temple when one of the columns distributing the temple's weight is removed or weakened. Remove, destroy, impair one of the columns and the whole structure is in danger of falling into disrepair and finally into ruin.

Therefore we should remember that it is the State of Arizona and not the Federal Government that is furnishing the potentiality of this mysterious thing we call electricity, and that furnishes the fall of the river. Electricity, the great force of the Almighty, which is always on the road and which never grows weary; electricity, that invisible, mysterious, and powerful force, will be furnished by the State of Arizona and not by the Federal Government.

Congress has provided for payments to the States in lieu of taxes in other instances, as, for example, in the agricultural appropriation act of May 23, 1908 (35 Stat. 260), which directs the Secretary of Agriculture to turn over one-quarter of the total receipts from the national forests to the States in which the same are located.

That hereafter 25 per cent of all money received from each forest reserve during any fiscal year, including the year ending June 30, 1908, shall be paid at the end thereof by the Secretary of the Treasury to the State or Territory in which said reserve is situated, to be expended as the State or Territorial legislature may prescribe for the benefit of the public schools and public roads of the county or counties in which the forest reserve is situated: *Provided*, That when any forest reserve is in more than one State or Territory or county the distributive share to each from the proceeds of said reserve shall be proportional to its area therein.

In addition the act of March 4, 1913 (37 Stat. 843), directs that a tenth of these same receipts shall be devoted to the construction of roads and trails within the forest reserves of the States where collected, so that the States actually benefit to the extent of 35 per cent of the gross Federal income from the national forests.

That hereafter an additional 10 per cent of all moneys received from the national forests during each fiscal year shall be available at the end thereof, to be expended by the Secretary of Agriculture for the construction and maintenance of roads and trails within the national forests in the States from which such proceeds are derived; but the Secretary of Agriculture may, whenever practicable, in the construction and maintenance of such roads, secure the cooperation or aid of the proper State or Territorial authorities in the furtherance of any system of highways of which such roads may be made a part.

The act to promote the mining for coal, phosphate, oil, oil shale, gas, and sodium on the public domain (41 Stat. 450) specifically directs that 37½ per cent of all royalties collected shall be paid to the State within which the leased lands are located. Section 35 of that act reads:

SEC. 35. That 10 per cent of all moneys received from sales, bonuses, royalties, and rentals under the provisions of this act, excepting those from Alaska, shall be paid into the Treasury of the United States and credited to miscellaneous receipts; for past production 70 per cent, and for future production 52½ per cent of the amounts derived from such bonuses, royalties, and rentals shall be paid into, reserved, and appropriated as a part of the reclamation fund created by the act of Congress, known as the reclamation act, approved June 17, 1902, and for past production 20 per cent, and for future production 37½ per cent of the amounts derived from such bonuses, royalties, and rentals shall be paid by the Secretary of the Treasury after the expiration of each fiscal year to the State within the boundaries of which the leased lands or deposits are or were located, said moneys to be used by such State or subdivisions thereof for the construction and maintenance of public roads or for the support of public schools or other public educational institutions, as the legislature of the State may direct: *Provided*, That all moneys which may accrue to the United States under the provisions of this act from lands within the naval petroleum reserves shall be deposited in the Treasury as "Miscellaneous receipts."

The same principle is recognized in the Federal water power act of June 10, 1920 (41 Stat. 1072), from which this provision is quoted:

SEC. 17. That all proceeds from any Indian reservation shall be placed to the credit of the Indians of such reservation. All other charges arising from licenses hereunder shall be paid into the Treasury of the United States, subject to the following distribution: Twelve and one-half per cent thereof is hereby appropriated to be paid into the Treasury of the United States and credited to "Miscellaneous receipts"; 50 per cent of the charges arising from licenses hereunder for the occupancy and use of public lands, national monuments, national forests, and national parks shall be paid into, reserved, and appropriated as a part of the reclamation fund created by the act of Congress known as the reclamation act, approved June 17, 1902; and 37½ per cent of the charges arising from licenses hereunder for the occupancy and use of national forests, national parks, public lands, and national monuments, from development within the boundaries of any State shall be paid by the Secretary of the Treasury to such State; and 50 per cent of the charges arising from all other licenses hereunder is hereby reserved and appropriated as a special fund in the Treasury to be expended under the direction of the Secretary of War in the maintenance and operation of dams and other navigation structures owned by the United States or in the construction, maintenance, or operation of headwater or other improvements of navigable waters of the United States.

To sustain the right of the Federal Government to dispose of water and surplus power incidentally created in the course of improving the navigability of a stream, reliance is placed upon three decisions of the Supreme Court; i. e., in the cases of Kaukana Water Power Co. *v.* Green Bay & Mississippi Canal Co. (142 U. S. 254); Green Bay, etc., Co. *v.*, Patten Co. (172 U. S. 58); and Chandler *v.* Dunbar (229 U. S. 53).

The case first cited is not in point. The right of the Federal Government to sell or dispose of incidentally created surplus electrical energy or water power was not involved.

Briefly, the facts in this case were: Congress granted public lands to the future State of Wisconsin for the improvement of the navigation of the Fox and Wisconsin Rivers. The State accepted the grant and undertook the work of improving the Fox River, reserving to itself all water powers created and appurtenant to such improvement, "subject to future action of the legislature." Unable to complete the work, the State incorporated and transferred to an improvement company the incomplete work, vesting in the company complete title to all the improvements, water powers to be created, rights, powers, and franchises. The improvement company mortgaged the property, was unable to meet its indebtedness, the mortgage was foreclosed, and complete title passed under foreclosure sale to the Green Bay & Mississippi Canal Co., the appellee.

This company in turn became seized in fee of all the improvements and all the appurtenant rights, powers, and franchises. Finding the operation of the dam and canal unprofitable, this company in turn sold the improvements to the United States Government, reserving, however, to itself the water power created by the dam and the use of surplus waters not required for purposes of navigation. Another company, claiming the right as a riparian owner, thereafter attempted to draw water from the pond formed by the dam, and thus deprive the Green Bay Co. of its use, control, and dominion over it. The Supreme Court of Wisconsin directed an injunction against the intruding company, and the case went to the Supreme Court of the United States on the ground that it involved the validity of a State statute, because repugnant to the Constitution of the United States. Mr. Justice Brown, for the court, among other things, said (p. 272):

With respect to such rights (riparian rights) we have held that the law of the State, as declared by its supreme court, is controlling as a rule of property. (Barney *v.* Keokuk, 94 U. S. 324, etc.)

Upon the question as to the validity of the State statute he said (p. 273):

But if, in the erection of a public dam for a recognized public purpose, there is necessarily produced a surplus of water, which may properly be used for manufacturing purposes, there is no sound reason why the State may not retain to itself the power of controlling or disposing of such water as an incident of its right to make such an improvement.

There is indeed no sound reason for denying such a right to the State. Such a right is entirely consistent with the doctrine of the State's dominion and sovereignty over the flowing waters of the navigable streams within its borders. But there is no word in the entire opinion in regard to the power of the Federal Government to assert and reserve such a right, and certainly there can be no parity in application of the construction of a rule dealing with the reserved rights of the State to the limited constitutional grants to the Federal Government. What there is sound reason for conceding to the State, there is, under the circumstances, equally as sound reason for denying to the Federal Government. The first proposition from the report quoted supra gains no support from the case cited.

The other case, that of Green Bay, etc., Canal Co. *v.* Patten Paper Co. (172 U. S. 58), is another suit against the same company as above. In this suit the right of the United States to control and dispose of the surplus waters created by the improvement to navigation heretofore described was brought directly into question. As said by Mr. Justice Shiras for the court (pp. 68–69):

Whether the water power, incidentally created by the erection and maintenance of the dam and canal for the purposes of navigation in Fox River, is subject to control and appropriation by the United States, owning and operating those public works, or by the State of Wisconsin, within whose limits Fox River lies, is the decisive question in this case.

Upon the undisputed facts contained in the record we think it clear that the canal company is possessed of whatever rights to the use of this incidental water power that could be validly granted by the United States.

The court then reviews the history of the whole enterprise, namely, the granting of land by act of Congress to the future State of Wisconsin for the express purpose of the improvement of the navigation of the river; the acceptance of the grant by the legislature of the State and the accompanying express reservation of title in the State to the water power incidentally created "subject to the future action of the legislature"; the act authorizing the relinquishment of such water powers to the persons undertaking the work of improvement; the act creating a corporation authorized to undertake the work and take all the powers, rights, and franchises possessed by the State; the failure of the company so created, foreclosure of the mortgage, and acquirement of all its property, rights, and powers at the sale by purchasers, who were incorporated under another act of the legislature, specifically investing them with such rights, powers, franchises, and so forth; the sale by this last company (appellant in this case) of all the property to the United States Government, under an act of the Legislature of Wisconsin authorizing the sale and an act of Congress providing for the purchase, and the reservation by the company in its conveyance of title to the personal property, water powers, and appurtenances. With reference to this reservation by the company, the court said (p. 80):

The substantial meaning of the transaction was, that the United States granted to the canal company the right to continue in the possession and enjoyment of the water powers and the lots appurtenant thereto, subject to the rights and control of the United States as owning and operating the public works, and that the United States were credited with the appraised value of the water powers and appurtenances and the articles of personal property. The method by which this arrangement was perfected, namely, by a reservation in the deed, was an apt one, and quite as efficacious as if the entire property had been conveyed to the United States by one deed, and the reserved properties had been reconveyed to the canal company by another.

So far, therefore, as the water powers and appurtenant lots are regarded as property, it is plain that the title of the canal company thereto can not be controverted; and we think it is equally plain that the mode and extent of the use and enjoyment of such property by the canal company fall within the sole control of the United States. At what points in the dam and canal the water for power may be withdrawn, and the quantity which can be treated as surplus with due regard to navigation, must be determined by the authority which owns and controls that navigation. In such matters there can be no divided empire.

Evidently questioning the inherent right of the National Government under the Constitution to dispose of this surplus water power by virtue of its ownership of the dam, the court adopted the fiction of transfer and retransfer, so that the chain of title might be complete and a foundation laid for the Government's claim of authority to dispose of the surplus water. An abstract of the title would begin then with the acknowledged ownership by the State of the entire property, including the right to control and dispose of the surplus water power, and continuing, through the transfer by the State of its title and all appurtenant rights and powers to the first company; the foreclosure sale under mortgage and purchase by the second company, vesting it in turn with the complete title and all appurtenant rights and powers; the transfer by the second company to the national company of its title and all appurtenant rights and powers, all these transfers being duly authorized by acts of the Wisconsin Legislature; and finally the retransfer of the right to the use and enjoyment of such water powers by the Government to the second company, but a retention of all other property conveyed, including whatever power of control may have vested in the company by the State. As Mr. Justice Shiras says (p. 76):

We have here the case of a water power incidental to the construction and maintenance of a public work and, from the nature of the case, subject to the control of the public authorities, in this instance the United States.

And, at page 79:

The legal effect and import of the sale and conveyance by the canal company were to vest absolute ownership in the improvement and appurtenances in the United States, which proprietary rights thereby became added to the jurisdiction and control that the United States possessed over the Fox River as a navigable river.

In other words, the United States bought the right to dispose of this surplus water power. It never possessed it under the commerce clause of the Constitution giving it control of the navigation of the river. It was a proprietary right, coming down by regular conveyance from the State of Wisconsin. The National Government always had the right under the Constitution to prevent the State of Wisconsin, or its successors in title to this dam and appurtenances, from destroying or impairing the navigability of the river by an improvident diversion of the flowing water, but it never had the right, until it acquired it by purchase, of disposing of the surplus water power so created, and the court does not say it did. The State had such a right, and the court in the first case, supra, specifically recognized not only its right but its power to dispose of it.

So far as the authority of the National Government in the premises is concerned, what this case really does decide, and that is not now an open question, and was not so then, is, that the National Government has plenary power to maintain the navigability of streams uninterrupted, and further, that in the exercise of that power, it can determine at what points in its dams erected in aid of navigation water may be withdrawn, the quantity that may be withdrawn so far as it affects the question of navigability, and all other matters affecting that question solely. As is said by the court (p. 80): "In such matters there can be no divided empire." The power to sell surplus water incidentally created by improvements in aid of navigation is not given the National Government, in terms at least, by the Constitution.

The sole and exclusive right of the States to control the disposition of the flowing waters within their boundaries, limited only by nonimpairment of the riparian rights (under the State system) of the Government as an actual owner of the lands, and noninterference with the maintenance and improvement of the navigation of streams, has been too repeatedly and too strongly

confirmed by the Supreme Court to be now questioned, and this reserved and valuable right would be seriously impaired—sometimes, perhaps, entirely destroyed—if the National Government, under the guise of aiding navigation, could exercise a precisely similar but paramount right at will. Here, too, there should be "no divided empire." The National Government has the undoubted power to see to it that the navigability of streams is maintained when they are in fact navigable, and that right is granted to it by the Constitution of the United States. The State has the undoubted right to control the disposition of the waters within its limits, subject only to the limitations stated, and that right has been repeatedly confirmed by the Supreme Court. Neither should seek to invade the province of the other. In Kansas *v.* Colorado (206 U. S. 88) Mr. Justice Brewer said:

> Yet while so construed—that is, broadly—it still is true that no independent and unmentioned power passes to the National Government or can rightfully be exercised by the Congress.

The power to seize upon and dispose of the flowing waters of a State would be both independent and unmentioned. Assertion of the existence of such power under the second paragraph of section 3, of Article IV of the Constitution, providing "The Congress shall have power to dispose of and make all needful rules and regulations respecting the territory or other property belonging to the United States," etc., was made by counsel for the United States Government intervening, apparently, upon the theory that the National Government, being a large owner of arid lands in the Western States, might enter into a general scheme of reclamation, and, consequently, had an interest in the controversy between the States as to the disposal of the waters of the Arkansas River, the boundary between them. The contention of the Government met with no favor, the court stating emphatically that no such power had been granted and none could be exercised. Conceding, however, that so far as its own lands were concerned, the National Government had power to make all needful rules and regulations, the court materially qualified this decision by adding:

> We do not mean that its legislation can override State laws in respect to the general subject of reclamation. (Ib. p. 92.)

THE CHANDLER-DUNBAR CASE

In the United States *v.* Chandler-Dunbar Co. (229 U. S. 53), the act of Congress, March 3, 1909, declared that a public necessity existed for the absolute control of the waters of the St. Marys River for purposes of navigation.

The ownership in fee simple absolute, was acquired by the United States of all lands and property of every kind and description throughout the entire length of the St. Marys River, within the State of Michigan, a riparian State, necessary for the purposes of the navigation of the waters of the river and the United States Government compensated the owners for this property.

The State of Michigan, when it was admitted into the Union, acquired title to the bed of the St. Marys River. Under the law of that State, conveyance of a tract of land upon a navigable river, carried the title to the middle thread. The technical title became vested in the Chandler-Dunbar Co. and included the bed of the river opposite its upland on the bank to the middle thread of the stream, which was the boundary line at that point between the United States and the Dominion of Canada. The Federal Government when it acquired, by purchase, the property of the Chandler-Dunbar Co., became the proprietor of and acquired all of the rights of that company in the property in question.

The court in the Chandler-Dunbar case stated:

> The main purpose of the act of 1909 was to clear the way for generally widening and enlarging facilities for the ever-growing commerce of the Great Lakes. The act, therefore, looks to the construction of one or more canals and locks paralleling those in use and directs a survey "to ascertain and determine the proper plan * * * for constructing in the rapids * * * a filling basin or forebay from which the ship locks may be filled" (p. 67).
>
> That Congress did not act arbitrarily in determining that "for the purposes of navigation of said waters and the waters connected therewith," the whole flow of the river should be devoted exclusively to that end, is most evident when we consider the character of this stream and its relation to the whole problem of lake navigation (p. 66).

The court then analyzed the character of the stream, the fall of the river, the turbulent nature of the water, the influence of the outflow upon Lake Superior, the necessity of maintaining water levels, and directed attention to the fact—

> that millions of public money have already been expended in the construction of canals and locks by this Government upon the American side and by the Canadian Government upon its own side of the rapids, as a means by which water craft may pass around the falls and the rapids in the river. The commerce, using these facilities, has increased by leaps and bounds. The first canal had hardly been finished before it became inadequate. (Ibid., p. 67.)

In the Chandler-Dunbar case, the court was careful to determine the findings of fact and law regarding the development of the river which was undertaken by the Federal Government. The court, with great pains, set out in detail the importance of the improvement of the navigation facilities of the river as an aid to the growing and important commerce thereon.

The court also at great length traced the title and ownership of the bed of the river and of the adjacent lands and it determined that when the United States became the riparian owner, in a riparian-law State, of the shore and appurtenant submerged land, by right of purchase, the United States owned in fee the property right in the river as a rule of law of the State of Michigan.

The United States constructed works in connection with navigation on the St. Mary's River which made available surplus water which could be used for the development of hydroelectric power, which the Government leased to private consumers.

Mr. Justice Lurton, speaking for the court (ibid. p. 73) on the question of the rights of the Government to deal with property of the character here under consideration, said:

> If the primary purpose is legitimate, we can see no sound objection to leasing any excess of power over the needs of the Government. The practice is not unusual in respect to similar public works constructed by State governments. In Kaukauna Co. *v.* Green Bay, etc. Canal (142 U. S. 254, 273), respecting a Wisconsin act to which this objection was made, the court said:
>
> "But if, in the erection of a public dam for a recognized public purpose, there is necessarily produced a surplus of water, which may properly be used for manufacturing purposes, there is no sound reason why the State may not retain to itself the power of controlling or disposing of such water as an incident of its right to make such improvement. Indeed, it might become very necessary to retain the disposition of it in its own hands, in order to preserve at all times a sufficient supply for the purposes of navigation. If the riparian owners were allowed to tap the pond at different places, and draw off the water for their own use, serious consequences might arise, not only in connection with the public demand for the purposes of navigation, but between the riparian owners themselves as to the proper proportion each was entitled to draw—controversies which could only be avoided by the State reserving to itself the immediate supervision of the entire supply. As there is no need of the surplus running to waste, there was nothing objectionable in permitting the State to let out the use of it to private parties, and thus reimburse itself for the expenses of the improvement."

The court did not find that the Government had authority to engage in the production and sale of hydroelectric energy for commercial purposes. It acquired the right to dispose of this surplus power as the proprietor of the riparian lands. It will be observed that the court specifically stated that the rights of the Government must rest upon the fact that "the primary purpose was legitimate," viz, navigation.

The legal effect of the sale and conveyance by the riparian owners were to vest absolute ownership in the improvement and appurtenances in the United States, which proprietary rights thereby became added to the jurisdiction and control that the United States possessed over the St. Marys River as a navigable river.

In other words, in addition to the unquestioned right of the Federal Government to improve the river to aid the rapidly increasing commerce thereon, the United States bought the right to dispose of the surplus water power. It never possessed it under the commerce clause of the Constitution, giving it control of the navigation of the river. It was a proprietary right, coming down by regular conveyance from the State of Michigan. The court did not recognize any right in the Federal Government to engage in the development and sale of hydroelectric power for commercial purposes, even in its capacity as a proprietor. It simply recognized the right of the Federal Government as a proprietor to dispose of certain surplus power which is developed as incidental to the primary development—the improvement of the river for navigation as an incident to facilitating commerce thereon.

MUSCLE SHOALS

The construction of the Wilson Dam at Muscle Shoals was authorized by the President of the United States on February 23, 1918, pursuant to the act of Congress of June 3, 1916, chapter 134, section 124, Thirty-ninth Statutes, pages 166 and 215 (see U. S. C., title "War," sec. 79), known as the national defense

act. Under the terms of this act the President was empowered to make investigation for the purpose of determining the—

best, cheapest, and most available means for the production of nitrates and other products for munitions of war * * * to designate for the exclusive use of the United States * * * such site or sites, upon any navigable or nonnavigable river or rivers or upon the public lands, as in his opinion will be necessary for carrying out the purposes of this act; and * * * to construct, maintain, and operate, at or on any site or sites so designated, dams, locks, improvements to navigation, power houses, and other plants and equipment * * * necessary or convenient for the generation of electrical or other power and for the production of nitrates or other products needed for munitions of war and useful in the manufacture of fertilizers and other useful products.

Section 124 of the national defense act of June 3, 1916, supra, relates not only to national defense and the production of materials needed in time of war, but provides for the improvement of navigation. Either is, of course, a national purpose. Legislation of this character would be expected to be broad and comprehensive. The act is so.

It gives the President large discretionary powers in the designation of suitable places for the erection of such plants as in his judgment are necessary in the effectuation of the purposes of the act. It gives authority to construct, maintain, and operate dams, locks, improvements to navigation, power houses, and other plants and equipment for the generation of electric or other power, and for the production of nitrates and other products needed for munitions of war. Paragraph 3 of section 124 reads:

The products of such plants shall be used by the President for military and naval purposes to the extent that he may deem necessary, and any surplus which he shall deem is not required shall be sold and disposed of by him under such regulations as he may prescribe.

The Muscle Shoals legislation is not a case where the Government has entered upon the business of generating power for commercial uses. It is a case where the Government, under its constitutional powers, has entered upon the prosecution of a work of national concern, in a time of war, relating to national defense and the improvement of navigation, in which a surplus product is created in time of peace which can be disposed of to aid agriculture.

Whether the State of Alabama reserved any rights in the surplus water power at Muscle Shoals has not as yet been determined by the Supreme Court. That State, however, contends that it has a right to derive a revenue from power developed at Muscle Shoals which is sold for commercial purposes.

THE TAXATION BY THE STATES OF HYDROELECTRIC POWER PRODUCED AT THE BOULDER DAM

The Federal Government has no authority, under the Constitution, to generate electric current primarily for commercial uses. It is assumed for the basis of this discussion that, because of the many and complex questions which are involved in Senate bill 728, that the States of Arizona and Nevada would waive the question of the right of the Government to generate and sell power for commercial purposes at Black Canyon or Boulder Dams on the Colorado River, if the interests of those States are recognized and protected in the pending bill.

The States of Arizona and Nevada have a twofold interest at Black and Boulder Canyons. First, they own the bed and banks of the river. Second, they have the sole authority to grant an easement or usufruct, for water-power purposes, to and in the water, which will be stored at that site, for the development of power. These States would have authority to impose a tax upon the usufruct to and in the water.

The United States Supreme Court, in Van Brocklin *v.* Tennessee (117 U. S. 150, 155) stated:

"All subjects over which the sovereign power of a State extends are objects of taxation, but those over which it does not extend are upon the soundest principles, exempt from taxation. The sovereignty of a State extends to everything which exists by its authority or is introduced by its own authority or which is introduced by its permission, but it does not extend to those means which are employed by Congress to carry into execution power conferred upon that body by the people of the United States.

The sovereign power of the States extends to the appropriation, the use, and control of the public waters and lands underlying navigable waters and the banks thereof, except as to the paramount right of the Federal Government to control the stream for navigation as an incident to facilitating commerce on the stream, and there is no evidence that anyone has attempted to justify the development of the stream for navigation.

The taxing power of a State is one of its attributes of sovereignty, and where there has been no compact with the Federal Government or cession of jurisdiction for the purpose specified in the Constitution this power reaches all the property and business within the State which are not properly denominated the means of the General Government. (Van Brocklin *v.* Tennessee, 117 U. S. 176, quoting Nathan *v.* Louisiana, 8 How. 73, 82; see also Society for Savings *v.* Coite, 6 Wall. 594, 605; State Tonnage Tax cases, 12 Wall. 204, 224; Ward *v.* Maryland, 12 Wall. 418, 427; Transportation Company *v.* Wheeling, 99 U. S. 273, 279; see also South Car. *v.* United States, 199 U. S. 437, in particular, the minority opinion; Husler *v.* Thomas Collory Co., 260 U. S. 245; Oline Iron Works *v.* Lord, 262 U. S. 172; Lake Superior Mine Co. *v.* U. S., 211 U. S. 577.)

The Supreme Court in United States *v.* Bridge Company (6 McLean 515, pp. 531, 532) stated:

In the admission of any States into the Union compacts were entered into with the Federal Government that they would not tax the lands of the United States. This implies that the States had power to tax such land if unrestrained by compact.

In United States *v.* Bridge Co. (ibid. 532) the court stated:

Within the limits of a State, Congress can, in regard to the disposition of public lands and their protection, make all needful rules and regulation, but beyond this it can exercise no other acts of sovereignty which it may not exercise in common over the lands of individuals. A mode is provided for the cession of jurisdiction when the Federal Government purchased a site for a military post, a customhouse, and other public buildings; and if this mode be not pursued, the jurisdiction of the State over the ground purchased remains the same as before the purchase. This, I admit, is not a decided point, but I think the conclusion is maintainable by the deductions of constitutional law.

The States have authority to establish such rules of property for themselves as they deem expedient, relative to the ownership of the beds and banks of navigable streams subject to the authority of Congress to control navigation in the interest of commerce. (27 R. C. L. 1369, 1072, and cases cited.)

That for the purpose of its policy, the State has legislative control, exclusive of Congress, within its territory, of all persons, things, and transactions of strictly internal concern. (Bowman *v.* Chicago & N. R. Co. 25 U. S. 465, 493.)

Assuming that a State may divest itself of its control and dominion over the bed and banks and the use of the waters of the stream, and that the United States may acquire a property right in the bed and banks of a stream and the use of the waters by such action on the part of the State; the States of Arizona and Nevada, which are nonriparian States, have not so divested themselves of the property at Black Canyon dam site in the Colorado River. (See Kaukana Water Power Co. *v.* Green Bay & Mississippi Canal Co. 142 U. S. 254; Green Bay & Mississippi Canal Co. *v.* Patten Paper Co. 172 U. S. 58; 9 Corpis Juris, 185 in re opening West Farm Road, 213 N. Y. 325; Fulton Light Co. *v.* State, 116 N. Y. S. 1000, sec. 10570, et seq., Code of Alabama, 1923.)

The State of Arizona and the State of Nevada are not riparian States and, in any event, they have not conveyed to any person or to the Federal Government, title to the banks and beds and the use of the water of the Colorado River at Black or Boulder Canyon. This is one distinction between this issue and issues decided in the Green Bay cases, the Economy Light & Power Co. cases; or at Muscle Shoals. At each of these dam sites the State had voluntarily divested itself of the title to the bed and banks of the streams and the United States had acquired the same.

The right to use the bed of navigable streams, for purposes other than the improvement of navigation, can only be acquired by legislative grant.

A franchise or license to build dams, locks, or other structures in a navigable stream does not create any interest in the land.

The legislation which is proposed in Senate bill 728 would result in the National Government acquiring, by subterfuge, the absolute control of over 90 per cent of the water of the Colorado River and would enable the Federal Government to lease, sell, or give it away. The bill would create a Federal monopoly in 90 per cent of the flowing waters of the Colorado River and in exercising the authority vested in the Federal Government by this act it may dispose of the water under rules, regulations, and upon terms different from, and in actual conflict with, the rules, regulations, and terms established by the State of Arizona for the appropriation and use of waters within its borders. This legislation is in direct conflict with the opinion of the Supreme Court in Kansas *v.* Colorado (206 U. S. 92) in which case the court stated:

We do not mean that its (National Government) legislation can override State laws in respect to the general subject of reclamation.

That power to tax is the power to destroy is the principle exempting the property of the Federal Government from taxation by the States and likewise exempting the property of the States from taxation by the Federal Government. No one will deny that as a legal proposition any property held by the Federal Government necessary or useful in performing the functions vested in the Federal Government by the Constitution is exempt from State taxation. A wholly different question arises when the Federal Government goes into a private business such as the production and distribution of hydroelectric power either directly or through leases. It was held in South Carolina *v.* United States (199 U. S. 437) that where a State assumed to conduct a private business, the performance of which did not fall within the ordinary and usual functions of a State, the business was not exempt from taxation by the Federal Government merely because it was conducted by the State. It was said by the Supreme Court in Hammer *v.* Dagenhart (247 U. S. 275) that the maintenance of the authority of the States over matters purely local is as essential to the preservation of our institutions as the conservation of the supremacy of the Federal power in all matters intrusted to the Federal Government by the Federal Constitution.

This being the case it would seem to follow since the Federal Government may tax private business conducted by the States, the States may also tax private business conducted by the Federal Government, and that such will be the rule is asserted in the dissenting opinion in the case of South Carolina *v.* United States (199 U. S. 437).

We are at present concerned, however, not with what is the strict right of the United States in this respect but rather with what is the equitable thing that Congress should do in the matter. The exemption of Federal property from taxation by the States may be waived by Congress. Both the legality and good policy of such waiver are firmly established. Thus Congress permits the taxation of national banks by the State at the same rate as other State property is taxed and with the consent of Congress such taxation is legal. (Owensboro National Bank *v.* Owensboro, 173 U. S. 664; Bank of California *v.* Richardson, 348 U. S. 476, 483.)

So also with certain lands granted to railroad companies. (Central Pacific Railroad Co. *v.* Nevada, 162 U. S. 512, 521; Northern Pacific Railroad Co. *v.* Myers, 172 U. S. 589, 597.)

Such taxation is also permitted under certain conditions by acts of Congress of lands in irrigation districts, and of lands held in trust for certain Indian tribes in Oklahoma.

As a matter of fair dealing between States, Congress should permit the taxation by Arizona and Nevada of the power produced at Boulder Canyon Dam. The dam will be situated wholly in Arizona and Nevada. So will also be the reservoir. It is expected that but little land in Nevada will be irrigated from the reservoir. Only an insignificant strip of California lies in the Colorado River Basin. It is proposed to build a canal for Imperial Valley lands at a cost of $31,000,000; another canal to irrigate the lands in Coachella Valley, also in California, is also authorized by the bill which is estimated to cost $12,000,000; and to pay the interest for a long term of years and perhaps also the principal of the cost of such canal from the proceeds of the sale of the power produced at the dam. It is proposed to pump a vast quantity of water over the mountains to supply the California coastal plains cities with water by means of the power that will be produced at the dam. Most of the remaining power will be conducted by transmission lines to Los Angeles. This water and this power will create billions of dollars of taxable wealth in California out of the construction of a dam and reservoir on the soil of Arizona and Nevada and from the use of water that nature has placed in Arizona and Nevada.

It is thus a case of where Arizona and Nevada resources are to be used to transfer other Arizona and Nevada resources to the State of California. California realizes that without the aid of the Federal Government she can not accomplish her purpose. As a State on an equality with any other State she can not enter into Arizona to build dams or create power. Without such dams or power she can get no more water of the Colorado River than she has now appropriated. Furthermore, if Arizona did permit her to enter and build a dam and other works she would certainly be subject to taxation by Arizona. California therefore comes to Congress and says: Use for our benefit the powers vested in you for the benefit of the Nation and build for us a dam on Arizona and Nevada soil. Produce hydroelectric power by the use of Arizona and Nevada resources to make a profit that will help build our all-American canal and that will pump the water that by nature belongs to Arizona over the mountains to our coastal plain and employ your power of exemption from taxation to our benefit so that we may have cheap power for our industries and domestic water for our coastal cities.

We have heard it stated that in no event should Congress consent to the distribution of any revenues created by a Government-constructed dam until the construction cost is paid. That principle is correct where the dam is constructed for the benefit of the State and with the consent of the State where the dam is situated, because in such case the State collects taxes from the taxable wealth created by the Government investment. But where the dam is built in one State against its wishes and for the benefit of another State that principle does not apply. In the latter case for the Federal Government to insist on its exemption from taxation is simply robbing one State for the benefit of another. It is said that we are one Nation and State lines should be disregarded in the development of resources. But since State lines are regarded in imposing a large part of the burdens of Government they can not be disregarded in the development and distribution of resources without stripping the poorer States for the benefit of the more opulent States. But it is said that the project will not stand the extra cost of taxation. If it is worth so little to California that taxes can not be paid thereon, it should not be presently undertaken but should be left to Arizona to utilize in her future development.

NAVIGATION ON THE COLORADO RIVER AND THE EFFECT OF IRRIGATION THEREON

The Boulder Canyon project act is the consummation of the plan for the development of the Colorado River as outlined in the Fall-Davis report (S. Doc. 142, 67th Cong., 2d sess.). This bill in the main save one conforms to the recommendations in that report, which are found on page 21 of the report. These recommendations are as follows:

1. It is recommended that through suitable legislation the United States undertake the construction with Government funds of a high-line canal from Laguna Dam to the Imperial Valley, to be reimbursed by the lands benefited.

2. It is recommended that the public lands that can be reclaimed by such works be reserved for settlement by ex-service men under conditions securing actual settlement and cultivation.

3. It is recommended that through suitable legislation the United States undertake the construction with Government funds of a reservoir at or near Boulder Canyon, on the lower Colorado River, to be reimbursed by the revenues from leasing the power privileges incident thereto.

4. It is recommended that any State interested in this development shall have the right at its election to contribute an equitable part of the cost of the construction of the reservoir and receive for its contribution a proportionate share of power at cost, to be determined by the Secretary of the Interior.

5. It is recommended that the Secretary of the Interior be empowered, after full hearing of all concerned, to allot the various applicants their due proportion of the power privileges and to allocate the cost and benefits of a high-line canal.

6. It is recommended that every development hereafter authorized to be undertaken on the Colorado River by the Federal Government or otherwise be required in both construction and operation to give priority of right and use—

First. To river regulation and flood control.

Second. To use of storage water for irrigation.

Third. To development of power.

It will be noted that the "improvement of navigation" is not mentioned in the report and that the project is an irrigation and power project.

The Chief of Engineers of the Army prepared a memorandum on navigable waters, as defined by the Supreme Court of the United States. The memorandum is found on page 298 of the hearings of the House of Representatives on H. R. 2903, Sixty-eighth Congress, first session, February 27, 1924, and is as follows:

The Daniel Ball (10 Wall. 557): A river is navigable in law when it is navigable in fact, and it is navigable in fact when it is used or is susceptible of being used in its ordinary condition as a highway for commerce over which trade and travel may be conducted in the customary modes of trade and travel on water.

A river or other waterway that lies wholly within the limits of a State and has no navigable connection with any waters outside the boundaries of the States is a navigable water of the State, subject to regulation and control by State laws, and does not come within the jurisdiction of Congress nor of the laws enacted by Congress for the preservation and protection of navigable waters of the United States.

A river or other waterway constitutes a navigable water of the United States, within the meaning of the aforesaid acts of Congress, when it forms by itself or by uniting with other waters a continuous

highway over which trade and travel is or may be conducted between the States themselves or between the States and foreign countries.

The Montell (20 Wall. 430): The true test of the navigability of a stream does not depend upon the manner or mode by which commerce is or may be conducted nor upon the difficulties attending navigation. If this were so, the public would be deprived of the use of many of the large rivers of the country over which rafts of lumber of great value are constantly taken to market. It would be a narrow rule to hold that in this country unless a river was capable of being navigated by steam or sail vessels it could not be treated as a public highway.

The capability of use by the public for purposes of transportation and commerce affords the true criterion of the navigability of a river rather than the extent and manner of that use.

If it be capable in its natural state of being used for purposes of commerce, no matter in what mode the commerce may be conducted, whether in vessels propelled by steam, wind, cars, or poles, the stream is navigable in fact, and becomes in law a public highway.

21 Pickering, 344: It is not to be understood, however, that every ditch or inlet in which the tide ebbs and flows, nor every small creek in which a fishing skiff or gunning canoe can be made to float at high water, is a navigable highway; but to give it the character of a navigable stream it must be generally and commonly useful to some purpose of trade or agriculture.

DECISION BY UNITED STATES CIRCUIT COURT OF APPEALS

Harrison v. Fite (148 Fed. 781): To meet the test of navigability as understood in American law a watercourse should be susceptible of use for purposes of commerce or possess a capacity for valuable floatage in the transportation to market of the products of the country through which it runs. It should be of practical usefulness to the public as a public highway, in its natural state and without the aid of artificial means. A theoretical or potential navigability, or one that is temporary, precarious or unprofitable is not sufficient. While the navigable quality of a watercourse need not be continuous, yet it should continue long enough to be useful and valuable in transportation; and the fluctuations should come regularly with the seasons, so that the period of navigability may be depended upon. Mere depth of water, without profitable utility, will not render a watercourse navigable in the legal sense, so as to subject it to public servitude nor will the fact that it is sufficient for pleasure boating or to enable hunters or fishermen to float their skiffs or canoes. To be navigable a watercourse must have a useful capacity as a public highway of transportation.

Gen. Lansing H. Beach, Chief of Engineers of the United States, War Department, testified before the Colorado River Commission (first meeting). He said:

While the lower Colorado River did have some navigation on it in the seventies, there is nothing on it to-day to justify navigation being regarded as of foremost importance.

Col. William Kelly, former chief engineer of the Federal Trade Commission, on April 15, 1924, testified (H. R. 2903, 68th Cong. 1st sess., p. 1228) as follows:

The physical conditions on the Colorado River Basin make it fairly simple to outline what form the complete development should take. In the upper region, above the junction of the Green with the Colorado, there are possibilities for both irrigation and power development. Below the junction of the Green and Grand, through the canyon section, irrigation development is practically impossible, except for a few very small intercanyon areas.

Power in this section can be developed to an amount of probably 4,000,000 horsepower, and that development can be made without interference with irrigation.

In the lower basin irrigation is, by far, the most important development. Such power as will be developed there will be relatively small, and will be incidental to irrigation developments. In some of the irrigation developments there will undoubtedly be opportunities to develop a small amount of power; and such developments will take care of themselves, because they help to carry the financial burden.

There are two things which I think stand out on the Colorado River:

One is that there is sufficient land to use all the water in the river, and perhaps more than enough land available for irrigation. Consequently, there should be no waste of water by unnecessary evaporation, or by diversion, which does not give full efficiency.

The second point is that the Colorado River constitutes the only big remaining source of power in the southwestern section of this country; and every kilowatt-hour that can be developed from the Colorado River will be needed. Consequently, no development should be permitted on the river which will reduce the ultimate supply of water, or the ultimate amount of power that can be taken out of the river.

Those are the two basic principles on which the outline of a general scheme of development must rest.

(Page 1240)

According to the Reclamation Service figures, which check with those of the Geological Survey and those that have been made in my office, 3,200,000 acre-feet of storage, if placed at Laguna Dam, would control the floods in the worst flood season of record, so that the maximum flow would not exceed 75,000 second-feet. If that dam be moved upstream, certain additional storage must be provided in order to compensate for the storage that exists in the valley now during those high floods.

(Page 1244)

On the ultimate development as proposed by the Reclamation Service, in order to get the maximum power output from this Boulder Canyon Dam, a dam is to be built at Bullshead which would have a storage capacity of 1,600,000 acre-feet.

(Page 1258)

In the upper basin, and that the consumption of water for irrigating these lands will lie somewhere between 1 and 1½ acre-feet per acre per year. If we take it at slightly over 1 foot, the consumption for upstream lands becomes ultimately 4,500,000 acre-feet. If we take it at 1½ feet, it becomes 6,500,000 acre-feet.

(Page 1259)

The available water supply is still somewhat in doubt. The Reclamation Service, based on the records at Yuma over the past thirty-odd years, figure that the average annual run-off amounts to about 16,000,000 acre-feet. The Geological Survey, going back and figuring since 1878 to what the probable run-off has been, placed the usable annual run-off at somewhere around 12,000,000 acre-feet. Now, the figure lies somewhere between there. It is impossible to get at it with precision.

(Page 1262)

In addition to the above acreage the reclamation report states that there are 800,000 acres in Arizona that might be feasible under the Parker-Gila project which were not included. If we include them, the water required on the same basis for the lower basin becomes 13,360,000 acre-feet per year. The total water required, therefore, from the Colorado River on the minimum basis stated is 14,460,000 acre-feet per year.

On the maximum basis, which includes the 800,000 acres of the Parker-Gila project and a slightly larger consumption in the upper region, it amounts to 20,400,000.

Now, the average run-off of the river, as I stated, taken from the reclamation records at Yuma gauge, is about 16,000,000 acre-feet per year. The average as deduced by the Geological Survey may run as low as 12,000,000 acre-feet per year. With the records available it is impossible to tell with precision just where the average will come, but it will lie somewhere between those figures.

(Page 1271)

Mr. RAKER. The States of the upper basin will not cause the flow of the water to be depleted below an aggregate of 75,000,000 acre-feet for any period of 10 years, reckoned in continuing progressive series, beginning with the 1st of October next succeeding the ratification of this compact. Now, what does that mean?

Colonel KELLY. Well, that means any consecutive 10-year period that you might take. That is, if you went over the record you would pick out the worst 10 years with respect to flow, and the average flow during that time would have to amount over the 10-year period to 75,000,000 acre-feet, although it might at some time have been less than * * * 75,000,000 acre-feet.

(Page 1272)

Mr. RAKER. All right. I will put it this way, Colonel: From the mouth of the river, the Gulf of California, up, say, to Lees Ferry, have you made any investigation to see how many obstructions there are in the river that would have to be removed to clear it for navigation if you put in locks, if you kept the flow of the stream in shape, and there was not to be permitted to be taken out the water that has been taken and is contemplated?

Colonel KELLY. Well, the river is obstructed in its natural condition for navigation in many places. Of course, through several months of the year below Yuma there is practically no water in the river. The Laguna Dam is an absolute obstruction to the passage of boats up and down the river, but boats have passed up as far as Old Coleville.

(Page 1273)

Mr. RAKER. The Laguna Dam has assisted in obstructing the navigability of the river?

Colonel KELLY. It is a complete obstruction.

Mr. RAKER. And also the diversion of the Imperial Valley has been another means of obstruction?

Colonel KELLY. Yes, sir.

Mr. RAKER. So what has been done has been done to obstruct the navigation rather than to expedite navigation.

Colonel KELLY. What has been done practically puts navigation out of possibility except on certain stretches of the river.

Mr. Arthur P. Davis, former director of the Reclamation Service, testified before the Colorado River Commission, first meeting, page 43 and page 44, Department of Commerce, Washington, January 26, 1922, as follows:

It (Laguna Dam) was authorized by the act of Congress due to the fact that the river was navigable and it actually stopped navigation.

It is not possible to navigate past the dam. At that time there were, I believe, three boats plying on the lower Colorado River and it had been for a long time a navigable stream and the commerce had been considerable at one time. It is gradually declining on account of the railroads tapping many points and being much more accessible for the transportation necessary and now Laguna Dam is a stop to navigation. Navigation is possible above and below, but not through the dam. * * * As a practical fact Laguna Dam is the diversion for the Yuma project and the Imperial Valley project, and it has destroyed practical navigation below. Every use of the water for irrigation depleted the supply. The navigation of the river was one of the problems that we had to meet, and following the act of Congress all trouble was overcome by the purchase of the steamboats on the river by the Government. The operation of these boats had become unprofitable, for there had been no profit in navigation for a good many years; the boats were old and no new ones were put into commission. They were used for construction purposes and finally were put out of service.—Colorado River Commission, first meeting, etc.

Many years ago the navigation of the Colorado River was possible and was actually carried on from the mouth of the river to points in what is now the State of Nevada. As late as 1904 there were still some boats engaged in transportation upon the lower reaches of the river. In 1901 the first large diversion from the lower stream system, that to the Imperial Valley, began; and this, with other development in the basin, necessarily depleted the supply for navigation below that point.

In 1904 Congress passed an act (33 Stat. 224, sec. 25) authorizing the Secretary of the Interior to divert the waters of the Colorado River for the irrigation of lands now constituting the Yuma irrigation project. Under this authority there was constructed shortly thereafter what is known as the Laguna Dam, a large dam across the channel of the river a short distance above Yuma. This dam now effectually prevents any navigation of the river between points above and below. Prior to the construction of this dam the operation of boats on the river had become unprofitable, there having been no navigation for several years. The boats then in service were old. They were purchased by the Government, used in connection with the construction of the dam, and then put out of service. While there is an occasional period of high water when navigation may be physically possible, this would continue for only a few months in ordinary years. There is no commercial navigation upon the river at present.

Mr. L. Ward Bannister, a Denver attorney, who has appeared before the committees of Congress numerous times in support of amendments to the Boulder Dam bill, in a letter to Congressman E. O. LEATHERWOOD, who was a member of the Committee on Irrigation and Reclamation, April 7, 1924, which is found beginning on page 900 in the hearings of H. R. 2903 (68th Cong., 1st sess., 902), in discussing the question of navigation, stated:

In the case of the Colorado River the Federal Government is not intending to protect navigation, if, indeed, the river can be said to be navigable, but joins the States in the intention that the waters shall be withdrawn for purposes utterly inconsistent with navigation, such, for instance, as irrigation. When, therefore, the course of development is to be one which has no bearing upon navigation except to destroy it, the course of development and the water rights gained must be under the power of the State and not under that of the Federal Government. In States where riparian rights exist as to nonnavigable streams riparian rights also exist as to navigable streams, except in the latter case they are subject to the paramount public right of navigation. Except for the extent required for the public right of navigation, riparian rights exist with respect to navigable streams in States where they exist as to nonnavigable streams. In the seven States of the West, however, riparian rights exist neither as to nonnavigable nor as to navigable streams.

The construction of a dam at Boulder Canyon by the Federal Government is not an act for the purpose of promoting or protecting navigation. The very purpose is to gather water in order later to withdraw it from the stream for use on land and also in order to generate electric power. These acts by the Government are not connected with navigation, and therefore can not be justified by the interstate commerce clause of the Constitution, which is the clause under which the Congress has the implied right to protect navigation on an interstate stream.

It (the Federal Government) has no rights of ownership. Under the commerce clause its power is to protect navigation, if the river is navigable, and not to enter into schemes for withdrawing water from the river, for that would be destructive of navigation.

We know that the development of the Colorado River, whether undertaken by the States or by the Federal Government, is going to proceed without any regard for the protection of navigation; in fact, the whole scheme from the Gulf to Wyoming contemplates the withdrawal of the water. Even if Congress has the power to prohibit withdrawal by reason of the stream being navigable, the Congress is not going to exercise it, and therefore it may well say that the stream has ceased to be navigable and that navigation uses are subservient to other uses. The meaning of article 4 of the compact as to navigability is not as clear as it might be with respect to whether or not there is a declaration to the effect that the stream is not navigable, but this is not of practical importance.

POWER OF THE FEDERAL GOVERNMENT OVER DEVELOPMENT AND USE OF WATER POWER

Under this heading there will be found in the 1928 Senate hearing on this bill, beginning on page 465, a report made some years ago by Senators Nelson, Root, Chilton, O'Gorman, and Culberson as a subcommittee of the Judiciary Committee of the Senate. The report deals with the power of the Federal Government over the development and use of water power within the respective States. I quote from their report (p. 466):

TITLE OF THE STATES IN THE BEDS AND WATERS OF NAVIGABLE STREAMS

The several States of the Union are each primarily the proprietors of, and have the sovereignty over, the beds and waters of the navigable streams and watercourses within their respective borders, subject only to the rights of the Federal Government under the interstate commerce clause of the Constitution (par. 3, sec. 8, Art. I) and to the rights of the Federal Government as owner of the riparian lands (par. 2, sec. 3, Art. IV), which rights will hereafter be referred to and enlarged upon.

In the case of Martin *v.* Waddell (16 Pet. 367), where the question of tidelands and tidewaters was involved, the Supreme Court of the United States makes this clear and comprehensive declaration:

"For when the Revolution took place the people of each State became themselves sovereign, and in that character hold the absolute right to all their navigable waters, and the soils under them, for their own common use, subject only to the rights since surrendered by the Constitution to the General Government."

The same doctrine was laid down by the court in the case of Pollard *v.* Hagan (3 How. 212), and it was held to apply to the newer States in as full a measure as to the original States of the Union. In this case the court concludes its opinion as follows:

"By the preceding course of reasoning we have arrived at these general conclusions: First. The shores of navigable waters and the soils under them were not granted by the Constitution to the United States but were reserved to the States, respectively. Second. The new States have the same rights, sovereignty, and jurisdiction over this subject as the original States. The right of the United States to the public land and the power of Congress to make all needful rules and regulations for the sale and disposition thereof conferred no power to grant to the plaintiffs the land (tidewater land) in controversy."

In the case of Barney *v.* Keokuk (94 U. S. 324), Justice Bradley declares that the correct principles were laid down in the foregoing cases, and then adds:

"These cases related to tidewater, it is true; but they enunciate principles which are equally applicable to all navigable waters."

The rule laid down in the foregoing cases is reaffirmed and amplified with the citation of numerous authorities in the case of Shively *v.* Bowlby (152 U. S. 1).

The States of Arizona and Nevada have never recognized the common-law rule of riparian rights. Their actions in this respect were concurred in and approved by Congress, as they come within the scope of general legislation on the appropriation of water (acts of 1866 and 1870; now sections 2339 and 2340 of the Revised Statutes) and sustained by the Supreme Court of the United States in a long line of decisions.

WATER LAWS OF WESTERN STATES

Kinney on Irrigation and Water Rights says (p. 331):

In the following States the common-law rule of riparian rights is rejected in toto: Arizona, Colorado, New Mexico, Nevada, Utah, and Wyoming. As the ownership of the beds of fresh-water streams navigable in fact is one of the riparian rights, it follows that this right was also rejected and the ownership of the beds of these streams is in the States under whose jurisdiction these waters flow.

No State in the Colorado River Basin, with the exception of California, either in its capacity as a Territory or as a State, has ever recognized the common-law rule of riparian rights. California has never recognized the riparian doctrine as it relates to that portion of the State bordering upon the Colorado River. The laws of the several States will be found beginning on page 476 of the Senate hearings on S. 728, S. 1274. The provisions of the constitutions of the several States relating to the appropriation and use of water, together with court decisions sustaining them, are as follows:

Arizona: The common-law doctrine of riparian water rights shall not obtain or be of any force or effect in the State. (Art. 17, sec. 1.) All existing rights to the use of any of the waters in the State for all useful or beneficial purposes are hereby recognized and confirmed. (Art. 17, sec. 2.) (Boquillas Catte Co. *v.* Curtis, 213 U. S. 564; Clough *v.* Wing, 2 Ariz. 371.)

New Mexico: The unappropriated water of every natural stream, perennial or torrential, within the State of New Mexico is hereby declared to belong to the public and subject to appropriation for beneficial use. In accordance with the laws of the State, priority of appropriation shall give the better right. (Sec. 2, Art. 16.) (Trombley v. Luterman, 6 N. Mex. 15.)

Wyoming: Water being essential to industrial prosperity, of limited amount, and easy of diversion from its natural channel, its control must be in the State, which, in providing for its use, shall equally guard all the various interests involved. (Art. 1, sec. 31.)

The waters of all natural streams, springs, lakes, and other collections of still waters within the boundaries of the State are hereby declared to be the property of the State. (Art. 8, sec. 1.) (S. 728 and S. 1274, p. 482.) (Farm Investment Co. v. Carpenter, 9 Wyo. 110.)

Colorado: The waters of every natural stream not heretofore appropriated within the State of Colorado is hereby declared to be the property of the public and the same is dedicated to the use of the people of the State, subject to appropriation as hereinafter provided. (Art. 14, sec. 5.) (S. 728 and S. 1274, p. 484.) (Yernker v. Nichols, 1 Colo. 151; Coffin v. Left Hand Ditch Co., 6 Colo. 443.)

California: The use of all water now appropriated or that may hereafter be appropriated for sale, rental, or distribution is hereby declared to be a public use and subject to the regulations and control of the State in the manner to be prescribed by law. (Art. 14, sec. 1.) (S. 728 and S. 1274, p. 476.)

Utah: All existing rights to the use of any of the waters of this State for any useful or beneficial purposes are hereby recognized and confirmed. (Art. 17, sec. 1.) S. 728 and S. 1274, p. 381.) (State v. Xalio (4575), Nov. 25, 1927; Stowell v. Johnson, 7 Utah, 215; 26 Pac. 290.)

Nevada: All natural water courses and natural lakes and the waters thereof which are not held in private ownership belong to the State and are subject to appropriation for beneficial uses. (Reno Smelting, Milling & Reduction Works v. Stevenson, 20 Nev. 269; 21 Pac. 317, 4 L. R. A. 60, 19 Com. St. Rep. 364.)

This section is quoted from the State water code of Nevada. The constitution of the State is silent upon the use of public water.

A declaration contained in the bill of rights, adopted by the Territory of Arizona in 1864—which was two years in advance of the law passed by Congress in July, 1866—recognized that local customs and laws, in addition to the decisions of the courts in the semiarid States of the West, should govern the appropriation and use of water. The section of the Territorial act follows:

All streams, lakes, and ponds of water capable of being used for the purpose of navigation or irrigation are hereby declared to be public property, and no individual or corporation shall have the right to appropriate them exclusively to their own private use, except under such equitable regulations and restrictions as the legislature shall provide for that purpose.

A GRAVE MENACE TO TAMPER WITH WATER LAWS

There is a long line of decisions by the courts sustaining this principle, and any attempt by Congress to destroy, directly or indirectly, by subterfuge or by law, the basic and fundamental principles which underlie these provisions of the constitutions and laws of the Western States is fraught with grave danger to them. These principles governing the use of water are founded upon the natural law and should not be disturbed by Congress.

The State of Idaho has provisions in its constitution practically identical with those of the States in the Colorado River Basin and does not recognize the riparian doctrine.

The States of Montana, Oregon, Washington, Nebraska, North Dakota, South Dakota, Oklahoma, Kansas, and Texas have revised their constitutions and laws so that they now accept and enforce the "doctrine of appropriation and use" of water as distinguished from the riparian doctrine.

The laws and conditions in all of these States will be menaced by any precedents which may be established by the pending legislation.

WATER RIGHTS WERE NEVER RELINQUISHED BY STATES

These principles and rights have never been relinquished by the States to the Federal Goverment. Gov. George H. Dern, of Utah, in testifying before the Senate Committee on Irrigation and Reclamation (hearings on S. 728, p. 144), stated the situation very forcefully and the menace which would come to the States from tinkering with the water laws of the States by Congress:

Governor DERN. Congress also recognized the sovereignty of the States over their waters in the Federal water power act, for that act provides that the United States Government shall not grant any permit to use the public lands for the building of a power dam until the applicant has first obtained a permit from the State wherein the dam is to be built, to use its waters and land, and has otherwise complied with the laws of the State. The Representatives and Senators from the Western States have always been extremely jealous of the sovereign rights of the States in their waters, and up to this time they have impressed that principle upon every piece of Federal legislation affecting the waters of western streams. It is to be hoped that those in the present Congress will be equally vigilant.

The pending bills propose an entirely new and revolutionary national policy, and completely reverse the former position of Congress with respect to the waters of western streams. Never before has Congress gone so far as to attempt to appropriate water without the consent of a State. The West has always heretofore seen to it that its sovereign rights were respected.

Every State has the inherent sovereign right to control the uses of water, which is essential to its existence. To deprive a State of this right would be to destroy its autonomy. Moreover, the original States are conceded by everybody to possess full power to control their waters, save for the regulation of interstate commerce, and to deprive the newer States of this control would take from them that equality with the original States which was guaranteed them when they were admitted into the Union. The arid States in particular, whose water is their very lifeblood, should realize that if they would protect their autonomy they must resist the deliberate and constant pressure of certain enthusiasts for Federal usurpation of State powers.

THE REAL PURPOSE OF THE COLORADO RIVER COMPACT

A full and complete discussion of the history of the compact and the conditions which led up to its negotiation will be found in the 1926 House hearings on the Swing bills (H. R. 6521, 9826), beginning on page 146, in the testimony of Mr. Delph Carpenter, of Colorado.

The real purpose of the Colorado River compact, which is referred to in six sections of this bill (4 (a), 5, 6, 8 (a), 8 (b), 12 (a), 12 (b), 12 (c), 12 (d), and 14), is primarily to conserve for the upper basin States the right to use water which originates in those States. Those States want to retain the water for use in the future.

On page 710 of the Senate hearings on December 15, 1925, on S. 320, is found the following testimony:

Mr. KENDRICK. Mr. Carpenter, I am not sure whether I understood the full inference about the delay in the development of the lands in the upper basin States. Did you intend to say to the committee in answer to Senator JOHNSON'S question that the ultimate development in these upper basin States would be delayed for 50 or 100, or possibly 200 years?

Mr. CARPENTER. Yes, sir.

It will therefore be observed that the water is not being reserved to the upper basin States for immediate use. Arizona has not asked that she be accorded the same degree of protection as that accorded the upper basin States, although she is entitled to it. Arizona will have exhausted all the water available for her use long before the upper basin States utilize the water allocated to them. We do demand a measure of protection which will conserve our interests and such protection is not given us by either the compact or by this bill.

This bill (secs. 4 (a), 8 (b), and 12) approves the Colorado River compact. That compact allocates annually 7,500,000 acre-feet of water, in perpetuity, to the upper basin States, and retains to them an equity in the undivided surplus.

THE AVAILABLE WATER SUPPLY IS INADEQUATE FOR ALL

In considering this bill and the Colorado River compact, it is important that we know approximately how much water will be available for the use of the States. The United States Geological Survey is the Government bureau authorized by Congress to study water resources. Mr. E. C. La Rue testified:

The figures here presented therefore indicate that complete utilization and control of the stream of waters in the upper basin will create a shortage of about 3,800,000 acre-feet in the supply available for the lower basin. More complete data would probably indicate a greater shortage in the water supply available for the irrigation of lands on the lower Colorado. Evidently the flow of the Colorado River and its tributaries is not sufficient to irrigate all the irrigable lands lying within the basin.

From these estimates it appears that when ultimate irrigation development is reached in the upper basin of the Colorado River there will be a natural shortage of 5,000,000 acre-feet in the lower basin, an amount sufficient to irrigate 1,100,000 acres of land. (Senate hearings on S. 320, December 9, 1925, p. 533.)

Mr. LA RUE. I might add here that if we consider the 20-year period of low flow, 1886 to 1905, inclusive, we will find that should such a period of drought occur again the water available at Parker, Ariz., would be about 6,570,000 acre-feet annually, the amount required for the needs of the lower basin being 14,714,000 acre-feet. The annual shortage would be 8,145,000 acre-feet. During such a 20-year period

there would be less than half enough water to supply the needs of the lower basin. (S. 320, December 9, 1925, p. 533.)

Mr. LA RUE. If you will agree that we will irrigate 1,000,000 acres in Mexico and let 1,000,000 acres in the United States remain dry, then go ahead and build the Boulder Canyon Dam. (Senate hearings on S. 320, December 9, 1925, p. 545.)

Mr. Herman Stabler, chief of the land classification branch of the United States Geological Survey, made a report from which the following is quoted:

19. The estimates of water supply and practicable storage for the period 1878–1922 indicate that through long periods not to exceed 12,000,000 acre-feet of water a year may be relied on for future irrigation development above Laguna Dam and for present and future development below that point. (House hearings on H. R. 2903, March 25, 1924, p. 841.)

Mr. O. C. Merrill, executive secretary of the Federal Power Commission, testified as follows:

It is the opinion of those who have investigated the water resources of the Colorado Basin that there at least is not any surplus of waters for the necessities of irrigation, and that, therefore, in any general scheme of development of the river care should be exercised not unnecessarily to waste waters which though not needed in this generation are almost certain to be needed in the future. (Senate hearings on S. 320, December 8, 1925, p. 505.)

Col. William Kelly, former chief engineer of the Federal Power Commission, testified:

Mr. LITTLE. Colonel, before we finish, do you think there is water enough in the Colorado River to irrigate it all?

Colonel KELLY. There is reason to believe there is not.

Mr. LITTLE. How much shy?

Colonel KELLY. I can not say exactly how much is going to be shy, but I am satisfied that counting the lands that can be irrigated in Mexico there is not sufficient water to irrigate all the land.

Mr. LITTLE. If we omit them there would be plenty of water, would there not?

Colonel KELLY. There might be enough. There would be some short years. (House hearings on H. R. 2903, April 15, 1924, p. 1249.)

In the report "Problems of Imperial Valley and vicinity" (S. Doc. No. 142, 67th Cong., 2d sess.), on page 37, will be found a table which gives the average annual run-off for the years 1903 to 1920. The report makes an estimate of water available at Boulder Canyon of 16,470,000 acre-feet after allowing for past depletion. But the report admits that the table leaves out a cycle of years of low flow and drought immediately preceding it.

DEMANDS UPON THE AVAILABLE WATER SUPPLY

The States of the upper basin—Colorado, New Mexico, Wyoming, and Utah—have reserved for their perpetual use by the Colorado River Co. 7,500,000 acre-feet of water. This is a somewhat larger amount of water than any Federal official has estimated will be required for their use, but Arizona is willing to concede that much water to the upper basin for use at any time in the future. The evidence concerning the amount of water required for use in the upper-basin States is as follows:

	Acre-feet
Col. William Kelly, chief engineer Federal Power Commission (p. 1258, H. R. 2903, 1924)	6,500,000
E. C. La Rue, hydraulic engineer U. S. Geological Survey (p. 111, Water-Supply Paper No. 556, 1925)	5,815,000
A. P. Davis, director United States Reclamation Service (CONGRESSIONAL RECORD, Feb. —, 1923)	6,590,000

Engineers representing the Several States of the upper basin have estimated a maximum diversion from the Colorado River and its tributaries in those States of 9,550,000. However, this does not represent the net consumptive use which, with a return flow of 25 per cent, would be 7,200,000 acre-feet.

According to a report made by F. C. Weymouth, chief engineer United States Reclamation Service, in February, 1924, it is estimated that there will be available for diversion below Boulder Canyon 9,341,000 acre-feet of water each year. In 1925 the United States Geological Survey reported in Water Supply Paper No. 556 that 9,593,000 acre-feet will be available for irrigation below Boulder Canyon. Both of these figures are based upon estimates of the maximum possible uses of water in the upper basin. In calculating the amount of water which may be put to beneficial use in Nevada, California, Arizona, and Old Mexico after the flow of the Colorado River is completely regulated, it may be said that approximately 9,500,000 acre-feet will be available. It is reported that Mexico is now using about 1,000,000 acre-feet of water, which if conceded to that country by treaty, would leave about 8,500,000 acre-feet available for use in Arizona, Nevada, and California.

Mr. George W. Malone, State engineer of Nevada and secretary of the Colorado River commission of that State, testified:

Nevada has claimed 300,000 acre-feet of water to be used within her borders * * *. She could no doubt use more water than is claimed if allowed an unlimited period for development * * *. (Senate hearings on S. 728 and S. 1274, January 19, 1928, p. 233.)

Mr. H. A. Van Norman, representing the city of Los Angeles, demanded on behalf of that city an amount of water to be pumped annually from the Colorado River Basin to the coastal plain of "1,500 second-feet," which would be 1,095,000 acre-feet. (Senate hearings on S. 728 and S. 1274, January 21, 1928, p. 292.)

Mr. Charles L. Childers testified and put in the record the water requirements of the State of California, which, in effect, demand annually 4,600,000 acre-feet of the allotted waters and one-half of any surplus waters in the river. (Senate hearings on S. 728 and S. 1274, January 21, 1928, p. 322.)

Prior to 1922 the State of Arizona had made no exhaustive surveys of the land possible of irrigation from the Colorado River. Arizona was busily engaged in developing land in the central portion of the State upon her own streams, which are tributary of the Colorado.

A reconnaissance survey of Arizona lands was made under Federal Government auspices in 1923, and topographical surveys were begun in 1925, the field work for which was completed in the fall of 1927. These surveys indicate that there is far more land in Arizona economically feasible of irrigation than there is water to irrigate it.

Mr. E. C. La Rue, an engineer who was employed by the United States Geological Survey for 23 years and who was the chairman of the Arizona Engineering Commission appointed by the United States Geological Survey to investigate the irrigational possibilities in Arizona from the Colorado River, offered one plan of development based upon a part gravity and part pump lift, with an estimated cost for power of 7½ mills. He testified (Senate hearings on S. 320, December 9, 1925, p. 564) that water could be delivered to this land at a cost of $168 an acre to over 800,000 acres of land in Arizona. Since that report was made further surveys and studies by engineers employed by Arizona indicate that water can be delivered to at least 1,250,000 acres of land at a cost much less than $168 an acre. With a duty of 4 acre-feet, at least 5,000,000 acre-feet of water must be diverted from the Colorado River to irrigate this Arizona land. (Senate hearings on S. 728, January 17, 1928, pp. 72–74.) But assuming for the sake of argument only that it would cost $168 an acre—which seems excessive for one reason, because power for pumping will not cost 7½ mills—a comparison of this project is invited with the Columbia Basin project recently considered by the Congress.

The hearings on the Columbia Basin project brought out the fact that the cost of irrigating the lands of that project is estimated to be $158 per acre, and that project is declared to be practical now.

As to the question of the relative feasibility of projects, your attention is again invited to the testimony of Mr. Carpenter, of Colorado, that it may be 200 years before the water which the upper basin States are asking to have reserved to them will be used in those States. (Senate hearings on S. 320, December 18, 1925, p. 710.)

THE FLOOD MENACE DOES NOT REQUIRE EMERGENCY ACTION

While it is generally admitted that there is a menace to property values and to property as a result of the floods in the Colorado River, and that flood control is needed at a comparatively early date, the testimony of numerous witnesses is to the effect that development of the river should not be undertaken until a seven-State compact is ratified. In substantiation of this assertion I direct attention to the testimony of the following witnesses:

Governor Emerson, of Wyoming, one of the members of the special advisory board appointed by Secretary Work, testified as follows:

Few realize the real magnitude of the great project that is proposed at Black or Boulder Canyon—a dam twice as high as any dam that has been constructed in the world heretofore; a reservoir seven or eight times the capacity of any reservoir that has been constructed heretofore. The magnitude of this project is so great that we should be sure we are right before we go ahead. There is no such urgency for relief from conditions applying to the physical situation upon the lower river as to warrant any course but to allow all reasonable time and effort for the completion of the seven-State agreement by the approval of all the seven States. (Senate hearings on S. 728, p. 206.)

Gov. George H. Dern, of Utah, chairman of the Colorado River conference, which was in session for many weeks at Denver, Colo., testifies as follows:

Governor DERN. The question of flood control, of course, is only one of the purposes of this bill. As a matter of fact, one might have sat through the Denver conference without discovering that there was any problem of flood control. It was hardly mentioned at Denver, and there did not seem to be much importance attached to it there. It seems to me that California, by the reservation that she put on her ratification, practically refused to accept flood control. She specifically refused to accept it except by means of one particular project that she herself had selected. It seems to me she practically estopped Congress from giving her flood control except through that one particular project, which Congress might conceivably have found to be unwise. Therefore it seems to me that California has not——

Senator JOHNSON. How does that explain your answers here?

Governor DERN (continuing). That California has not exhibited very deep concern over flood control.

(Senate hearings on S. 728, p. 174.)

In this connection your attention is directed to a map which was prepared by Mr. E. C. La Rue, an engineer, who was formerly in the employ of the United States Geological Survey. Mr. La Rue resigned his Government employment last summer, after over 20 years of service, and gave as his reason: "That he was muzzled by the Department of the Interior and forbidden to oppose the legislation proposed in the Swing-Johnson bill," which he has testified he believes to be unsound. The map is one of the studies made by Mr. La Rue in connection with his work and studies on the Colorado River. It indicates that if the entire flow of the Colorado River was turned into the Imperial Valley that it would require about a year and a half for the water level of the Salton Sea to rise as far as the town of Mecca; 12 years before it reached the highest town in the valley and 15 years to get to sea level.

If the advocates of the Swing-Johnson bill had exercised energy and good judgment, Imperial Valley would to-day have been protected from floods of the Colorado River and the all-American canal would have been nearing completion; but, most unfortunately for Imperial Valley, the advocates of the Swing-Johnson bill have preferred to spend their time and energy in planning how most effectively to exploit Arizona's resources rather than to spend their time and energy in securing the relief which Congress would quickly and amply grant. Just so long as Imperial Valley continues to be beguiled by those urban Pollyannas who seek to acquire Arizona's potential hydroelectric energy, just so long will Imperial Valley be imperiled.

California seeks not flood control but hydroelectric power. Flood control may be the excuse, but power is the substance of the demand for this bill. Arizona has never stood in the way and does not now stand in the way of ample appropriations for flood control on the Colorado River. California has never been willing to have an engineering investigation made of the Colorado River under the terms of section 3 of the flood control act of March 1, 1917.

Politically, financially, industrially, socially, and economically California is one of the most powerful States of the Union, and if her congressional delegation had labored for Imperial Valley along flood-control lines success would have long ago abundantly crowned such efforts.

If the sword of Damocles is suspended over Imperial Valley and if the waters of wrath are held in check only by a tricky guard of sand, let the California delegation but ask for appropriations and the relief prayed for will be promptly granted by Congress.

The writer of this report, in the Senate Committee on Irrigation and Reclamation, offered the following amendment to this bill:

Provided, That the sum of $30,000,000 shall be allocated to flood control, and shall not be reimbursable to the United States.

This amendment was rejected by the committee upon the suggestion of the proponents of this legislation, as was another amendment which directed that the Boulder Canyon Dam be built to only such height as would provide flood control.

AMOUNT OF STORAGE REQUIRED FOR FLOOD CONTROL AND WHAT IT WOULD COST TO PROVIDE SAME

Col. William Kelly, former chief engineer of the Federal Power Commission, graduate of West Point, who served in the Army since 1899, and was former chief assistant to the Chief of Engineers on river and harbor work, secretary of the California Levee Commission, and in charge of the third California engineering district, which included flood protection on the Sacramento River, also had service overseas and wide experience regarding the handling of streams and embankments, dams and revetment works, flood control and canals, and practically everything that pertains to the handling of water, testified (House hearings on H. R. 2903, pp. 1227, 1228, 1240, April 15, 1924):

Colonel KELLY. According to the Reclamation Service figures, which check with those of the Geological Survey and those that had been made in my office, 3,200,000 acre-feet of storage, if placed at Laguna Dam, would control the floods in the worst flood season of record so that the maximum flow would not exceed 75,000 second-feet. If that dam be moved upstream certain additional storage must be provided in order to compensate for the storage that exists in the valley now during those high floods * * *. A dam at Mohave 100 feet high will give the storage required * * *. I think such a dam can be built inside of $15,000,000, and that is a very rough guess.

Mr. F. E. Weymouth testified before the Senate committee and gave several alternate plans and the cost thereof for flood control. (Senate hearings on S. 320, p. 479, November 2, 1925.)

The Reclamation Service worked out a plan for controlling the floods of the Colorado River by building dams at the Dewey site, Bluff site, Flaming Gorge, and at the Juniper site, at an estimated cost of $40,000,000 for the four dams. A dam at the Dewey site could be built for $11,000,000.

The storage at these four sites would be about 9,000,000 acre-feet. (S. Doc. No. 142, 67th Cong., 2d sess., pp. 42, 43.)

Mr. WEYMOUTH. There has been also a flood-control dam suggested for the Mohave site, but that would cost about $28,000,000 (includes $13,000,000 for flowage damage) for just a flood-control dam. (Hearings on S. 320, November 2, 1925, p. 485.)

Mr. WEYMOUTH. An eight or ten million acre-feet flood-control dam at Black Canyon would cost $28,000,000. (Senate hearings on S. 320, November 2, 1925, p. 485.)

Mr. LA RUE. A dam can be built at Glen Canyon in about six years. It will cost about twice as much, but the water will be worth six times as much as the water at Boulder Canyon. (Hearings on S. 320, December 9, 1925, p. 548.)

A dam to store 11,000,000 acre-feet of water can be constructed at Marble Gorge for an estimated cost of $19,000,000. The dam site has been diamond drilled for bedrock. (Senate hearings on S. 728, 1928, p. 463.)

The Marble Gorge Dam site would utilize the same storage facilities as the Glen Canyon site. In addition to being more accessible and with materials for the dam available, it could be constructed for very much less than either the Boulder Canyon or the Glen Canyon Dam. (See Senate hearings on S. 728, p. 463; La Rue-Jakobsen report.)

IS SAFETY ASSURED?

The proposed dam at Boulder or Black Canyon as authorized by this act would be at least 675 feet high. It would be "550 feet above the present water level" and "125 feet below the water level to bedrock" (A. P. Davis, Senate hearings on S. 320, p. 493).

There is no dam now in existence comparable with it. It would be equal in height above the water level to the Washington Monument. In this connection the testimony of Col. William Kelly (House hearings on H. R. 2903, April 23, 1924, pp. 1251, 1252) is pertinent:

Colonel KELLY. As you go up in height the mere weight of the dam itself puts a pressure on the foundations that runs into very large figures. On the Washington Monument that pressure was great enough to cause the stones to sprawl at the edges around the bottom of the monument. * * * In addition to the weight of the structure itself you have the pressure of the water behind it, which greatly increases the stresses, especially on the downstream part of the foundation. In order to keep these stresses within reasonable limits the dam has got to be widened out and made very wide at the base.

In this connection I again direct your attention to the fact that the foundations of the dam will be at least 125 feet below the water surface. This is a greater depth than has ever been used as a foundation for any other dam, and its total height from bedrock to crest will be 675 feet. Continuing Colonel Kelly's statement, he said:

Up until a few years ago the usual practice on gravity dams was to keep the maximum stress below 20 tons per square foot. The Reclamation Service in designing some of their higher dams, like Arrow Rock, found that in order to comply with that requirement they had to expand the dam at the base to such an extent that the cost became very great. The consequently made use of the arch principle in combination with the gravity section or weight of the dam and allowed a maximum stress of 30 tons per square foot.

The Reclamation Service, evidently in an attempt to keep the estimates of the cost of Boulder Dam within the bounds of reason, felt that it was necessary that some further modification

be made, but away from the principle of safety, because, continuing to quote from the testimony of Colonel Kelly:

In the design of this Boulder Canyon high dam they again found that going up to 600 feet 30 tons per square foot required a dam of abnormal dimensions, and their design proposes to have an allowable maximum stress of 40 tons per square foot on that 600-foot dam.

The stresses on the St. Francis Dam, which recently collapsed, is reported by press dispatches to be but 12 tons per square foot, or but 30 per cent of the stress proposed for the Boulder Canyon Dam.

Mr. F. H. Newell, former Director of the United States Bureau of Reclamation, in a recent article (March, 1928) on "High dams," stated:

It is true that each and every one of these structures, big and little, has a limited life. Ultimately each will require renewal or replacement. A dam, like a bridge or similar structure, is in one sense an offense against nature. All of the forces of heat and cold, of wind and water, chemical and physical, are working on it untiring, day and night, in season and out, trying to tear it down. There is no one of these natural forces which is making it stronger.

Mr. W. G. Clark, a consulting engineer of New York City, gave testimony regarding earthquakes in the Boulder Canyon region. (House hearings on H. R. 11449, p. 210, February 21, 1925):

I was in Boulder Canyon when an earthquake occurred. At that time there was a decided movement of the north wall of the canyon, but there was no movement of the south wall. Thousands of tons of rock fell along the north wall of the canyon, but there was no fall along the south wall. I was camped on the south side of the canyon and if it were not for the fact that I could see and hear the rock falling on the other side of the canyon I would not have known that an earthquake was in progress.

Some years later, in 1913 I believe, an earthquake occurred which affected the Imperial Valley. I was in southern California at the time, so went immediately to Boulder Canyon. The same condition had been repeated. I found that thousands of tons of rock had been shaken from the north wall of the canyon, but the south wall remained undisturbed.

The river apparently runs through a faulty fissure, for in both instances the disturbance was confined to the north side of the canyon at Boulder Wash.

The proposed dam is unprecedented as to height, both above and below water, as will be illustrated by comparing it with the following dams which are among the highest in the world:

Name of dam	State	Height of dam
		Feet
Pocoima	California	383
Arrow Rock	Idaho	349
Exchequer	California	330
O'Shaughnessy	do	320
Horse Mesa	Arizona	308
Don Pedro	California	284
Lake Cushman	Washington	275
Elephant Butte	New Mexico	275
Olive Bridge	New York	235
Roosevelt	Arizona	225
New Croton	New York	220
Kensico	do	200

These figures are taken from Modern Irrigation, June, 1927.

In the committee I offered the following amendment to the bill in an effort to try to insure, if the dam is to be constructed, a measure of safety to the citizens who live in the valleys below. The proponents of this bill rejected the amendment, which read:

In order to be sure of the financial, economic, and engineering feasibility of the projects herein authorized or planned, the President is hereby authorized to appoint a board of five competent engineers of outstanding reputation, at least one of whom shall be an engineer officer of the Army, which board shall examine into and review the plans and estimates heretofore made by engineers of the Department of the Interior for the control and utilization of the waters of the Colorado River and report thereon within six months after the approval of this act, and no construction work shall be done or contracted for until said board shall have submitted its report to Congress.

The Boulder Reservoir would hold seven hundred times as much water as was held by the St. Francis Dam which recently collapsed. I again quote from an article by Mr. Newell:

Whatever may be the case [St. Francis Dam disaster], the lesson taught is that in all such work there should be a more thorough study than has usually been given to such matters, particularly in connection with the foundation of dams.

Mr. Newell also makes this very pertinent observation concerning the colossal experimental dam now under discussion in Congress:

How does this apply to propositions now pending before Congress; for example, the Boulder Dam? It is true that considerable time and money have been spent in surveys; various engineers have agreed on certain fundamentals; those who dissent have held their peace. There is little doubt, however, but that if private capital were proposing to build a structure of this kind there would be continuous study and observation of all the phenomena peculiar to that locality. "With the valor of ignorance" the Congress, however, is satisfied to discuss the legal or political steps and assume that all of the forces, such, for example, as those which have overthrown the St. Francis Dam, are well enough known. Is it true?

On pages 821 to 845 of the House hearings on H. R. 2903, March 25, 1924, there will be found a report signed by a group of engineers who were appointed by the Secretary of the Interior to review the report then in process of preparation by the engineers of the Bureau of Reclamation. The report is not favorable to the project as outlined. On page 844 the following language appears: "The need for more facts is the rather astounding conclusion one must reach from the data at hand." The letter of Col. William Kelly, who was one member of the board, found on page 269 of the House hearings on H. R. 5773, 1928, is ample evidence that no great weight or consideration can be given to the report of this so-called "board of review."

The only other board which has made any study of the project was appointed during the summer of 1927 by the Secretary of the Interior and was composed of one governor, one ex-governor, a United States Senator, and two college professors. The gentlemen comprising this commission were all excellent and reputable men. I believe three of them were engineers, but I believe that none of them is recognized as an authority on dam designs and structures or has had any experience in actual dam construction.

A majority of the prominent engineers who have testified concerning their studies of the problems connected with the project, and who have not been employed by the Bureau of Reclamation, have testified against the proposed project because of economic and engineering reasons.

ALL-AMERICAN CANAL

I have no objection to a canal being built "to connect with the Laguna Dam and to deliver water to the Imperial and Coachella Valleys in California," provided: That the lands benefited by the construction of the canal will pay for the cost of the canal and its appurtenant structures, and the maintenance and operation thereof. I do object to the revenues from power resources of Arizona being used to guarantee the cost of the construction of the canal and the maintenance and operation thereof. While I understood it was the sense of the committee that the committee proposed that the bill should provide that the lands benefited by the canal shall carry the necessary costs of that project, the provisions of the bill place the burden of guaranteeing the repayment to the Government of the entire appropriation upon the power to be developed. (Sec. 2 (D) and (E).)

I am particularly impressed with the unfairness of such a proposition from a study of the table found on page 80 of the report (S. Doc. No. 142, 67th Cong., 2d sess.), where it will be found that of the 785,400 acres in the project only 167,100 acres were Government lands at the time the report was made in 1922. It is quite probable that in the last six years a large acreage of these lands have passed into private ownership. It will therefore be observed that the provisions of section 9 which give preference of filing on the land to ex-service men is mostly words. I offered an amendment before the committee that would subject the privately owned lands to the same conditions as lands in other irrigation projects privately owned, so that no water user might secure water for land in excess of 160 acres. This amendment is not included in the bill as it is reported to the Senate.

The estimate submitted to Congress by the Secretary of the Interior about a year ago that the all-American canal would cost approximately $31,000,000, was based only upon the cost of the so-called "first unit" of the canal. The canal would only deliver the water into the Imperial Valley. This act provides for the delivery of water into "the Imperial and Coachella Valleys"; this would require an additional canal 141 miles long at a cost of from $10,000,000 to $12,000,000. (S. Doc. 142, 67th Cong., 2d sess., p. 81.)

Wasting water: The use of water in the Imperial Valley in comparison with water used elsewhere in any other State in the basin will be uneconomical and wasteful.

The amount of water wasted annually into the Salton Sea, according to the estimate of the United States Geological Survey, when the Imperial Valley is fully irrigated, will be 1,387,000 acre-feet. (Senate hearings on S. 728 and S. 1274, p. 267.) This is more than enough water than is required to irrigate all of the land feasible of irrigation, from the Colorado River in either the State of Wyoming or the State of New Mexico.

California is the only State in which water will be used from the Colorado River where it will be wasted.

It has been contended that the construction of the all-American canal will solve the Mexican problem by enabling the United States to divert water into the Salton Sea at certain seasons of the year and by thus denying water to Mexican agriculture prevent Mexico from acquiring water rights in addition to those she may now have.

The fallacy of this argument—if there were no better evidence to prove it to be ridiculous—is indicated by the summary of the conclusions from the report of George F. Holbrook, engineer for the United States Geological Survey. (Report D-100-9-L-15, Department of the Interior, U. S. Geol. Surv.) It will be found on page 267, the Senate hearings on this bill, and is as follows:

REPORT ON PROBABLE FUTURE STAGES OF SALTON SEA

By George F. Holbrook, assistant engineer, United States Geological Survey

CONCLUSIONS

(a) Lands bordering on Salton Sea below elevation —240 are worthless from an agricultural point of view. Those between elevations —240 and —230 are worth very little, except in the near vicinity of New and Alamo Rivers. Lands lying between elevations —230 and —220 are generally valuable for farming within the boundaries of the Imperial irrigation district. Outside of the district lands at this elevation are not classified as arable by the Strahorn soil survey.

(b) The contract between the Southern Pacific Co. and the Imperial irrigation district, granting a flowage right of way to the district, will be an impediment that will have to be removed before the irrigation district can waste any more water into the Salton Sea than at present.

(c) The maximum amount of storm water that may be expected to flow into Salton Sea in a very wet year is 500,000 acre-feet.

(d) Under present conditions there is being wasted 1.5 acre-feet of water annually per acre irrigated from the Imperial Valley canal system. Upon the completion of the all-American canal conditions affecting the operation of the canal systems in Imperial Valley will be changed. It is not known to what extent these changes will affect the necessity for wasting water from the system. It is believed that the present value of 1.5 acre-feet per acre irrigated is a liberal estimate of the amount likely to be wasted under future conditions. On this basis, with 925,000 acres irrigated, the amount of water wasted into Salton Sea annually would be 1,387,000 acre-feet.

(e) In order to evaporate the amount of water that may be wasted into Salton Sea under conditions of ultimate development an average water-surface area of 239,000 acres will be necessary. This corresponds to elevation —228 feet.

(f) With Salton Sea at an average stage of —238 feet and the possibility always present of storm water raising this level to —225 feet, it is not likely that any lands below the —220-foot contour will have any value for agricultural purposes.

It will therefore be seen that the annual wastage of water into the Salton Sea will be a problem in itself and will raise the water table to such heights that there will not be sufficient capacity to hold sufficient water to deprive Mexico of the use of it, as is alleged to be their purpose by the proponents of this bill.

RIGHTS OF YUMA PROJECT

Any analysis of this legislation would be incomplete that failed to recognize the avidity with which its authors have availed themselves of every opportunity for advantage. The bill is inconsistent and contradictory; it is vague and indefinite where it should be clear and certain; and is harsh and unyielding where it should be flexible. But no point has been overlooked where advantage might be reaped, at whatsoever cost to others, for the interests it is designed to enrich.

A striking illustration of this may be found in section 10, supplemented, extended, and enlarged by the provisions of section 7.

Section 10 empowers the Secretary of the Interior, with the consent of Imperial irrigation district, to modify the existing contract, dated October 23, 1918, authorizing the use of Laguna Dam for the diversion of water for the irrigation of Imperial Valley. That may appear reasonable enough to the casual observer, since the Secretary of the Interior and Imperial irrigation district are the parties of record to the contract in question. It should be understood, however, that the contract, in all of its details, relates to property rights and interests vital to the welfare and existence of Yuma project.

The Secretary of the Interior is a party to the contract merely in his capacity as an officer of the United States, in which the title to the Yuma project temporarily vests. The contract was the result of long negotiations, in which the negotiating parties were representatives of Imperial irrigation district on one hand and Yuma project on the other.

The protection to Yuma project, as embodied in the completed agreement, was the result of hard labor and determined effort over the attempts on the part of the California representatives seeking, as they now seek, every advantage for themselves. To disturb the status quo of this contract and agreement without the consent of the organization conducting the affairs of the landowners and water users of Yuma project, which originally confirmed its provisions, would constitute a violent outrage of the rights of those water users.

YUMA PROJECT INTERESTS NOT RECOGNIZED

It may be asserted that the Secretary of the Interior will naturally consult the interested project members or their representatives before modifying the contract, as did a previous Secretary of the Interior when the instrument was originally formulated. That does not necessarily follow. Secretaries come and Secretaries go. Secretaries have been known to be partisan. They are human, and humanity is beset with frailty. The water users of Yuma project might indeed be consulted, but their protests might go unheeded. In any event, it is proposed to empower the Secretary, with the consent only of one party, viz, the Imperial irrigation district, to modify this contract in which Yuma project's very existence is bound up, and the peril that lurks in the provision is clearly shown by the alacrity with which a proposal made in committee for an amendment that would have required the consent of the Yuma County Water Users' Association was rejected by champions of this bill. The suggestion that Yuma project has any interest in the contract was treated with contempt.

If there were any doubt as to the seriousness of the purpose intended in the authority extended by section 10 it would be removed by turning back to section 7. Taking time and authorization by the forelock, this section, in vital particulars, itself modifies the contract in question.

By the agreement entered into on October 23, 1918 (appendix to House hearings on "All-American canal in Imperial County, Calif., 1922, p. 245), it is declared that Laguna Dam was constructed "in connection with the Yuma project, Arizona-California"; that Imperial irrigation district desires to secure "the right to divert water at said dam"; that the said district is authorized to contract with the United States "for a supply of water"; that the district shall proceed to secure cost data "for the diversion of water" at Laguna Dam and thence "through the existing main canal of the Yuma project" and for a main canal to "connect with said main canal of the United States at a point described as Siphon Drop"; that "for the right to use the Laguna Dam, the main canal, and appurtenant structures and divert water," the district agrees to pay the sum of $1,600,000; that "the United States shall have and retain perpetually the title to and the complete control, operation, and management of said Laguna Dam, auxiliary works, and enlarged main canal from the dam to and including the Siphon Drop * * *, including the diversion works at Siphon Drop for the diversion and delivery of water to the Yuma project and the district"; that "the United States reserves the right to develop power * * * down to and including Siphon Drop"; that all other power possibilities * * * down to * * * Pilot Knob shall be developed by the United States * * * for the joint benefit of the Yuma project and the Imperial irrigation district, and the cost of joint canal and headworks alterations and of power plants and accessories is definitely apportioned to the United States "for the Yuma project" and to the Imperial irrigation district; that "the preference right to purchase power developed" (between Siphon Drop and Pilot Knob) "shall be given over other users of power to the requirements of the Yuma project for power to be used in pumping irrigation water." Other provisions highly important to Yuma project, relating both to power and to water, are embodied in the contract, which the Secretary of the Interior, with the consent of Imperial irrigation district, is to be given authority to modify. Imperial irrigation district, by the permission heretofore given to it to use the Laguna Dam thereby gained no proprietary interest in the dam, "auxiliary works, and enlarged main canal from the dam to and including the Siphon Drop." The Yuma project, it should be borne in mind, is not solely an Arizona project, but an Arizona-California project. Down to and including Siphon Drop, at which point the proposed main canal of the Imperial irrigation district is to take off from the Yuma project canal, the district, for the considerations named, obtained simply the right to use, but the title to

the dam, appurtenant works, and canal to the point described is not affected by any capital investment therein necessary to be made by Imperial irrigation district in order that it may use Laguna Dam and divert water therefrom for the irrigation of Imperial Valley.

CONTRAST BETWEEN PROVISIONS OF THE CONTRACT AND THE BILL

How different are the provisions of section 7, when taken in conjunction with the authorization to amend, contained in section 10 of the proposed legislation.

Section 7 provides:

That the Secretary of the Interior may, * * * transfer the title to said canal and appurtenant structures to the districts or other agencies of the United States having a beneficial interest therein in proportion to their respective capital investments.

The "canal and appurtenant structures," as defined in this legislation, are "a main canal and appurtenant structures * * * connecting the Laguna Dam with the Imperial and Coachella Valleys in California." The estimated cost thereof is about $42,000,000. It will likely be much more. Yuma project's capital investment in the canal and appurtenant structures from Laguna Dam to Siphon Drop is by comparison inconsequential. To the same extent would its title be insignificant, and this project would be at the tender mercy of Imperial irrigation district.

Keeping the provisions of the contract of October 23, 1918, in mind, this further clause of section 7 is of absorbing interest to the water users of Yuma project:

The said districts or other agencies shall have the privilege at any time of utilizing by contract or otherwise such power possibilities as may exist upon said canal, in proportion to their respective contributions or obligations toward the capital cost of said canal and appurtenant structures from and including the diversion works to the point where each respective power plant may be located.

USE OF DAM ONLY RIGHT GRANTED

The contract gives to the district only the right to use Laguna Dam and divert water therefrom; reserves to the United States the dam, appurtenant structures and canal to Siphon Drop, and reserves all power generated down to that point. This legislation completely overturns the protection thus afforded to Yuma project by relinquishing such power possibilities "as may exist upon said canal" to districts "in proportion to their respective contributions or obligations toward the capital cost of said canal and appurtenant structures from and including the diversion works to the point where each respective power plant may be located."

Inasmuch as Yuma project, under the operation of this measure, will have no capital investment beyond Siphon Drop, and a relatively small one down to that point, it again becomes apparent that Yuma project, if the proponents of this legislation have their way, must shrink to the status of a very small toad in a very large pond—an all-California pond. Laguna Dam was constructed for the Yuma project. It is a part—a vital part—thereof, and its independent control is essential to the project's prosperous existence. But under the plan proposed it will pass to and under the control of Imperial irrigation district. The contract of 1918, which gave to an eager and importunate applicant—Imperial irrigation district—simply the right to use the dam and divert water therefrom, is of inestimable value to that district, for it is the key to an Imperial Valley canal all on American soil, and opens the way to extensive revenue-producing power development, the emoluments of which will accrue to the Imperial irrigation district and contribute to its enrichment. But it would appear as if this is not sufficient. All is not too much. A limited right is, by this bill, to be converted into outright ownership, and Yuma project's power resources, slight at best but sorely needed, are to be taken away.

CONDITIONS UNDER WHICH HYDROELECTRIC POWER IS NOW BEING DEVELOPED BY THE GOVERNMENT

Advocates of the Boulder Canyon project assert that no precedent would be established by the enactment of the pending legislation. It is argued that the Government is now engaged in the production and sale of hydroelectric power at Muscle Shoals, the various dams constructed in navigable rivers, and on several projects constructed by the United States Bureau of Reclamation.

The Congress of the United States, acting under the authority of Article I, section 8, paragraph 1, of the Constitution, "to provide for the common defense and general welfare of the United States," authorized, and, at the earliest solicitation of the Senators and Representatives of the State of Alabama, constructed a dam at Muscle Shoals, Ala., for the primary purpose of developing hydroelectric power to manufacture air nitrates to be used in the manufacture of explosives for the defense of the United States. All other uses of the dam and the power generated thereat are incidental to this primary purpose. Therefore the Muscle Shoals project furnishes no precedent for this legislation.

The Congress of the United States has authorized, and the Government has constructed, dams in navigable streams in various sections of the United States. A list of these projects will be found in the Senate hearings on this measure. (Senate hearings on S. 728, pp. 486 and 487.) These dams were all constructed under the authority granted to Congress by Article I, section 8, paragraph 3, of the Constitution, "to regulate commerce with foreign nations and among the several States and with Indian tribes."

The primary purpose for the construction of the dams which were built under this authority was to improve navigation and the excess water which resulted from this primary work was used for the development of power and was incidental to the operation of the dams for purposes of navigation. No precedent can be found under this authority for the enactment of the pending bill.

The Government of the United States has constructed, under the authority of the reclamation law, a number of power plants on Federal reclamation projects. A list of these projects will be found in the Senate hearings held this year on S. 728, on page 262. The power installed on all of these irrigation projects covered in the report is only 55,000 horsepower. The power, in the first instance, was installed to aid in the construction of the projects and is used as incidental to and in connection with the construction, maintenance, and operation of the projects. The power plants were installed with the consent of and in compliance with the laws of the States in which the projects are located. That legislation does not afford a precedent for the pending act. For further information see the letter of the Federal Power Commission in this report.

PRECEDENTS FOR THE RIGHT OF STATES TO DERIVE REVENUE IN LIEU OF TAXES

It has long been the settled policy of the Federal Government to recognize the right of the States to derive revenue from their natural resources when these resources are on public lands.

The importance of this principle is manifest when it is considered that the Government controls large areas of the Western States as public lands, forest reserves, oil reserves, mineral reserves, Indian reservations, national parks, and monuments, and so forth.

The Federal Government owns 74 per cent of the area of Utah, 67 per cent of Arizona, 87 per cent of Nevada, and 63 per cent of Idaho.

Congress has provided for payments to the States in lieu of taxes in other instances, as, for example, in the agricultural appropriation act of May 23, 1908 (35 Stat. 260), which directs the Secretary of Agriculture to turn over one-quarter of the total receipts from the national forests to the States in which the same are located:

That hereafter 25 per cent of all money received from each forest reserve during any fiscal year, including the year ending June 30, 1908, shall be paid at the end thereof by the Secretary of the Treasury to the State or Territory in which said reserve is situated, to be expended as the State or Territorial legislature may prescribe for the benefit of the public schools and public roads of the county or counties in which the forest reserve is situated: *Provided*, That when any forest reserve is in more than one State or Territory or county the distributive share to each from the proceeds of said reserve shall be proportional to its area therein.

In addition, the act of March 4, 1913 (37 Stat. 843), directs that a tenth of these same receipts shall be devoted to the construction of roads and trails within the forest reserves of the States where collected, so that the States actually benefit to the extent of 35 per cent of the gross Federal income from the national forests.

That hereafter an additional 10 per cent of all moneys received from the national forests during each fiscal year shall be available at the end thereof, to be expended by the Secretary of Agriculture for the construction and maintenance of roads and trails within the national forests in the States from which such proceeds are derived; but the Secretary of Agriculture may, whenever practicable, in the construction and maintenance of such roads, secure the cooperation or aid of the proper State or Territorial authorities in the furtherance of any system of highways of which such roads may be made a part.

The act to promote the mining for coal, phosphate, oil, oil shale, gas, and sodium on the public domain (41 Stat. 450) specifically directs that 37½ per cent of all royalties collected shall be paid to the State within which the leased lands are located. Section 35 of that act reads:

SEC. 35. That 10 per cent of all money received from sales, bonuses, royalties, and rentals under the provisions of this act, excepting those from Alaska, shall be paid into the Treasury of the United States and credited to miscellaneous receipts; for past production 70 per cent, and for future production 52½ per cent of the amounts derived from such bonuses, royalties, and rentals shall be paid into, reserved, and appropriated as a part of the reclamation fund created by the act of Congress known as the reclamation act, approved June 17, 1902, and for past production 20 per cent, and for future production 37½ per cent of the amounts derived from such bonuses, royalties, and rentals shall be paid by the Secretary of the Treasury after the expiration of each fiscal year to the State within the boundaries of which the leased lands or deposits are or were located, said moneys to be used by such State or subdivisions thereof for the construction and maintenance of public roads or for the support of public schools or other public educational institutions, as the legislature of the State may direct: *Provided*, That all moneys which may accrue to the United States under the provisions of this act from lands within the naval petroleum reserves shall be deposited in the Treasury as "Miscellaneous receipts."

The same principle is recognized in the Federal water power act of June 10, 1920 (41 Stat. 1072), from which this provision is quoted:

SEC. 17. That all proceeds from any Indian reservation shall be placed to the credit of the Indians of such reservation. All other charges arising from licenses hereunder shall be paid into the Treasury of the United States, subject to the following distribution: Twelve and one-half per cent thereof is hereby appropriated to be paid into the Treasury of the United States and credited to "Miscellaneous receipts"; 50 per cent of the charges arising from licenses hereunder for the occupancy and use of public lands, national monuments, national forests, and national parks shall be paid into, reserved, and appropriated as a part of the reclamation fund created by the act of Congress known as the reclamation act, approved June 17, 1902; and 37½ per cent of the charges arising from licenses hereunder for the occupancy and use of national forests, national parks, public lands, and national monuments, from development within the boundaries of any State shall be paid by the Secretary of the Treasury to such State; and 50 per cent of the charges arising from all other licenses hereunder is hereby reserved and appropriated as a special fund in the Treasury to be expended under the direction of the Secretary of War in the maintenance and operation of dams and other navigation structures owned by the United States or in the construction, maintenance, or operation of headwater or other improvements of navigable waters of the United States.

THE QUESTION OF THE RIGHT TO TAX

There is some question of whether a decision on the part of the Federal Government to engage in the production and distribution of hydroelectric power would come within what might be termed a proper function of government; and the question has been raised whether, if it were found that the development and sale of power for commercial purposes was not a proper governmental function, it would exempt such a Government enterprise from the taxing power of the States.

The State of South Carolina, some years ago, engaged in the liquor business and maintained dispensaries. The United States Government claimed the right to tax this enterprise and set up the claim that the operation of dispensaries was not a governmental function and therefore that the State must pay the internal-revenue tax on intoxicating liquors. The State of South Carolina claimed that as a State it was not required to pay the Federal revenue tax and appealed to the United States Supreme Court on this issue. (South Carolina *v.* United States, 199 U. S. 437.) The court held that the State must pay to the Government the revenue taxes; that otherwise the State might go into every kind of business and thereby deprive the Federal Government of all of its revenues.

The minority opinion in this case, written by Chief Justice White, is very illuminating and is here referred to because of the strength of its reasoning. The opinion suggests that the rule applied in this case against the State of South Carolina must necessarily be applied against the United States in the event that the Federal Government engages in enterprises which are not proper functions of government.

If, forsooth, the Federal Government engages in the manufacture of hydroelectric power within a State and it is found to be not a governmental function, the State, under this opinion, should be entitled to tax the enterprise.

This question which has been raised in connection with this bill is of more importance than it appears on the surface. There are 4,000,000 horsepower of hydroelectric energy yet to be developed in Arizona. The policy which is being advocated by powerful men in the Senate, that the undeveloped hydroelectric power in this country should be developed by the Government, and some of the advocates of this theory grow vehement in their opposition to the States deriving any revenue from such power, if developed by the Government, is fraught with danger to the States and particularly to a State situated similar to Arizona.

THE SILT QUESTION

It is 325 miles from the Boulder Canyon Dam site to the Laguna diversion dam. The rivers meander through lowlands and the silt control which it is alleged that this dam will provide will not be accomplished, because the water after it leaves the dam will again pick up its burden of silt and carry it toward the Delta.

VIEWS OF THE FEDERAL POWER COMMISSION

Attention is directed to the letter signed by Secretaries Work, Weeks, and Wallace, of the Federal Power Commission, dated March 24, 1924, which will be found in the 1924 House hearings on H. R. 2903, beginning on page 1000. The letter discusses a dam 605 feet above the present water surface instead of the proposed dam, 550 feet above the water surface and 125 feet below the water surface. The discussion of the project by these Cabinet members remains pertinent, however. A reference to this letter and to the Fall-Davis report will disclose that the appropriation authorized falls short by about $11,000,000 of enough money to build the canal to deliver water to Coachella Valley.

MARCH 24, 1924.

DEAR MR. SMITH: Reference is made to your letter of February 26, addressed to the executive secretary of the Federal Power Commission, suggesting that the commission might like to express an opinion concerning H. R. 2903, a bill to provide for the protection and development of the lower Colorado River Basin.

We do not desire at this time to discuss details of the proposed legislation, but believe it appropriate to call attention to certain general considerations with respect to the plan of development proposed and to the public policy expressed or implied in the bill.

The bill proposes the construction of a dam and reservoir at or near Boulder Canyon on the Colorado River, the so-called all-American canal, certain specified extensions therefrom, and certain unspecified canals and other structures, such works to provide for flood protection of the Imperial Valley and lands along the lower Colorado River for irrigation of both publicly and privately owned lands in California, Arizona, and Nevada, and for making water and held available for the development of hydroelectric power. The bill authorizes the appropriation of $70,000,000 for these purposes. Estimates of the Bureau of Reclamation indicate that the construction of Boulder Canyon Dam to a height of 605 feet above low water and with a capacity of 34,000,000 acre-feet will involve at least $50,000,000; that the construction of the all-American canal and extensions will involve $31,000,000, and the necessity distributing system $15,000,000, or a total of $96,000,000. The obligations involved in the other authorized canals for serving lands in Nevada and Arizona are unknown. These figures do not include power houses, high-tension substations, and equipment, estimated at $36,000,000, or transmission lines, estimated at $46,000,000—a total of $82,000,000 or more. It is unsafe to assume that the entire project—flood control, irrigation, and power development—can be secured in its entirety for less than $200,000,000, to which must be added millions of dollars of accumulated interest charges during the period of construction.

Flood control and irrigation storage are presumed to be the primary purposes for which it is proposed to construct the dam at Boulder Canyon. While there are differences of opinion with respect to the amount of storage actually required for these purposes, it is agreed that 8,000,000 acre-feet is the maximum required, and it is probable that 4,000,000 feet would be reasonably adequate. The nearer the reservoir is installed to the lands to be protected or irrigated the more satisfactorily will it serve the purposes of flood control and irrigation. Information recently made available indicates that a reservoir of sufficient capacity to serve all the needs of flood control and irrigation could be located on the river some 100 miles nearer the lands to be served and at a cost of not more than one-half that of the proposed high dam at Boulder Canyon. If this is correct, the location of the dam at Boulder Canyon and its construction to the height proposed must be justified, if at all, wholly from the standpoint of the development of electric power.

In the consideration which has so far been given to the Colorado River there has been too much of a tendency to overlook any other aspect than the flood protection and irrigation of the Imperial Valley. Admittedly this is the acute problem and requires early action, but there is not justification for ignoring other problems which require solution and for failing to plan accordingly. A reservoir for flood control or irrigation is more useful if located at the foot of the canyon section. With respect to power development, a reservoir at that site is useful for the one power development only and is useless in connection with all power developments above it—some 75 per cent of the total in the section. Reservoirs at the head of the canyon section of sufficient capacity completely to regulate the river must eventually be built

if the full power resources are to be utilized. When this is done reservoirs on the lower river will be useful only for reregulation for irrigation. For this reason dams should be located and their heights determined so as to provide for full use of the available head and so as to avoid evaporation losses as far as possible. A dam of 605 feet height at Boulder Canyon, as proposed, is not adapted to the accomplishment of these purposes.

The bill proposes that the costs of irrigation canals and appurtenant structures shall be reimbursed to the United States by the lands benefited and that the costs of flood control and irrigation storage as effected by the dam to be constructed shall be repaid by leases of rights in the dam for power purposes; that is, that such costs shall be charged not against the lands benefited but against users of power, the great majority of whom receive no benefit from either flood control or irrigation.

The United States has spent many millions of dollars in internal improvements without reimbursement, particularly on river and harbor improvements and on public highways. These expenditures have been for the primary purpose of facilitating interstate commerce and on the theory that such a policy was a common public benefit properly chargeable against the taxpayers of the entire Nation. Whether the benefits received from such a policy are in fact nation-wide, the policy is far less questionable than that of charging the costs of an improvement admittedly benefiting a limited area not against the area benefited and not against the Nation as a whole but against individuals and industries for the most part wholly unrelated to the area benefited. We are doubtful of the propriety or equity of so charging the cost of flood control and irrigation storage, whether the construction be financed by private or public capital. If a dam be so located and built as to provide sufficient storage for flood control and irrigation and for a reasonable amount of power, the cost of flood control and irrigation storage if allocated in the ration of storage space reserved for these purposes apparently need not exceed $10 per acre for the area protected and irrigated.

In so far, at least, as the project proposed exceeds the requirements of flood control and irrigation, the bill proposes that the United States undertake a new national activity, namely, the business of constructing facilities for production of electric power for general disposition, an activity which if logically pursued has possibilities of demands upon the Federal Treasury in amounts far beyond those now involved in reclamation and highway construction combined. While the United States has heretofore constructed power developments in connection with irrigation projects, these developments have been merely incidental to the projects, have been of a few thousand horsepower only, and have been primarily for use on the projects themselves. The construction of a reservoir having a capacity of from four to eight times the needs of irrigation and flood control and of a power development twenty times in excess of the probable power needs of the irrigated lands and adjacent communities is a complete departure from former policies. The only undertaking by the United States at all comparable in magnitude with the proposals at Boulder Canyon is at Muscle Shoals, and this project was undertaken to furnish munitions in time of war. In so far as it was to serve the needs of peace, it was to furnish an essential commodity for all sections of the United States and was not for the special benefit of a limited area.

If the United States is to embark upon a general policy of public development of electric energy at Federal expense, it should do so only after full consideration of what the step means. The present investment in the United States in central electric stations—that is, in those plants engaged in developing electric power for general distribution and sale—is approximately $4,500,000,000. That investment will require to be more than doubled in the next 10 years if the demands of industry are to be met. A policy of Federal development would therefore require continuous expenditures of not less than one-half billion dollars per annum, for it could not be expected, in the face of such a policy supported by Government funds and with tax-exempt properties, that private industry could afford to put any additional investment into the central-station business. Under such circumstances we must assume that any such a policy or program of Federal activities is impracticable and undesirable.

If the proposal in H. R. 2903 with respect to power development is not the first step in a general program of like undertakings, it can be justified only on the clear proof that peculiar conditions in this particular case, conditions not prevailing elsewhere, justify the Federal Government in taking action that it does not propose to duplicate elsewhere. Such action can not rest on the ground that the Federal Treasury is the only available source of funds, for private funds are available now, and have been for several years, to undertake immediately such development as is justified by the needs of flood control, irrigation, and energy supply; or on the ground that the territory to which the greater part of the power must be delivered is in any immediate need of added power, for that territory is already better supplied and at a cheaper rate than any similar territory in the United States. It has been argued that the United States should finance this power development, because with a lower interest rate, absence of profit, and freedom from taxation power could be delivered at a less cost than if developed by private capital. This is by no means a necessary conclusion, but even if it were, electric power is only one element in industry, and if Federal financing is justified in the present case on such grounds it is similarly justified in all other cases and in all branches of industry. With the authority that exists in the States and in the United States to regulate and control private or municipal power development, distribution, and sale, we do not believe that the United States should undertake such development unless it can be clearly shown that the development can not otherwise be had.

In 1920, after many years of consideration, Congress adopted a general national policy with respect to power development on sites under Federal control. That policy has been attended with marked success. Millions of horsepower are being constructed under the terms of the Federal water power act. These sites are being held in public ownership under public control, with every essential public interest protected. There is no occasion for going outside of the terms of that act to secure the production of all the electric energy required at terms fair both to the developer and the user. Under such circumstances we do not deem it desirable to enact special legislation modifying the established policy by giving to any individual, corporation, or community special privileges not accorded to all.

Congress also, in the Federal water power act, created a single executive agency for the administration of all water powers under Federal ownership or control. The plan thus adopted is proving eminently satisfactory. We believe any change in such method of administration is undesirable, and therefore, whether the Boulder Canyon Dam or some other be built and whether at public or private expense, we believe the disposition of any power developed should be handled by the Federal Power Commission under the general terms of the Federal water power act and not as proposed in the bill. All interests of the Department of the Interior will be adequately met through the membership of the Secretary of the Interior on the commission.

There are two other considerations which should not be overlooked in dealing with the Colorado River. These are the Colorado River compact and the use of water in Mexico.

The Colorado River compact, negotiated for the purpose of determining by mutual agreement rather than by litigation the allocation of the waters of the river between the several States in the basin, has been ratified by all the States except Arizona. This compact we believe of primary importance in any comprehensive plan of development of the river. Until it is ratified, or it is known that it can not be ratified, we doubt the advisability of the establishment through construction of rights in the lower States of such magnitude as would be involved in the proposed storage at Boulder Canyon.

The regulation of the Colorado River to the extent proposed by the Boulder Canyon Dam will produce in the lower river a minimum discharge far in excess of present irrigation requirements in the United States. The surplus waters will pass into Mexico and will undoubtedly be put to use for irrigation there. Once put to use, their subsequent withdrawal for use elsewhere would be difficult, if not impracticable. It would therefore seem highly desirable to reach a general agreement with Mexico on the problem of the lower river before extensive storage is provided in the United States. The construction of the all-American canal will not obviate the necessity of constant dealings with Mexico in connection with irrigation or protection of lands in the United States. Irrespective of the amount of flood-control storage in the United States, it will for many years, at least, be necessary in the protection of the Imperial Valley to maintain levees and revetments in Mexico, and arrangements must be effected whereby this work can be carried on whenever necessary without interference.

Very truly yours,

JOHN W. WEEKS,
Secretary of War, Chairman.
HUBERT WORK,
Secretary of the Interior.
HENRY C. WALLACE,
Secretary of Agriculture.

In conclusion, the great point at issue is whether or not the States are sovereign over their waters, subject only to the right of Congress to legislate for the improvement of navigation.

Arizona can not, under any circumstances, yield her right to an equitable share of the waters of the Colorado River available for use in the lower-basin States. This water is absolutely essential to Arizona's development. It represents the only possibility of the reclamation of a large tract of her arid but exceedingly fertile and otherwise highly favored land. It means, at some time in the not remote future, population, homes, taxable wealth, prosperity, and the subsisting of peoples. Aside from the question of the rights of States and of geographical boundaries, the deprivation of this land of an opportunity for development would mean a tremendous economic waste, both in the production of crops and in the duty of water.

Arizona has 1,500,000 acres of land, easily susceptible of irrigation from the main stream of the Colorado River. It is land

highly favored both by soil and climatic conditions and lies adjacent to the Colorado and Gila Rivers in the southwestern portion of Arizona. It requires only water to make it tremendously productive of crops of a highly valuable character, and which can be produced only to a limited extent in the United States. This land drains back into the Colorado and Gila Rivers and its irrigation will therefore result in a return flow, and in an important saving of water over the irrigation of land having no drainage, where the water actually used on the land as well as the surplus flowing in the canal is forever lost. Through engineering feats of the greatest proportions all of the water of the Colorado River might be placed by gravity upon Arizona land, but no questionable engineering feat is involved in the utilization of Arizona's fair division of the water available for use in the States of the lower division. This is Arizona's claim, which she presents for the consideration of all who are fairly disposed toward the principle of equity and justice. It may be true that with only one-half of the water in the lower basin at her disposal, some of California's desert land could not be watered. If so, no hardship would be suffered by that State, which would not likewise be visited upon Arizona. If some acreage must be forever arid, there is no sound reason why Arizona should be singled out to bear the burden and the loss.

I now read to you from the Saturday Evening Post an article written by a gentleman who is not friendly to Arizona's attitude, judging from the whole article; but this is what, in part, he says:

> Wealth and population are small in Arizona as compared with California. But the percentage of growth has been very remarkable, indeed. The State has been settled by white men and free from Indian disturbances a short time, comparatively speaking. All things considered, it is doubtful if any other State has such just cause for pride. Great mining industries, large farming areas, unequaled scenic attractions, good roads, excellent schools, a large State university, flourishing cities, famous health resorts—all these have been established or rendered accessible in an amazingly short period of time.

This is not from some orator who speaks as a friend of Arizona, but it is from a man writing in the Saturday Evening Post from the viewpoint of an antagonist of Arizona's position. Arizona has done these things within 20 years. This bill would destroy our opportunity for and stifle our hope of future growth.

I should say at this juncture that those who are foremost in promoting this legislation do not understand this bill; I say this not in criticism of their ability, but to do justice to their morality, for if they understood the consequences of this bill they would not be found supporting the same.

This bill is a reckless and relentless assault upon Arizona. It may indeed appeal to some as a project of superb magnitude, but the bill is ruthless and cynical. It swarms with cryptic phrases. It is not the voice of compromise or an extension of the hand of amity and friendship.

I denounce it in the name of the Federal Constitution, which it violates; I denounce it in the name of Arizona, whose sovereignty it violates; I denounce it in the name of that fair play, which most bullies and all pugilists respect.

Mr. HAYDEN. Mr. President, I desire to be heard on the amendment to the committee amendment offered by the senior Senator from Arizona [Mr. ASHURST].

Before I concluded my remarks last night I referred to numerous instances in which States have provided compensation to counties, municipalities, and localities where private property has been purchased by the State within the limits of such a political subdivision for a higher State use.

It is no reflection upon the States of Arizona and Nevada to say that with respect to the exemption from taxation of property acquired or developed by the United States in carrying out a national policy of conservation the two States may be properly said to bear a similar relation to a county in a great State like New York or Pennsylvania where private property is acquired for a State use, such as a forest reserve or a State game sanctuary. It seems to me that the parallel thus drawn is true, and by analogy, at least, justifies the claim that Arizona and Nevada are making for compensation for the use of their lands and their waters in the event that hydroelectric power should be developed by the Federal Government at Boulder Dam.

I now desire to discuss another phase of the situation which has a direct bearing upon the present controversy.

CONGRESS MAY CONSENT TO STATE TAXATION OF FEDERAL PROPERTY

There are those who dogmatically assert that Federal property can not be taxed by the States. That is not a true statement; it only states half of the truth. The whole truth is that Federal property can not be taxed by the States except with the consent of Congress.

The title to lands and other property belonging to Indians is held in trust by the United States, therefore no State has an inherent right to tax the same. This has been repeatedly decided to be the law by the Supreme Court of the United States. Minerals produced on Indian lands are likewise tax exempt. The leading cases sustaining this contention are Howard *v.* Gypsy Oil Co. (247 U. S. 503) and Large Oil Co. *v.* Howard (248 U. S. 549), and were the result of an attempt by Hon. E. B. HOWARD, State treasurer of Oklahoma, now a Member of Congress from that State, to collect a production tax on oil produced on Indian lands.

But Congress has since consented that minerals produced on Indian lands may be taxed by the States. Permit me to cite some instances.

THE QUAPAW COUNTRY

In the act of March 3, 1921 (41 Stat, 1249) relating to the Quapaw Indians of Oklahoma, there is contained the following proviso:

> *And provided further,* That the production of minerals on said lands may be taxed by the State of Oklahoma in all respects the same as that produced on unrestricted lands, and the Secretary of the Interior is hereby authorized and directed to cause to be paid from out of the individual Indian funds held under his supervision, belonging to the Indian owner of the land, the tax so assessed against the royalty interests of the respective Indian owner in such production: *Provided, however,* That such tax shall not become a lien or charge of any kind or character against the land or other property of said Indian owner.

That law related to the mining of lead and zinc in the Quapaw country in Oklahoma.

THE OSAGE INDIAN RESERVATION, OKLA.

Another precedent for the payment of a State tax on minerals produced on Indian lands is found in section 5 of the act to amend section 3 of the act of Congress of June 28, 1906, entitled "An act for the division of the lands and funds of the Osage Indians in Oklahoma, and for other purposes."

That act related primarily to the length of the trust period, as it was called, whereby the property, particularly the real estate of restricted Indians, was to be held in trust by the United States until the year 1932. Oil was found in the Osage country, and the State of Oklahoma, as I stated, endeavored to levy a production tax on the oil, but the Supreme Court decided that under the Constitution of the United States the State of Oklahoma could not collect such a tax.

The Osage Indians greatly desired that this trust period be extended for an additional term of years. It was greatly to their advantage that such action be taken by Congress, but the Oklahoma delegation in Congress, the Senators and Representatives from that State, said that they would not agree to the passage of an act extending the trust period unless the Osage Tribe of Indians, which had grown wealthy from the discovery of oil within their lands, would permit Congress to direct that the same kind of a production tax which was collected on oil produced on private land in Oklahoma should likewise be levied on oil produced on the Osage Reservation. In carrying out that compromise, Congress enacted the following provision, which is section 5 of the act I have cited:

> SEC. 5. That the State of Oklahoma is authorized from and after the passage of this act to levy and collect a gross production tax upon all oil and gas produced in Osage County, Okla., and all taxes so collected shall be paid and distributed; and in lieu of all other State and county taxes levied upon the production of oil and gas as provided by the laws of Oklahoma, the Secretary of the Interior is hereby authorized and directed to pay, through the proper officers of the Osage Agency, to the State of Oklahoma, from the amount received by the Osage Tribe of Indians as royalties from production of oil and gas, the per cent levied as gross production tax, to be distributed as provided by the laws of Oklahoma.

INDIAN RESERVATIONS CREATED BY TREATY

This principle thus established with respect to the Quapaws and the Osages of Oklahoma was later extended to oil and other minerals produced on all treaty reservations. I read from the act of May 29, 1924 (43 Stat. L. 244), an act to authorize the leasing for oil and gas mining purposes of unallotted lands on Indian reservations affected by the proviso to section 3 of the act of February 28, 1891:

> *Be it enacted, etc.,* That unallotted land on Indian reservations other than lands of the Five Civilized Tribes and the Osage Reservation subject to lease for mining purposes for a period of 10 years under the preceding section may be leased at public auction by the Secretary of the Interior, with the consent of the council speaking for such Indians, for oil and gas mining purposes for a period of not to exceed 10 years, and as much longer as oil or gas shall be found in paying quan-

tities, and the terms of any existing oil and gas mining lease may in like manner be amended by extending the term thereof for as long as oil or gas shall be found in paying quantities: *Provided,* That the production of oil and gas and other minerals on such lands may be taxed by the State in which said lands are located in all respects the same as production on unrestricted lands, and the Secretary of the Interior is authorized and directed to cause to be paid the tax so assessed against the royalty interests on said lands: *Provided, however,* That such tax shall not become a lien or charge of any kind or character against the land or the property of the Indian owner. (May 29, 1924, c. 210, 43 Stat. 244.)

INDIAN RESERVATIONS CREATED BY EXECUTIVE ORDER

Following the passage of the act of May 29, 1924, Congress passed additional legislation to authorize oil and gas mining leases upon unallotted lands on Executive order Indian reservations. I shall not read the entire act, but direct particular attention to section 3, which emphasizes the point I have made with respect to the power of Congress to authorize the collection of taxes by the States:

SEC. 3. That taxes may be levied and collected by the State or local authority upon improvements, output of mines or oil and gas wells or other rights, property, or assets of any lessee upon lands within Executive order Indian reservations in the same manner as such taxes are otherwise levied and collected, and such taxes may be levied against the share obtained for the Indians as bonuses, rentals, and royalties, and the Secretary of the Interior is hereby authorized and directed to cause such taxes to be paid out of the tribal funds in the Treasury: *Provided,* That such taxes shall not become a lien or charge of any kind against the land or other property of such Indians.

I have here a copy of the House report on an identical bill, from which I shall read in order to indicate the true intent of the provision I have just cited.

The effect of this section is to permit the State to collect directly from the oil producer on Indian lands any and every kind of tax that may be assessed against others engaged in like operations elsewhere in the State. The State is not authorized, however, to collect such taxes directly from the Indians, but the same are to be paid for them by the Secretary of the Interior, and a proviso is added which exempts the lands or other property of the Indians from any tax lien. The final result of this legislation will be that the entire output of oil and gas will be taxed by the States, the producer paying upon his share and the Indians upon the share obtained for them.

STATE TAXATION OF NATIONAL BANKS

Just as Indian property held in trust by the United States can not be taxed, except with the consent of Congress, the same is true of the property of instrumentalities of the Federal Government, of which the national banks are a typical example. The latest expression of congressional consent in that respect is the McFadden bill, public law No. 75, Sixty-ninth Congress, approved March 25, 1926.

The States had a perfect right to complain that the national banks were competing with State banks, were engaging in a business which is not governmental, and therefore should not be tax exempt, and therefore Congress removed the exemption.

Arizona and Nevada say that if the Federal Government is to go into the power business in competition with private enterprise, is to engage in that which is not a true function of government, then Congress should see to it that those who are to be the beneficiaries of this power development at Boulder Dam should not use "Uncle Sam" as the excuse for cheating the two States out of the taxes which are justly due them.

The McFadden Act reads as follows:

[Public, No. 75, Sixty-ninth Congress]

An act (S. 3377) to amend section 5219 of the Revised Statutes of the United States

Be it enacted, etc., That section 5219 of the Revised Statutes of the United States be, and the same is hereby, amended so as to read as follows:

"SEC. 5219. The legislature of each State may determine and direct, subject to the provisions of this section, the manner and place of taxing all the shares of national banking associations located within its limits. The several States may (1) tax said share, or (2) include dividends derived therefrom in the taxable income of an owner or holder thereof, or (3) tax such associations on their net income, or (4) according to or measured by their net income, provided the following conditions are complied with:

"1. (a) The imposition by any State of any one of the above four forms of taxation shall be in lieu of the others, except as hereinafter provided in subdivision (c) of this clause.

"(b) In the case of a tax on said shares the tax imposed shall not be at a greater rate than is assessed upon other moneyed capital in the hands of individual citizens of such State coming into competition with the business of national banks: *Provided,* That bonds, notes, or other evidences of indebtedness in the hands of individual citizens not employed or engaged in the banking or investment business and representing merely personal investments not made in competition with such business shall not be deemed moneyed capital within the meaning of this section.

"(c) In case of a tax on or according to or measured by the net income of an association, the taxing State may, except in case of a tax on net income, include the entire net income received from all sources, but the rate shall not be higher than the rate assessed upon other financial corporations nor higher than the highest of the rates assessed by the taxing State upon mercantile, manufacturing, and business corporations doing business within its limits: *Provided, however,* That a State which imposes a tax on or according to or measured by the net income of, or a franchise or excise tax on, financial, mercantile, manufacturing, and business corporations organized under its own laws or laws of other States and also imposes a tax upon the income of individuals, may include in such individual income dividends from national banking associations located within the State on condition that it also includes dividends from domestic corporations and may likewise include dividends from national banking associations located without the State on condition that it also includes dividends from foreign corporations, but at no higher rate than is imposed on dividends from such other corporations.

"(d) In case the dividends derived from the said shares are taxed, the tax shall not be at a greater rate than is assessed upon the net income from other moneyed capital.

"2. The shares of any national banking association owned by nonresidents of any State shall be taxed by the taxing district or by the State where the association is located and not elsewhere; and such association shall make return of such shares and pay the tax thereon as agent of such nonresident shareholders.

"3. Nothing herein shall be construed to exempt the real property of associations from taxation in any State or in any subdivision thereof, to the same extent, according to its value, as other real property is taxed.

"4. The provisions of section 5219 of the Revised Statutes of the United States as heretofore in force shall not prevent the legalizing, ratifying, or confirming by the States of any tax heretofore paid, levied, or assessed upon the shares of national banks, or the collecting thereof, to the extent that such tax would be valid under said section."

Approved March 25, 1926.

The point I desire to emphasize in this connection is that just as in the case of oil and other minerals produced on Indian lands, where the Indians are abundantly able to pay taxes, Congress very properly reasoned that, although a national bank may be an instrumentality of the Federal Government, and, therefore, under the Constitution exempt from taxation, it was unfair to the States to create a Federal agency of that kind, and place it in competition with banks organized by the State, and give it the great advantage of exemption from State taxation. Let me repeat the Arizona contention with respect to the development of power of the Colorado River, that if the Federal Government desires to engage in the business of producing hydroelectric power or it is the wish of Congress to delegate that right to some instrumentality of the United States, nevertheless, by engaging in that business, the Federal Government or its agents are doing something which could be done by private enterprise. If the function were performed by private enterprise, the States of Arizona and Nevada would be entitled to collect taxes; and the taxes should be upon the same basis as is so carefully set forth in the act of Congress authorizing national banks to be taxed—that is, at no higher rate than the tax levied by the State upon a similar property, or upon a similar business.

STATE TAXATION OF RAILROAD-GRANT LANDS

The beneficiaries of congressional favors have always been quick to claim exemption from State taxation. The issue was once raised that the United States had such an interest in lands granted to encourage the construction of railroads by reason of a lien for the cost of surveys that the States could not collect taxes on the same. This scheme, devised by clever railroad attorneys, was frustrated by Congress by the act of July 10, 1886 (U. S. Code, p. 1390), which provided that:

No lands granted to any railroad corporation by any act of Congress shall be exempt from taxation by States, Territories, and municipal corporations on account of the lien of the United States upon the same for the costs of surveying, selecting, and conveying the same, or because no patent has been issued therefor; but this provision shall not apply to lands unsurveyed. * * *

In the instance of the Boulder Dam bill now before the Senate we find an almost parallel case to the one I have just cited. Certain localities of the State of California are here asking Congress to do them a great favor, just as Congress did a great favor to the land-grant railroads by giving them enormous areas of land in order to encourage the building of the railroads. Those who obtained gifts of public land immediately sought to be relieved of paying any taxes to the States. Congress had done them a great favor, yet they wanted to go further and

deprive the States of legitimate revenue. Localities in California are appealing to Congress to do them a great favor, but want to have added to the favor the special privilege of being exempt from State taxation.

COMPARISON OF SWING-JOHNSON BILL WITH GENERAL LEASING ACT

Having demonstrated that in the enactment of many laws Congress has consented that the States shall receive compensation in lieu of taxes, I now return to a further consideration of the general oil leasing act of February 25, 1920 (41 Stat. 450). The senior Senator from Nevada has cited that act as the leading precedent for the amendment which he has proposed and which the Committee on Irrigation and Reclamation has recommended to the Senate for adoption. I again read the provision of that act which disposes of the royalties for the benefit of the public-land States:

SEC. 35. That 10 per cent of all money received from sales, bonuses, royalties, and rentals under the provisions of this act, excepting those from Alaska, shall be paid into the Treasury of the United States and credited to miscellaneous receipts; for past production 70 per cent, and for future production 52½ per cent of the amounts derived from such bonuses, royalties, and rentals shall be paid into, reserved, and appropriated as a part of the reclamation fund created by the act of Congress known as the reclamation act, approved June 17, 1902, and for past production 20 per cent, and for future production 37½ per cent of the amounts derived from such bonuses, royalties, and rentals shall be paid by the Secretary of the Treasury after the expiration of each fiscal year to the State within the boundaries of which the leased lands or deposits are or were located, said moneys to be used by such State or subdivisions thereof for the construction and maintenance of public roads or for the support of public schools or other public educational institutions, as the legislature of the State may direct: *Provided*, That all moneys which may accrue to the United States under the provisions of this act from lands within the naval petroleum reserves shall be deposited in the Treasury as "Miscellaneous receipts."

It will be observed that only 10 per cent of all income from this great natural resource of the public domain goes into the Federal Treasury. Certainly it can not be said that Congress passed this law in order to make a profit for the United States. The truth is that the 10 per cent was estimated approximately to cover the cost of administering the law.

Then 52½ per cent is paid into the reclamation fund. Under its terms, the reclamation act applies principally to the public-land States. The constitutional theory upon which that act is based is that money may be properly expended from the Federal Treasury to aid in the disposal of the public lands. As the Senator from Wyoming [Mr. KENDRICK] has said many times, his State, in which vast quantities of oil have been produced under the general leasing act, has not benefited from the construction of reclamation projects in proportion to that production of oil. Nevertheless, the public-land States generally have gained a great advantage by having over half of all the oil and gas royalties placed in the reclamation fund.

Senator PITTMAN prepared his amendment without reference to the contribution to the reclamation fund. His amendment is based solely upon the provision which gives to the States in which the leased lands are located 37½ per cent of the sales, bonuses, royalties, and rentals. For comparison I shall again read his amendment to show that this is exactly what the Senator seeks to accomplish:

If during the period of amortization the Secretary of the Interior shall receive revenues in excess of the amount necessary to meet the periodical payments to the United States as provided in the contract, or contracts, executed under this act, then, immediately after the settlement of such periodical payments, he shall pay to the State of Arizona 18¾ per cent of such excess revenues and to the State of Nevada 18¾ per cent of such excess revenues.

The question which naturally arises is just what will the States of Arizona and Nevada obtain as revenue if the committee amendment is adopted and becomes a part of the law? It is a practical question and the answer should not be avoided. The senior Senator from Nevada has not dodged the issue. In his address to the Senate on April 28 he said:

This bill gives the Secretary of the Interior the absolute, exclusive power to fix the price at which the power is sold. If he sells the power at cost, then there is no revenue for the State of Arizona or to the State of Nevada. If he sells the power at a quarter of a mill above cost, then the States of Arizona and Nevada get only 37½ per cent of the quarter of a mill, which is a negligible sum. In any event the testimony shows that under that amendment the returns of revenue to the State would be far less than the taxes they would receive from private individuals if the dam were built by individuals or corporations.

Senator PITTMAN further emphasized this point by saying:

The bill provides that the Secretary of the Interior may sell the power at any price he fixes, and that if there is no excess revenue over and above the amount necessary to pay the Government with interest, then the States of Arizona and Nevada get nothing. If there is an excess over that amount, they only get 37½ per cent of it. It is a plain and simple proposition.

The senior Senator from Colorado [Mr. PHIPPS], chairman of the Committee on Irrigation and Reclamation, was equally frank in his explanation of the Pittman amendment to the Senate on May 2. I quote from his speech:

That amendment provides that in the event of excess revenue over and above the amount required for operation and maintenance, for payment of interest on the Government's advances, and for the retirement of the indebtedness within a period of 50 years, 37½ per cent of such excess may be divided equally between the States of Nevada and Arizona. It is believed that in no event would those States derive from that source and by that means anything like the amount they would receive by way of taxation in the event the enterprise were carried forward with private capital.

The Representative in Congress from Nevada [Mr. ARENTZ] has also expressed his views upon the practical effect of an identical amendment to the Swing bill, which has been accepted by the House Committee on Irrigation and Reclamation. Speaking before the Committee on Rules of that body on April 24 the Congressman said:

The State of Nevada has had two amendments accepted by the Irrigation and Reclamation Committee for insertion in this bill. One was to the effect that the surplus created over and above the payments necessary to amortize the cost of this work to the Government, whatever the amount of the surplus may be, will be divided between the States of Arizona and Nevada, but not until those amortization amounts are paid will a dollar come to these States. I do not say that there will ever be a surplus created, but if there should be a surplus created then these States will get it.

The amendment shows upon its face that the intention is to provide for paying to the States 37½ per cent of the net profits after all Federal expenses are paid, and not 37½ of the gross returns, as is provided in the general oil leasing act. Obviously there is a sound reason for doing that, because in the case of oil wells there is no Federal investment, whereas large sums of Government money must be first expended before any revenue can be produced at Boulder Dam.

No one in Arizona or Nevada has ever contended for a single moment that anything be done which would in the slightest degree prevent the repayment during the period of amortization, fixed in the bill, of the total amount which may hereafter be appropriated by Congress for the construction of works at Boulder or Black Canyon. The United States should be completely reimbursed for every dollar expended with interest unless Congress should conclude that it would be proper to make a nonreimbursable appropriation as a Federal contribution toward flood control. In addition thereto there must be returned to the United States all sums expended for operation and maintenance. Neither can anyone possibly object to the allowance of a fair margin for depreciation and all other contingencies.

I can not think of a better way to express the Arizona viewpoint on this question than to read an excerpt from a draft of legislation to provide for the construction and financing of works by the United States for the development of the lower Colorado River Basin, prepared by Mr. Dwight B. Heard, of Phoenix. Mr. Heard is one of the foremost citizens of our State and has devoted much time, talent, thought, and energy to a proper and just solution of the Colorado River problems. Like every good business man, he knows that Congress can not be expected to finance a great reclamation and power project as a free gift. Congress has adopted no such policy and there is no indication that it ever will. In the following provision Mr. Heard has clearly and specifically set forth every item which should be charged to power developed at any Government dam on the Colorado River:

Before any construction work is done or contracted for the Secretary of the Interior shall make provision for revenues from power and other benefits by contract, as in this act provided, for revenues which shall be sufficient to include, after the completion of the proposed works, the following:

First. Annual payment of operation and maintenance charges.

Second. Annual interest on amounts repayable to the United States.

Third. Annual amortization payment due the United States to be completed within 50 years after the completion of the works proposed.

Fourth. The creation of a reserve fund to safeguard operation contingencies and to protect against years of low-water supply. The amount transferred to such reserve fund annually shall be 15 per cent of the sum of this item (4) and item (5) immediately following.,

Fifth. The payment annually, after the payment of items (1), (2), and (3) above, to the States of Arizona and Nevada of a sum equal to the revenue that said States would receive through taxation were

the development herein authorized made by private capital. The estimated amount of the revenue to the States of Arizona and Nevada shall be the amount agreed upon in the three-State agreement between Arizona, Nevada, and California, referred to in this act: *Provided, however,* That all power shall be sold on the basis of commercial competition with steam power at the available market.

Let me repeat that at no time has anyone with authority to speak for the State of Arizona ever seriously proposed that our State should receive compensation in any form from power developed on the Colorado River which would in any manner prevent the United States from receiving all that is annually due to it under any proposed plan of reimbursement. Of course, the Federal Government has the first call for reimbursement. No sane person would advocate any other plan of repayment.

The Senator from Nevada did not deceive himself or seek to deceive the Senate in his explanation of why Congress gave 37½ per cent of the gross Federal income to the States. In the general oil leasing act, as in the Federal water power act, that percentage is not a payment in lieu of taxes because the States are expected by each of said acts to collect their taxes in addition to any payments received from the Federal Government. Senator PITTMAN thoroughly understands and has plainly stated to the Senate that the 37½ per cent which would be paid to the States of Arizona and Nevada in accordance with his amendment, is a payment to those States of compensation for the use of their lands and their waters by reason of the generation of hydroelectric power.

The Senator from Nevada used the general leasing act of 1920 as the basis for his amendment, and that very act recognizes the right of the States to collect taxes. Let me read from the proviso to section 32 of that law wherein Congress specifically recognized that right (41 Stat. 450):

Provided, That nothing in this act shall be construed or held to affect the rights of the States or other local authority to exercise any rights which they may have, including the right to levy and collect taxes upon improvements, output of mines, or other rights, property, or assets of any lessee of the United States.

It will be observed that this language is negative rather than positive in expression. Its form very naturally led shrewd lawyers into an effort to have these terms construed by the courts to be meaningless. That is always the way with those who have been granted a favor or a privilege by Congress. They immediately ask for more. They delight to call themselves instrumentalities of the Federal Government and to assert that therefore they are above the law of any State.

The Mid-Northern Oil Co. obtained from the Secretary of the Interior a lease under the act of February 25, 1920, and began the production of oil from public lands of the United States in the State of Montana. That State, by a general law, required all oil companies to pay a tax of 2 per cent on their gross production. By advice of its attorneys, the Mid-Northern Co. refused to pay this tax, and the issue was submitted to the courts for determination. The Supreme Court of Montana decided against the oil company and in construing the act of Congress said:

In the absence of any congressional declaration upon the subject, all of the privately owned property of this plaintiff within the jurisdiction of the State, including the improvements upon the claims, the net proceeds of the mines, and other property or assets whether used in connection with the mining operations or not, is subject to taxation by this State, and excluding the terms just enumerated, we undertake to say that there is not anything else which is or could be subject of taxation except the privilege of producing oil, and if that privilege is held to be exempt, then the phrase "or other rights" employed in the statute is meaningless. But we are not at liberty to assume that the Congress employed the expression for good measure or to conceal an idea; on the contrary, it is our judgment that the phrase was used advisedly with the other terms employed to indicate that a lease authorized by the statute shall not confer upon the lessee of the Government the right to claim any special exemption from taxation which is not accorded to a lessee of a private owner.

Not satsified, these oil producers appealed to the Supreme Court of the United States, and the right of the State of Montana to collect its taxes was again sustained in the following decision:

Supreme Court of the United States. No. 256. October term, 1924. Mid-Northern Oil Co., plaintiff in error, *v.* J. W. Walker, as treasurer of the State of Montana; Joseph M. Dixon, Governor of the State of Montana; C. T. Stewart, Secretary of State of the State of Montana, et al. In error to the Supreme Court of the State of Montana. April 13, 1925.

Mr. Justice Sutherland delivered the opinion of the court:

This suit was brought by the oil company to enjoin the enforcement of an annual license tax imposed by a State statute (Montana Revised Codes, 1921, secs. 2397–2408) (2398. Oil license tax. Every person engaging in or carrying on the business of producing within this State petroleum, * * * must, for the year 1921 and each year thereafter, when engaged in or carrying on any such business in this State, pay to the State treasurer, for the exclusive use and benefit of the State of Montana, license tax for engaging in and carrying on such business in an amount equal to 1 per cent of the total gross value of all petroleum and other mineral or crude oil produced by such person within this State during such year; * * *) upon persons producing petroleum, etc., equal to 1 per cent of the gross value of the oil produced during the year. The statute, as applied to the company, is assailed as invalid upon the ground that the company, by assignment of the original leases, is a lessee of the United States of certain public lands entered as homesteads but not yet granted by patent upon which it is engaged in prospecting for and producing crude petroleum under the provisions of the leasing act of February 25, 1920 (ch. 85, 41 Stat. 437), and therefore "is a governmental agency, means, or instrumentality whose operations can not be taxed by the State." The State supreme court held otherwise. (65 Mont. 414; 68 Mont. 550.)

Whether the company under its leases is an agency, means, or instrumentality of the United States, or in the absence of congressional consent would be outside the reach of State taxation, we need not stop to consider, since we are of opinion that the authority of the State exists in virtue of such consent. Section 32 (41 Stat. 450) of the act contains the following proviso: "*Provided,* That nothing in this act shall be construed or held to affect the rights of the States or other local authority to exercise any rights which they may have, including the right to levy and collect taxes upon improvements, output of mines, or other rights, property, or assets of any lessee of the United States."

The contention on behalf of the company is that this proviso, which saves from the effect of any possible adverse construction of the act, rights of the States "which they may have," relates to, and is confirmatory of, existing rights only; that is to say, rights existing when the act was passed. But we find nothing in the body of the act which, by any stretch of meaning, purports to detract from or render less certain any such preexisting rights, and in that view the theory advanced fails for want of material upon which to operate. It fairly can not be supposed that Congress would indulge in the altogether idle ceremony of enacting a law to save rights which, being in no way challenged or affected, stood in no need of being saved. The more natural view, and the one we adopt, is that Congress, having provided for leasing the public lands to private corporations and persons whose property, income, business, and occupations ordinarily were subject to State taxation, meant by the proviso to say in effect that although the act deals with the letting of public lands and the relations of the Government to the lessees thereof, nothing in it shall be so construed as to affect the right of the States, in respect of such private persons and corporations, to levy and collect taxes as though the Government were not concerned. In other words, the purpose of Congress was to remove altogether from the field of controversy, among other questions, the very question which is here presented, and to put beyond doubt the authority of the States to impose taxes upon lessees in respect of their property, although arising from and in respect of their taxable rights, although exercised under the act without regard to the origin thereof or to the interest of the United States in the lands or leases.

Further, it is said that the enumeration of particular objects of taxation causes it to be necessary to limit the general words "or other rights" to things of the same nature in accordance with the doctrine of ejusdem generis, and that, thus limited, the right or privilege of carrying on a business or following an occupation is not included. These general words follow the more particular words "improvements [and] output of mines," and are followed by the equally general words "property or assets," the entire clause being "improvements, output of mines, or other rights, [other] property, or [other] assets." The doctrine invoked is a rule of construction to be used as an aid in the ascertainment of the intention of the law makers, and not for the purpose of subverting such intention when ascertained. Here the enumeration of taxable things, including the general classes, property and assets, is so comprehensive that nothing remains to which the phrase in question can apply, unless to rights like the one here taxed; and to construe it as contended would, in effect therefore, nullify it altogether. (Mason *v.* United States 260 U. S. 545, 553–554.) No doubt what Congress immediately had in mind was the necessity of making it clear that notwithstanding the interest of the Government in the leased lands, the right of the States to tax improvements thereon and the output thereof should not be in doubt; but the intention likewise to save the authority of the States in respect of all other taxable things is made evident by the addition of the three general categories "other rights, property, or assets." We think the proviso plainly discloses the intention of Congress that persons and corporations contracting with the United States under the act should not for that reason be exempt from any form of State taxation otherwise lawful.

Decree affirmed.

A true copy.

Attest: ——— ———,

Clerk Supreme Court, United States.

Thus it will be seen that the very act upon which the Pittman amendment to the Swing-Johnson bill is predicated provides that the States shall receive, first, 37½ per cent of the Federal profits; and, second, their taxes. And that is exactly what the Swing-Johnson bill should, in effect, provide with respect to water power developed at Boulder Dam. After the United States is fully and completely paid each year for every expense chargeable to that great dam, the States of Arizona and Nevada should be given 37½ per cent of the profits. Those who buy power from the Federal Government or those who buy water from the Government dam to make power should also pay the State tax on that power.

The city of Los Angeles and the other municipalities of southern California, which are to be the purchasers of power at Boulder Dam, and which the authors of this bill intend to favor by its passage, should no more be exempted from State taxation on that power than was the Mid-Northern Oil Co. in Montana. Both the oil company and the municipalities are engaged in a business for profit and the fiction that they are performing some Federal function should not be thrown about them as a cloak to hide what, in truth and in fact, is a denial of the right of States to collect taxes which are justly due.

The production of oil is not a function of the Federal Government. The production of hydroelectric power is not a function of the Federal Government. The United States may have an interest in the production of oil as an incident to its ownership of the public domain. The United States may have an interest in the production of hydroelectric power as an incident to carrying out a Federal policy of reclamation and flood control. But that incidental interest in either case should not be made the excuse to cheat and defraud States of revenue from taxation.

Mr. President, I shall now read the text of four amendments to the committee amendment to the Swing-Johnson bill, the acceptance of any one of which by those who speak for the State of California will be satisfactory to the State of Arizona as a complete settlement of the power controversy in the lower Colorado River Basin. The first amendment is taken almost word for word from the proviso to section 32 of the general oil leasing act of February 25, 1920 (41 Stat. 450), and reads as follows:

Amend the committee amendment on page 6 by adding the following proviso at the end of line 12: "*Provided*, That nothing in this act shall be construed or held to affect the rights of the States of Arizona and Nevada to exercise any rights which they may have, including the right to levy and collect taxes upon improvements, output of electrical energy, or other rights, property, or assets used in connection with or necessary for the production of electrical energy at said Boulder or Black Canyon Dam and/or power plant, except that the tax imposed by any State shall not be higher than the rates assessed upon other rights, property, or assets by said State."

The next amendment which I have prepared for the consideration of the Californians is copied almost exactly from the act of May 29, 1924, which authorized mining for oil and gas on Executive order Indian reservations. This amendment states positively the purpose of my first proposal, which said the same thing in a negative way. I read:

Amend the committee amendment on page 6 by adding the following proviso at the end of line 12: "*Provided*, That taxes may be levied and collected by the States of Arizona and Nevada upon improvements, output of electrical energy, or other rights, property, or assets used in connection with or necessary for the production of electrical energy at said Boulder or Black Canyon Dam and/or power plant, except that the tax imposed by any State shall not be higher than the rates assessed upon other rights, property, or assets by said State."

I shall now read my third proposal in the way of an amendment which contemplates the direct payment of taxes to Arizona and Nevada by the consumers of power in southern California. This would be accomplished by a provision in the contracts for power produced at Boulder Dam, requiring the contractee to pay the taxes levied by Arizona and Nevada. This amendment is based upon the power offers made at various times to California by commissioners representing the State of Arizona, the text of which I have read to the Senate.

Amend the committee amendment on page 6 by adding the following proviso at the end of line 12: "*Provided*, That all contracts for the sale of electrical energy shall provide that the contractee shall pay, in addition to all other payments specified in such contract, to the States of Arizona and Nevada such taxes as may be annually levied by said States upon improvements, output of electrical energy, or other rights, property, or assets used in connection with or necessary for the production of electrical energy at said Boulder or Black Canyon Dam and/or power plant, and the contractee shall further agree to divide the total amount of such taxes levied by said States and pay one-half thereof annually to the State of Arizona and one-half to the State of Nevada: *Provided further*, That the tax imposed by any State shall not be higher than the rates assessed upon other rights, property, or assets by said State."

It will be observed that each of the three amendments just read end with a statement that any taxes imposed by Arizona or Nevada shall not be higher than the rates assessed on other rights, property, or assets by such States. That language is adopted from the McFadden Act of March 25, 1926, which is the latest expression by Congress on the subject of State taxation of national banks.

While Arizona would prefer recognition of the right to tax all power produced on the Colorado River, yet if California should still insist upon a fixed and determined rate per kilowatt-hour, that could be done by accepting the following amendment, which is likewise predicated upon a written offer made by the Arizona Colorado River Commission, to which I have previously referred.

Amend the committee amendment on page 6 by adding the following proviso at the end of line 12: "*Provided*, That all contracts for the sale of electrical energy shall provide that the contractee, in addition to all other payments specified in such contract, shall pay to the State of Arizona one-half of 1 mill per kilowatt-hour and to the State of Nevada one-half of 1 mill per kilowatt-hour for all electrical energy delivered to the contractee at the switchboard at said Boulder or Black Canyon Dam and/or power plant."

All of these amendments originate from the idea that Congress might possibly authorize the Secretary of the Interior to construct and operate a hydroelectric power plant at Boulder Dam. I do not believe that any bill carrying such a provision will ever become a law; and, therefore, do not offer the four proposals as amendments for consideration by the Senate at this time. Changing the Swing-Johnson bill so as to prevent the Federal Government from engaging in the power business at Boulder Dam, and authorizing licenses to be issued at that Government dam by the Federal Power Commission will accede to Arizona's wishes in a much more satisfactory way than any of these four alternative proposals which I have presented. The amendment that I offered yesterday points out the proper way in which to settle the Colorado River power dispute.

WHAT IS A GOVERNMENT FUNCTION?

Even if the Federal Government should itself generate and sell power at Boulder Dam the consumers of that power should be required to pay the equivalent of taxes to Arizona and Nevada, because the generation of electrical energy is not a governmental function.

I now propose to discuss the question as to whether the manufacture and sale of electrical energy is a governmental function. Everyone will admit that Congress has no constitutional authority to pass an act providing that some department or bureau shall directly engage in that activity. The States have at no time delegated any such authority to the Federal Government. The only way in which the United States can own and operate a power plant is where the generation of electricity is a mere incident to the exercise of some constitutional power such as the control of interstate commerce or the disposal of the public lands.

The functions of the Federal Government are limited and defined by the Constitution. To the States are reserved all powers not conferred upon Congress, so that a State may engage in any or all kinds of industrial pursuits if its people so desire, and amend the constitution of the State according to that desire. The same is true of municipalities which are arms of the State and derive their powers from it. To the States and to municipalities the industrial field is wide open. No such limits are imposed upon them as are fixed by the Federal Constitution upon Congress.

But just what is the difference between the governmental and the proprietary or business functions of States and municipalities? I have made some study of that question and find it difficult to answer. The answer depends not only upon the nature of the specific activity which may be under consideration, but time is also a factor. An evolutionary change is taking place and many enterprises which were once considered to be wholly private are now accepted to be of a public nature.

On Thursday, May 17, a very interesting and illuminating discussion took place on the floor of the Senate in connection with an amendment offered to the revenue bill by the junior Senator from Michigan [Mr. VANDENBERG]. By adopting the amendment, the Senate in effect decided to widen the definition of a governmental function as applied to municipalities by granting exemption from the Federal income tax to a larger number of the employees of cities and towns.

I voted for the Vandenberg amendment, first, because the total Federal revenue from that source will not amount to

$100,000 a year. The sum is so small as to not be worth contending for on principle. The second reason for my vote was that I would rather err upon the side of liberality toward municipal employees than to continue a practice which is discriminatory.

The only lesson that can be learned by a study of the controversy between the Federal Bureau of Internal Revenue and the city employees who have petitioned for relief is that Congress has the undoubted power to tax the nongovernmental activities of States and municipalities, but can waive the payment of such taxes as a voluntary act of grace. If that is true, and I am firmly convinced that it is, then the rule should work both ways. No State should be called upon to surrender any revenue that is justly due it from a nongovernmental activity of the Federal Government, unless it does so of its own free will and accord as an act of comity between sovereigns.

I first became interested in this question of what is a governmental function by reason of a letter which I received from Hon. S. C. Evans, mayor of Riverside, Calif., written in behalf of the employees of the water and electric light bureaus of that city. I am always glad to be of assistance to our neighbors in the Golden State whenever it is humanly possible for me to do so, and therefore took pleasure in communicating with the Commissioner of Internal Revenue. I promptly wrote to the commissioner and received the following reply:

TREASURY DEPARTMENT,
Washington, January 2, 1925.

Hon. CARL HAYDEN,
House of Representatives.

MY DEAR MR. HAYDEN: Receipt is acknowledged of your letter of December 23, 1924, transmitting letter from Hon. S. C. Evans, mayor, Riverside, Calif., relative to a ruling of the bureau holding that the compensation of officers and employees of the water and electric-lighting system owned and operated by the city of Los Angeles, Calif., is not exempt from income tax. Mayor Evans states that the city of Riverside, Calif., owns and operates its water and electric-lighting systems. He contends that to subject the compensation of the officers and employees of such systems to income tax for prior years will work a hardship, and expresses an opinion that the ruling should not be applied retroactively.

In reply, I have to state that the bureau has recently carefully considered the income-tax status of officers and employees of municipally owned and operated water and electric-lighting systems, as well as other utilities. The rulings of the bureau accept the distinction between essential governmental functions of a State or municipality on the one hand, and its proprietary or private activities on the other, as determining the question of the taxability of the compensation received by the officers and employees of a State or municipality, and hold that the implied exemption from Federal taxation applies to the compensation of officers and employees engaged in the former activities, and does not apply to the compensation of officers and employees engaged in the latter activities.

In the case of the Los Angeles Gas & Electrical Co. *v.* The City of Los Angeles et al. (241 Fed. 912, 918), the district court for Southern California, speaking with respect to the activities of the city of Los Angeles in furnishing electrical energy to the inhabitants of that city, said:

"Whatever the city does, however, in the matter of actually engaging in the furnishing and delivering of electrical energy to itself and its inhabitants is done in its proprietary or quasi private capacity (Walla Walla *v.* Walla Walla Water Co., 172 U. S. 1, 8, 10; 19 Sup. Ct. 77, 43 L. Ed. 341; South Pasadena *v.* Pasedena Land Co., 152 Cal. 579, 593, 93 Pac. 490; Safety Insulated Wire Co. *v.* Baltimore, 66 Fed. 140, 13 C. C. A. 375) * * *."

This language of the district court was approvingly referred to by the United States Supreme Court and the decree of the district court affirmed on appeal in a decision of that court reported in 251 U. S. 32, 38. In this connection also, attention is invited to the case of South Carolina *v.* United States (199 U. S. 437, 463), in which the Supreme Court quoted with approval from the Western Saving Fund Society *v.* City of Philadelphia (31 Pa. St. 175), as follows:

"Such contracts (i. e., contracts for supplying gas) are not made by the municipal corporation by virtue of its powers of local sovereignty, but in its capacity of a private corporation. The supply of gaslight is no more a duty of sovereignty than the supply of water. Both these objects may be accomplished through the agency of individuals or private corporations, and in very many instances they are accomplished by those means. If this power is granted to a borough or a city, it is a special private franchise, made as well for the private emolument and advantage of the city as for the public good."

After careful consideration of the entire matter it is the opinion of this office that a city in furnishing water and electricity to its residents is acting in a proprietary rather than in its sovereign capacity, and that the compensation of officers and employees engaged in such activities is not exempt from income tax under the revenue acts of 1918, 1921, and 1924.

In regard to applying the ruling without retroactive effect, you are advised that the ruling has not been promulgated as a Treasury decision or regulation. It, therefore, does not come within the purview of section 1008 of the revenue act of 1924, which provides for the application of a regulation or Treasury decision, under certain conditions, without retroactive effect.

Mr. Evans's letter is returned herewith.

If you desire to take up this matter with me further, consideration will be expedited by reference to IT:E:RR–ALH.

Sincerely yours,

D. H. BLAIR, *Commissioner.*

Not being satisfied with his reply, I again wrote to the Commissioner of Internal Revenue and directed his attention to the fact that while the Federal income tax was being collected from the employees of cities engaged in such activities as the production of hydroelectric power, nevertheless the municipal bonds issued to build power plants or electric-light plants were exempt from taxation.

To my second letter I received the following reply, dated February 18, 1925, from Commissioner Blair:

TREASURY DEPARTMENT,
Washington, February 18, 1925.

Hon. CARL HAYDEN,
House of Representatives.

MY DEAR MR. HAYDEN: Reference is made to your letter of January 5, 1925, acknowledging receipt of office letter, dated January 2, 1925, wherein you were advised that a municipality in furnishing water and electricity to its residents is acting in a proprietary rather than in its sovereign capacity and that the compensation of officers and employees of the municipality engaged in such activities is not exempt from income tax under the revenue acts of 1918, 1921, and 1924. You request to be informed as to the reasons for holding that the compensation of such officers and employees is subject to income tax, while the income derived from securities issued by a municipality for the installation of lighting, power, and water systems is held to be exempt.

In reply, I have to state that the revenue acts above referred to expressly provide for the exemption from income tax of the interest upon the obligations of a State or political subdivision thereof. They do not, however, contain a provision for the exemption of compensation received by officers and employees of a State or political subdivision thereof. Such compensation is exempt, nevertheless, by reason of the implied constitutional limitation which prohibits the Federal Government from taxing the means and instrumentalities of a State in the exercise of its governmental functions and vice versa. But, as stated in the office letter of January 2, 1925, above referred to, the compensation received by such officers and employees is not exempt when the services are rendered in connection with the private activities of such State or political subdivision thereof.

If you desire to take up this matter with me further, consideration will be expedited by reference to IT:E:RR:ALH.

Sincerely yours,

D. H. BLAIR, *Commissioner.*

This correspondence took place in 1925. Being desirous two years later of ascertaining whether there had been any change in the attitude of the Bureau of Internal Revenue, I again wrote to Commissioner Blair, and received the following reply:

TREASURY DEPARTMENT,
Washington, January 18, 1927.

Hon. CARL HAYDEN,
House of Representatives.

MY DEAR MR. HAYDEN: Reference is made to your recent telephonic request for information as to whether the views of the bureau respecting the taxable status of the compensation of officers and employees of municipally owned and operated water and electric lighting systems are still the same as those expressed in office letters dated January 2, 1925, and February 18, 1925, respectively.

In reply you are advised that the position taken in the office letters referred to represents the bureau's present attitude on the subject, in so far as the taxable year 1925 and subsequent years are concerned. Section 1211 of the revenue act of 1926 provides that any taxes imposed by the revenue act of 1924 or prior revenue acts in respect of the compensation received for personal services as an officer or employee of any State or political subdivision thereof, except to the extent that such compensation is paid by the United States Government either directly or indirectly, shall be abated, credited, or refunded, subject to the statutory period of limitations applicable. As to 1924 and prior years, it is immaterial whether the activity of the State or political subdivision thereof in which the officer or employee was engaged was of a governmental or nongovernmental character. The compensation received by an officer or employee of a State or political subdivision thereof for the year 1924 or prior years is not subject to income tax. Any compensation received by such officer or employee for services

rendered on or after January 1, 1925, in connection with the exercise of a nongovernmental function is subject to income tax under the revenue act of 1926.

A municipality in furnishing water, light, or power for the general use of its residents is not deemed to be engaged in an essential governmental function. The compensation of its officers and employees engaged in such activities is subject to income tax under the revenue act of 1926.

The position of the bureau in the matter is fully set forth in Solicitor's Opinion 152, Cumulative Bulletin II–2, page 93; Solicitor's Memorandum 2232, Cumulative Bulletin III–2, page 83; and Income Tax Ruling 2324, Bulletin V–52, page 2, Internal Revenue Bulletin Service. The bureau has no supply of these bulletins available for distribution. They may be obtained from the Superintendent of Documents, Government Printing Office.

If you desire to take this matter up with me further, consideration will be expedited by reference to IT:E:RR:ALH.

Sincerely yours,

D. H. BLAIR, *Commissioner.*

I have here, Mr. President, several decisions by the Solicitor of the Bureau of Internal Revenue which thoroughly cover this question. I read from Internal Revenue Bulletin of July–December, 1923, Cumulative Bulletin II–2, at page 93:

ARTICLE 88—COMPENSATION OF STATE OFFICERS AND EMPLOYEES

(II–35–1217, Sol. Op. 152)

INCOME TAX: SECTION 213, REVENUE ACT OF 1921

"The compensation of officers and employees of a street railway owned and operated by a municipality is taxable income under the revenue act of 1921."

The attached file relative to the income-tax liability of salaries and wages paid officers and employees of the M Street Railways, which have been acquired and are now operated by the board of street railway commissioners of the city of S, has been submitted to this office for an opinion on the law involved. The specific question presented is whether such compensation is taxable income under the revenue act of 1921.

Pursuant to authority granted by section — of article — of the constitution of the State of T, and particularly by section — of the State statutes (as amended by Pub. Acts 19—, No. —; Pub. Acts 191—, No. —), a city charter was adopted by the people of the city of S in 19—. This charter provided in chapter — of title — that the city should proceed to acquire or construct a street-railway system as soon as practicable, to be operated by a board of street railway commissioners. Under this authority the city of S now owns and operates a system of street railways in the city.

In the briefs filed by the corporation counsel of the city of S it is argued that the operation of the street-railway system is a governmental function, and is so regarded by the State and city; that, in any case, even regarded as a purely proprietary function, it is a necessary element in the city's existence. In either event, it is urged that the compensation of the street-railway officers and employees is exempt, evidently upon the theory that the Federal Government has not the power to lay an income tax upon it.

The sixteenth amendment to the Constitution of the United States provides:

"The Congress shall have power to lay and collect taxes on incomes, *from whatever source derived,* without apportionment among the several States, and without regard to any census or enumeration." [Italics ours.]

During the period in which the proposed amendment was being ratified by the legislatures of the various States it was urged by various writers that the amendment gave Congress the power to tax salaries of officers and employees of the States. (See Foster, Income Tax, p. 78 et seq.; Minor, The proposed income-tax amendment, 15 Va. L. Reg., 737, 753; Hubbard, The sixteenth amendment, 33 Harvard L. R., 794; contra, Ritchie, Power of Congress to tax State securities, 5 A. B. A. Journal, 602.) The basic argument in support of this conclusion is that the amendment in terms gives Congress the power to tax incomes, irrespective of their source (see opinion of Justice Holmes in Evans *v.* Gore (1920), 253 U. S. 245, 267 [C. B. 3, p. 93]), and therefore that salaries of State officials need be given no different treatment than any other salaries. Whatever may be the theoretical merit of this construction, the Attorney General has ruled, in Thirty-first Opinions Attorney General, page 441, that such salaries are not subject to the Federal income tax, even in the absence of a specific exemption in the revenue acts. This opinion has been followed in article 88 of Regulations 62:

"Compensation paid its officers and employees by a State or political subdivision thereof * * * is not taxable."

This exemption is, however, based upon constitutional reasons, irrespective of the statute; that is, it is based upon the necessary implication from judicial decisions construing the Constitution prior to the sixteenth amendment rather than upon any express exemption provisions. Accordingly it is necessary to examine these decisions to determine the scope of the exemption directed by the decisions and followed by the regulations.

In Collector *v.* Day (1870) (11 Wall. 113), the leading case upon the question, relied upon by the Attorney General, the question was whether, under the Civil War income-tax statutes, the salary of a State judge was taxable under the general provisions of the acts. In holding that the salary was not taxable, the court said (pp. 125, 127):

"It is admitted that there is no express provision in the Constitution that prohibits the General Government from taxing the means and instrumentalities of the States, nor is there any prohibiting the States from taxing the means and instrumentalities of that Government. In both cases the exemption rests upon necessary implication and is upheld by the great law of self-preservation; as any government, whose means employed in conducting its operations, if subject to the control of another and distinct government, can exist only at the mercy of that government.

"* * * the means and instrumentalities employed for carrying on the operations of their governments, for preserving their existence, and fulfilling the high and responsible duties assigned to them in the Constitution, should be left free and unimpaired, should not be liable to be crippled, much less defeated by the taxing power of another government." * * *

It will be observed that the court grants this exemption by implication to the "means and instrumentalities employed for carrying on the operations of their governments, for preserving their existence, and fulfilling the high and responsible duties assigned to them in the Constitution." Granted, then, that the sixteenth amendment did not remove this exemption, what are these "means and instrumentalities"? Are all enterprises in which a State or municipality may choose to engage ipso facto removed from the sphere of Federal taxation? The corporation counsel of the city of S so argues.

The Supreme Court has followed a consistent policy in the series of cases involving this question, which will be indicated by extracts from some of the decisions. In Bank of United States *v.* Planters' Bank of Georgia (1324) (9 Wheat. 904) Chief Justice Marshall said (p. 907):

"It is, we think, a sound principle, that when a government becomes a partner in any trading company, it divests itself, so far as concerns the transactions of that company, of its sovereign character and takes that of a private citizen. Instead of communicating to the company its privileges and its prerogatives, it descends to a level with those with whom it associates itself and takes the character which belongs to its associates and to the business which is to be transacted."

This distinction between the so-called proprietary functions of a municipality or State and its governmental functions has been further brought out in a series of cases involving Federal taxation. In Salt Lake City *v.* Hollister (1885) (118 U. S. 256) action was brought by the city to recover taxes paid the Federal collector of internal revenue on spirits distilled by the city. It was held that a municipal corporation engaged in the business of distilling spirits was subject to internal-revenue taxation under the laws of the United States. In the leading case upon this subject, South Carolina *v.* United States (1905) (199 U. S. 437), Justice Brewer brings out clearly the distinction noted in the earlier cases between proprietary and governmental functions of a State. The facts were these: The State of South Carolina established dispensaries for the wholesale and retail sale of liquor and prohibited sales by others. The United States demanded license taxes from the dealers, which the State paid. The dispensers had no interest in the sales and received no profits thereon. Later the State protested against the payment of the Federal license taxes and sued to recover amounts already paid. In upholding the power of the United States to levy the license tax, Justice Brewer, after citing Collector *v.* Day, supra, and McCulloch *v.* Maryland (1819) (4 Wheat. 316), said (pp. 456, 457, 459):

"There is something of a conflict between the full power of the Nation with respect to taxation and the exemption of the State from Federal taxation in respect to its property and a discharge of all its functions. * * * The exemption of the State's property and its functions from Federal taxation is implied from the dual character of our Federal system and the necessity of preserving the State in all its efficiency. In order to determine to what extent that implication will go, we must turn to the condition of things at the time the Constitution was framed. * * * Looking, therefore, at the Constitution in the light of the conditions surrounding at the time of its adoption it is obvious that the framers in granting full power over license taxes to the National Government meant that that power should be complete, and never thought that the States by extending their functions could practically destroy it."

* * * * * * *

"It is also worthy of remark that the cases in which the invalidity of a Federal tax has been affirmed were those in which the tax was attempted to be levied upon property belonging to the State, or one of its municipalities, or was a charge upon the means and instrumentalities employed by the State, in the discharge of its ordinary functions as a government."

In this connection I shall depart from reading the opinion of the Solicitor of Internal Revenue to say that, in a vigorous dissenting opinion in South Carolina *v.* The United States (199 U. S. 437), Chief Justice White in substance said that this decision would be the basis of a like demand by States to tax the nongovernmental activities of the United States. Chief Justice White was right. We are making that very plea to-day.

This distinction between governmental and nongovernmental functions should apply with even greater force against the Federal Government, which is one of delegated powers, than to the State governments, to whom all other powers are reserved.

The court then cites Veazie Bank *v.* Fenno (8 Wall. 533), Collector *v.* Day (11 Wall. 113), United States *v.* Railroad Co. (17 Wall. 322), to the same effect, and continues (p. 461):

"In Ambrosini *v.* United States (187 U. S. 1), in which the Federal war revenue tax act, providing for stamp taxes on bonds, was held inapplicable to bonds required from licenses under the dram shop act of Illinois, the court declared:

"'The question is whether the bonds were taken in the exercise of a function strictly belonging to the State and city in their ordinary governmental capacity, and we are of the opinion that they were, and that they were exempted as no more taxable than the licenses.'

"These decisions, while not controlling the question before us, indicate that the thought has been that the exemption of State agencies and instrumentalities from national taxation is limited to those which are of a strictly governmental character and does not extend to those which are used by the State in carrying on of *an ordinary private business.*" [Italics ours.]

The court then refers to the distinction in the law of torts between suits against a city for acts done in its public capacity and for acts in its private character and goes on (p. 463):

"* * * It is reasonable to hold that while the former may do nothing by taxation in any form to prevent the full discharge by the latter of its governmental functions, yet whenever a State engages in a business which is of a private nature that business is not withdrawn from the taxing power of the Nation."

The application of this decision to the present case is obvious. The city of S is here engaged in an enterprise which is not essentially governmental in its nature, but which is normally an ordinary private business. The operation of this ordinarily private business by the city does not remove the compensation paid its officers or employees from the Federal taxing power, since the implied restriction upon that power relates only to the essential governmental activities of the State or city.

The same distinction has been followed in two recent cases, Flint *v.* Stone-Tracy Co. (1911) (220 U. S. 107) and Vilas *v.* Manila (220 U. S. 345). In the former the court quoted South Carolina *v.* United States with approval, and added (p. 157):

"The cases unite in exempting from Federal taxation the means and instrumentalities employed in carrying on the governmental operations of the State. The exercise of such rights as the establishment of a judiciary, the employment of officers to administer and execute the laws, and similar governmental functions can not be taxed by the Federal Government. (Collector *v.* Day, 11 Wall. 113; United States *v.* Railroad, 17 Wall. 322; Ambrosini *v.* United States, 187 U. S. 1.)

"But this limitation has never been extended to the exclusion of the activities of a merely private business from the Federal taxing power, although the power to exercise them is derived from an act of incorporation by one of the States."

In Vilas *v.* Manila, the court said (p. 356):

"We are unable to agree with the argument. It loses sight of the dual character of municipal corporations. They exercise powers which are governmental and powers which are of a private or business character. In the one character a municipal corporation is a governmental subdivision, and for that purpose exercises by delegation a part of the sovereignty of the State. In the other character it is a mere legal entity or juristic person. In the latter character it stands for the community in the administration of local affairs wholly beyond the sphere of the public purposes for which its governmental powers are conferred.

"The distinction is observed in South Carolina *v.* U. S. (199 U. S. 437, 461), where Lloyd *v.* Mayor of N. Y. (5 N. Y. 369, 374) and Western Savings Sec. *v.* Phila. (31 Pa. St. 175) are cited and approved. In Lloyd *v.* Mayor of N. Y., supra, it is said:

"'The corporation of the city of New York possesses two kinds of power, one governmental and public and, to the extent they are held and exercised, is clothed with sovereignty; the other private, and to the extent they are held and exercised, is a legal individual. The former are given and used for public purposes, the latter for private purposes. While in the exercise of the former the corporation is a municipal government, and while in the exercise of the latter, is a corporate legal individual.'"

Reference should also be made to the same distinction in the law of torts, referred to by Justice Brewer in South Carolina *v.* U. S., supra, which is the basis of the decisions in the following illustrative cases: Lynch *v.* City of Springfield (1899) (174 Mass. 430, 54 N. E. 871); Bullmaster *v.* City (1897) (70 Mo. App. 60); City *v.* Babbitt (1894) (8 Tex. Civ. App. 432, 28 S. W. 702); City *v.* Kelly (1882) (38 Ohio St. 50); Western Saving Fund Society *v.* City (1858) (31 Pa. St. 175); City *v.* Corey (1861) (9 Mich. 165). See also Mayor *v.* Birmingham Water Wks. Co. (1903) (139 Ala. 531, 36 So. 614); State *v.* Barker (1902) (116 Iowa 96, 89 N. W. 204).

With the background of these decisions, it must be regarded as established that there is a consistently recognized distinction between the strictly governmental functions of a city on the one hand and its proprietary or private activities on the other; moreover, that the implied exemption from Federal taxation applies only to the former and does not apply to the latter. Although it may well be that the operation of a street railway in the city of S is a necessity, it could scarcely be contended that it is an instrumentality of the city in the discharge of its ordinary functions as a government, within the limitations of the decisions supra. If it is not a means or instrumentality of government, it is not, according to these decisions, removed from the sphere of Federal taxation. This fact is impliedly recognized in the State of T statute (Pub. Acts, 191_, No. —), which conferred authority upon the city to insert in its charter provisions for the acquisition of a street railway. It provides in part:

"When a transportation utility is so acquired State and county taxes shall be paid thereon as if privately owned, also local taxes on any portion of such property lying outside of the city limits."

As was said in Boston Elevated Ry. Co. *v.* Malley (1923) (268 Fed. 864; T. D. 3479, C. B. II-1, p. 251) with reference to a similar provision (p. 869):

"While Federal taxation is not specially mentioned, the fact that the legislature expressly stated that the company should continue to be subject to taxation is strong indication that the legislature intended that the company should be subject to all the obligations to which it was subject before it was placed under the control of trustees appointed by the Commonwealth."

The decisions of the Supreme Court of the United States require the conclusion that the operation of a street railway by the city of S is not a governmental function of the city; that it does not, therefore, fall within any implied exemption from Federal taxation; that, since there is no express exemption of the salaries and wages of officers or employees of such railway either in the sixteenth amendment or in the revenue act of 1921, such salaries or wages are taxable income within such act.

NELSON T. HARTSON,
Solicitor of Internal Revenue.

It seems to me Mr. President, to be perfectly clear that if a distinction is to be drawn between the governmental functions and the business or proprietary functions of cities, it is strictly applicable to the bill now pending before the Senate. If a California municipality engaged in the business of producing and selling hydroelectric power should obtain a license to construct a power plant at a Government dam on the Colorado River, it certainly follows from the logic of the cases cited that such a municipality should be required to pay taxes to the States of Arizona and Nevada, because it is engaged, not in a governmental function but in business for the profit of its citizens.

The same thing, it seems to me, should be true with respect to the United States of America. If it is not an essential governmental function of the Federal Government to engage in the business of producing hydroelectric power at a dam on the Colorado River, certainly if not legally, at least equitably, the States wherein the power plant is located have a just right to insist that they should not be deprived of the same measure of revenue as they would receive if they were permitted to tax a private power corporation engaged in the same business at the same place.

I shall now read from Internal Revenue Bulletin, July to December, 1924, at page 82:

ARTICLE 87—INCOME OF STATES

(See S. M. 2040; sec. 225, art. 424.) Operation of bank under Texas State guaranty fund

III-34-1742—S. M. 2322

ARTICLE 88—COMPENSATION OF STATE OFFICERS AND EMPLOYEES
REVENUE ACTS OF 1918 AND 1921

"Any amounts received by the sheriff of ——— County, Ohio, in excess of the actual cost of feeding State and Federal prisoners, such amounts being retained by him under the laws of the State as part of his official compensation, represent additional compensation from a political subdivision of the State and are not subject to Federal income tax."

Advice is requested relative to the taxability of certain amounts received by a sheriff of ——— County, Ohio, such amounts being the excess of the actual cost of feeding State and Federal prisoners over

the allowances made by law for that purpose. It appears that under the laws of the State of Ohio the sheriff is authorized to keep such excess amounts as part of his official compensation.

Although it is true that the amounts for feeding the Federal prisoners are paid by the Federal Government, nevertheless they are paid to the sheriff in his official capacity, and it would be necessary for him to account for such amounts to the State government and to pay over to the State government any excess over the actual cost were it not for the law of the State which permits him to keep such excess amounts as part of his compensation. The excess amounts are therefore received by him by virtue of the law of the State and not because of the contract which he enters into in his official capacity with the Federal authorities. In other words, although the money comes to him directly from the Federal Government, he is authorized by the State to keep the excess amounts. The authorization coming by virtue of the law of the State, the situation is just the same as though the State had paid the additional compensation to him.

It is held, therefore, that the amounts in question represent additional compensation received from a political subdivision of a State and are not subject to Federal income tax.

NELSON T. HARTSON,
Solicitor of Internal Revenue.

In that case the distinction was again properly drawn between the governmental and the nongovernmental activities of the State or county, and the ruling was undoubtedly correct.

I shall now read from page 83 of the same bulletin:

REVENUE ACT OF 1921

"In deciding whether or not any particular activity in which a State or municipality may be engaged is a governmental function, the attitude of the Federal rather than the State authorities should govern.

"The compensation received for services rendered in connection with a municipally owned water system is not exempt from income tax.

"The income of the employees of the port district of X is not exempt from income tax.

"The salaries of the manager and employees of cafeterias conducted in connection with public schools are not exempt from income tax."

Advice is requested relative to the application of the principles set forth in Solicitor's Opinion 152 (C. B. II–2, 93), where it was held that the compensation of employees of a street railway owned and operated by a municipality was not exempt from Federal income tax under the revenue act of 1921, upon the theory that the operation of a street railway is not a governmental function of a city.

In deciding whether or not any particular activity in which a State or municipality may be engaged is a governmental function the attitude of the Federal rather than the State authorities should govern. (See St. Louis Cotton Compress Co. *v.* Arkansas, 260 U. S. 346; Boston & Maine Railroad *v.* United States, 265 Fed. 578 [T. D. 3004]; Lane Timber Co. *v.* Hynson [T. D. 3593; C. B. III–1, 498]; Boise Title & Trust Co. *v.* Evans, 295 Fed. 223 [T. D. 3551; C. B. III–1, 504].) Where there is a substantial difference of opinion among the State courts and no ruling of any Federal court, the decisions of those courts holding a certain activity to be nongovernmental should be followed in every State, regardless of the rulings of individual States to the contrary. The existence of a well-founded or rational doubt as to the character of the activity should be considered as equivalent to the denial of a claim for exemption on behalf of an employee. In general, the rule that exemptions from taxation are to be strictly construed should be applied and no intendment should be taken in favor of the taxpayer in doubtful cases. (See Wright *v.* Georgia, etc., R. R. Co., 216 U. S. 420.)

In the brief field on behalf of the employees of the M municipally owned waterworks system decisions of the courts of the State holding that the operation of a waterworks system of a city is an exercise of a governmental function are cited. The United States District Court for the District of Massachusetts on May 21, 1924, however, decided that compensation received for services rendered in connection with a municipally owned water system was not exempt from income tax. (Metcalfe *v.* Eddy, unreported to date.) This appears to be in harmony with the rulings of the Federal courts holding municipal waterworks to be nongovernmental in cases other than those involving income taxes (Winona *v.* Botzet, 169 Fed. 321) as well as with the weight of authority among the States and should be followed in all cases, irrespective of the attitude of the courts or statutes of the individual States.

A ruling is also requested as to the status of an employee of the port commission of the port of X. While port districts have been declared by the courts of the State to be "municipal corporations," it seems quite certain that the powers granted them by the State statutes are in the main proprietary rather than governmental in character. According to the State statutes none of the usual police powers of municipalities are delegated, but the districts appear to be restricted to the owning and operating of "wharves," "elevators," "terminal icing plants," "tramways," etc., and modern appliances for the handling, storing, and transporting of freight and handling of passenger traffic. They are made subject to the State laws regulating other public-service corporations, and altogether appear to have few, if any, functions that may not be given private corporations. It is therefore held that the income of the employees of the port district of X is not exempt.

Among the other activities mentioned in the queries presented to this office are the salaries of employees of cafeterias conducted in connection with the public schools.

In purveying food the board of education or the school district is engaged in a business ordinarily carried on by private persons. Such enterprises have been held not to be governmental in character. (See Salt Lake City *v.* Hollister, 118 U. S. 256, and South Carolina *v.* United States, 199 U. S. 437, and other cases cited in Solicitor's Opinion 152.) It seems clear, therefore, that the salaries of the manager and employees of the cafeterias are not exempt.

Inquiry is also made as to whether or not the ruling set forth in Solicitor's Opinion 152 should be made retroactive under the revenue act of 1921. In the opinion of this office that ruling necessarily controls all cases arising under the act referred to.

NELSON T. HARTSON,
Solicitor of Internal Revenue.

Very recently I wrote to the Commissioner of Internal Revenue asking if the views which I have quoted were still maintained as the attitude of his bureau and received the following reply:

TREASURY DEPARTMENT,
OFFICE OF COMMISSIONER OF INTERNAL REVENUE,
Washington, April 13, 1928.

Hon. CARL HAYDEN,
United States Senate.

MY DEAR SENATOR: Reference is made to your telephone inquiry as to whether the position of the bureau remains the same with respect to the taxable status of the compensation of officers and employees of municipally owned and operated water and electric lighting systems as expressed in my letter to you dated January 18, 1927.

In reply you are advised that the position of the bureau as outlined in the letter of January 18, 1927, referred to, remains the same. While not referring particularly to the compensation of an employee of a municipally owned and operated water or electric lighting system but, nevertheless, as bearing on the general subject, you are referred in addition to the rulings cited in the letter addressed to you under date of January 18, 1927, to I. T. 2376, Internal Revenue Bulletin VI, No. 36, page 2. This ruling covers the case of an employee of a freight traffic commission created by a city council to secure and maintain just and nondiscriminatory freight rates between two ports. The employee's salary for 1925 was deemed taxable, because his service was not considered as being in connection with an essential governmental function of the city.

If you desire to take this matter up with me further, consideration will be expedited by reference to IT:E:RR:RHD.

Very truly yours,

¶. F. MIRES, *Acting Commissioner.*

(VI–36–3408 I. T. 2376)

SECTION 213 (b).—GROSS INCOME DEFINED: EXCLUSIONS

ARTICLE 88. COMPENSATION OF STATE OFFICERS AND EMPLOYEES—REVENUE ACT OF 1926

"The taxpayer is an employee of a freight-traffic commission, a bureau created by a certain city council. His work, as well as that of the bureau in which he is employed, is 'to endeavor to secure and maintain just, reasonable, and nondiscriminatory freight rates applying to and from the ports of M and O, thereby fostering and encouraging the commerce of the ports.'

"Held, that the taxpayer is not rendering service in connection with the exercise of an essential governmental function and, therefore, his salary derived from the source mentioned must be included in his gross income."

An opinion is requested as to the taxability of the salary received by one acting as assistant traffic commissioner of the M Freight Traffic Commission.

The M Freight Traffic Commission is a municipal nonstock, nonprofit bureau created by an act of the M City Council and consists of the commissioners serving without compensation. The purpose of the commission is to secure and maintain just, reasonable, and nondiscriminatory freight rates applying to and from the ports of M and O, thereby fostering and encouraging the commerce of the ports. The commission has authority, subject to the approval of the council, to employ an assistant traffic commissioner. The taxpayer was appointed as assistant traffic commissioner by the commission with the approval of the city council and served in that capacity throughout the taxable year 1925. In that capacity he is subject to the orders of the commission. It is his contention that, inasmuch as he receives his salary from the city of M, he is an employee of a political subdivision of a State and that his income is not subject to Federal income tax.

Article 88, Regulations 69, provides in part as follows:

"Compensation received for services rendered to a State or political subdivision thereof is included in gross income unless (a) the person receives such compensation as an officer or employee of a State or

political subdivision, and (b) the services are rendered in connection with the exercise of an essential governmental function."

In a sworn statement dated September —, 1926, the taxpayer advises that his work, as well as that of the municipal department in which he is employed, is—

To endeavor to secure and maintain just, reasonable, and nondiscriminatory freight rates applying to and from the ports of M and O, thereby fostering and encouraging the commerce of the ports.

Even though the taxpayer's contention that he is an officer or employee of a municipal commission be conceded, it is evident, from the nature and purpose of the M Freight Traffic Commission that the taxpayer is not rendering services in connection with the exercise of an essential governmental function. It is held, therefore, that the taxpayer's salary derived from this source must be included in his gross income for the year 1925.

Mr. President, I have cited these decisions of the Solicitor of the Bureau of Internal Revenue to make plain to the Senate that there is a difference between the governmental and the nongovernmental activities of a municipality, a State, or the Federal Government. If the United States shall engage in business, the rule the Supreme Court has laid down, and which has been followed in the opinions which I have read, should work both ways. A State should have the same right to collect taxes from the business or nongovernmental activities of the Federal Government as the Federal Government has to collect from the business or nongovernmental activities of the State or a municipality.

This distinction has been drawn many times in the courts, and I shall merely read the syllabi of a few of the more important cases.

DISTINCTION BETWEEN GOVERNMENTAL AND PROPRIETARY ACTIVITIES OF MUNICIPALITIES

(Bullmaster *v.* City of St. Joseph (1897), 70 Mo. App. 60)

1. Municipal corporations: Negligence: Public Powers *v.* Private Powers: Electric lighting plant. A municipal corporation exercising the powers which are public and governmental functions delegated to it by the State exclusively for the public good is not liable for the negligence of its officers; but in exercising powers which are of a proprietary character and conferred for private advantage of a municipality, it is liable for negligence in the construction and repair of its electric lighting plant.

(City of Ysleta *v.* Babbitt (1894), 8 Tex. Civ. App. 432; 28 S. W. 702)

The operation of an acequia by a city to furnish water to the public for irrigation is not a governmental act, which a city may perform without liability to individuals.

(The Western Saving Fund Society of Philadelphia et al. *v.* The City of Philadelphia et al. (1858), 31 Pa. State 175)

A city in supplying gas to its inhabitants acts as a private corporation and is subject to the same duties, liabilities, and disabilities. It can not impair the obligation of a contract entered into by it in that capacity because it may deem it for the benefit of its citizens to do so.

(City of Detroit *v.* Corey (1861), 9 Mich. 165)

MUNICIPAL CORPORATIONS—LIABILITY FOR INJURIES

The power conferred upon the city of Detroit to construct sewers under public streets is not a power given to the city for governmental purposes or a public municipal duty imposed on the city like that to keep its streets in repair, or the like, but a special legislative grant to the city for private purposes. The sewers of the city, like its works for supplying the city with water, are the private property of the city—the corporation and its corporators, its citizens, are alone interested in them—the outside public, or people of the State at large, have no interest in them as they have in the streets of the city, which are public highways.

It is interesting to note that this distinction between the governmental and nongovernmental activities of government has been decided in a case which deals with the Federal reclamation of the public lands. In the case of Twin Falls Canal Co. (Ltd.) *v.* Foote et al., circuit court, D. Idaho, S. D., October 23, 1911, the syllabus reads:

In the construction of works for the irrigation of arid public lands under reclamation act of June 17, 1902, c. 1093, 32 Stat. 388 (U. S. Comp. St. Supp. 1909, p. 596), the United States is not exercising a governmental function nor even a strictly public function, but is promoting its proprietary interests.

I read now from the opinion:

The storage of water for irrigation purposes or the reclamation of arid lands is not, accurately speaking, a governmental function, and is not "a necessary part of civil government in the same sense in which the protection of life, liberty, and property, the defense of the Government against insurrection and foreign invasion, and the administration of public justice are." The Government, being possessed of large tracts of arid land, which without irrigation are practically worthless, in pursuance of a wise policy, as we think, is, under the reclamation act, engaged in reclaiming them, to the end that they may become marketable and ultimately fruitful.

(1) In prosecuting such an enterprise, however, it is not primarily performing a governmental, or, strictly speaking, even a public function, but is promoting its proprietary interests. Such advantage as arises therefrom to the people at large is material and not governmental, and is only such as might indirectly accrue to the public from the reclamation of an equal amount of land through private enterprise. (Kansas *v.* Colorado, 206 U. S. 46, 92, 27 Sup. Ct. 655, 51 L. Ed. 956; United States *v.* Hanson, 167 Fed. 881, 93 C. C. A. 371; United States *v.* Burley (C. C.), 172 Fed. 615, id., 179 Fed. 1, 102 C. C. A. 429.)

(2) It will further be borne in mind that the subject matter of this action is not, directly, at least, the right to collect dues or enforce contracts, but to use the flow of a certain stream of water. This right of the Government, such as it possesses, is of the same quality, and is derived from the same sources and rests upon the same basis as that of the plaintiff or any other claimant. Not in its sovereign, but in its proprietary capacity, as the owner of arid lands, it acquired such right, by complying with the laws of the State governing the appropriation and use of water for beneficial purposes. Congress was careful to make clear its intent in this respect, for, by section 8 of the act, it declared:

"That nothing in this act shall be construed as affecting or intended to affect or to in any way interfere with the laws of any State or Territory relating to the control, appropriation, use, or distribution of water used in irrigation, or any vested right acquired thereunder, and the Secretary of the Interior, in carrying out the provisions of this act, shall proceed in conformity with such laws, and nothing herein shall in any way affect any right of any State or of the Federal Government or of any landowner, appropriator, or user of water in, to, or from any interstate stream or the waters thereof: *Provided*, That the right to the use of water acquired under the provisions of this act shall be appurtenant to the land irrigated, and beneficial use shall be the basis, the measure, and the limit of the right."

In acquiring the right, therefore, and in using it, the Secretary of the Interior is not authorized to act independently of, but is directed to proceed in conformity with and subject to, the laws of the State, and there can be no implication that Congress intended that all controversies touching a right thus acquired and held under the State laws should be withdrawn from the State courts. The plaintiff is not seeking to restrain the defendant from collecting water rents or water dues, or from enforcing any contracts that have been made for the payment of money. The only substantive relief sought is the adjudication of conflicting claims to certain water, a judicial determination of the extent, and the dignity of the rights of the several parties to the flow of Snake River. The right not having been conferred upon the Secretary of the Interior by the reclamation act, but having been acquired by him through a compliance with the statutes of the State, in adjudicating the controversy herein involved, the court exercising jurisdiction, whether it be a State or a Federal tribunal, will be under the necessity of construing and applying the statutes, not of the National Government, but of the State. In that view no presumption, to say the least, arises that, if the matter were brought to the attention of Congress, it would advisedly authorize the removal of all such controversies into the Federal court. * * *

Accordingly, the motion to remand will be allowed.

Mr. BRUCE. Mr. President——

The VICE PRESIDENT. Does the Senator from Arizona yield to the Senator from Maryland?

Mr. HAYDEN. I yield.

Mr. BRUCE. I would like to ask the Senator a question. Does he not think that the tension of the present parliamentary situation would be relieved if he would yield and give us an opportunity to have a symposium on the subject of prohibition? I promise that I will enter with the utmost degree of spirit into that symposium, and I think I could assure him it will take me at least 12 hours to summarize all the evils and abuses of prohibition.

Mr. HAYDEN. I do not doubt that the Senate would listen with great interest, as it always has done, to the Senator from Maryland when he addresses it upon that subject.

Mr. BRUCE. We might diversify the nature of the present discussion a little bit. I am afraid it would not hold out any hopes to the Senator from California [Mr. JOHNSON] of a speedy end to the present situation.

Mr. HAYDEN. Certainly, what the Senator from Maryland might say would be diverting to the minds of Senators, but I have a line of argument in opposition to the Boulder Dam bill that I am most anxious to complete.

Mr. HEFLIN. Mr. President, will the Senator permit me to make an inquiry?

Mr. HAYDEN. I yield.

Mr. HEFLIN. In the language of Edgar Allan Poe, "Is there no balm in Gilead?"

Mr. HAYDEN. Mr. President, I had just read a Federal court decision wherein the court holds that in the reclamation of arid lands the Federal Government is not performing a governmental but a proprietary function. If that is true with respect to the irrigation of arid lands, it certainly ought to be true of the business of producing and selling hydroelectric power. That is more of a business, and there is less reason for the United States to engage in it than there is for the reclamation of lands which are a part of the public domain. If such is the case, and if the rule operates to permit Congress to impose taxes upon all incomes of employees of cities or States when engaged in nongovernmental activities, I again inquire, Should not the rule work both ways? Should not the States wherein a Federal enterprise of this character is located, in all equity, in all fairness, be permitted to obtain the revenue which they would receive if the business were conducted by private parties?

Mr. President, it will not be inappropriate at this point to quote from an address delivered at the seven-State conference at Denver on September 24, 1927, by Mr. Clifton Mathews, of Globe, Ariz., one of the legal advisers of the Colorado River Commission of Arizona. Mr. Mathews is a clear headed, straight thinking lawyer, and his brief statement went directly to the very heart of the controversy between Arizona and California with respect to the right of his State to receive revenue from hydroelectric power developed at Boulder Dam. Mr. Mathews then said:

Mr. Chairman and gentlemen of the conference, Arizona has felt that it might be proper at this time to add something further to its exposition of article 7 of the proposal read here this morning by Mr. Maddock.

Article 7, as you will recall, is the article which states that—

"It is expressly agreed and understood that the signatory States in this compact, and their political subdivisions, shall possess the right to derive revenue for public purposes from power developed within their territory or on their boundary."

* * * * * * *

Now, Arizona is not committed to any one particular method of developing the Colorado River, but, in common with the other six States of the basin, she wants such development, and hopes to see it had as early as may be. In that connection it has been recognized by us that the United States Government is concerned, and it well may be that, in the proper development of this river, the United States Government is going to have to take not only a leading part but the leading part in the matter of providing, or at least advancing, funds.

Arizona has no objection in principle to letting the Federal Government do its share, and perhaps more than its share, in the development of the Colorado River. But when we reach that point the question immediately arises as to the extent to which under existing laws the Federal Government may go in that development. We have not questioned that there are certain constitutional functions which the Federal Government can discharge in this connection; there are certain purposes, certain limited purposes, with which the Government can proceed, and over which the Government is supreme, and may proceed without the consent of the State or States. For instance, if it shall be determined that the Colorado River, or certain portions of it, are navigable, there is no question in my mind but that the Government can do whatever is necessary to regulate that navigation. It may build dams for the purpose of regulating and controlling that navigation. There are other things, which I will not stop to list now, which the Federal Government can do in the exercise of its constitutional power. But, in the opinion of Arizona, there are certain limits beyond which the Federal Government, independently and without the consent of the State, is not free to go.

We hold to the position taken in the Pittman resolution, which was read here yesterday but not acted upon, and we are in accord with the conclusions expressed in that resolution. We believe the law is as stated by the committee which drafted the Pittman resolution in its last form; and we believe it follows from that statement of the law that the State of Arizona, or any other State involved, would have the right declared in that resolution, namely, the right to demand and receive compensation for the use of its lands and waters, except for the use by the United States of such lands and waters in the regulation of interstate and foreign commerce. We agree with that principle, and that, I may say, is the basis of the proposal set forth in article 7.

I do not mean to say, of course, that the resolution was drawn first and then the proposition was thought up afterwards, but the principle which led Senator PITTMAN to draft his resolution and present it here and which led the committee of which he was chairman to revise it and submit it yesterday is the same principle on which we acted a year ago, or many months ago, in drafting the proposal which Mr. Maddock read this morning.

We do not conceive that the question of the right of a State to tax Government property is involved in this proposal. If the question were propounded by Mr. Wilson or anyone else whether we claimed for Arizona the right to tax Government property, we could readily answer that in the negative.

We know that there is a theory, briefly referred to by Mr. Maddock, to the effect that if a government, either State or Federal, embarks in business not governmental in character, but purely industrial or commercial, the other government might be able to tax such activities, as the Government did tax the liquor activities of the State of South Carolina. It was suggested by one of the justices in that case that the rule might be reciprocal, that some day the United States might embark in some enterprise which was not strictly governmental in character and so give the right to the State to tax that as a private business. That theory, however, is not the one on which we base our proposal. That is interesting and, I think, an arguable theory, but the thing we come here with is much more substantial, namely, the legal proposition set forth in this Pittman resolution. I won't restate it here, as it was so well stated in the resolution that I would be wasting time to do so.

If these legal principles are correct, if those are indeed the principles which apply to the situation, then it is obvious that there are limits beyond which the Federal Government can not go in the development of the Colorado River.

* * * * * * *

There is another question here, Mr. Chairman, besides the strict question of law. Suppose it were determined against us, assuming for the sake of argument that we are wrong and that the State has no power to block any development that may seem proper to Congress; granting that Congress has unlimited power over our lands and rivers, there is a further question here, one of policy, equity, justice, and fairness. Suppose we all were agreed that Congress had the power to take this river and do as they like with it. I do not think we would agree that it would be right for Congress to override the equitable claims of the State, nor that Congress would be justified in making use of its power of exemption from taxation to the injury of a State and to the favoring of one State over another. I think that we would agree that even though Congress had the power to do that, it ought not to exercise any such power. As a matter of policy and fairness, if we knew in advance that the law was going to be settled against us, we would still say that the States in the Colorado River Basin ought to put themselves on record as holding that Congress ought not to exercise any such power, but should recognize, if not their legal right, their equitable claim to compensation for the use of their lands and waters. That is not anything novel, new, or startling. The proposition is one with which we are well acquainted already. I am speaking now of the equitable rights of the States.

As Mr. Mathews well said, the chief interest in the question of what is a governmental function in its relation to the Boulder Dam dispute is more a matter of equity than of law. The issue to be primarily determined is not whether the Federal Government may lawfully tax the nongovernmental functions of States and municipalities or whether the States have a legal right to tax in like measure the nongovernmental activities of the United States. It would be most unfortunate for both the United States and the States if the strict letter of the law were the only guide which could be used to establish the relationship between the two sovereignties in this particular.

Congress may very properly decide not to collect revenue from a source which leads to friction and discord. Public policy may fully justify the elimination of a Federal tax in order to encourage States and municipalities to engage in certain forms of industrial pursuits. That was, no doubt, the motive of a number of Senators when they gave support to the Vandenberg amendment a few days ago which sought to exempt the employees of municipalities from the Federal income tax.

If Congress may refuse to collect revenue from a source which the Supreme Court has decided to be perfectly legitimate; if Congress may waive a legal right for equitable reasons; Congress can also extend the same measure of justice to the States by allowing them to obtain revenue from the nongovernmental activities of the United States. I have shown that Congress has done that very thing in many instances and I only ask that the rule be made uniform with respect to electrical energy generated at Boulder Dam.

AUGUSTA CORNOG

During the delivery of Mr. HAYDEN'S speech—

Mr. GEORGE. I ask the Chair to lay before the Senate the amendment of the House of Representatives to Senate bill 3931.

The PRESIDING OFFICER (Mr. BINGHAM in the chair) laid before the Senate the amendment of the House of Representatives to the bill (S. 3931) for the relief of Augusta

Cornog, which was, to strike out all after the enacting clause and insert:

That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, and in full settlement against the Government, the sum of $2,000 to Augusta Cornog, a former employee of the United States Public Health Service, who contracted tuberculosis while employed at the Atlanta Veterans' Bureau Hospital; and that said Augusta Cornog shall be admitted to such Army hospital as may be directed by the Surgeon General of the United States Army for necessary care and treatment.

Mr. JOHNSON. I understand this is a privileged matter and comes here messaged from the House.

The PRESIDING OFFICER. The Senator is correct.

Mr. GEORGE. I move that the Senate concur in the amendment of the House.

The motion was agreed to.

FINAL ADJOURNMENT

Mr. CURTIS. Mr. President, will the Senator from Arizona yield to allow me to submit a privileged motion?

Mr. HAYDEN. I yield to the Senator from Kansas.

Mr. CURTIS. Mr. President, I send to the desk a resolution and move its adoption.

The VICE PRESIDENT. The clerk will read the resolution for the information of the Senate.

The Chief Clerk read the resolution (S. Con. Res. 22), as follows:

Resolved by the Senate (the House of Representatives concurring), That the President of the Senate and the Speaker of the House of Representatives be authorized and directed to close the first session of the Seventieth Congress by adjourning their respective Houses on the 29th day of May, 1928, at 5.30 o'clock p. m.

Mr. JOHNSON. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The clerk will call the roll.

The Chief Clerk called the roll, and the following Senators answered to their names:

Ashurst	Edwards	McLean	Shortridge
Barkley	Fess	McMaster	Simmons
Bayard	Fletcher	McNary	Smith
Bingham	George	Metcalf	Smoot
Black	Gerry	Moses	Steck
Blaine	Gillett	Norris	Steiwer
Blease	Glass	Nye	Stephens
Borah	Greene	Oddie	Swanson
Bratton	Hale	Overman	Thomas
Brookhart	Harris	Phipps	Tydings
Broussard	Harrison	Pine	Tyson
Bruce	Hawes	Pittman	Vandenberg
Capper	Hayden	Ransdell	Wagner
Copeland	Heflin	Reed, Mo.	Walsh, Mass.
Couzens	Johnson	Reed, Pa.	Walsh, Mont.
Curtis	Kendrick	Robinson, Ark.	Warren
Cutting	Keyes	Robinson, Ind.	Waterman
Dale	King	Sackett	Watson
Deneen	La Follette	Schall	Wheeler
Dill	Locher	Sheppard	
Edge	McKellar	Shipstead	

The VICE PRESIDENT. Eighty-two Senators having answered to their names, a quorum is present.

Mr. CURTIS. I ask for the yeas and nays on the adoption of the resolution.

Mr. JOHNSON. Under paragraph 5 of Rule XIV, I ask that the concurrent resolution shall lie over one day for consideration.

Mr. CURTIS. Mr. President, under the decisions and precedents, it is well settled and almost universally conceded that resolutions of this kind are privileged and do not have to lie over for one day.

The VICE PRESIDENT. The Chair so rules. The question is on agreeing to the resolution.

Mr. CURTIS. I ask for the yeas and nays.

The yeas and nays were ordered, and the Chief Clerk proceeded to call the roll.

Mr. SWANSON (when his name was called). The senior Senator from Kansas [Mr. CURTIS] has shown me a telegram from the junior Senator from Maine [Mr. GOULD] stating that he desires to be paired in favor of adjournment. Using the authority contained in that telegram, I transfer my pair with the senior Senator from Washington [Mr. JONES] to the junior Senator from Maine [Mr. GOULD] and vote "yea."

The roll call was concluded.

Mr. NYE. I desire to announce that upon this question my colleague [Mr. FRAZIER] is paired with the Senator from Arkansas [Mr. CARAWAY]. If my colleague were present, he would vote "nay."

Mr. McMASTER. I desire to announce that my colleague [Mr. NORBECK] is detained at home on account of illness. If he were present, he would vote "nay."

Mr. CURTIS. I desire to announce the following pairs on this question:

The Senator from Delaware [Mr. DU PONT] with the Senator from West Virginia [Mr. NEELY];

The Senator from South Dakota [Mr. NORBECK] with the Senator from Florida [Mr. TRAMMELL];

The Senator from West Virginia [Mr. GOFF] with the Senator from Texas [Mr. MAYFIELD]; and

The Senator from North Dakota [Mr. FRAZIER] with the Senator from Arkansas [Mr. CARAWAY].

If present, the Senator from Delaware [Mr. DU PONT], the Senator from Florida [Mr. TRAMMELL], the Senator from West Virginia [Mr. GOFF], the Senator from Arkansas [Mr. CARAWAY] would vote "yea," and the Senator from West Virginia [Mr. NEELY], the Senator from South Dakota [Mr. NORBECK], the Senator from Texas [Mr. MAYFIELD], and the Senator from North Dakota [Mr. FRAZIER] would vote "nay."

The result was announced—yeas 46, nays 36, as follows:

YEAS—46

Ashurst	Gerry	Moses	Smith
Bayard	Gillett	Overman	Smoot
Bingham	Glass	Phipps	Steck
Blease	Greene	Pine	Swanson
Broussard	Harrison	Ransdell	Thomas
Bruce	Hawes	Reed, Mo.	Tydings
Curtis	Hayden	Reed, Pa.	Tyson
Deneen	Keyes	Robinson, Ark.	Warren
Edge	King	Robinson, Ind.	Waterman
Edwards	McKellar	Sackett.	Watson
Fess	McLean	Schall	
Fletcher	Metcalf	Simmons	

NAYS—36

Barkley	Cutting	La Follette	Shipstead
Black	Dale	Locher	Shortridge
Blaine	Dill	McMaster	Steiwer
Borah	George	McNary	Stephens
Bratton	Hale	Norris	Vandenberg
Brookhart	Harris	Nye	Wagner
Capper	Heflin	Oddie	Walsh, Mass.
Copeland	Johnson	Pittman	Walsh, Mont.
Couzens	Kendrick	Sheppard	Wheeler

NOT VOTING—12

Caraway	Goff	Howell	Neely
du Pont	Gooding	Jones	Norbeck
Frazier	Gould	Mayfield	Trammell

So the concurrent resolution was agreed to.

BOULDER DAM

The Senate, as in Committee of the Whole, resumed the consideration of the bill (S. 728) to provide for the construction of works for the protection and development of the lower Colorado River Basin, for the approval of the Colorado River compact, and for other purposes.

Mr. JOHNSON. Mr. President, I ask unanimous consent that Senate bill 728, Order of Business No. 606, the present unfinished business of the Senate, may be made the unfinished business of the Senate for the day when Congress assembles in December next, 1928, and shall continue the unfinished business then until disposed of.

The VICE PRESIDENT. Is there objection?

Mr. REED of Pennsylvania. Reserving the right to object, I want to ask the Senator whether, if his measure becomes the unfinished business, it will be his intention to press it to a vote as rapidly as possible?

Mr. JOHNSON. Indeed, sir, that is what I have been endeavoring to do; but, at any rate, that shall be done. That answers the Senator's query.

Mr. REED of Pennsylvania. Yes.

Mr. President, I think the situation in the present session of Congress has been highly unfair to all the other legislation on the calendar. The Senator from California has been most gracious in yielding first to one of us and then to another; but the practical effect of keeping the Boulder Dam bill astride of the Senate's path for months has been that nothing could be done except by unanimous consent. That is not fair to other legislation.

Mr. NORRIS. Mr. President——

Mr. JOHNSON. Mr. President, that is not quite accurate by any means. When the Boulder Dam bill came before the Senate it came before the Senate upon a distinct agreement upon the part of the author of that bill with those who gave it the right to be a part of the Senate's business that he would permit certain measures—tax measures, conference reports, appropriation measures, and the like—to be heard, and permit his bill to be set aside. The Senator from California always observes sedulously every agreement that he makes; so he observed his agreement made at the time the bill was put upon the list by the steering committee just exactly as he ought to have done.

Mr. CURTIS. Mr. President——

Mr. NORRIS. Mr. President, I wish the Senator would yield for a suggestion. I desire to make a suggestion.

Mr. CURTIS. Let me say just one word. I want to say that the Senator from California faithfully kept every promise that he made, and I hope his request will be granted.

Mr. REED of Pennsylvania. I have no objection.

Mr. NORRIS. Mr. President, the matter to which I wanted to call the attention of the Senator—and I should like to have the attention of the Senate also—is that no bill can be made the unfinished business by unanimous consent. Unfinished business comes about by the operation of a certain parliamentary procedure.

Mr. MOSES. The Senator can move to make the bill a special order for that day.

Mr. NORRIS. I do not want the Senator to get the bill in a situation where it might be displaced.

Mr. JOHNSON. Does the Senator suggest, then, that I move to make it the unfinished business.

Mr. NORRIS. No; the Senator can not do it by motion.

Mr. MOSES. The Senator can move to make it a special order.

Mr. NORRIS. The Senator's bill is now the unfinished business, and if the Senate adjourns without displacing it by motion it will still be the unfinished business. What we ought to do, it seems to me, is, by unanimous consent, to lay it temporarily aside.

Mr. ROBINSON of Arkansas. Mr. President, I make the suggestion that I made yesterday, which will relieve from every difficulty that has been presented; namely, that the Senator from California ask unanimous consent that the unfinished business now be laid aside, and that at 5 o'clock and 29 minutes p. m. the Presiding Officer lay the unfinished business before the Senate. That will have the result of bringing the unfinished business back before the Senate at the time when the Senate has already agreed to adjourn, and it will then be the unfinished business when the Senate meets in December.

Mr. JOHNSON. I accept the suggestion.

Mr. BRUCE. Mr. President, I desire to know whether the suggestion of the Senator from Arkansas and the Senator from Kansas resulted from any concession made by the Senator from California before he took the risks of the vote with reference to final adjournment.

Mr. JOHNSON. Just a minute. I want to know just what the Senator from Maryland means by that.

Mr. BRUCE. I mean just what I said.

Mr. JOHNSON. If the Senator means to imply that I entered into any agreement in relation to the vote, no.

Mr. ROBINSON of Arkansas. Just a minute, Mr. President. Will the Senator yield to me?

Mr. JOHNSON. I do not propose to permit the Senator——

Mr. ROBINSON of Arkansas. The Senator will yield to me. Mr. President, I can assure the Senator from Maryland that I had no understanding with either the Senator from California or either of the Senators from Arizona.

Mr. ASHURST. Quite right.

Mr. ROBINSON of Arkansas. I made this suggestion yesterday because I saw that it would relieve from all the parliamentary difficulties which had been raised, and I repeat it this morning because I feel that it was a fair proposition. Otherwise the Senator from California could keep the unfinished business before the Senate all the time, and we would continue to wrangle here until the hour of 5.30; and I wanted the Senate to do all the business it can between now and that time. I assure the Senator from Maryland that I did not even mention the matter to the Senator from California or to anyone else.

Mr. BRUCE. I just asked as a matter of curiosity; because, since the Senator chose to take the fortunes of war, and he has been carrying on this fight here now for hours——

Mr. JOHNSON. Of course I chose to take the fortunes of war.

Mr. BRUCE. And he did not win, and we did——

Mr. JOHNSON. All right; you did win. You won on the adjournment, did you not?

Mr. BRUCE. I recollect that when he was wrangling, after he got his adversary down he gave him another blow.

Mr. JOHNSON. Well, give me another one if you can, sir. Go on. I intend to.

Mr. BRUCE. We have given you one. We will give you another.

Mr. JOHNSON. Well, go on. You are at liberty to give another if you can.

Mr. NORRIS (and other Senators). Regular order!

Mr. BORAH. Mr. President——

The VICE PRESIDENT. The Senator from Idaho.

Mr. JOHNSON. I want to resent the insinuation which was contained in the suggestion that I had entered into any agreement with anybody in respect to this matter.

Mr. BRUCE. I asked whether you had entered into any, and the Senator from Arkansas—whose word is truth itself—said to me that he had entered into none with you. I am satisfied with that.

Mr. JOHNSON. But the implication ought never to have been uttered on this floor; and I resent its being uttered in respect to me. I have made a fight upon this bill. I made a fight upon adjournment. I made the best fight of which I was capable. I have been temporarily beaten; but by Heaven, sir, there is another day, and somebody else may be whipped on that other day! [Applause.]

The VICE PRESIDENT rapped for order.

Mr. ROBINSON of Arkansas. Mr. President——

The VICE PRESIDENT. The Senator from Arkansas.

Mr. BRUCE. Mr. President——

Mr. ROBINSON of Arkansas. I have been recognized, and I take the floor, not that I have any particular use for it except to make the suggestion that I think this is a fair proposition.

Mr. HEFLIN. I should like to pour some oil on the troubled waters myself.

Mr. ROBINSON of Arkansas. We all want to do that.

The VICE PRESIDENT. The Senator from Arkansas has been recognized.

Mr. ROBINSON of Arkansas. This is a fair suggestion, one that can work harm to no one, that does injustice to no one, and it will relieve the Senate of great difficulty and very many embarrassments. I trust there will be no objection to it.

The VICE PRESIDENT. Is there objection?

Mr. BRUCE. I object.

The VICE PRESIDENT. Objection is made.

Mr. BORAH obtained the floor.

Mr. ROBINSON of Arkansas. Mr. President, I suggest to the Senator from California that he move to proceed with the consideration of some other bill; and I pledge him that if he secures recognition and moves to again proceed to the consideration of what is now the unfinished business I will vote for it, and every Member on this side, with the exception of the Senator from Maryland, will vote for it, and his bill will be the unfinished business when the Senate adjourns at 5.30, and the Senate will at least have an opportunity to transact some business.

Several Senators addressed the Chair.

The VICE PRESIDENT. The Senator from Idaho [Mr. BORAH] has been on his feet asking for recognition for the last five minutes. The Senator from Idaho is recognized. The Senate will be in order.

Mr. NORRIS. Mr. President——

The VICE PRESIDENT. The Senator from Idaho has the floor.

Mr. BORAH. I yield to the Senator from Nebraska if he wants to make a parliamentary suggestion.

Mr. NORRIS. That is what I want to make.

I should be very glad to carry out the arrangement the Senator from Arkansas has suggested; but if it is going to require a vote to place the unfinished business back as the unfinished business, it will be a motion that is debatable, and the Senator from Maryland can kill the vote on that motion.

Mr. WATSON. Mr. President, will the Senator yield to me for a question? Why can not the Senator from California move to make the Boulder Dam bill a special order for a fixed time next session? That will settle it.

Mr. NORRIS. A special order will not do him much good. It can be set aside.

Mr. WATSON. It will do him good. If the Senate votes to make it a special order, that fixes it definitely.

Mr. SMOOT. Mr. President, I will say to the Senator from California that, no matter what the situation is, I will vote to make his bill the unfinished business, no matter whether it is one day or any other day.

Mr. LA FOLLETTE. Mr. President, a parliamentary inquiry.

The VICE PRESIDENT. The Senator will state it.

Mr. LA FOLLETTE. If the Senator from California moves to make the Boulder Dam bill a special order, and a special order is entered, and the bill becomes a special order on the convening of Congress, no other order having been entered, would it not then be taken up at the conclusion of the first morning hour and become the unfinished business when the Senate adjourns on that day?

The VICE PRESIDENT. It would, at the conclusion of the first day's business after 2 o'clock.

Mr. LA FOLLETTE. Therefore, Mr. President, I suggest to the Senator from California that he make his bill a special order for the first day of the next session of Congress, at 2 o'clock.

Mr. JOHNSON. Mr. President, I move that the bill which I have just described—that is, Senate bill 728, Order of Business 606—be made a special order for 2 o'clock p. m. the first day of the convening of Congress in December, 1928.

Mr. BRUCE. Mr. President——

The VICE PRESIDENT. The Senator from Maryland.

Mr. BRUCE. I desire to say that I am just as much opposed to that suggestion as I was to the last. I can not see why any concession of any kind should be made to the Senator from California in this matter. He should take, as the rest of us do, the hazards of parliamentary procedure.

I am opposed to the Senator's bill. No bill is pending in this body to which I am more antagonistic than I am to his bill. The Senators from Arizona are not more opposed to it than I am. Why, therefore, should I be expected to acquiesce in this proposal simply because somebody rises here and with violent gestures endeavors to place me in a position of parliamentary isolation? I have my own convictions about this matter, and I propose to adhere to them.

As I say, if the Senator had entered into any understanding about the course which things were to take here I should feel entirely differently. I should have the generosity that any successful antagonist should always have; but there was nothing of the sort. He did everything in his power to bring this bill—highly obnoxious to me and to other Members of this body—to a vote. He failed, and he should take the consequences of failure: and I say that I can see no reason why his bill should enjoy a privileged status at the beginning of the next session, only to be again an obstruction to other legislation, as I look at it, as it has been during the present session.

SEVERAL SENATORS. Who has the floor?

Mr. BRUCE. I have the floor, by recognition of the Chair.

Mr. BORAH. Mr. President——

The VICE PRESIDENT. The Senator from Maryland has the floor.

Mr. BRUCE. I ask the Senator to take his seat.

SEVERAL SENATORS. Vote! Vote! Vote!

Mr. BRUCE. Mr. President——

Mr. ROBINSON of Arkansas. Yeas and nays! Yeas and nays!

Mr. EDGE. Mr. President, the Senator from Maryland has the floor.

SEVERAL SENATORS. Yeas and nays! Yeas and nays!

The VICE PRESIDENT rapped with his gavel.

Mr. BRUCE. You can howl "yeas and nays" until you are black in the face; I have the floor.

SEVERAL SENATORS. Regular order! Regular order!

Mr. REED of Missouri. Mr. President, I rise to a point of order.

Mr. LA FOLLETTE. Mr. President, I object to these tactics. I make the point of order that the Senator from Maryland was addressing the Chair. This body has a certain dignity to maintain, and the integrity of its rules must be maintained.

The VICE PRESIDENT. The point of order is well taken. The Senator from Maryland has the floor.

Mr. BRUCE. Mr. President, the Senator from Wisconsin has spoken in the manly spirit in which he always speaks.

The VICE PRESIDENT. The Chair was under the impression that the Senator from Maryland had finished and was about to ask if there was a second to the demand for the yeas and nays.

Mr. BRUCE. It is very pleasant indeed to find, when I am subjected to little short of indignity and insult by the leader of my own side in this body, that there is on the other side of this Chamber still an individual prepared to see that I receive a proper measure of justice.

Mr. BORAH. Mr. President——

The VICE PRESIDENT. Does the Senator from Maryland yield to the Senator from Idaho?

Mr. BRUCE. I do.

Mr. BORAH. I wanted to ask the Senator if he would not permit us to lay the Boulder Dam bill aside so that we can take up other matters, and then we can adjust this matter later.

Mr. BRUCE. I will.

Mr. JOHNSON. Let us vote.

Mr. BORAH. I suggest to the Senator from California that he ask that the unfinished business be temporarily laid aside.

Mr. JOHNSON. Let us vote upon the motion.

Mr. BORAH. The Senator from Maryland will not consent to a vote.

Mr. JOHNSON. He can not prevent it.

Mr. HEFLIN. Mr. President, I want to suggest to the Senator from California that if his bill is laid aside, to be taken up later, and the Senator from Maryland should get the floor, he could speak on it until adjournment, and it would be up in the air. He had better take it up now, when we have the day before us.

Mr. BRUCE. I think the Senate has quite as good a chance of brevity at my hands as it ever has at the hands of the Senator from Alabama.

Mr. HEFLIN. When they listen to me, they hear something. [Laughter.]

Mr. SWANSON. A parliamentary suggestion.

The VICE PRESIDENT. The Senator will state his suggestion.

Mr. SWANSON. If the unfinished business is laid aside by unanimous consent, any Senator can object to any other measure which may be taken up, and the unfinished business will come back before the Senate.

The VICE PRESIDENT. The Senator is correct. The unfinished business will not lose its status.

EXECUTIVE SESSION

Mr. BORAH. Mr. President, I move that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business. After 1 hour and 30 minutes spent in executive session the doors were reopened.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Haltigan, one of its clerks, announced that the House had passed the following bills of the Senate, each with amendments, in which it requested the concurrence of the Senate:

S. 1297. An act to extend the benefits of the employees' compensation act of September 7, 1916, to Alice E. Moore;

S. 3171. An act providing for a Presidents' plaza and memorial in the city of Nashville, State of Tennessee, to Andrew Jackson, James K. Polk, and Andrew Johnson, former Presidents of the United States; and

S. 3581. An act authorizing the Commissioners of the District of Columbia to settle claims and suits against the District of Columbia.

The message also announced that the House had passed the following bills of the Senate, each with an amendment, in which it requested the concurrence of the Senate:

S. 343. An act for the relief of Sallie Stapleford, Mrs. J. C. Stuckert, Mary E. Hildebrand, Kate Wright, Mary M. Janvier, Harry L. Gray, Frank D. Carrow, Harry V. Buckson, George H. Swain, Claude N. Jester, and Charles H. Jamison;

S. 433. An act for the relief of Harry C. Bradley;

S. 471. An act for the relief of Agnes McManus and George J. McManus;

S. 652. An act for the relief of Edgar Travis, sr.;

S. 3314. An act for the relief of John J. Fitzgerald;

S. 3931. An act for the relief of Augusta Cornog;

S. 3991. An act declaring certain designated purposes with respect to certain parts of Santa Rosa Island in Florida to be "public purposes," within the meaning of the proviso in section 7 of the act approved March 12, 1926, entitled "An act authorizing the use for permanent construction at military posts of the proceeds from the sale of surplus War Department real property, and authorizing the sale of certain military reservations, and for other purposes";

S. 4321. An act authorizing the Secretary of the Interior to dispose of two bridges on the San Carlos Indian Reservation, Ariz.; and

S. 4344. An act granting the consent of Congress to the State Highway Commission of Arkansas to construct, maintain, and operate a bridge across White River at or near Clarendon, Ark.

The message further announced that the House had passed the following bills and joint resolutions, in which it requested the concurrence of the Senate:

H. R. 58. An act to authorize the assignment of railway postal clerks and substitute railway postal clerks to temporary employment as substitute sea-post clerks;

H. R. 1320. An act for the relief of James W. Pringle;

H. R. 1993. An act to correct the naval record of William E. Adams;

H. R. 2069. An act for the relief of Squire J. Holly;

H. R. 2492. An act to extend the benefits of the United States Employees' Compensation act of September 7, 1916, to John L. Jenifer, a former employee of the Government Printing Office, Washington, D. C.;

H. R. 2651. An act for the relief of David F. Richards, alias David Richards;

H. R. 3202. An act for the relief of Elizabeth Hunt, widow of George W. Hunt;
H. R. 3460. An act for the relief of First Lieut. Frank Z. Pirkey;
H. R. 4589. An act for the relief of Dan A. Morrison;
H. R. 4609. An act for the relief of M. L. Willis;
H. R. 4683. An act for the relief of Fred Andler, jr.;
H. R. 5216. An act for the relief of the New York Marine Co.;
H. R. 5780. An act to provide for the further carrying out of the award of the National War Labor Board, of July 31, 1918, in favor of certain employees of the Bethlehem Steel Co., Bethlehem, Pa.;
H. R. 5952. An act for the relief of Robert Michael White;
H. R. 5995. An act for the relief of John F. O'Neil;
H. R. 6350. An act for the relief of Bertram Lehman;
H. R. 6907. An act for the relief of John Marks, alias John Bell;
H. R. 7392. An act for the relief of John I. Fitzgerald;
H. R. 8130. An act authorizing the creation of game refuges on the Ouachita National Forest, in the State of Arkansas;
H. R. 8974. An act authorizing the President to order Oren W. Rynearson before a retiring board for a hearing of his case and upon the findings of such board determine whether or not he be placed on the retired list with the rank and pay held by him at the time of his resignation;
H. R. 8511. An act for the relief of the American Foreign Trade Corporation and Fils d'Aslan Fresco;
H. R. 9009. An act for the relief of Francis Leo Shea;
H. R. 9072. An act for the relief of Louis A. Yorke;
H. R. 9085. An act for the relief of Charles A. Moore;
H. R. 9168. An act for the relief of Simon A. Richardson;
H. R. 9716. An act for the relief of Charles H. Salley;
H. R. 9862. An act for the relief of M. T. Nilan;
H. R. 10015. An act authorizing the promotion on the retired list of the Navy of Herschel Paul Cook, lieutenant, junior grade;
H. R. 10045. An act for the relief of Robert S. Ament;
H. R. 10178. An act for the relief of the H. J. Heinz Co., Atlantic City, N. J.;
H. R. 10244. An act to credit the accounts of Richings J. Shand, United States property and disbursing officer, Illinois National Guard;
H. R. 10372. An act regulating Indian allotments disposed of by will;
H. R. 10457. An act for the relief of Norman Dombris;
H. R. 11500. An act for the relief of Ella Mae Rinks;
H. R. 10624. An act for the relief of William J. Casey;
H. R. 11181. An act for the relief of William Parish;
H. R. 11289. An act for the relief of Katherina Kautz and Fred G. Kautz, heirs of the estate of Christian F. Kautz, deceased;
H. R. 11343. An act for the relief of Frank C. Russell;
H. R. 11422. An act for the relief of Samuel J. D. Marshall;
H. R. 11469. An act to authorize appropriations for construction at the United States Military Academy, West Point, N. Y.;
H. R. 11510. An act for the relief of Montana State College;
H. R. 11749. An act for the relief of H. A. Russell;
H. R. 11772. An act for the relief of Charles Smith;
H. R. 12007. An act for the relief of Mr. and Mrs. Peter J. Egan;
H. R. 12312. An act for the relief of James Hunts Along;
H. R. 12322. An act to quiet title and possession with respect to certain lands in Faulkner County, Ark.;
H. R. 12359. An act for the relief of the widow of Edwin D. Morgan;
H. R. 13440. An act for the relief of Howard P. Milligan;
H. R. 13476. An act for the relief of Joseph M. McAleer;
H. R. 12499. An act for the relief of Arthur N. Ashmore;
H. R. 12612. An act for the relief of E. W. Gillespie;
H. R. 12650. An act for the relief of John F. Fleming;
H. R. 12666. An act for the relief of William S. Shacklette;
H. R. 12711. An act for the relief of certain members of a trail crew employed by the Forest Service;
H. R. 12898. An act to extend the collect-on-delivery service and limits of indemnity to sealed domestic mail on which the first-class rate of postage is paid;
H. R. 12995. An act for the relief of Etta B. Leach Johnson;
H. R. 13449. An act to provide for the promotion of clerks and general mechanics in the motor-vehicle service;
H. R. 13450. An act to provide for the promotion of clerks, general mechanics, driver mechanics, and garagemen drivers in the motor-vehicle service;
H. R. 13498. An act for the relief of Clarence P. Smith;
H. R. 13606. An act for the relief of Russell White Bear;
H. R. 13633. An act for the relief of Martin G. Schenck, alias Martin G. Schanck;
H. R. 13744. An act to provide for the acquisition by Parker I-See-O Post No. 12, All-American Indian Legion, Lawton, Okla., of the east half northeast quarter northeast quarter northwest quarter of section 20, township 2 north, range 11 west, Indian meridian, in Comanche County, Okla.;
H. R. 13753. An act authorizing an expenditure of certain funds standing to the credit of the Cherokee Nation in the Treasury of the United States to be paid to one of the attorneys for the Cherokee Nation, and for other purposes;
H. R. 13795. An act for recognition of meritorious service performed by Lieut. Commander Edward Ellsberg, Lieut. Henry Hartley, and Boatswain Richard E. Hawes;
H. R. 13824. An act authorizing L. L. Montague, his heirs, legal representatives, and assigns, to construct, maintain, and operate a bridge across the Columbia River at or near Arlington, Oreg.;
H. R. 13825. An act to authorize appropriations for construction at military posts, and for other purposes;
H. R. 13826. An act authorizing the Interstate Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Missouri River at or near Union, Nebr.;
H. R. 13882. An act to extend the benefits of the Hatch Act and the Smith-Lever Act to the Territory of Alaska;
H. R. 13976. An act authorizing the International Business Co. (Inc.), its successors and assigns, to construct, maintain, and operate a bridge across the Ohio River at or near Ashland, Ky.; and
H. J. Res. 311. Joint resolution to provide an annual appropriation to meet the quota of the United States toward the expenses of the International Technical Committee of Aerial Legal Experts.

The message also returned to the Senate, in compliance with its request, the bill (H. R. 13622) to amend and supplement the Code of Laws of the United States of America.

HOUSE BILLS AND JOINT RESOLUTIONS REFERRED

The following bills and joint resolutions were severally read twice by their titles and referred as indicated below:

H. R. 58. An act to authorize the assignment of railway postal clerks and substitute railway postal clerks to temporary employment as substitute sea-post clerks;
H. R. 12898. An act to extend the collect-on-delivery service and limits of indemnity to sealed domestic mail on which the first-class rate of postage is paid;
H. R. 13449. An act to provide for the promotion of clerks and general mechanics in the motor-vehicle service; and

H. R. 13606. An act for the relief of Russell White Bear; to the Committee on Indian Affairs.
H. R. 13824. An act authorizing L. L. Montague, his heirs, legal representatives, and assigns, to construct, maintain, and operate a bridge across the Columbia River at or near Arlington, Oreg.;
H. R. 13826. An act authorizing the Interstate Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Missouri River at or near Union, Nebr.; and
H. R. 13976. An act authorizing the International Business Co. (Inc.), its successors and assigns, to construct, maintain, and operate a bridge across the Ohio River at or near Ashland, Ky.; to the Committee on Commerce.
H. R. 12995. An act for the relief of Etta B. Leach Johnson; and
H. J. Res. 311. Joint resolution to provide an annual appropriation to meet the quota of the United States toward the expenses of the International Technical Committee of Aerial Legal Experts; to the Committee on Foreign Relations.

DEATH OF REPRESENTATIVE THOMAS S. BUTLER, OF PENNSYLVANIA

The PRESIDENT pro tempore laid before the Senate the following resolutions of the House of Representatives, which were read:

House Resolution 231

Resolved, That the House has heard with profound sorrow of the death of Hon. THOMAS S. BUTLER, a Representative from the State of Pennsylvania.

Resolved, That a committee of 57 Members of the House, with such Members of the Senate as may be joined, be appointed to attend the funeral.

Resolved, That the Sergeant at Arms of the House be authorized and directed to take such steps as may be necessary for carrying out the provision of these resolutions and that the necessary expenses in connection therewith be paid out of the contingent fund of the House.

Resolved, That the Clerk communicate these resolutions to the Senate and transmit a copy thereof to the family of the deceased.

Resolved, That as a further mark of respect the House stand in recess until 8 to-night.

Mr. REED of Pennsylvania. I offer the resolution which I send to the desk, which I ask to have read, and then I shall ask unanimous consent for its immediate consideration.

The PRESIDENT pro tempore. The resolution will be read.

Mr. JOHNSON. Mr. President, we are in legislative session?

The PRESIDENT pro tempore. The Senate is now in legislative session.

Mr. JOHNSON. Let us see where we are in legislative session.

The PRESIDENT pro tempore. The unfinished business is the Boulder Dam bill.

Mr. JOHNSON. That is correct. I am perfectly willing temporarily to lay aside the unfinished business for matters of this kind if I do not lose my place and the unfinished business continues as such.

The PRESIDENT pro tempore. The Chair will so hold.

Mr. JOHNSON. Very well.

The PRESIDENT pro tempore. The clerk will read the resolution presented by the Senator from Pennsylvania.

The resolution (S. Res. 259) was read, considered by unanimous consent, and unanimously agreed to, as follows:

Resolved, That the Senate has heard with profound sorrow the announcement of the death of Hon. THOMAS S. BUTLER, late a Representative from the State of Pennsylvania.

Resolved, That the Secretary communicate these resolutions to the House of Representatives and transmit a copy thereof to the family of the deceased.

Resolved, That as a further mark of respect the Senate stand in recess until 1.30 o'clock p. m.

The PRESIDENT pro tempore. In accordance with the last resolution, the Senate, as a mark of further respect to the memory of the deceased Representative, will stand in recess until 1 o'clock and 30 minutes p. m.

Thereupon (at 1 o'clock and 20 minutes p. m.) the Senate took a recess until 1 o'clock and 30 minutes p. m.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Chaffee, one of its clerks, announced that the House had passed the following bills, in which it requested the concurrence of the Senate:

H. R. 12951. An act providing for the purchase of 640 acres of land, more or less, immediately adjoining Camp Clark, at Nevada, Mo., and authorizing an appropriation therefor;
H. R. 13048. An act for the relief of James Aloysius Manley;
H. R. 13406. An act to authorize the city of Fort Thomas, Ky., to widen, improve, reconstruct, and resurface Fort Thomas Avenue and to assess the cost thereof against the United States according to front feet of military reservation abutting thereon, and authorizing an appropriation therefor;
H. R. 13644. An act authorizing the Secretary of Commerce to sell at private sale a portion of the Pointe Aux Herbes Lighthouse Reservation, La.;
H. R. 13778. An act authorizing Alex Gonzales, his legal representatives and assigns, to construct, maintain, and operate a bridge across the Rio Grande near the town of Ysleta, Tex.;
H. R. 13996. An act granting the consent of Congress to the Board of Supervisors of Leake County, Miss., to construct, maintain, and operate a free highway bridge across the Pearl River at or near Edinburg, Leake County, Miss.; and
H. R. 14034. An act to establish a commission for the participation of the United States in the observance of the one hundred and fiftieth anniversary of the Battle of Wyoming.

The message also announced that the House had agreed to the amendment of the Senate to the bill (H. R. 13622) to amend and supplement the Code of the Laws of the United States of America.

BUSINESS FOR REMAINDER OF SESSION

Mr. CURTIS. Mr. President, I ask unanimous consent that the unfinished business be temporarily laid aside; that the Senate proceed to the consideration of unobjected bills on the calendar, receive reports from the several committees, and that at the conclusion of the consideration of the unobjected bills the calendar be called under Rule VIII.

The PRESIDENT pro tempore. May the Chair suggest to the Senator from Kansas that it might be well to change the order in which those items in the unanimous-consent agreement shall be submitted, so that the reports of committees may come first?

Mr. CURTIS. I ask that that be done.

The PRESIDENT pro tempore. Is there objection?

Mr. GLASS. Mr. President, reserving the right to object, I desire to ask unanimous consent to call up from the desk certain measures which are not on the calendar.

Mr. CURTIS. I will include bills and resolutions on the desk.

Mr. REED of Pennsylvania. And conference reports.

Mr. CURTIS. And conference reports.

The PRESIDENT pro tempore. The present occupant of the chair will understand the unanimous-consent agreement to cover all business pending before the Senate, whether on the calendar, reported from committees, or on the Presiding Officer's desk.

Mr. CURTIS. Or to be presented.

The PRESIDENT pro tempore. Or to be presented.

Mr. JOHNSON. Mr. President, the unfinished business remains the Boulder Dam bill; does it not?

The PRESIDENT pro tempore. The Boulder Dam bill is the unfinished business, and under the unanimous-consent request it is temporarily laid aside for the purposes stated in the unanimous-consent request. Is there objection?

Mr. WALSH of Montana. Mr. President, I desire to inquire of the Senator from Kansas what the order will be.

Mr. CURTIS. The presentation of reports will come first.

The PRESIDENT pro tempore. The first thing, the Chair will state, will be to lay down certain messages from the House of Representatives, following which reports of committees will be in order, following which the calendar will be called for unobjected bills, following which the calendar will be called under Rule VIII. In the meantime, any business may be presented from the floor.

Mr. EDGE. Mr. President, a parliamentary inquiry right there. The Chair states that any business may be presented from the floor.

The PRESIDENT pro tempore. By unanimous consent.

Mr. EDGE. Exactly; but if the calendar is to be the third in order, as stated by the Presiding Officer, and then various Members suggest taking up individual bills from the floor, we shall never reach the calendar.

The PRESIDENT pro tempore. It will have to be done by unanimous consent. Is there objection? The Chair hears none, and the unanimous-consent agreement is entered into.

GEORGE A. ROBERTSON

The PRESIDENT pro tempore laid before the Senate the amendment of the House of Representatives to the bill (S. 1541) for the relief of George A. Robertson, which was to strike out all after the enacting clause and insert:

That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, and in full settlement against the Government, the sum of $1,250 to George A. Robertson for the loss of his right eye while employed by the Department of the Interior in Glacier National Park, 1913.

Mr. WALSH of Montana. I move that the Senate concur in the amendment of the House.

The motion was agreed to.

UMATILLA INDIAN RESERVATION, OREG.

The PRESIDENT pro tempore laid before the Senate the amendment of the House of Representatives to the bill (S. 1191) to amend an act of March 3, 1885, entitled "An act providing for allotment of lands in severalty to the Indians residing upon Umatilla Reservation, in the State of Oregon, and granting patents therefor, and for other purposes," which was on page 1, line 8, to strike out "range" and insert "ranges."

Mr. McNARY. I move that the Senate concur in the amendment of the House.

The motion was agreed to.

SANTA ROSA ISLAND, FLA.

The PRESIDENT pro tempore laid before the Senate the amendment of the House of Representatives to the bill (S. 3991) declaring certain designated purposes with respect to certain parts of Santa Rosa Island in Florida to be "public purposes" within the meaning of the proviso in section 7 of the act approved March 12, 1926, entitled "An act authorizing the use for permanent construction at military posts of the proceeds from the sale of surplus War Department real property, and authorizing the sale of certain military reservations, and for other purposes," which was, on page 2, to strike out all after the word "municipality," in line 7, down to and including the word "prescribe," in line 11.

Mr. FLETCHER. I move that the Senate concur in the House amendment.

The motion was agreed to.

ALICE E. MOORE

The PRESIDENT pro tempore laid before the Senate the amendments of the House of Representatives to the bill (S. 1297) to extend the benefits of the United States employees' compensation act of September 7, 1916, to Alice E. Moore, which were to strike out all after the enacting clause and insert:

That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, and in full settlement against the Government, the sum of $2,000 to Alice E. Moore, formerly employed as a dietitian and temporary nurse in the Medical Department at Large, War Department, who contracted tuberculosis while on duty at United States General Hospital No. 6, Fort McPherson, Ga., during the year 1920; and that said Alice E. Moore shall be admitted to such Army hospital as may be directed by the Surgeon General of the United States Army for necessary care and treatment.

And to amend the title so as to read: "An act for the relief of Alice E. Moore."

Mr. LA FOLLETTE. Mr. President, in the absence of the Senator from Idaho [Mr. BORAH], I take the responsibility of moving a concurrence in the amendments of the House.

The motion was agreed to.

EDGAR TRAVIS

The PRESIDENT pro tempore laid before the Senate the amendment of the House of Representatives to the bill (S. 652) for the relief of Edgar Travis, sr., which was, on page 1, line 10, to strike out "pay" and insert "back pay, bounty."

Mr. REED of Pennsylvania. I move that the Senate concur in the amendment of the House.

The motion was agreed to.

JOHN J. FITZGERALD

The PRESIDENT pro tempore laid before the Senate the amendment of the House of Representatives to the bill (S. 3314) for the relief of John J. Fitzgerald, which was to strike out all after the enacting clause and insert:

That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to John J. Fitzgerald, during his natural life, the sum of $50 per month, to date from the passage of this act, as compensation in contracting tuberculosis while in line of duty as an employee of the United States Shipping Board Emergency Fleet Corporation, said monthly payments to be paid through the United States Employees' Compensation Commission; and that said John J. Fitzgerald shall be admitted to a Government hospital as may be directed by the United States Employees' Compensation Commission for necessary care and treatment.

Mr. LA FOLLETTE. On behalf of the Senator from Illinois [Mr. DENEEN] I move concurrence in the amendment of the House.

The motion was agreed to.

UNITED STATES YORKTOWN SESQUICENTENNIAL COMMISSION

The PRESIDENT pro tempore laid before the Senate a concurrent resolution from the House of Representatives, which was read as follows:

Resolved by the House of Representatives (the Senate concurring), That there is hereby established a commission to be known as the United States Yorktown Sesquicentennial Commission (hereinafter referred to as the commission) and to be composed of 10 commissioners, as follows: Five Senators, to be appointed by the President of the Senate, and 5 Members of the House of Representatives, to be appointed by the Speaker of the House of Representatives. The commissioners shall serve without compensation and shall select a chairman from among their number.

SEC. 2. That it shall be the duty of the commissioners to prepare and report a plan or plans and a program for the commemoration of the siege of Yorktown, Va., and the surrender of Cornwallis on October 19, 1781, with an estimate of the probable cost; to give due and proper consideration to such plan or plans as may be submitted to them for said celebration; to confer with such civic associations and organizations and with such other commissions, Federal, State, or municipal, as may be appointed for purposes similar to the purposes of this resolution, and to take such steps as may be necessary to secure the coordination and correlation of plans prepared by State commissions or by bodies created under appointment by the governors of the respective States and by representative civic bodies; and to do all such other things as may be necessary to carry into full effect the intents and purposes of this resolution.

SEC. 3. That the commission, after selecting a chairman and a vice chairman from among their members, may employ a secretary and such other assistants as may be needed for clerical work connected with the duties of the commission: *Provided*, That said commission can so arrange that no part of the pay or expense of said secretary and other assistants, if any, shall be paid by the United States.

SEC. 4. The commissioners shall receive no compensation for their services, but shall be paid their actual and necessary traveling, hotel, and other expenses incurred in the discharge of their duties, and the same shall be paid out of the contingent funds of the House and Senate.

SEC. 5. That the said commission be, and the same is hereby, authorized to call upon the Commission of Fine Arts, in Washington, for their assistance and advice in connection with any plan or plans that may be submitted or considered, and the said Commission of Fine Arts is directed to render such assistance and advice as its other duties may permit and as may be within its power.

SEC. 6. That the commission shall on or before the 15th day of December, 1928, make a report to the Congress, in order that enabling legislation may be enacted.

SEC. 7. That the commission hereby created shall expire within two years after the expiration of the celebration.

SEC. 8. That this concurrent resolution shall take effect immediately.

The PRESIDENT pro tempore. The Chair invites the attention of the Senator from Virginia [Mr. GLASS] to this concurrent resolution.

Mr. GLASS. I ask the Senate to concur in the concurrent resolution.

The concurrent resolution was considered by unanimous consent and agreed to.

CHOCTAWHATCHEE RIVER BRIDGE, ALABAMA

The bill (H. R. 13651) granting the consent of Congress to the State of Alabama to construct, maintain, and operate a free highway bridge across the Choctawhatchee River in Dale County on the highway now under construction from Dothan to Enterprise, was read twice by its title.

The PRESIDENT pro tempore. The Chair calls the attention of the Senator from Alabama [Mr. BLACK] to this bill.

Mr. BLACK. I ask unanimous consent that the bill be taken up and passed by the Senate.

The PRESIDENT pro tempore. Is there objection to the request of the Senator from Alabama? The Chair hears none.

The Senate, as in Committee of the Whole, proceeded to consider the bill, which was read, as follows:

Be it enacted, etc., That the consent of Congress is hereby granted to the State of Alabama to construct, maintain, and operate a free highway bridge and approaches thereto across the Choctawhatchee River, at a point suitable to the interests of navigation, in Dale County, on the highway now being constructed from Dothan to Enterprise, in accordance with the provisions of an act entitled "An act to regulate the construction of bridges over navigable waters," approved March 23, 1906.

SEC. 2. The right to alter, amend, or repeal this act is hereby expressly reserved.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

PEARL RIVER BRIDGE, MISSISSIPPI

The bill (H. R. 13996) granting the consent of Congress to the board of supervisors of Leake County, Miss., to construct, maintain, and operate a free highway bridge across the Pearl River at or near Edinburg, Leake County, Miss., was read twice by its title.

The PRESIDENT pro tempore. The Chair invites the attention of the Senator from Mississippi [Mr. HARRISON] to this bill.

Mr. HARRISON. I ask unanimous consent for the present consideration of the bill.

The PRESIDENT pro tempore. Is there objection?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill, which was read, as follows:

Be it enacted, etc., That the consent of Congress is hereby granted to the board of supervisors of Leake County, or to the board of supervisors of Leake County and the board of supervisors of Neshoba County, Miss., to construct, maintain, and operate a free highway bridge and approaches thereto across the Pearl River, at a point suitable to the interests of navigation, at or near Edinburg, Leake County, Miss., in accordance with the provisions of the act entitled "An act to regulate the construction of bridges over navigable waters," approved March 23, 1906.

SEC. 2. That the right to alter, amend, or repeal this act is hereby expressly reserved.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

REPORTS OF COMMITTEES

Mr. PHIPPS, from the Committee on Agriculture and Forestry, to which was referred the bill (S. 2328) to promote the development, protection, and utilization of grazing facilities within national forests, and for other purposes, reported it with amendments.

Mr. STEIWER, from the Committee on Claims, to which was referred the bill (S. 3741) for the relief of S. L. Roberts, reported it with an amendment and submitted a report (No. 1327) thereon.

HOUSE BILLS REFERRED

The following bills were severally read twice by their titles and referred as indicated below:

H. R. 13048. An act for the relief of James Aloysius Manley; to the Committee on Military Affairs.

H. R. 13644. An act authorizing the Secretary of Commerce to sell at private sale a portion of the Pointe Aux Herbes Lighthouse Reservation, La.; and

H. R. 13778. An act authorizing Alex Gonzales, his legal representatives and assigns, to construct, maintain, and operate a bridge across the Rio Grande near the town of Ysleta, Tex.; to the Committee on Commerce.

MAJ. CHARLES P. ELLIOTT

Mr. SMITH. Mr. President, I only want to take a minute to call attention to some matter that I desire to have referred to the Committee on Commerce. I believe the Senator from New York [Mr. COPELAND] the other day had a similar case, and it was referred to that committee. It was an incident in which a retired Army officer was fired upon by the Coast Guard. I think there were two offenses. I took the matter up with Admiral Billard, and I intend to have a hearing before him; but I want to lay these facts before the Commerce Committee, since they have been charged with similar duty in almost a similar case.

I ask unanimous consent that the editorials and communications sent me be printed in the RECORD, and the papers referred to the Committee on Commerce. This matter is of such importance that I hope the committee will make a thorough investigation of the whole matter involved, as well as the recommendation that there shall be some remedial legislation. The allegations are to the effect that this retired officers' boat was fired upon. He is deputy sheriff of the community, and was then on his way out to the barrier islands in the discharge of his duty.

The PRESIDENT pro tempore. Without objection, it will be so ordered.

The editorials and communications were ordered to be printed in the RECORD and referred to the Committee on Commerce, as follows:

UNITED STATES NAVAL HOSPITAL,
Parris Island, S. C., May 16, 1928.

Senator E. D. SMITH,
United States Senate Chamber, Washington, D. C.

MY DEAR SENATOR: I have not seen you since the Baltimore police and gang tried to keep us out of the convention hall in 1912.

You would hardly remember me as an old Army officer, son of Gen. Stephen Elliott, of Beaufort, and cousin to the Gonzales boys and William Elliott, of Columbia, S. C.

Quite recently I have passed through three rather trying experiences; two with the United States Coast Guard and one with a rattlesnake on Bay Point. Am now laid up with the effects of the latter; am writing in bed and must ask you to excuse errors.

I represent the sheriff and the government of our State as special volunteer deputy sheriff in charge of the outer sea islands of Beaufort County, make my headquarters on Bay Point on east side of Port Royal entrance, and operate from there in my small 20-foot launch.

On Sunday, April 23, while hauling anchor preparatory to going to Beaufort to return two little children who had spent the week end with me, my boat was approached and laid alongside by a small Coast Guard cutter, the young enlisted man in charge subjecting me to a grueling cross-examination as to my residence, occupation, and business in those waters.

I was courteous and very thorough in giving him a complete history of the boat and of myself. I was not running rum, was an officer of nearly 50 years' service, and, in addition, special deputy sheriff in charge of enforcing all laws on the outer or barrier sea islands.

This information, with a full and detailed description of the boat, was forwarded to his headquarters in Charleston, S. C., where a young Lieutenant Collins is in charge and made a matter of record.

On the 2d of May, while going with my young friend, Herman von Harten, of Beaufort, to fish on the wreck of the steamer *Lawrence*, we were fired on by one Carl A. Soderberg, chief boatswain's mate, United States Coast Guard, seven shots from Colt .45-caliber pistols being directed around and toward my small boat, one shot hitting the guard rail about 3 feet above the water, within a foot or 14 inches of young von Harten and probably double that distance of me.

I wheeled my boat and headed for the small dingy in which were three men, Soderberg, in command, young Eaton, and a seaman named Hill, I think.

I used some very forcible language toward Soderberg, and had not von Harten pleaded with me and taken my 30-30 Winchester out of my hand would have committed justifiable manslaughter, as the men were never more than 50 yards from me, and, though 68 years old, can still see the sights of a rifle.

I demanded through the adjutant general an investigation. It was held at my insistence in Beaufort on Monday, May 14, in a hall and not on Soderberg's boat, as suggested by the commander sent to hold the inquiry. I secured the services of Claude Aman and William Levin, lawyers, of Beaufort. We had to fight to get the facts recorded. It was an investigation of one's self by one's self, in closed court; no stenographer was allowed me.

In numerous cases the young man recording in longhand made omissions favorable to the accused. We saw that those were corrected.

The evident intention was a barrel of whitewash. Mr. Aman threw in a bucket of lampblack, and if printed as given the evidence is conclusive.

I would like very much to have a copy of the proceedings certified and sent to me. Many very offensive stunts have been pulled off near here and in Charleston Harbor. Lieutenant Collins is a callow and rather officious young lieutenant in charge of an important area which should be under a captain or commander.

That is for the Coast Guard authorities, however, to determine. Lieutenant Collins, when I took him and the commander to see the hole made by the .45 caliber bullet in my boat, insinuated that it had been made after the attack on my boat. I asked him, "Do you mean to say that I made or caused to be made that hole?" He then denied any such intention.

He expressed in the public press before any inquiry that Soderberg was justified in his attack. He came to sit on the board of inquiry; Mr. Aman objected and had him excluded from the hall with all other spectators. Upon each witness finishing his testimony he was directed by the commander not to divulge to anyone what had been testified to. This proceeding would have been all right in Russia before royalty lost out, but in a free country seems strange to me.

I hope you will pardon my long letter full of mistakes, but I am still rather full of venom.

Yours truly,

CHARLES P. ELLIOTT.

WASHINGTON, D. C., *May 22, 1928.*

Maj. CHARLES P. ELLIOTT,
Parris Island, S. C.:

In accordance with telephone conversation with Admiral Billard, commandant of Coast Guard, who has just returned to city, the admiral says he will be very glad to discuss the matter with you at any time.

E. D. SMITH.

PARRIS ISLAND, S. C., *May 19, 1928.*

Senator E. D. SMITH,
United States Senate, Washington, D. C.:

Supplementary to wire of even date, Claude Aman, Beaufort lawyer, represented me at United States Coast Guard inquiry, Beaufort, May 14. He is not satisfied that record made by inquiry truly recorded and printed. Is thoroughly familiar with whole procedure. Regarded it as deliberate attempt to whitewash Soderberg, chief boatswain's mate, United States Coast Guard. I can give very illuminating testimony and facts. Suggest that Aman and I be directed to appear in Washington for inquiry. Naval surgeon has given consent for my making journey. Will stop in Washington at Walter Reed Hospital.

CHARLES P. ELLIOTT,
Major, United States Army.

WASHINGTON, D. C., *May 19, 1928.*

Maj. C. P. ELLIOTT,
Care United States Naval Hospital,
Parris Island, S. C.:

Your letter received. Will you grant permission for me to send copy your letter to Commandant of the Coast Guard? I am asking an investigation of the whole affair and would like to submit your letter to them. Wire me to-day, official business, collect.

E. D. SMITH.

PARRIS ISLAND, S. C., *May 19, 1928.*

Senator E. D. SMITH,
United States Senate:

Desire that Commandant of United States Coast Guard be thoroughly informed. Perfectly willing that copy of letter be sent him.

CHARLES P. ELLIOTT,
Major, United States Army.

WASHINGTON, D. C., *May 19, 1928.*

Mr. W. E. GONZALES,
Care of the State, Columbia, S. C.:

Have taken up the matter you brought to my attention with officials of the Coast Guard and have demanded a thorough investigation of all the facts. Will keep you posted.

E. D. SMITH.

BEAUFORT, S. C., *May 21, 1928.*

Hon. E. D. SMITH,
United States Senate, Washington, D. C.

MY DEAR SENATOR: May 19 I sent you two telegrams, one consenting to the use of my letter as in your judgment seems proper and the other advising that my attorney, Claude M. Aman, of Beaufort, is very doubtful that the record of the court of inquiry discloses the testimony as given, because several times during the hearing Mr. Aman called attention to District Commander G. R. Lofberg that the yeoman was not writing the questions and answers. Unquestionably Lofberg was attempting to whitewash the situation, because he refused to permit Mr. Aman to ask me any questions for the purpose of the record.

If you will permit a suggestion, if I had violated the prohibition law or failed to comply with the regulations as to equipment on my small boat, the punishment under the statute, as I understand it, is twenty-five to one hundred dollars—certainly not death. The only relief that the plain citizen has in matters of this character is to present them to Congress. As you know, my entire life has been spent in Beaufort, with the exception of performance of duty in the Army, and all my vacations have been spent here.

I am not presenting this matter so much for myself, but I am conscious of the fact that unless you gentlemen who make the law understand conditions innocent people and many times ladies riding in pleasure crafts will be insulted, endangered, and, like myself, come very near being killed. I believe that you could render no greater service to the people of the United States who live along the coastal regions than to throw some safeguard around them. I venture the opinion that if the United States Senate were to investigate the personnel of the Coast Guard, if the Coast Guard here is like that elsewhere, the Senate would either abandon the service or take steps to place men in charge of it and its personnel that would exercise judgment and some knowledge of what their duties were.

I am out of business and my principal purpose in life is to be of what service I can to this country. You are, therefore, at liberty to have me summoned before any committee investigating this matter, both as to the incident that happened here and as to the personnel of the Coast Guard in this district as observed by me. To reiterate—it is a dangerous thing to put arms in possession of men with authority to shoot down citizens unless they are such type as are intelligent and will only exercise the use of arms when a necessity arises.

I inclose an editorial (from the State) of May 17, mentioning other incidents occurring in this State.

Yours very truly,

CHARLES P. ELLIOTT.
Major, United States Army, Retired.

P. S.: Since this occurrence a number of prominent men have spoken to and written to me asking that I see that this shooting be presented to Congress, in the hope that they would investigate this and other cases, since it has become unsafe to go on the water in a private craft.

C. P. E.

[Inclosure]

[From the Columbia (S. C.) State of May 17, 1928]

PROHIBITION AUTHORITIES TAKE ACTION AGAINST FIRING ON AUTOMOBILES

An investigation into the shooting of a citizen at Niagara Falls by a member of the Coast Guard when said citizen did not stop his automobile at command has been ordered by Washington authorities. The incident was aired on the floor of the House of Representatives, and this inquiry called for.

Last week at Fresno, Calif., a constable and a special deputy sheriff were indicted for manslaughter. They suspected that Frank Aiello, riding in an automobile, was a rum runner and shot him to death. No liquor was in the car.

In South Carolina a few years ago a lone fisherman sleeping in his boathouse, which was out of the water, was visited after midnight by Federal and State officers. Suddenly awakened by persons unknown to him and commanded to come out, he grabbed his gun and was shot to death by the Federal prohibition officer. In the Federal court the jury was not even permitted to pass on the case. In South Carolina, also, an automobile in which two women school-teachers were riding and which was not halted at command, was fired into by Federal officers. They were not punished.

There have been thousands of other outrages by Federal and State prohibition officers, and the Constitution has been trampled upon by those designated to enforce the law. There are very many persons having no understanding of human nature who, on the theory that the end justifies the means, are disposed to justify almost any act if it be done in the name of enforcing the prohibition law, but the State has maintained that nothing has tended to weaken that law so much as excesses and lawless acts in its behalf. They create resentments; they have caused it to lose friends and supporters. Persons will argue against this contention, but they might as well argue against human nature.

It seems that at last authorities in Washington are coming to understand that lawlessness in behalf of the law is a boomerang. An enforcement agent in West Virginia was dismissed this week for firing at an automobile, and "strict orders were issued," according to the Associated Press, "that shooting at suspected law violators must cease at once." Commissioner Doran is quoted as saying: "We are not going to put up with firing on vehicles on highways whether they stop when commanded or not. We will certainly not shield officers charged with this offense and we will aid States at any time within reasonable limits. Of course, a particular case depends on the facts."

It will be maintained, of course, that unless agents are permitted to shoot, many violators of the law who would otherwise be captured will escape. That is true; but to shoot at a suspect is unlawful. And in many instances the suspect is not a suspect on the strength of evidence held by the officer, but merely because the agent chooses so to regard him. In numbers of cases, too, the man "suspected" by the agent suspects that agent of being a hold-up man or highway robber. And at the worst, no officer is warranted in shooting a man even if that man is known to be guilty of an offense for which, if convicted, he would be fined from $25 to $100.

BEAUFORT, S. C., May 23, 1928.

Hon. E. D. SMITH,

United States Senator, Washington, D. C.

My Dear SENATOR: Your telegram of the 22d, wherein you advise that Admiral Billard, Commandant of the Coast Guard, will be glad to discuss with me concerning the attack made upon the writer.

My military training leads me to believe that Commander Lofberg, who conducted the court of inquiry, is acting under orders of his superior, and if that be true, I am convinced that the effort is to justify the conduct of the accused rather than seek the truth. If that be true, do you not think it wise for you to put into motion such machinery as in your judgment seems best and proper in order to get the absolute truth of the situation before Congress? As stated in a prior communication to you, they did not kill me, and I really suffered no physical injury, but as a citizen who has had opportunities that a number of my countrymen have been denied, I feel it my duty to request you as my representative, and you who have to do with making the laws of this Nation, to inquire both as to my incident and especially into the personnel of this unit; as to the authority they have and can exercise; and about the very great danger to which the public is exposed as a result of existing conditions.

In another letter I have mentioned that if a person were to have whisky or fail to have the equipment on the boat as required by law, the severest penalty is a nominal sum of money or short servitude—certainly not to be shot down by a group of ignorant, irresponsible squareheads.

I am perfectly willing to be summoned before a committee or Admiral Billard, provided you or some other Member of Congress who desires to be informed, can be present.

Yours very truly,

CHARLES P. ELLIOTT,
Major, United States Army, Retired.

[From the Charleston (S. C.) News and Courier of May 15, 1928]

COAST GUARD INQUIRY BOARD INVESTIGATING AT BEAUFORT SENDS WASHINGTON RESULTS—MAJ. C. P. ELLIOTT RECOUNTS STORY OF ALLEGED FIRING ON HIS FISHING LAUNCH

BEAUFORT, May 14.—The alleged firing without cause by a Coast Guard patrol boat upon a fishing launch manned by Maj. Charles P. Elliott and Herman von Harten, of Beaufort, was recounted to-day before a Coast Guard board of investigation which came here to receive Major Elliott's testimony.

The board was organized in Charleston by Lieut. Commander G. B. Lofberg, of the Washington headquarters of the Coast Guard, to investigate a complaint lodged with Washington authorities by Major Elliott, who is a retired Army officer. It came to Beaufort when Major Elliott, who last Sunday was bitten by a rattlesnake, was unable to accept an invitation to testify in Charleston.

TRANSCRIPT TO CAPITAL

A transcript of the testimony and other finds of the board, the sessions of which were held in secret, will be forwarded to Washington and decision in the matter will be announced from the headquarters there, Lieutenant Commander Lofberg said.

After the taking of the testimony was completed Lieutenant Commander Lofberg, Lieut. Paul Collins, commander of the Coast Guard at Charleston, accompanied Major Elliott to view the boat which Major Elliott charged was fired upon.

The retired officer charged that on May 2 a shot fired from Coast Guard patrol boat *221* struck his small fishing launch near where von Harten and he were standing. Boatswain's Mate Carl Soderberg, in charge of the Coast Guard boat, denied this charge, declaring in his report that he had only fired six shots across the bow of the craft when Major Elliott had disregarded commands to heave to for boarding and inspection.

WARRANT CHARGES ASSAULT

A warrant charging Soderberg with assault with intent to kill was sworn out by von Harten, but Lieutenant Collins refused to turn the petty officer over to civil authorities. Soderberg accompanied the board of inquiry to Beaufort and came ashore upon assurance having been given Lieutenant Collins by Sheriff McTeer that no attempt at arrest would be made.

Lieutenant Collins was a member of the board of investigation, and his serving on the body was protested by Major Elliott's counsel on the grounds that the officer had expressed previously the opinion that Soderberg had acted in performance of his duty. This point was not settled before the board went in secret session.

INVESTIGATION OF ACTIVITIES OF THE CONTINENTAL TRADING CO. (REPT. NO. 1326, PT. 1)

Mr. WALSH of Montana. By direction of the Committee on Public Lands and Surveys, I submit a report on the inquiry directed by the Senate under Senate Resolution 101, the so-called Continental Trading Co. inquiry. I desire to say, in this connection, that the report is the unanimous report of the Senators present at the time it was under consideration.

I also desire to submit, and ask that there be printed in the RECORD, a chronology prepared by the legislative reference bureau on that inquiry, as well as the one which preceded it, known as the Teapot Dome inquiry.

I desire to ask, also, that the report submitted by the Committee on Public Lands and Surveys be published entire in the RECORD.

The PRESIDENT pro tempore. Without objection, it will be so ordered.

The matter referred to is as follows:

Mr. WALSH of Montana, from the Committee on Public Lands and Surveys, submitted the following report pursuant to Senate Resolution 101:

The Committee on Public Lands and Surveys, having carried out the directions of the Senate contained in Senate Resolution 101, copy of which is appended hereto, reports as follows:

The Continental Trading Co. was incorporated November 16, 1921, and began its business life next day. On November 30, 1921, E. L. Doheny made his celebrated "loan" to Fall, and in the last week of that year Sinclair visited the Secretary of the Interior at his ranch at Three Rivers, then expanded by the acquisition of the adjacent Harris property, a deal that excited the suspicion of his neighbors who knew that Fall was "broke."

The mysterious Continental Trading Co. was discovered in the course of the preparation of Messrs. Pomerene and Roberts for the trial of the suit of the Government brought at Cheyenne, Wyo., to cancel the lease of the Teapot Dome. Prowling around among the records of the banks at which Fall had accounts in the West, a reference was found to 3½ per cent Liberty bonds, the numbers of which were noted. Through the Treasury these were traced to the Continental Trading Co., for whom they had been purchased with others aggregating $3,080,000 face value, by the New York branch of the Dominion Bank of Canada. It was then developed that of the bonds so acquired $230,500 worth, face value, were delivered by Fall's son-in-law to a bank at Pueblo, Colo., the avails going in part to liquidate obligations to the bank from a company the stock of which was owned jointly by Fall and his son-in-law, in part to pay off Fall's personal debts, and the remainder to the credit of his account.

Inquiry revealed that the Continental Trading Co. was organized, as stated, in 1921 by one H. S. Osler, of Toronto, Canada, all others

connected with the institution being clerks in his law office, and that it had dissolved in 1923. The story of its entrance into the business world was told by ex-Senator Thomas, of the State of Colorado, practicing law at the capital. He was called to New York by Col. A. E. Humphreys, a client whose home was likewise at Denver, to assist in drafting a contract for the sale to the Sinclair Crude Oil Purchasing Co. and the Prairie Oil & Gas Co. by companies controlled by Humphreys of 33,333,333 barrels of oil, a part of the product of a rich field opened up by Humphreys in west Texas.

Conferences were held, participated in by Thomas, Humphreys, and his son on the one side, and Harry F. Sinclair, Robert W. Stewart, and Harry M. Blackmer, associated with the Sinclair Crude Oil Purchasing Co., and James E. O'Neil, the managing head of the Prairie Oil & Gas Co., on the other. The stock of the Sinclair Crude Oil Purchasing Co. is owned, the one-half by the Sinclair Consolidated Co., dominated by Sinclair, and the one-half by the Standard Oil Co. of Indiana, of the board of directors of which Stewart then was and still is the chairman. Blackmer was at that time the strong man in the Midwest Refining Co., all of the stock of which was then and still is owned by the Standard of Indiana. O'Neil directed the business of the Prairie Oil & Gas Co.

The negotiations terminating in an agreement, Thomas was about to write the contract from notes taken by him during the conference when he was told that the Continental Trading Co. was to be named in the contract as the purchaser. There naturally arose a question as to the financial responsibility of that company, but all misgivings were stilled by the assurance that its obligations would be guaranteed by the two companies which throughout the negotiations were spoken of as the purchasers.

The contract having been drafted, there then appeared, for the first time, the Toronto lawyer who the day before brought the Continental Trading Co. into being and who, as president of that company, signed and sealed it.

The vendor companies became bound through the signature of Humphreys and the guarantee indorsement was executed by O'Neil for the Prairie Oil & Gas Co. and by Sinclair and Stewart, purporting to act as directors of the Sinclair Crude Oil Purchasing Co., though they were not in fact such—a circumstance of no consequence, seeing the transaction was subsequently ratified by the board of directors of that company.

Further information was secured by counsel representing the Government in the litigation, civil and criminal, that while the Continental Trading Co., by its contract heretofore referred to, guaranteed as stated, acquired the right to have from the Humphreys 33,333,333 barrels of oil at $1.50 per barrel, it on the same day contracted to sell to the guaranteeing companies at $1.75 per barrel, O'Neil signing for the Prairie Oil & Gas Co., Sinclair and Stewart for the Sinclair Crude Oil Purchasing Co.

Deliveries were made under the contracts until June 1, 1923, when the contract of the Continental with the Humphreys companies was transferred to the guaranteeing companies, they paying for it $400,000.

The profits theretofore realized—25 cents per barrel—being thus swelled, the Dominion Bank, to which remittances were made, bought with the avails from time to time, under directions from Osler, 3½ per cent Liberty bonds, to the amount of $3,080,000. These, under directions from the same source, were by the bank, after taking out 2 per cent which went to the credit of Osler, evidently his commission, divided into four packages, each containing an equal amount and delivered to him.

It was established at the trial at Cheyenne of the suit to cancel the Teapot Dome lease that the bonds heretofore referred to as having been delivered to the Pueblo bank for Fall were among those thus acquired by the Continental Trading Co. The Dominion Bank kept no record of the numbers of the bonds purchased by it, but it did note the brokerage firms through which they were bought and the identity of which was established by the records of such firms.

The foregoing contitutes in outline the sum of the information at the command of the Government, either at the trial at Cheyenne or at the criminal trial of Fall and Sinclair in the District of Columbia, halted in consequence of the "shadowing" of the jury by Burns detectives employed by Sinclair.

There was no direct evidence on either trial concerning how the bonds came into the possession of the son-in-law of Fall, who turned them over to the Pueblo bank, nor regarding the source from which he obtained them. In both instances he declined to testify on the ground that his evidence might tend to incriminate him.

An effort was made to take the testimony of O'Neil and Blackmer who had fled to France when it seemed likely they would be called as witnesses under letters rogatory issued to the courts of that country, but they, too, declined to testify and, strangely, compulsory process can not be resorted to in that Republic against recalcitrant witnesses.

In like manner an attempt was made to compel Osler to relate the story of the evanescent life of the Continental Trading Co., but he took refuge in the plea of privilege of counsel. Persisting in his refusal to answer he was committed for contempt, his plea being overruled. He sued out a writ of habeas corpus, but again he was adjudged not to be protected by the rule that counsel can not be forced to disclose confidential professional communications. From the judgment thus rendered against him he appealed and departed on a lion hunt to South Africa. Meanwhile Judge Kennedy, sitting at Cheyenne, denied a motion of the Government for a continuance until the deposition of Osler could be taken, and the effort to get his testimony proved abortive.

Such light as Col. Robert W. Stewart could shed upon the shady transaction, in view of the part he had in the negotiations leading up to the contracts, was likewise sought by counsel for the Government, but he had important business in South America about the time the trial was coming on and left for an unknown destination before the subpœna could be served upon him. It might be added that Sinclair did not offer himself as a witness at Cheyenne and was not examined. Obviously, being under indictment at the time, his testimony could not be compelled.

Notwithstanding the failure to close up the gap referred to, the Circuit Court of Appeals for the Eighth Circuit and the Supreme Court of the United States, reversing the decree of Judge Kennedy dismissing the Government's bill, held the facts hereinbefore narrated, with others brought to light by your committee, to be indicative of fraud and corruption in the lease, and held that Fall, in executing the same, was a "faithless public officer."

Here begins the story of the revived investigation undertaken pursuant to the resolution of the Senate, No. 101, directing the Committee on Public Lands and Surveys to continue the work that remained suspended for four years, and particularly to inquire into the disposition of the bonds purchased by the Continental Trading Co.

Reference has been made to the refusal of Everhart, Fall's son-in-law, twice to testify on constitutional grounds. If he was in peril of prosecution at all, it was because he might be suspected of participation in the crime for which Sinclair and Fall stood indicted, namely, conspiracy to defraud the United States, though he had never been formally charged with that or any other crime in connection with the oil leases. Nor was there any purpose to proceed against him. However, the court on both occasions, perhaps properly, sustained his plea.

Prior to 1921 the statute of limitations as to all offenses against the United States not capital was three years. Shortly after his taking office Attorney General Daugherty represented that gigantic frauds criminal in character had been perpetrated during the war by or through the connivance of trusted officers of the Government who would be likely to escape punishment through the running of the statute, it being impossible within the brief period of the statute, owing to the complicated nature of the transactions and the iniquity of the conspirators, to unravel the tangled web sufficiently to permit the framing of indictments. He asked that the period be extended in the case of conspiracies to defraud the United States to six years, and Congress promptly complied. It is well known that the great hue and cry came to naught. No official of the Government not altogether petty was ever put upon trial. None such was ever indicted save one, and he was discharged on a demurrer; but the statute served as a shield to protect the associates of Daugherty caught red-handed in the most stupendous piece of thievery known to our annals or perhaps to those of any other country. Secretary Wilbur has estimated the net value of the leased reserves at $1,000,000,000.

The interruption of the Fall-Sinclair trial in Washington was improved by the Congress to repeal the Daugherty Act of 1921, thereby cutting away the immunity of Everhart who, being called before the committee on the resumption of its hearings, testified frankly that he got from Sinclair the bonds he turned over to the bank at Pueblo, together with others to the amount of $2,500 which he put into the hands of Fall in Washington where he came at the instance of the latter from the West. There was some pretense that the bonds represented the purchase price of one-third of the stock of the Fall-Everhart Tres Ritos Land & Cattle Co., whose ranch property was to be turned into a club, a sort of riding and hunt club; but so shallow was this fable that its details need not be dwelt upon, though it was accepted by a jury of the District of Columbia that acquitted Sinclair of the charge of conspiring to defraud the United States in securing the Teapot Dome lease.

The futile efforts of the committee to wring information from the dummy directors of the corporations involved need not detain us. Blackmer and O'Neil were, and are still abroad, subject to a penalty of $100,000 for failing to respond to a subpœna to attend the criminal trial in the District, a law to that effect having been enacted to enforce their appearance. Stewart's presence was secured, however, after the committee had enlisted the aid of John D. Rockefeller, jr., to induce him to cut short a round of festivities in Havana and to postpone a contemplated trip to Mexico.

Though correspondence coming into the hands of the committee disclosed that he and Blackmer were associated in the negotiations for the purchase of the Humphreys oil from the beginning and he was present at their culmination, as stated, he professed no knowledge of the incorporation of the Continental Trading Co. or participation therein, and could, or, rather, would, offer no reason why his company was not able to buy at $1.50 as well as the Continental Trading Co., particularly

when it was unknown and had no credit, so that the ultimate purchasers had to guarantee its contract to buy, and he was present and participating, according to the testimony of Thomas Humphreys, jr., and Beaman Dawes (interested because his company, the Pure Oil, was a stockholder of the Humphreys companies), when the agreement was actually entered into by which the Prairie Oil & Gas Co. and the Sinclair Crude Oil Purchasing Co. were to get the oil for $1.50. He stolidly insisted that some one told him he could not get the oil for less than $1.75, and that it was a good buy at that price, though he knew some one was getting a "commission" of 25 cents. He protested that he had never made a penny out of the transaction, but declined to tell what he knew about what disposition was made of the bonds. He was arrested by order of the Senate to answer as for contempt, sued out a writ of habeas corpus, which was, after hearing, quashed, though he remained at large pending an appeal from the order remanding him to the custody of the Sergeant at Arms of the Senate. Meanwhile he was indicted for his refusal to answer and stands in peril of a jail sentence like that imposed upon Sinclair for a like offense.

Stewart offered in justification of his recalcitrancy that he was called as a witness in a criminal case involving the matters being inquired of by the committee, and offered that he ought not to be required to testify concerning them in advance of the trial, the reference obviously being to the trial of Sinclair on the charge of conspiracy to defraud the Government in the Teapot Dome transaction, heretofore referred to. That trial having terminated in an acquittal, as stated, Stewart was again called before the committee and answered that without any knowledge of the Continental Trading Co., except as heretofore set out, he was told by Osler, a short time after the contracts so profitable to it were entered into, that he, Stewart, was to participate in its profits; that thereupon he wrote out an instrument in the nature of a declaration of trust, reciting that any such coming to him were transferred to one Barnett, tax commissioner of the Standard Oil Co. of Indiana, a subordinate official or employee of that company, of which Stewart was the dominating head, in trust for either that company or the Sinclair Crude Oil Purchasing Co. as the one or the other should appear to be the rightful owner; that the instrument being executed, and Barnett made acquainted with its contents, it was placed in a safe in the office of Stewart, to which he and Barnett alone had the combination; that thereafter, from time to time, Osler delivered to him bonds aggregating something less than $759,500, which were placed in the safe with the trust agreement; that coupons maturing in June and December, 1922, and June and December, 1923, were clipped and cashed by Stewart, who delivered to Barnett like bonds in equal amount that were in like manner deposited in the safe, so that eventually the total reached the figure above mentioned; that no later maturing coupons were clipped, and that on or about the 21st day of April, 1928, only three days before the witness last testified, the whole were turned over to the Sinclair Crude Oil Purchasing Co. Stewart never communicated to any of its directors or officers or those of the Standard—save as stated—any information that he had or expected to have the bonds or any profits out of the Continental or its transactions, until the bonds were delivered as last-above stated.

Questioned as to why the later-maturing coupons were not clipped or cashed, he answered that the omission arose from a desire to avoid "publicity." The most persistent examination failed to elicit any more definite information, but in view of all the facts disclosed there can remain no doubt that the unusual course pursued was followed lest Sinclair might be disadvantaged thereby in the proceedings against him growing out of the Teapot Dome lease, and, accordingly, that Stewart, as well as O'Neil and Blackmer, who likewise at the same time quit clipping the coupons on the bonds coming to them, must have known or had information that some of the bonds might be, as they were, traced through Sinclair to Fall. If that inference is unjustifiable the suspension in the cashing of the coupons at least affords additional ground for reaching the conclusion arrived at by the Supreme Court that the Continental was organized "for some illegal purpose."

Having thus told of the bonds coming into his possession his attention was directed to the following from the record of his testimony when he first appeared before the committee:

"Senator WALSH. Colonel, I suppose you have heard that so much of the profits of this company, the Continental Trading Co., as were realized up to 1923 were invested in Government bonds, part of which have been traced to Secretary Fall, former Secretary of the Interior——

"Mr. STEWART (interposing). I do not know whether any have been traced to Secretary Fall, and I do not know anything about the bonds. I never had anything to do with the distribution of any bonds.

"Senator WALSH. What, if anything, do you know about any of the bonds purchased by the Continental Trading Co.?

"Mr. STEWART. I never had anything to do with the Continental Trading Co.'s distribution of any bonds.

"Senator WALSH. That is not an answer to the question, Colonel.

"Mr. STEWART. I think it is.

"Senator WALSH. The question is, What do you know about them—not whether you had anything to do with them?

"Mr. STEWART. Well, I didn't know anything about it.

"Senator WALSH. Now, let us get to this transaction by which the Sinclair Crude Oil——

"Mr. STEWART (interposing). I never had anything to do with the distribution by the Continental Trading Co. of any bonds.

"Senator WALSH. Do you know anything about the matter?

"Mr. STEWART. I don't know anything about it.

"Senator WALSH. What is that?

"Mr. STEWART. I don't know anything about it; that is, I don't remember anything about it.

"The CHAIRMAN. Mr. Stewart, do you know of anyone who received these bonds that the Continental Trading Co. is reported to have dealt in?

"Mr. STEWART. Senator NYE, I did not personally receive any of these bonds or make a dollar out of them; I personally did not make a dollar out of this transaction.

"The CHAIRMAN. That was not the question.

"Mr. STEWART. I have said that to you to make way for something else. I am a witness in a case which is now pending between the Government of the United States and some defendants. I have been interrogated in regard to these subjects by the counsel appointed to represent the United States in that case. From their interrogation of me I am of the opinion those are the issues which are going to be tried in that case, and I do not think that the line of interrogation here by this committee is within the jurisdiction of the committee under the laws of the United States. I do not think that the question is entirely pertinent to this inquiry, even."

How he attempted to justify himself is shown by the following from his testimony on his later appearance:

"Senator WALSH. Do you care to say anything about that testimony, Colonel?

"Mr. STEWART. I do not think so. I want to make it plain. What I meant there, I think, from what you read there, I assumed you were talking about the distribution of bonds to Mr. Fall or to somebody so that these bonds got into Mr. Fall's hands, but I never knew anything about those.

"Senator WALSH. You were referring to bonds which might come into the possession of Mr. Fall?

"Mr. STEWART. I assumed from what you read there that you referred to the bonds coming into the hands of Mr. Fall, and, as a matter of fact, all of the statements there are true.

"Senator WALSH. But, you will observe, Colonel, the question is, 'What, if anything, do you know about any of the bonds purchased by the Continental Trading Co.?'

"Mr. STEWART. I think my answer was I had nothing to do with their distribution."

The Senate gave some evidence of an indisposition to accept his explanation as satisfactory and directed that the record be transmitted to the United States attorney for the District of Columbia, with a view to its submission, in the discretion of that officer, to a grand jury, looking to an indictment for perjury.

Not all the witnesses holding places with the companies involved, however, suffered from amnesia, though that affection was most extraordinarily general among them.

The gentleman who succeeded O'Neil as chairman of the board of the Prairie Oil & Gas Co., long associated with him, told an amazing story of having been called in the year 1925 by O'Neil to Montreal, whither, obviously avoiding the United States, he had secretly come from France ill and expecting to die. He conveyed to his friend the intelligence that he had made a profit out of the transactions of the Continental Trading Co. amounting, with accrued interest, to $800,000, which he asserted he considered and had always considered belonging to the Prairie Oil & Gas Co. He gave the messenger so summoned an order on his son in New York to deliver to the bearer bonds to the amount above indicated for that company, which was done, and the bonds were taken to the office of the company at Independence, Kans., where they now are in the possession of an affiliated company.

Another actor in the drama, Henry M. Blackmer, anticipated the discovery by the committee of the whereabouts of his share of the loot by sending his attorney to tell about it. He, too, cautiously crept to Canada, where he summoned his counsel to tell him that, as in the case of the O'Neil bonds, none of the coupons on his had been cashed, except those maturing in June and December, 1922, and that they were held intact to the amount of $763,000 in New York. This was done because he had some misgivings about a claim that might be made thereto by either the Midwest Refining Co. or the Standard of Indiana, with the directing head of the latter of which he, as heretofore set out, had been associated in the transaction through which the bonds had been acquired, and of the former of which he was himself the directing officer, at a salary of $50,000 or more. In his case it was apparently the promptings of prudence that brought him from his sanctuary, not of conscience, as in the case of O'Neil.

Neither volunteered any information concerning the disposition of the remainder of the bonds, O'Neil indicating quite clearly to his intimate friend on announcing his purpose to surrender that he did not desire to be questioned concerning details. It was further developed at the original hearing in 1924 that Sinclair had turned over to

Will H. Hays, for the Republican National Committee, about December 3, 1923, $75,000 in bonds, which at the later inquest were shown to be Continental bonds. That gentleman, who had been chairman of the committee mentioned, prior to and during the campaign of 1920, and who became Postmaster General on the incoming of the Harding administration in March, 1921, felt impelled, though he had retired from both positions, in the fall of 1923 to help raise funds to meet the large deficit resulting from a somewhat liberal course of spending in that campaign. He left the impression, if he did not actually state when on the stand in 1924, after much prodding, that the contribution had been made by Sinclair in cash, but another witness revealed that what the committee received were bonds in the amount above indicated, which were converted and applied to the liquidation of an indebtedness at the Empire Trust Co.

On the renewed hearing Mr. Hays voluntarily appeared—whether he had an acute sense that the facts would otherwise be divulged is a matter of speculation—and told the committee that Sinclair had further turned over $185,000 in bonds, in the nature of a loan, to be "used" by the committee in taking care of the debt. Pressed for an explanation as to how the bonds were to be "used," Mr. Hays was indefinite and unintelligible, but it was anticipated that in some way the delivery of them would, to that extent, serve to permit the statement to be made to the committee, then about to assemble, that the debt had been "provided for," it being understood that from moneys to be raised by a nation-wide solicitation Sinclair was to be made whole.

Of the bonds so "loaned" Hays told that $60,000 were sent to Fred W. Upham, treasurer of the committee at Chicago, and $25,000 to John W. Weeks, then Secretary of War, and $50,000 delivered to John T. Pratt, a wealthy New Yorker, a member of the "Standard Oil group." Pratt subscribed on the receipt of the bonds on November 28, 1923, toward the fund to lift the indebtedness, $50,000, remitting by check to Upham, but afterwards was prevailed upon by Hays to return either the bonds he received or an equal amount which Hays then turned back to Sinclair, together with $50,000 more which, according to Hays, were never "used."

Interrogated as to what Upham was to do with the bonds sent to him Hays professed ignorance, but denied specifically that it was understood that he was to distribute them around among trustworthy Republicans in the city of Chicago and take from them checks for the avails, giving to the transactions the character of subscriptions from the recipients, respectively.

Information coming to the committee to the effect that that was just what was done was confirmed by the testimony of James A. Patten of that city, a retired grain speculator of advanced years, who got $25,000 of the bonds from Upham and subscribed for an equal amount. Patten took the bonds, but, reflecting on the matter, his sense of decency revolted and he grew angry at being thus approached, but stilled his conscience by donating an equal amount to a hospital. Other Chicagoans were shown to have subscribed similarly.

Meanwhile the custodians of the papers and effects of Mr. Pratt, who died during the summer of 1927, placed in the hands of the committee, among other papers relating to the transaction in which he figured, a small slip of paper on which were memoranda in pencil in his handwriting, intending to serve as a record of the same, in the lower right-hand corner of which were four names—"Weeks," "Andy," "Butler," and "du Pont." Senator COLEMAN DU PONT got from Hays the $75,000 in bonds which went toward discharging the obligation at the Empire Trust Co., of which DU PONT was an officer. Weeks had been the recipient of bonds and so it was a reasonable inference that "Andy," presumably Andrew W. Mellon, Secretary of the Treasury, and Senator William M. Butler, chairman of the Republican National Committee, had some part in the transaction. Being called they both asserted that Hays had tendered bonds to them, to the former $50,000 and to the latter $25,000; but that they had declined to accept them, though Secretary Mellon, who was told the bonds were provided by Sinclair, made a contribution in the amount of the bonds sent him. Neither of them manifested any resentment such as stirred Patten, nor did either rebuke Hays, or counsel him to return the bonds to Sinclair, or make any effort to dissuade him from "using" the bonds, nor did either take any steps to prevent his "use" of them. Moreover at the outset of its work the committee sought the aid of the Treasury and had been assured by the Secretary that the secret service of his department would give the committee all possible assistance. It responded and was collaborating with the committee in its effort to trace the bonds, though neither had had any information concerning the connection of the Secretary with any of them.

Secretary Mellon was unaware of the fact that the bonds tendered him came from the Continental, but he knew they were contributed by Sinclair, for Hays told him so, and he had information, apparently from some other source, that Sinclair had made a huge contribution in bonds toward liquidating the debt of the committee, understood by Mellon to have been in an amount approximating $300,000. No other contributor gave anything like such sum; and the limit to which Mellon himself cared to go or was asked to go was $50,000, though, according to common repute, he is one of the wealthiest men in America.

In this connection it should be recalled that the great concession of Sinclair, charged to have been corruptly secured, was at the time actually under investigation. No explanation was offered by the Secretary as to why he did not communicate to Government counsel the invaluable information in his possession concerning Sinclair's extraordinary generosity to the committee, for use in the suit instituted a few months thereafter to annul the lease of the Teapot Dome, and which was brought to trial a year later, nor why he did not acquaint the committee, charged with the duty devolving upon it by Senate Resolution 101 of ascertaining what disposition had been made of the Continental bonds, with the obviously pertinent fact that a short time after they were by it acquired through transactions in which Sinclair had prominently figured, he had turned over to Hays bonds of the same issue aggregating, as the Secretary understood, in the neighborhood of $300,000.

It will be borne in mind that the Treasury itself prosecuted for Government counsel, under their direction, the inquiry which opened the books of the Dominion Bank and revealed the purchase of the bonds by it for the Continental and the distribution of them from time to time in four parcels, each containing an equal amount and going, presumably, to Sinclair, Stewart, Blackmer, and O'Neil, respectively, as in fact, as later established, they did go.

Though Secretary Mellon had no definite information that the bonds Hays got from Sinclair were Continental bonds, the slightest attention to facts presumably within his knowledge would have made such an inference all but irresistible, even if he were not prompted by the official duty of collecting the income tax, obviously due from the Continental, to make searching inquiry into what had become of its bonds.

Hays, recalled, explained his failure to mention his effort to get Mellon and Butler to take the bonds by saying that he felt called upon to tell only about how the bonds were "used." He added that the bonds tendered to Mellon—actually he had them for a week or 10 days—were the $50,000 worth he had said on his earlier appearance never were "used" and were turned back to Sinclair. Presumably the $25,000 which Butler refused went to Weeks. Sinclair having recovered $100,000 of the $185,000 worth "loaned," "glancing an eye of pity on his (Hays's) losses" through speculations in Sinclair stock, generously released Hays from any obligation arising out of the "loan" of the stock by making a further contribution to the debt fund of $85,000, or $160,000 in all.

Reference was made at the outset to the singular circumstance that the organization of the Continental Trading Co. on the one hand and the preliminaries to the leasing of the naval oil reserves on the other occurred simultaneously. An even more striking coincidence in respect to time as between these two enterprises is disclosed. The date of the delivery of the bonds by Sinclair to Hays is fixed by the date of Pratt's check to Upham, and the receipt of the brokerage house to which the bonds he got were delivered for sale, as November 28, 1923. The time is further fixed by the date of the application of the avails of the bonds that went to Du Pont by the records of the Empire Trust Co., showing that the proceeds thereof were received by it December 3, 1923. At that very time the facts were being unfolded before the Senate Committee from which the inference was all but inescapable that Fall had been bribed to issue the leases. On November 30, 1923, the so-called "New Mexico" witnesses were examined, having been subpœnaed perhaps a week before—Clayton, the county treasurer of Fall's county, who told that he hadn't paid his taxes for 10 years prior to the summer of 1922, when they were liquidated; Carl Magee, who testified that Fall had told him some time prior to 1921 that he (Fall) was broke"; other citizens who testified that conditions had been so hard in the cattle business in which Fall was engaged that every cattleman in that county was broke; Fall's neighbor, Harris, who had just sold his ranch to the former for $94,000 cash, and Johnson, the ranch foreman, who testified to extensive and costly improvements on Fall's place. So significant was this testimony that his friends on the committee, Senators Smoot and Lenroot, telegraphed Fall at once that he ought to come on without delay to explain.

This synchrony suggests at once that the extraordinary sum yielded up at that critical time by Sinclair was not altogether voluntarily donated, and that either hope or fear, if not gratitude, stimulated his generosity and accentuated his devotion to the principles of the Republican Party. In the predicament in which he found himself at that juncture he stood in dire need of friends at court.

Sinclair having been acquitted, as stated, he was examined by the committee, and told that he came to the meeting, out of the negotiations at which the Continental contracts were entered into, on the invitation of Blackmer, by whom he was assured that he (Sinclair) would share in the "commission" of 25 cents a barrel on the oil which was the subject of the transaction, Sinclair remarking, by way of protest, that the "commission" was too large. Blackmer must have said something about the purpose to convert the profits into bonds, for he admonished Sinclair not to transfer any of them, or, perhaps, to clip the coupons, a caution he disregarded. He protested, however, that he had no part in the organization of the Continental and knew nothing of the reason for its coming into existence. He told the committee

that from time to time Blackmer delivered him bonds, sometimes sending them by a messenger, who took no receipt, and that the only record he (Sinclair) kept was a notation on the back of an envelope inclosing the bonds, or on a card, indicating the dates and amounts of the deliveries, which he destroyed after having been subpœnaed to appear before the committee, and after having communicated to the Sinclair Crude Oil Purchasing Co. the information thus recorded in a letter written after his acquittal and a few days before he appeared before the committee, about April 21, 1928, with which he transmitted bonds in an amount equal to the amount received by him from Blackmer, with accrued interest, in all, $889,000. As the bonds were received, he kept them in a safe in his private residence, though he had safety-deposit boxes at several banks in which bonds and other securities were kept. He professed to have acted at all times in arranging to receive and in receiving the bonds for his company, but he never advised any of its officers or anyone else of such purpose or that he held the bonds for it; nor did he ever make any record enabling it to assert title in case of his death. The bonds were from time to time, as demonstrated by indubitable evidence before the committee, used in payment of private obligations of Sinclair, assumed or incurred; they were intermingled with other bonds of like character held by him, so that he professed to be unable to say whether he did or did not so use them or any of them, and the equivalent of the bonds he received was never turned over to his company until facts developed by your committee pointed unmistakably to his having the bonds and its purpose to call him for information concerning them was readily to be surmised.

It is unnecessary to dwell upon the facts leading to the conclusion that no one of the four conspirators had at the outset any purpose to make the company each respectively represented the beneficiary of the Continental transactions. If this judgment is harsh the parties affected, whose testimony given directly or vicariously was characterized in no degree by candor, are themselves to blame. It is impossible to offer any sane reason for taking the pains or going to the expense of organizing the corporation device or for paying Osler commissions amounting to $60,000 for conducting its affairs if there was an honest intention that the companies should have the profits. If, as Stewart and Sinclair tried to convey the impression, Blackmer was entitled to a commission for negotiating the deal, it would have been a simple matter to draft a contract reciting the sale by the Humphreys companies to the Sinclair Crude Oil Purchasing Co. and the Prairie Oil & Gas Co. at $1.50 per barrel and another from those companies to Blackmer for the payment to him of the proper commission.

As the transaction now stands the Sinclair Crude Oil Purchasing Co. has been made whole, but the Prairie Oil & Gas is out the amount still held by Blackmer. In this statement account is not taken of the fact that a loss to the companies has ensued to the amount of the interest that would have accrued on the various sums represented by the coupons not cashed, had they been turned in for payment and the interest thus realized been invested or deposited in an interest-bearing account. Moreover it is quite probable that both companies were all the time borrowing at a rate in excess of 3½ per cent, and that they could have used the sums withheld from them in their business so as to produce a return in excess of 3½ per cent. However that may be, if the avails belonged to the companies they, through their boards of directors, had the right to have the funds promptly as they came from the Continental, to employ as they saw fit. The officers who withheld the funds in asserting now that they were being held for the companies confess to a dereliction of duty to their stockholders.

The purpose for which the Continental Trading Co. was organized remains a mystery. No doubt can be entertained that Stewart and Sinclair can both tell but they both stoutly, but unconvincingly, declared they could not. Blackmer and O'Neil could illuminate the subject but they cautiously remain beyond the jurisdiction. Osler probably could, but he has been sojourning in Europe shrewdly avoiding at this season the compulsory process of the Canadian courts, likely to be invoked to compel him to pay an income tax or to punish him for refusing to return for taxation his share of the spoils.

Pursuant to a resolution of the Senate the Secretary of the Treasury has reported that the four conspirators have, after the facts herein recited were made public by your committee, paid ratably the sum of $606,097.19, taxes, interest, and penalties due from the Continental Trading Co., and that incidental to the inquiry prosecuted by your committee information was secured resulting in the collection of taxes, interest, and penalties in the further sum of $1,398,910.09.

As heretofore stated, the transactions from which the Continental realized profits in excess of $3,000,000 became known to the representatives of the Government some time prior to January, 1925. The Secret Service agents of the Treasury having access to the books of the Dominion Bank had knowledge of the account of the Continental Trading Co. and of the distribution of its assets. No explanation has been offered for the failure of the Treasury for nearly three years to exact payment of the tax due from it. A suit brought against the distributees would have brought out all the essential facts developed by the committee, affording as it would, an opportunity to examine under oath the participants in the unsavory affair, including Blackmer and O'Neil before they fled beyond seas. Before the hearings had progressed very far the attention of the Secretary of the Treasury was called to the probability that a tax was due from the Continental Trading Co. and to the likelihood that it had made no return. He was asked to indicate to the committee what legislation, if any, was, in his judgment, desirable to assure payment by those into whose hands the assets of the corporation had passed. To this inquiry he responded that none was then in mind, but that if upon further inquiry any supplementary enactment might seem helpful the committee or the Congress would be advised.

In reporting the collection of the sums already realized the Secretary advised that further payments might be expected, as obviously surtaxes are due from the parties into whose hands the profits of the Continental passed, the sum due being dependent upon the total income of each of the distributees and on whether the obligation is due from the immediate or from the ultimate distributees.

The committee was directed to resume its work because of a widespread belief that the fund accumulated by the Continental Trading Co., which had been denounced by the Supreme Court of the United States as a fraudulent institution, was to be devoted and perhaps had been devoted to corrupt uses of one form or another, seeing that some of it had been shown to have been so employed. It seems now, however, to have been the ill-gotten gains of a contemptible private steal, the peculations of trusted officers of great industrial houses, pilfering from their own companies, robbing their own stockholders, the share of the boodle coming to one of the freebooters serving in part as the price of the perfidy of a member of the President's Cabinet.

The expense of the inquiry, the results of which are here reported and which has resulted in the recovery for the Government of slightly in excess of $2,000,000 with the prospect of getting as much more, has been, as of the date hereof, $14,165.

Respectfully submitted.

T. J. WALSH,
For the Committee.

CHRONOLOGY OF EVENTS IN THE HISTORY OF THE NAVAL PETROLEUM RESERVE, NO. 3, TEAPOT DOME

[Rita Dielmann, April 25, 1928]

[NOTE.—Events in the history of Teapot Dome are herein arranged chronologically with no indication as to the date or method whereby facts were disclosed. For the legislative history of Senate and House resolutions bearing on Teapot Dome, see Legislative reference manuscript No. 01663—HD216C.]

1865: First withdrawal of public lands supposed to contain petroleum. (67th Cong., 2d sess., S. D. 210.)

September 27, 1909: The President by Executive order withdrew certain portions of the public domain as an oil reserve. (5 F (2d) 330.)

June 25, 1910: Congress enacted a law authorizing the President to make withdrawals of public lands. (36 Stat. 847.)

July 2, 1910: The President under authority of the act of June 25, again withdrew certain public lands. A part of the present naval reserve No. 3 was included in this order. (14 F (2d) 705. CONGRESSIONAL RECORD, 67th Cong., 2d sess., p. 6046.)

1911: First oil-burning vessel in the Navy. Fear that oil supply was not sufficient to put Navy on oil basis. (CONGRESSIONAL RECORD, 68th Cong., 1st sess., p. 1730.)

April 30, 1915: President Wilson created naval reserve No. 3 by Executive order. (67th Cong., 2d sess., S. Doc. 191.)

October 27, 1916: Report of Glenn B. Morgan, field agent, U. S. G. L. O., concerning the status of claims in Wyoming, shows that the Wyoming Oilfields Co. had a claim to most of the lands within the reserve. (U. S. Senate hearings, leases on naval oil reserves, p. 3369.)

December 1, 1916: Report of the Secretary of the Navy Daniels emphasized the importance of conserving the oil supply for the Navy. (CONGRESSIONAL RECORD, 67th Cong., 2d sess., 6046.)

December 9, 1916: Thomas A. Edison, chairman of the Naval Consulting Board, declared in an official statement that the national defense would be imperiled if any legislation was enacted which would divert from the Navy any portion of its petroleum fuel reserve. (CONGRESSIONAL RECORD, 67th Cong., 2d sess., p. 6046.)

1917: The department investigated the claims of the Pioneer Oil & Refining Co. and the Société Belgo-Americaine des Petroles du Wyoming to lands in the reserve and found them without merit. (U. S. Supreme Court, advance opinions, November 1, 1927.)

February 25, 1920: Leasing act. Provided that all royalty accruing to the United States from lands within the naval petroleum reserves is to be deposited in the Treasury. All royalty accruing to the United States under any oil or gas lease, on the demand of the Secretary of the Interior, shall be paid in oil or gas. (U. S. Comp. Stat., Ann. Suppl., 1923, §4640.)

February 25, 1920: Universal leasing act. Authorizing the Secretary of the Interior to lease producing oil wells within the naval reserves, authorizing the President to permit the drilling of additional wells or to lease any part of a claim on which wells had been drilled. (U. S. Comp. Stat., Ann. Suppl., 1923, §4640.)

March 5, 1920: And again March 29, 1920, Secretary Daniels addressed letters to the chairman of the Committee on Naval Affairs of the House of Representatives suggesting that the Secretary of the Navy be directed to take possession of all properties within the naval petroleum reserves, to conserve, develop, use, and operate the same at his discretion, directly or by contract, lease, or otherwise, and to use, store, exchange, refine, sell, or otherwise dispose of the oil and gas products thereof and those from all royalty oil for the benefit of the United States.

Pursuant to this suggestion Congress passed the act of June 4, 1920. (CONGRESSIONAL RECORD, March 8, 1924 (current), 3961.)

June 4, 1920: Congress passed a law directing the Secretary of the Navy to take possession of all properties within the naval petroleum reserves—to conserve, develop, use, and operate the same at his discretion, directly or by contract, lease, or otherwise, and to use, store, exchange, or sell the oil and gas products thereof, and those from all royalty oil from lands in the naval reserves, for the benefit of the United States. (41 Stat. 813.)

[NOTE.—Mr. Fall, in his testimony before the Senate Committee, on October 23, 1923, maintained that the act of June 4, 1920, transferred to the Navy Department only lands against which there were no specific claims. Until claims were cleared the lands against which they were filed continued in the Department of the Interior under act of February 25, 1920. (U. S. Senate hearing, leases upon naval oil reserves, p. 179.)]

August 21, 1920: The Pioneer Oil & Refining Co. applied for an oil and gas lease on Teapot Dome. (U. S. Senate hearing, leases on naval oil reserves, p. 445.)

March 1, 1921: The Department of the Interior denied applications of the Pioneer Oil & Refining Co. for leases on wells in Wyoming on the ground that the company was not producing commercial wells within the meaning of the general leasing act. (U. S. Senate hearing, leases upon naval oil reserves, pp. 221, 1197.)

March 3, 1921: John B. Payne, Secretary of the Interior, directed that the unclaimed oil land was to be offered for leasing at public auction to the highest bonus bidder, the royalties being fixed by the department. (5 F. (2d) 330.)

March 5, 1921: Albert B. Fall became Secretary of the Interior and Edwin Denby, Secretary of the Navy.

April 28, 1921: The oil companies filed a motion for rehearing. The motion was denied by Assistant Secretary Finney. The oil companies filed a motion for the invocation of the supervisory power of the Secretary. Neither the petition nor the motion were heard, but both were pending when the contract was made with the Mammoth Oil Co. (67th Cong., 2d sess., S. Doc. 210.)

May, 1921: Fall asked Assistant Secretary of the Interior, Mr. Finney, to prepare a memorandum showing that the President might commit control of reserves and other wells or leases to Fall, and that under act of June 4, 1920, the Secretary of the Navy might ask him to handle conservation, development, and operation of the naval reserves. (U. S. Supreme Court, advance opinions, November 1, 1927.)

May 11, 1921: Fall sent Denby a letter inclosing a draft of a proposed Executive order, to be signed by Denby, transferring naval oil reserves from the Navy Department to the Interior. (U. S. Supreme Court, advance opinions, November 1, 1927.)

May 26, 1921: Secretary Denby wrote to President Harding suggesting that the naval oil reserves might properly be transferred to the Interior Department. He states that the officials of the Navy Department had opposed the transfer.

He also stated that in a conversation between the President, Secretary Fall, and himself it was agreed that the President would issue an Executive order effecting the transfer. (U. S. Senate hearing, leases upon naval oil reserves, pp. 286–287.)

May 27, 1921: Rear Admiral R. S. Griffin, Chief of the Bureau of Engineering, wrote a memorandum for the Secretary of the Navy stating that naval oil reserves were no longer public lands and a part of the interior, but property of the Navy and protested against the transfer to the Interior. ((Text) CONGRESSIONAL RECORD, 68th Cong., 1st sess., p. 2063.)

May 31, 1921: Order by President Harding committing the administration of all oil and gas bearing lands in the naval reserves to the Secretary of the Interior, subject to the supervision of the President. (Executive Order No. 3474, 67th Cong., 2d sess., S. Doc. 210.)

June 2, 1921: Senator Harreld, of Oklahoma, wrote to the President questioning his legal authority to issue the Executive order of May 31, transferring the administration of the naval petroleum to the Department of the Interior. Secretary Fall assured the President in a letter that he had power under the Overman Act of 1918 to transfer functions from one department to another. (CONGRESSIONAL RECORD, 67th Cong., 2d sess., p. 6103.)

July 23, 1921: Fall wrote a letter to Denby suggesting that royalty oil might be used to pay for fuel depots to be located and planned by the Navy. (67th Cong., 2d sess., S. Doc. 210.)

July 29, 1921: Denby by letter to Fall indicated his acquiescence in the use of royalty oil to pay for fuel depots. (67th Cong., 2d sess., S. Doc. 210. U. S. Sup. Ct., advance opinions, Nov. 1, 1927.)

July–October, 1921: Fall in the West to arrange with oil men for exploitation of oil reserves. (U. S. Supreme Court, advance opinions, November 1, 1927.)

September, 1921: Report of Mr. C. H. Wegemann, of the Geological Survey, points out danger of loss of oil in reserve No. 3 by the invasion of water. (67th Cong., 2d sess.; S. Doc. 210–G.)

September, 1921: Dr. H. Foster Bain, Director of the Bureau of Mines under the Department of the Interior, and Arthur W. Ambrose, chief petroleum technologist in the Bureau of Mines, visited naval reserve No. 3. They consulted Carroll H. Wegemann, formerly in the Government service, and G. A. Fisher, of the firm of Fisher & Lowrey, consulting geologists and engineers. Their maps showed a fault and danger of drainage. (5 F. (2d) 330.)

September 27, 1921: R. S. Griffin, rear admiral, United States Navy, Chief of the Bureau of Engineering, retired. Admiral Griffin had advised Secretary Denby against transfer of naval oil reserves to the Department of the Interior. (U. S. Senate hearing, leases upon naval oil reserves, pp. 347–349.)

October 1, 1921: Admiral John K. Robison was made Chief of the Bureau of Engineering in the Navy Department to succeed Admiral Griffin. (5 F. (2d) 330.)

October 8, 1921: Admiral Robison took direct charge of the naval reserves by oral direction of the Secretary of the Navy. Later confirmed by a written order. (5 F. (2d) 330.)

October, 1921: Conference between Admiral Robison, Secretary Fall, Doctor Bain, and Mr. Ambrose to discuss possible drainage on naval reserve No. 3. Considered Wegemann's second report, in which he stated that the Navy Department can not prevent drainage but it can make arrangements for development of the property under conditions mutually advantageous to the Navy Department and the operators. (5. F. (2d) 330.)

October 25, 1921: Robison wrote a letter to Fall, signed by Denby, agreeing that Fall was to control the making of leases for drilling of wells in the naval reserves. The development of Teapot Dome reserve was not to be undertaken except to protect it against depletion by others. The Navy was to receive fuel oil for royalty oil and the royalty oil not so exchanged was to be stored. (United States Supreme Court, advance opinions, November 1, 1927.)

November 15, 1921: A. H. Humphreys, who controlled two-oil producing companies, his counsel, Charles S. Thomas, H. M. Blackmer, chairman of the board of the Midwest Refining Co. and subsidiary of the Standard Oil Co. of Indiana, Sinclair, and O'Neil, president of the Prairie Oil & Gas Co., met in New York. Agreed that the Humphreys's companies would sell oil to Blackmer at $1.50 up to 33,333,333 barrels. (U. S. Supreme Court, advance opinions, November 1, 1927.)

November 16, 1921: Incorporation of the Continental Trading Co. in Canada by application from H. S. Osler, a barrister of Toronto. (U. S. Supreme Court, advance opinions, November 1, 1927.)

November 16, 1921: The same persons met with R. W. Stewart, president of the Standard Oil Co. of Indiana. The Continental Oil Co. to be the purchaser instead of Blackmer. (U. S. Supreme Court, Advance Opinions, November 1, 1927.)

November 17, 1921: Osler met with same persons and contracted on behalf of the Continental Trading Co. for the purchase of oil at a profit of 25 cents a barrel. (U. S. Supreme Court, advance opinions, November 1, 1927.)

November 30, 1921: Report of Mr. Heald, who had been sent by Secretary Fall to make a report on the condition of reserve No. 3. He reported that the oil in three of the sections would certainly be drained and oil in other sections would presumably, but not certainly, ultimately be drained by wells drilled outside the reserve. (67th Cong., 2d sess., S. Doc. 210.)

November 30, 1921: Meeting of the council of the Secretary of the Navy. Robison advised and it was decided that the oil reserves should not be used to supply fuel for current use. Robison urged that leases be made, that royalty oil be exchanged for fuel oil and storage constructed as designated by the Navy. Denby queried whether the exchange was authorized by law. Robison asked the opinion of the Judge Advocate of the Navy, who answered affirmatively. Robison transmitted this to Fall in a letter signed by Denby. (U. S. Supreme Court, advance opinions, November 1, 1927. 5 F (2d) 330.)

December 5, 1921: Denby, Secretary of the Navy, approved the plans arrived at in the meeting of the council on November 30. (5 F. (2d) 330.)

December, 1921, to April, 1922: Mr. Fall consulted various oil companies on means of constructing a pipe line from the Teapot Dome wells and developing the oil lands with a view to offsetting loss by drainage from outside fields. Such a pipe line would pay eventual returns in putting the oil in favorable market or producing a quantity for storage. (67th Cong., 2d sess., S. Doc. 210.)

December 31, 1921: Sinclair and Fall conferred at Fall's ranch at Three Rivers, N. Mex. (5 F. (2d) 300. U. S. Supreme Court, advance opinions, November 1, 1927.)

January, 1922: Mr. Safford, administrative assistant to Secretary Fall, instructed Eddy, who was in the General Land Office in charge of

leasing oil lands, to make a memorandum relating to claims on Teapot Dome to be submitted to Secretary Fall on his return to Washington. (14 F. (2d) 705.)

January, 1922: Fall was informed that counsel for certain oil companies had held that the use of royalty oil to pay for fuel depots was not authorized by law. He refused to submit the question to the Attorney General, lest there was some chance that an adverse opinion would be given. (U. S. Supreme Court, advance opinions, November 1, 1927.)

January 12, 1922: Mr. Tallman made a report on the status of mining claims at Teapot Dome. His report showed that the mineral claims on Teapot Dome did not deserve serious consideration and that there was no imperative need of opening up Teapot Dome. (14 F. (2d) 705; 5 F. (2d) 330.)

January 27, 1922: Fall reached Washington. After conference with Robison it was decided to develop all of reserve No. 3, Teapot Dome. (U. S. Supreme Court, advance opinions, November 1, 1927.)

Shortly after January, 1922, Admiral Robison recommended to Denby the development of the Wyoming reserves as a whole and insisted upon the necessity of a pipe line for military reasons. Denby at first hesitated, then agreed. Admiral Robison communicated the decision to Fall. Admiral Robison made the recommendation to Fall on basis of fear of loss from drainage and pressing national emergency regarding our state of security. (5 F. (2d) 330.)

February 3, 1922: Sinclair went to Fall's office and presented a memorandum outlining the terms of a contract to develop naval oil reserve No. 3. He would want a contract which would authorize him to take out all of the oil in the reserve on a royalty basis, to build a pipe line to market, to build storage tanks, and to quiet all outstanding claims on the reserve. Fall called for a report from Ambrose on possibility of drainage from the naval reserve. (67th Cong., 2d sess., S. Doc. 210; (U. S. Supreme Court, advance opinions, November 1, 1927.)

February 18, 1922: Mr. Ambrose, chief petroleum technologist, Bureau of Mines, reported possible drainage during the next six or seven years by wells outside the Teapot Dome reserve. (14 F. (2d) 705; 67th Cong., 2d sess., S. Doc. 210.)

February, 1922–June, 1923: Purchases and deliveries in Liberty bonds by the Dominion Bank of Canada in New York amounted to more than $3,000,000. (14 F. (2d) 705; U. S. Supreme Court, advance opinions, November 1, 1927.)

February 28, 1922: Sinclair caused the Mammoth Co. to be organized and obtained quitclaim deeds from oil companies holding leases on naval oil reserve lands. (U. S. Supreme Court, advance opinions, November 1, 1927; 5 F. (2d) 330.)

March 10, 1922: Mr. Tallman again reported that there were no legal claims to the Teapot oil region. (14 F. (2d) 705.)

March 11, 1922: Mammoth Oil Co. bought up claims of the Belgo-American and the Pioneer Oil Co. in naval reserve No. 3 for $1,000,000. (14 F. (2d) 705. U. S. Senate hearing, leases on naval oil reserves, p. 2314.)

March 11, 1922: Sinclair made formal application to Fall for a lease. He inclosed a form of lease and quitclaim deeds of the Pioneer and Belgo Cos. (14 F. (2d) 705. U. S. Supreme Court, advance opinions, November 1, 1927.)

March 24, 1922: Admiral Robison wrote Congressman Kelley, chairman of the Subcommittee on Naval Affairs, that the development of naval petroleum reserve No. 3 was to be undertaken only to protect the Government against depletion of the reserve by other parties. (14 F. (2d) 705.)

March–April, 1922: (Two or three weeks.) Most of the lease was drawn up in the office of J. W. Zevely, counsel of Sinclair. The draft was not submitted to any lawyer in the Interior Department. (14 F. (2d) 705. U. S. Supreme Court, advance opinions, November 1, 1927.)

About March 30, 1922: A copy of the lease was shown to Robison. (U. S. Supreme Court, advance opinions, November 1, 1927.)

April 6, 1922: Senator La Follette wrote to Fall asking what was being done in regard to naval reserves. (5 F. (2d) 330.)

April 6, 1922: An oil paper, the Inland Oil Index, wired Secretary Denby asking about the purported leasing of Teapot Dome. (14 F. (2d) 705.)

April 7, 1922: Teapot Dome reserves leased to the Mammoth Oil Co., of which Harry F. Sinclair was president. (67th Cong., 2 sess. S. Doc. 191.)

April 7, 1922: Secretary Denby sent the following telegram:

"To Inland Oil Index, Cooper, Wyo. Matters connected with development of naval petroleum reserves are being handled by the Secretary of the Interior. Navy Department has made no contract for development of Teapot Dome." (14 F. (2d) 705.)

April 7–21, 1922: Between the time of making the lease and the date when it was made public Sinclair oil jumped on the New York Exchange in three days trading over $30,000,000. (CONGRESSIONAL RECORD, 67th Cong., 2d sess., p. 6043.)

April 8, 1922: Commander H. A. Stuart, of the Department of the Navy, was detached. He left Washington April 10. (U. S. Senate hearing, leases upon naval oil reserves, p. 292.)

April 10, 1922: Lieutenant Shafroth, of the Bureau of Steam Engineering in the Navy Department, left Washington. (U. S. Senate hearing, leases upon naval oil reserves, p. 292.)

April 7, 1922: Senator KENDRICK inquired on behalf of one of his constituents whether the Secretary of the Interior would consider proposals for leases in the Teapot Dome field. (CONGRESSIONAL RECORD, 67th Cong., 2d sess., p. 11785.)

April 10, 1922: Doctor Bain, Director of the Bureau of Mines, wrote to Senator KENDRICK in response to his inquiry about leases, inclosing a copy of the press memorandum of April 6, 1922. This stated that no leases had been granted. (14 F (2d) 705.)

April 12, 1922: Denby signed the Sinclair lease to Teapot Dome. (5 F (2d) 330; U. S. Supreme Court, advance opinions, November 1, 1927.)

April 12, 1922: Fall asked Denby to procure the adoption of an amendment to the pending naval appropriation bill, providing that storage fuel oil from the naval reserves might be obtained by exchange of oil or use of cash received for royalty oil sold. (U. S. Supreme Court, advance opinions, November 1, 1927.)

April 12, 1922: Fall wrote to La Follette reviewing what the Navy and Interior Departments had done in regard to leasing the reserves. (5 F. (2d) 330.)

April 13, 1922: Secretary Fall wrote President Harding inclosing a copy of his reply to Senator La Follette's request for copies of the lease. In this he said, "Of course, the matter of the process by which we are obtaining storage, etc., and the location of the storage, the contracts for the same, and in fact the plans of the Navy, as they are being worked out by myself and Secretary Denby are military plans, and in my judgment, should not be given to Senator La Follette or anyone else." (14 F. (2d) 705.)

April 13, 1922: Fall left Washington for his ranch at Three Rivers, N. Mex., and locked the lease in his desk saying that he did not care to have the matter get out. (5 F. (2d) 330.)

April 14, 1922: Representative Mondell received a telegram from Governor Brooks of Wyoming protesting against the proposed lease. Mondell called on Judge Finney, Assistant Secretary of the Interior, who gave him the impression that the lease had not been concluded. (14 F. (2d) 705.)

April 14, 1922: Mr. B. B. Brooks, president of the Rocky Mountain Oil & Gas Producers' Association, sent a telegram to Senator KENDRICK protesting against the development of oil in the Teapot Dome. There was already overproduction in Wyoming, the price level was low, there would be no market for oil, and there was no danger of loss of oil by drainage. (CONGRESSIONAL RECORD, 67th Cong., 2d sess., p. 5568.)

April 15, 1922: The Senate passed a resolution (S. Res. 277) calling on the Secretary of the Interior for information as to the existence of a lease. (CONGRESSIONAL RECORD, 67th Cong., 2d sess., p. 5568.)

April 18, 1922: The Department of the Interior released a memorandum to the press, explaining in a general way the leasing of Teapot Dome. (14 F. (2d) 705.)

April 18, 1922: Letter of Mr. Daniels, former Secretary of the Navy, to Senator LA FOLLETTE, explaining his objections to leasing naval oil reserve lands. (Text, New York Times, April 22, 1922.)

April 19, 1922: Mondell again called on Finney, but was not permitted to see the lease. He went to the Navy Department and was permitted to read a copy. (14 F. (2d) 705.)

April 19, 1922: B. B. Brooks, president of the Rocky Mountain Oil & Gas Purchasers' Association, and former governor of Wyoming, sent Senator KENDRICK a telegram, stating that there was no danger of drainage. (CONGRESSIONAL RECORD, 67th Cong., 2d sess., p. 6044.)

April 21, 1922: Edward C. Finney, Acting Secretary of the Interior, and Edwin Denby, Secretary of the Navy, wrote to the President of the Senate in response to Senate Resolution 277, giving information concerning the terms of the contract with the Mammoth Oil Co. (67th Cong., 2d sess., S. Doc. 191.)

April 23, 1922: Dr. G. B. Morgan, State geologist, of Wyoming, sent a telegram to Senator LA FOLLETTE, stating that there was practically no possibility of draining Teapot Dome through Salt Creek wells. (CONGRESSIONAL RECORD, 67th Cong., 2d sess., p. 6044.)

April 25, 1922: Robert D. Carey, Governor of Wyoming, sent a telegram to Senator LA FOLLETTE, stating that there was no change of the Salt Creek field draining Teapot Dome. (CONGRESSIONAL RECORD, 67th Cong., 2d sess., p. 6044.)

April 25, 1922: Judge Finney, Assistant Secretary of the Interior, wrote to Mr. JOHN C. SCHAFER, who had applied for a lease, that for military reasons it was deemed advisable not to make the full contract public at that time. (14 F. (2d) 705.)

April 28, 1922: E. C. Finney, Acting Secretary of the Interior, transmitted a copy of the contract made between the Secretary of the Interior, the Secretary of the Navy, and the Mammoth Oil Co. (67th Cong., 2d sess., S. Doc. 196.)

April 29, 1922: Senate adopted a resolution (S. Res. 282) directing the Secretary of the Interior to send to the Senate copies of all oil leases

made on naval oil reserves, and authorizing the Committee on Public Lands and Surveys to investigate the entire subject of leases with reference to the protection of the rights and equities of the Government of the United States and the preservation of its natural resources. (CONGRESSIONAL RECORD, 67th Cong., 1st sess., v. 62, p. 6097.)

May 1, 1922. Commander J. O. Richardson, United States Navy, emphatically advised against drilling on the Teapot Dome. (U. S. Senate hearings, leases upon naval oil reserves, p. 373.)

May 8, 1922: Osler, President of the Continental Co., gave the Dominion Bank of Canada a receipt for $300,000 Liberty bonds. (U. S. Supreme Court, advance opinions, November 1, 1927.)

May, 1922: Sinclair gave Secretary Fall $230,500 face value of United States first 3½ per cent bonds, which he had got as his share of dividends from the Continental Trading Co. The counsel for the United States charged and the court sustained the charge that this pecuniary consideration was intended to influence Fall in granting the Mammoth Oil Co. a lease of naval petroleums reserve No. 3. (14 F (2d) 705.)

May 13, 1922: Report of F. B. Tough, supervisor of oil and gas operations, Bureau of Mines, explaining the leases made in April and defending the action of the Secretary of the Interior. (CONGRESSIONAL RECORD, 68th Cong., 1st sess., p. 4358.)

May 29, 1922: Fall's son-in-law, M. T. Everhart, had $230,500 in Liberty bonds. Two hundred thousand dollars bore numbers corresponding to those purchased by the Continental Trading Co. in New York on April 13 and April 17 and receipted for by Osler May 8. (U. S. Supreme Court, advance opinions, November 1, 1927.)

June 3, 1922: Report of Mr. Tough, geologist in the Bureau of Mines. Mr. Tough reported that it was highly probable that oil-bearing lands in the Teapot Dome reserve would be subject to drainage by wells drilled on lands along the northwest boundary of the reserve. (67th Cong., 2d sess., S. Doc. 210.)

June 3, 1922: Report of A. B. Fall, Secretary of the Interior, to President Harding on Teapot Dome oil lease in response to Senate's demand for information. (67th Cong., 2d sess., S. Doc. 210.)

June 5, 1922: Mr. Fall paid taxes in arrears for 1912–1920. On June 22, 1922, he paid taxes for 1921. [County Treasurer's Certificate.] (U. S. Senate hearing, leases on naval oil reserves, p. 836.)

June 5, 1922: The Senate adopted a resolution (S. Res. 294) authorizing the Committee on Public Lands and Surveys to summon witnesses and to require the production of documents, to employ counsel, etc. (CONGRESSIONAL RECORD, 67th Cong., 2d sess., p. 8140.)

June 7, 1922: A. B. Fall, Secretary of the Interior, transmitted to Hon. REED SMOOT, chairman of the Senate Committee on Public Lands, 2,300 documents in response to Senate Resolution No. 282. [Senator WALSH took charge of the documents preparatory to the investigation.] U. S. Senate hearing, leases on naval oil reserves, pp. 3142–3144.)

June 7, 1922: President Harding's message to the Senate transmitting the report of Secretary Fall and approving the Teapot Dome oil lease. (67th Cong., 2d sess., S. Doc. 210.)

July 13, 1922. [Note: Montana Railway Commission reported inequality in prices in Wyoming and adjoining States during 1921. 67th Cong., 2d sess., S. Doc. 233.]

Report of the Federal Trade Commission on conditions in the petroleum trade in Wyoming and Montana. 1921 Standard Oil Co. of Indiana purchased one-half interest in the Sinclair Pipe Line Co. The Sinclair interests and the Standard Oil Co. together organized the Sinclair Crude Oil Purchasing Co. The Standard Oil Co. had a monopoly of petroleum trade in Wyoming. The Sinclair-Standard interests would increase the monopolistic control of the industry. The commission recommended abolition of legislation of common-stock ownership in corporations which have been members of a combination dissolved under the Sherman law. (67th Cong., 2d sess., S. Doc. 233.)

July 29, 1922: Secretary Fall called upon Acting Secretary Roosevelt for marines. Col. Theodore Roosevelt, Acting Secretary of the Navy, called for marines. Captain Shuler was sent to Casper, Wyo., with four enlisted men. (68th Cong., 1st sess., S. Rept. 794; U. S. Senate hearing, leases upon naval oil reserves, pp. 2723–2724.)

August 2, 3, 1922: The Mutual Oil Co. received their equipment. August 4 the marines left Casper, Wyo. (U. S. Senate hearing, leases upon naval oil reserves, pp. 2729–2730.)

[Note: The marines were used rather than any form of civil injunction, lest a suit bring the validity of the Sinclair lease into question. CONGRESSIONAL RECORD, 68th Cong., 1st sess., pp. 10947–10948.]

August 1, 1922: James O. Lewis wrote to Mr. Ambrose indorsing the policy of the Navy in developing the naval oil reserves and storing oil. (U. S. Senate hearings, leases upon naval oil reserves, p. 824.)

August 15, 1922: The Denver Post showed the enormous profits that Sinclair was making on royalty oil. ((Reprint.) U. S. Senate hearings, leases on naval oil reserves, pp. 2006–2010.)

August 19, 1922: The Mammoth Oil Co. filed papers of incorporation with the Secretary of State for Wyoming. (CONGRESSIONAL RECORD, 67th Cong., 2d sess., p. 11786.)

October, 1922–February, 1923: Nineteen producing wells were brought in on Teapot Dome reserve. ((Tables.) U. S. Senate hearings, leases on naval oil reserves, p. 385.)

October 23, 1922: $20,000 of the $90,000 lot of United States bonds were deposited to the credit of the Tres Ritos Cattle and Land Co. in the First National Bank of Pueblo. October and November, 1922, about $20,000 of the $90,000 United States bonds which could be identified as having been purchased by the Continental Trading Co., were deposited in the First National Bank of El Paso to the credit of Mr. Fall. (14 F. (2d) 705.)

October 25, 1922: Lieut. Commander I. F. Landis, U. S. N., stated that Teapot Dome was not in danger of being drained Wells operating around it were at a considerable distance. Robert Cary, Governor of Wyoming: "I believe there is no chance of the Salt Creek field draining the Teapot Dome. To use this oil now may mean that at some time this country may be seriously embarrassed in a war for lack of fuel for its Navy. No one can justify the bartering away of valuable natural resources, the property of the State and the Nation." G. B. Morgan, State geologist of Wyoming: "My opinion is that Teapot Dome and Salt Creek are separate structures, with practically no possibility of draining Teapot Dome through Salt Creek wells." (U. S. Senate hearings, leases upon naval oil reserves, p. 374.)

December 20, 1922: Separate agreement. Sinclair Pipe Line Co. to construct a pipe line having daily capacity of 40,000 barrels. (5 F. (2d) 330, U. S. Supreme Court advance opinions, November 1, 1927.)

January, 1923: Sinclair Crude Oil Purchasing Co. bought tanks from the Mammoth Co. and stored the royalty oil that it bought from the Government. The Crude Oil Purchasing Co. was jointly owned by the Sinclair Consolidated Oil Corporation of which Sinclair was chairman, and by the Standard Oil Co. of Indiana, of which Stewart was head. The Sinclair Pipe Line Co., also owned half and half by the Consolidated Co. and the Standard Co. was nominated to construct the pipe line designated in the lease and began construction work. (U. S. Supreme Court, advance opinions, November 1, 1927.)

January 11, 1923: Senator WALSH to Florida. Took testimony of McLean, who said he was too ill to come to Washington. McLean said he did not send $100,000 to Fall.

January 26, 1923: Secretary Denby addressed a letter to Secretary Fall giving specifications as to storage of oil and asking the Secretary of the Interior to enter into a supplemental contract covering this matter. (Text U. S. Senate hearing, leases upon naval oil reserves, pp. 1198–99.)

January 30, 1923: The Senate committee invited James O. Lewis, formerly of the Bureau of Mines, and Mr. Clapp to investigate conditions in the Teapot Dome, and to report whether wells in the Salt Creek field could drain the naval reserve oil. (U. S. Senate hearing, leases upon naval oil reserves, p. 826.)

Summer, 1923: Two geologists were sent by the Senate committee to the Teapot Dome area to report on possible drainage by wells outside the reserve. (The True History of Teapot Dome, Senator T. J. WALSH, The Forum, July, 1924.)

February 5, 1923: The Senate adopted a resolution (S. Res. 434) continuing the authorization for an investigation provided for in Senate Resolution 282 and Senate Resolution 294, through the recess of Congress and until the assembling of the Sixty-eighth Congress. (CONGRESSIONAL RECORD, 67th Cong., 4th sess., p. 3048.)

February 9, 1923: Agreement supplementary to lease of April 7, 1922, concerning storage tanks to be provided by Sinclair in exchange for royalty oil certificates. This provision made possible the use of proceeds from royalty oil which if sold would have to be paid into the Treasury. This enabled the Secretary of the Navy to construct fuel stations that had not been authorized by Congress. (Act of August 31, 1842, 5 Stat. L. 577; 5 F. (2d) 330; U. S. Supreme Court, advance opinions, November 1, 1927.)

March 4, 1923: Fall left the Cabinet.

March 29, 1923: Public hearing before the Secretary of the Interior, Hon. Hubert Work. Mr. J. Foley, supervisor of the Salt Creek Producers Conservation Committee, stated that drainage along the common boundary of the Salt Creek field and naval petroleum reserve No. 3 would occur either from the reserve to the Salt Creek field or from the Salt Creek field to the reserve according to the predominance of drilling and the rate of operating the wells. (U. S. Senate hearing, leases on naval oil reserves, pp. 385–86.)

March 29, 1923: $50,000, the balance of the $90,000 lot of United States bonds, were deposited with the Exchange Bank of Carrizozo, N. Mex., to the credit of Mr. Fall. (14 F. (2d) 705.)

May, 1923: The Continental Trading Co. assigned its contract with the Humphreys companies to its guarantors for $400,000. Shortly afterwards it was dissolved. (U. S. Supreme Court, advance opinions, November 1, 1927.)

May 26, 1923: Sinclair directed his secretary, Wahlberg, to give Zevely $25,000 in bonds if the latter asked for them. These were deposited to Fall's credit in El Paso. Sinclair was about to go to Russia and had Zevely arrange with Fall to meet him there. The bonds were a loan, not a fee. After Fall's return from Russia, he gave Zevely a note for $25,000. (U. S. Supreme Court, advance opinions, Nov. 1, 1927.)

May 26, 1923: An agreement was executed whereby the Continental Trading Co. assigned its contract of November 17, 1921, with

the Humphreys interests to the Sinclair Crude Oil Purchasing Co. and the Prairie Oil and Gas Co. At that time some 8,000,000 barrels of oil had been delivered under the Humphreys contract, leaving some 25,000,000 still to be delivered to the Continental Trading Co. As this oil had been resold to the Sinclair Crude Oil Purchasing Co. and the Prairie Oil & Gas Co. on the same date at a profit of 25 cents per barrel, there was still a profit to accrue to the Continental Trading Co. of some $6,000,000 under its resale contract. (14 F. (2d) 705.)

Summer, 1923: Mr. Fall went to Russia to advise Mr. Sinclair on an oil lease. He testified before the Senate Committee that he received no pay for his services but that the syndicate paid him $10,000 for expenses. (U. S. Senate hearings, leases upon naval oil reserves, pp. 271–274.)

June, 1923: $25,000 in Government bonds were shipped by the employees of Sinclair to the First National Bank of El Paso, Tex., to be received for Fall's account. (5 F. (2d) 330.)

August 9, 1923: The Continental Trading Co. (Ltd.), went out of business. (14 F. (2d) 705.)

October 22, 1923: Senate investigation of the Teapot Dome Oil case began under authority of Senate Resolutions 282 and 294. (Hearing before the Committee on Public Lands and Surveys, pp. 1–174.)

October 23, 1923–February 11, 1924: Hearings of the Senate Committee on Public Lands and Surveys pursuant to Senate Resolutions 282, 294, 434. (Pp. 175–2070.)

December 3, 1923: Sinclair turned over to W. H. Hays for the Republican National Committee $75,000 in bonds, which were later known to be Continental bonds, to help meet the deficit of the campaign of 1920. (Senator WALSH. New York Times, April 1, 1928. CONGRESSIONAL RECORD, April 2, App.)

December 27, 1923: A. B. Fall plead illness and sent to the committee a statement that E. B. McLean, of Washington, had lent him $100,000. (68th Cong., 1st sess., S. Rept. 794.)

January 20, 1924: The Bureau of Investigation of the Department of Justice wired their agent in El Paso to put the manager of Mr. Fall's ranch under surveillance. The man in charge of the El Paso Bureau was an appointee of Fall's. (CONGRESSIONAL RECORD, 68th Cong., 1st sess., p. 1622.)

[Same date Fall at New Orleans put under surveillance.]

January 24, 1924: E. L. Doheny appeared before the Committee on Public Lands and Surveys and testified that he had lent Fall $100,000 on November 30, 1921. (68th Cong., 1st sess., S. Rept. 794.)

January 27, 1924: The President issued a press statement that the Department of Justice was following the hearings of the Senate committee.

"If there has been any crime it must be prosecuted. If there has been any property of the United States illegally transferred or leased, it must be recovered. * * * I propose to employ counsel of high rank drawn from both political parties, to bring action for the enforcement of law. Counsel will be instructed to prosecute these cases in the courts so that if there is any guilt it will be punished; if there is any civil liability it will be enforced; if there is any fraud, it will be revealed; and if there are any contracts which are illegal, they will be canceled. Every law will be enforced and every right of the people and the Government will be protected." (CONGRESSIONAL RECORD, 68th Cong., 1st sess., p. 1520.)

January 28, 1924: President Coolidge to Speaker of the House. Estimate of $100,000 to enable the Chief Executive to take action for prosecution of cases growing out of oil leases and for the protection of interests of the United States on naval reserves. (68th Cong., 1st sess., H. Doc. 174.)

January 31, 1924: House Concurrent Resolution 10. That it is the sense of Congress that Harry F. Sinclair be requested to return to the United States to testify regarding the proposed cancellation of the Teapot Dome oil lease and explain the loan of $25,000 to Fall. (CONGRESSIONAL RECORD, 68th Cong., 1st sess., p. 1770.)

February 2, 1924: Mr. Fall challenged the authority of the Committee on Public Lands and Surveys to proceed under Senate Resolutions 282, 294, and 434, Sixty-seventh Congress. He held that the committee had no authority to continue its investigation until the assembling of the Sixty-eighth Congress. Mr. Fall refused to answer questions on the ground that Senate Joint Resolution 54, attempting to deal with the lease of the Mammoth Oil Co., had taken upon the Senate the authority over naval oil leases. (United States Senate hearing, leases upon naval oil reserves, pp. 1961–1962.)

February 2, 1924: Atlee Pomerene, of Ohio, and Owen J. Roberts, of Pennsylvania, appointed as special oil counsel.

February 7, 1924: Senate Resolution 147. Authorizing the investigation by the Senate committee in view of Mr. Fall's refusal to testify. (CONGRESSIONAL RECORD, 68th Cong., 1st sess., p. 1973).

February 8, 1924: Joint resolution directing the President to institute and prosecute suits to cancel certain leases of oil lands and incidental contracts. (68th Cong., 1st sess., S. J. Res. 54, p. 2053.)

February 11, 1924: Senate Resolution 134. Calling upon the President to dismiss the Secretary of the Navy from his Cabinet. The President replied that no official recognition could be given to the Senate's resolution, since it usurped an Executive function. (CONGRESSIONAL RECORD, 68th Cong., 1st sess., p. 2245.)

February 12, 1924: President Coolidge's Lincoln Day address, National Republican Club, New York. "There will be immediate, adequate, unshrinking prosecution, criminal and civil, to punish the guilty and to protect every national interest." (CONGRESSIONAL RECORD, 68th Cong., 1st sess., p. 2338.)

February 12–May 14, 1924: Hearings of the Senate Committee on Public Lands and Surveys pursuant to Senate Resolution 147 (pp. 2071–3586.)

February 18, 1924: Edwin Denby resigned as Secretary of the Navy after attacks in the Senate.

February 27, 1924: Appropriation of $100,000 to enable the Chief Executive to employ counsel and to prosecute suit to cancel leases on oil lands. H. J. Res. 160. (CONGRESSIONAL RECORD, 68th Cong., 1st sess., p. 3269.)

March 1, 1924: S. Res. 157. That a committee of five Senators be authorized to investigate the neglect of H. M. Daugherty, Attorney General of the United States, to arrest and prosecute Fall, Sinclair, Doheny, Forbes. (CONGRESSIONAL RECORD, 68th Cong., 1st sess., p. 3410.)

March 7, 1924: Letter of Secretary Denby showing that no officer of the Navy had been removed from duty at Washington nor retired on account of disagreement with the petroleum policy of Denby. (CONGRESSIONAL RECORD, March 8, 1924 (current), 3961.)

March 13, 1924: A temporary restraining order on the Mammoth Oil Co. and one appointing receivers for the property involved were entered. (14 F. (2d) 750.)

March 22, 1924: Harry F. Sinclair appeared before the Senate committee and was duly sworn as a witness. Sinclair refused to answer questions put to him. (S. Rept. 299, 68th Cong., 1st sess.)

March 24, 1924: Senator WALSH offered motion that facts concerning Mr. Sinclair's refusal to answer questions of the committee be certified to the district attorney for the District of Columbia. (CONGRESSIONAL RECORD, 68th Cong., 1st sess., p. 4788.)

[NOTE.—The United States cited Sinclair for contempt and the Supreme Court of the District of Columbia returned an indictment.]

March 27, 1924: President Coolidge requested the resignation of Attorney General H. M. Daugherty. (CONGRESSIONAL RECORD, 68th Cong., 1st sess., p. 5141.)

July 14, 1924: The District of Columbia Supreme Court rules that Sinclair must answer questions.

Congress has the right to compel testimony in aid of the exercise of its legislative function, excluding, of course, self-incrimination.

The defendant urged that in referring to the courts for determination and adjudication the question of the alleged invalidity of the several leases of naval oil reserves, the Senate had divested itself of jurisdiction further to investigate the subject of such leases. Court held that the institution of judicial proceedings did not exhaust the entire subject matter of the investigation itself.

The defendant urged that even if power exists in Congress to compel testimony in aid of the discharge of its legislative functions, the indictment must show that the Senate committee was engaged in an investigation having for its object the acquiring of information for legislative purposes.

The court holds that questions pertinent to the inquiry must be answered. Congress has lawful authority to require answers. (Supreme Court of the District of Columbia. U. S. *v.* Harry F. Sinclair. The Washington Law Reporter. LII 461. Criminal, No. 42060.)

September 15, 1924: Mr. Osler was summoned to testify on application made to the United States district court pending suit against the Mammoth Oil Co. in the district of Wyoming. Mr. Osler refused to be sworn. Appeal was made to the Supreme Court of Ontario for an opinion as to the propriety of the refusal on the part of the witnesses to answer questions. (56 O. L. Rep. 307.)

December 10, 1924: Motion in the Weekly Court, Toronto, for an order for Osler to attend for examination as witness in the suit pending in the United States District Court for the District of Wyoming. (56 O. L. Rep. 307.)

December 13, 1924: Riddell rendered opinion of the court that Osler must answer questions as to who caused him to organize the Continental Trading Co., who were its owners, and what the assets of the company. (56 O. L. Rep. 307.)

[NOTE.—The United States attempted to secure a continuance of the trial in order to procure evidence of H. S. Osler. The request was denied. (14 F. (2d) 705.)]

February 9, 1925: United States *v.* Mammoth Oil Co. Letters rogatory to any judge or tribunal having jurisdiction of civil causes in the Republic of France to take the testimony of H. M. Blackmer and J. E. O'Neil. (U. S. District Court, District Court of Wyoming.) Blackmer and O'Neil refused to testify. (U. S. Supreme Court, advance opinions, November 1, 1927.)

February 9 and 11, 1925: Appeal by Osler heard. (56 O. L. Rep. 635.)

March 11, 1925: Judgment of Riddell was affirmed on appeal by Osler. The court held that questions put to Osler must be answered. (56 O. L. Rep. 635.) [NOTE: Osler left for a hunting trip to Egypt.]

April 3, 1925: United States *v.* Albert B. Fall and Harry F. Sinclair. Criminal Cases Nos. 42303, 42304, and 42305. Indictment charging bribery and conspiracy to defraud the Government was quashed. (The Washington Law Reporter, Vol. LIII, p. 230.)

June 19, 1925: United States *v.* Mammoth Oil Co., et al. District Court, D. Wyoming. Bill to cancel the lease to Teapot Dome was dismissed. This appears to be a good contract and should not be set aside for light or frivolous reasons. "It is not only possible, but very probable, in this case, that the action taken by the Secretary of the Navy, if the contracts are fairly and honestly carried out, will actually conserve oil which would otherwise have been lost." (5 F (2d) 330.) [NOTE: In the course of the preparation of Atlee Pomerene and Owen J. Roberts for the trial of the suit of the United States to cancel the Teapot oil lease in Wyoming, the counsel for the United States found reference to Liberty bonds in Mr. Fall's bank accounts and disclosed the Continental Trading Co. Senator WALSH. CONGRESSIONAL RECORD. April 2, 1928.]

December 7, 1925: Court of Appeals of the District of Columbia. United States *v.* Albert B. Fall. No. 4362. The United States appealed from the decision of the Supreme Court of the District of Columbia sustaining a plea in abatement and quashing an indictment. The Court of Appeals reversed the decision of the supreme court. (The Washington Law Reporter, Vol. LIV, p. 25.)

March 26, 1926: Appropriation to enable the Chief Executive to institute and continue the prosecution of suits to cancel certain oil leases and incidental contracts. (69th Cong., 1st sess., H. Doc. 282.)

July, 1926: Mr. Blackmer had his counsel, Mr. Schuyler, meet him at Montreal, Canada. Blackmer had $750,000 in bonds which he held as part of the profits of the Continental Trading Co. Schuyler advised him to deposit them in trust in New York. (United States Daily, February 24, 1928. 3608:1.)

September 28, 1926: United States *v.* Mammoth Oil Co. Appeal from the District Court of the United States for the District of Wyoming. Judge Kenyon rendered the opinion of the circuit court of appeals for the eighth circuit. Reversed the decision of the district court. Declared that the lease held by the Mammoth Oil Co. had been obtained by fraud and ordered an accounting by the Mammoth Oil Co. for all oil taken under the lease and contract. (14 F (2d) 705.)

February 1, 1927: Proposed legislation canceling oil leases to extend availability of unexpended balance of appropriation carried in act approved July 3, 1926, to enable the Chief Executive to continue litigation to cancel certain leases of oil lands. (69th Cong., 2d sess., H. Doc. 675.)

March 17, 1927: Executive order revoking Executive order of May 31, 1921, which committed the administration and conservation of all oil and gas bearing lands in naval petroleum reserves Nos. 1 and 2, California, and reserve No. 3 in Wyoming, and naval shale reserves in Colorado and Utah, to the Secretary of the Interior subject to supervision of the President. (No. 4614.)

July 9, 1927: Agreement between Secretary Work and Secretary Wilbur concerning the transfer of naval petroleum reserves to the Department of the Navy pursuant to Executive Order of March 17, 1927. To become effective August 1, 1927. (Text published United States Daily, July 15, 1927.)

August 1, 1927: All naval oil reserves returned to the control of the Navy Department.

October 10, 1927: Mammoth Oil Co. *v.* U. S. The Supreme Court of the United States decided that the lease and supplemental agreement were fraudulently made to circumvent the law and to defeat public policy. No equity arises in favor of the lessee or the other petitioners to prevent or condition the granting of the relief directed by the Circuit Court of Appeals. Petitioners are bound to restore title and possession of the reserve to the United States, and must abide the judgment of Congress as to the use or removal of the improvements or other relief claimed by them. (U. S. Supreme Court, advance opinions, November 1, 1927.)

November 2, 1927: Criminal trial collapsed for want or jury after exposure of Sinclair's plot to shadow the jury. Jury dismissed. Justice Siddons declared a mistrial.

December 29, 1927: Judge Kennedy signed the decree returning naval petroleum reserve No. 3 to the Navy. This order terminated the receivership which had lasted since March, 1924 (cf. item March 13, 1924).

In accordance with the court decision, the Mammoth Oil Co. is accountable to the Government for the value of oil and other products taken under the lease and contract which had been declared void. (United States Daily, December 31, 1927. 3095:6.)

December 30, 1927: Statement of Secretary Wilbur that the United States would receive $3,000,000 in Liberty bonds and about $100,000 in cash from the receivers of Teapot Dome, representing the proceeds of petroleum sold during the period of receivership and from interest on bonds. (United States Daily, December 31, 1927. 3093:7.)

January 7, 1928: Receivership on Teapot Dome ended. (CONGRESSIONAL RECORD, 70th Cong., 1st sess. (current), 5934.)

January 9, 1928: The Senate adopted a resolution (S. Res. 101) authorizing the Committee on Public Lands and Surveys to investigate the transactions and activities of the Continental Trading Co. (CONGRESSIONAL RECORD, 70th Cong., 1st sess. (current), p. 1185.)

January 25, 1928: Hearings of the Committee on Public Lands and Surveys resumed. Examination of transactions of persons connected with the Continental Trading Co.. (United States Daily, January 27, 1928, 3333:5; 3344:1.)

January 25, 1928: Mr. Stephens, counsel for the Standard Oil Co., stated that Col. R. W. Stewart could not appear, because of important business in Cuba and Mexico. Senator WALSH instructed Mr. Stephens to advise Colonel Stewart to come to Washington at once. (United States Daily, January 26, 1928. 3333:5.)

February 2 and 3, 1928: R. W. Stewart was subpœnaed to appear before the Senate Committee on Public Lands and Surveys. Declined to answer questions. (United States Daily, February 24, 1928. 3618:7.)

February 3, 1928: Senate committee ordered the arrest of R. W. Stewart. Ordered the Sergeant-at-arms of the Senate to bring Stewart before the committee (S. Res. 132). President of the Senate to issue a warrant commanding the Sergeant-at-arms to take into custody R. W. Stewart and to bring him before the bar of the Senate. (CONGRESSIONAL RECORD, 70th Cong., 1st sess. (current), 2439–2440.)

February 3, 1928: Stewart was arrested by the Sergeant at Arms of the Senate. (United States Daily, February 7, 1928. 3447:1.)

February 4, 1928: Stewart's application for writ of habeas corpus on grounds that Senate Resolution 101 is not within the jurisdiction of the Senate because it attempts to inquire into the personal affairs of the petitioner. (February 6, 1928. United States Daily, 3437; 2.)

February 4, 1928 (S. Res. 133): The Committee on Public Lands and Surveys is authorized to employ counsel to represent the Senate in any proceedings relating to R. W. Stewart to secure his release from the custody of the Sergeant at Arms in any court. (CONGRESSIONAL RECORD, 70th Cong., 1st sess. (current), p. 2468.)

February 7, 1928: Hearings in the Supreme Court of the District of Columbia. Both parties to file briefs. (United States Daily, February 8, 1928, 3459:7.)

February 13, 1928: Brief for Stewart was filed.

Contention that Senate committee has power to make inquiry only to prosecute its legislative function. (United States Daily, February 14, 1928, 3519:1.)

February 23, 1928: The Senate Committee on Public Lands and Surveys traced $763,000 in bonds to H. M. Backmer. (United States Daily, February 24, 1926, 3607:4.)

February 23, 1928: Mr. Justice Bailey, of the Supreme Court of the District of Columbia, dismissed R. W. Stewart's petition for a writ of habeas corpus. (United States Daily, February 24, 1928, 3607:5.)

February 27, 1928: President Coolidge signed the act (S. 1959) to transfer to the Secretary of the Navy jurisdiction over oil and gas leases issued by the Secretary of the Interior on lands in naval pretroleum reserves. (CONGRESSIONAL RECORD, 70th Cong., 1st sess. (current), 3582; United States Daily, 3646:1.)

March 8, 1928: Senate Committee on Public Lands and Surveys traced $20,000 in Liberty bonds purchased from the profits of the Continental Trading Co. of Canada to the campaign deficit fund of 1920. In 1923 that sum was used to reimburse a contributor to the Republican National Committee. (United States Daily, 43:4.)

March 14–17, 1928: Senators NYE and NORBECK investigated the campaign contributions during 1921, 1922, and 1923 in Chicago in an effort to trace some of the Liberty bonds received by W. H. Hays from Sinclair. They accounted for practically all of the $60,000 which Hays sent to Chicago. (United States Daily, March 19, 1928, 137:2.)

March 19, 1928: Senator ROBINSON of Indiana charged that Sinclair had contributed to the campaign funds of Governor Smith of New York in 1920 and that Governor Smith had appointed Sinclair a member of the New York racing commission. (CONGRESSIONAL RECORD, March 19, 1928 (current), 4978.)

March 20, 1928: Public Lands and Surveys. Senator NYE announces that the Senate committee will make investigation to determine whether late President Harding was recipient of any benefits from any transactions growing out of the lease of the Teapot Dome naval reserve. (United States Daily, March 21, 1928.)

March 21, 1928: Senate Committee on Public Lands and Surveys decided to send a subcommittee to El Paso, Tex., to examine Albert B. Fall on his knowledge of the Teapot Dome case.

March 21, 1928: Senator NYE sent a telegram to Mr. Fall at El Paso asking him whether he would be willing to testify before a subcommittee. Rumor to that effect had reached Washington. Mr. Fall replied that he would not be willing to testify in advance of the Fall-Sinclair conspiracy trial pending in the Supreme Court of the District of Columbia. (United States Daily, March 23, 1928. 181:4.)

March 29, 1928: A. B. Fall's testimony was taken at El Paso by M. B. Bull, a notary public. (Washington Post, March 30, 1928.)

April 4, 1928: Trial of H. F. Sinclair postponed to enable the counsel for Sinclair to study Fall's deposition. (Washington Post, April 5, 1928.)

April 9, 1928: Retrial of Sinclair on conspiracy charge opened.

April 21, 1928: Supreme Court of the District of Columbia acquitted Sinclair of conspiracy to defraud the Government in obtaining the lease on naval oil reserve No. 3. (New York Times, April 22, 1928.)

LEASES UPON NAVAL OIL RESERVES AND ACTIVITIES OF THE CONTINENTAL TRADING CO. (LTD.) OF CANADA (REPT. NO. 1326, PT. 2)

Mr. NYE. I ask that an additional report from the Committee on Public Lands and Surveys, which is in no wise at odds with the report presented by the senior Senator from Montana but is in addition, on the same subject, may be printed, and that it also may be printed in the RECORD.

The PRESIDENT pro tempore. Without objection, it is so ordered.

The matter referred to is as follows:

[S. Rept. No. 1326, pt. 2, 70th Cong., 1st sess.]

LEASES UPON NAVAL OIL RESERVES AND ACTIVITIES OF THE CONTINENTAL TRADING CO. (LTD.) OF CANADA

Mr. NYE, from the Committee on Public Lands and Surveys, submitted the following supplemental report, pursuant to S. Res. 101:

Conceived in darkness and selfishness and dedicated to the proposition that the cause of privilege and the privileged must be served!

That in a few words is the sum and substance of the real story of the looting of the naval oil reserves and the formation and operations of the Continental Trading Co. of Canada, which the Committee on Public Lands and Surveys has had under investigation by virtue of Senate Resolution 101 of the Seventieth Congress and Senate Resolutions 282 and 294 of the Sixty-seventh Congress.

In preparing this report in response to the aforementioned resolutions the desires and requirements of the Senate with relation to a report have been construed to include:

(1) The committee findings with relation to protection, or lack of protection, accorded the rights and equities of the Government of the United States in and the preservation of its natural resources as embodied in its naval oil reserves.

(2) The committee findings with relation to its inquiry into the affairs of the Continental Trading Co. of Canada; the purpose of its organization, the source of its profit, the uses to which this profit was put or the uses for which it was probably intended; its connection, if any, with the leasing of the naval oil reserves; and its influence upon the political and economic life of the Nation.

(3) In view of the developments which have been the outgrowth of the investigation, it is felt that there should be incorporated in this report a citation of such benefits as have come out of the investigation thus far.

(4) It is further felt that any final report should include a review of the contention of those men and institutions which have been thrown on the defensive as a result of the disclosures made by the investigation; that such a review should be offered for the purpose of showing how unreasonable their contention often has been, and how evasive, misleading, and false these men and institutions have in many cases been while presuming to throw light upon the matter under inquiry and while under oath to tell the truth, the whole truth, and nothing but the truth.

(5) Finally, in its report the committee is expected to at least suggest such recommendations for legislation as may be considered necessary to further safeguard the naval oil reserves or other necessary security.

THIS REPORT NOT FINAL

This report should under no circumstances be considered necessarily a final report.

The committee is still without knowledge of the uses to which about a third of the profits of the Continental Trading Co. were put. Representation is made that the one-fourth share which went to James O'Neil was finally given by O'Neil to the oil company of which he was the head official at the time he received the said profits. The bonds which were thus paid over to the oil company were not the Continental Trading Co. bonds, however. It may be that O'Neil still possesses the original bonds received as profits from the Continental Trading Co., but there has as yet developed no opportunity to ascertain this.

In addition to this quarter share of said profits, there is unaccounted for a portion of those bonds received by Harry F. Sinclair. Since the investigation has disclosed that approximately a half of his share entered channels which have been considered of a corrupt nature, it seems essential that every possible means ought to be exhausted to learn of the uses to which that portion unaccounted for was put.

Not all avenues of information with relation to the questions under investigation can be considered exhausted before the testimony of one H. S. Osler, one H. M. Blackmer, and one James E. O'Neil, has been made available. These three men were principals in the entire question under investigation, but they have all absented themselves from the continent during the time their testimony has been sought. The first has found trips abroad convenient upon occasions when it was indicated that the investigation would seek his personal testimony. The other two have been fugitives from justice since the inauguration of this inquiry in 1923.

Persistence and patience have been the first essential in winning virtually every bit of material information which has been secured by the committee. There ought not be haste and impatience now in bringing the inquiry to a quick close.

WHAT INVESTIGATION DISCLOSES

The investigation thus far discloses that the leasing of the naval oil reserves constitutes criminal conspiracy against the rights, interests, and properties of the United States Government unparalled in the history of this or any other civilized nation.

Never has the world known a case involving a degree of fraud, quite evident bribery, thievery, conspiracy, and corruption to compare with what has come to be known as the Teapot Dome-Elk-Hills-Continental Trading Co. case. The leases involved in the case are estimated to have been worth not less than $500,000,000, and were consummated, to use the language of the Supreme Court of the United States, "by conspiracy, corruption, and fraud."

The investigation has uncovered the slimiest of slimy trails beaten by privilege. The investigation has shown, let us hope, privilege at its worst. The trail is one of dishonesty, greed, violation of law, secrecy, concealment, evasion, falsehood, and cunning. It is a trail of betrayals by trusted and presumably honorable men—betrayals of a government, of certain business interests and the people who trusted and honored them; it is a trail showing a flagrant degree of the exercise of political power and influence, and the power and influence of great wealth upon individuals and political parties; it is the trail of despoilers and schemers, far more dangerous to the well-being of our Nation and our democracy than all those who have been deported from our shores in all time as undesirable citizens. And in the end the story is one of the crushing of brilliant careers when finally the light was played upon those who schemed those unhealthy schemes born in darkness.

Slow to unfold itself, and slow in being unraveled, the tale of those who engineered, aided, and abetted in the naval oil-reserve leases and the affairs of the Continental Trading Co. goes beyond the most fertile imagination. The enormity of the offenses involved in these transactions is increased by the fact that these great oil reserves, created by the acts of Presidents Taft, Roosevelt, and Wilson, were essential to the national defense and were intended to be held inviolate until they were actually needed for the use of the Navy by reason of the depletion of other oil sources or for some other great national emergency.

In addition to the startling story which the investigation itself has unfolded there are results, the direct outgrowth of facts uncovered by it, to further startle and stagger any mind which has followed the case. Among such results are the various court actions which the investigation has made inescapable, and the results of these actions.

The acquittal verdicts which followed the Fall-Doheny and the Fall-Sinclair trials have been considered most deplorable failures of justice on every side, excepting only the side of privilege. These failures have been of such nature as to prove the need for such changes in court procedure as will make advantage no more easily available to the criminal of great means than to the offender who comes out of the most lowly classes. Great means in these particular cases have won delays and purchased talent which have served to divert the mind from and cloud the real offenses and criminal acts attendant thereon. Justice has been proven, not a thing to be applied to and enjoyed by all alike, but instead a commodity to be bought and otherwise influenced by wealth, and able lawyers in the Congress and out would contribute mightily to the cause of our democracy if they would devote themselves to such legislation as would make justice reach out to one and all alike.

The delays which have been attendant upon the trial of cases growing out of the naval oil leases is not to the credit of the order that prevails now with respect to the dispensation of justice. Because of these permissible delays we become the laughing stock of the world. Then there are the ins and outs and technicalities which do not permit, when expensive legal talent is on guard and objects, the offering of all evidence bearing upon the case at trial.

The complaints offered by jurors, who voted an acquittal in one of the cases growing out of the leasing of the naval oil reserves, to the effect that one learned more about the case from the newspapers he read after being relieved from duty on the jury which voted the acquittal than he had learned during the entire course of the trial, which ran over many days, is a case in point when it is agreed on every hand that the newspapers made no false presentations in its representations. Greed will be served through means, corrupt if need be, so long as there remains the chance to play with and break down the true purpose of law. Conspiracies can be anticipated so long as conspirators are

shown to have a chance for trial before juries which can be denied knowledge of all conditions and facts attendant upon that act of conspiracy.

HISTORY OF NAVAL OIL RESERVES

There is appended or will be appended to this report a more detailed history of the naval oil reserves cases, their setting aside; their great value; the law which was intended to safeguard them; the desire of powerful groups in the oil world to win possession of them; the weight of campaign contributions to national parties by men included in these groups; and their influence in the selection of men who were to administer the affairs of government which was to exercise the duty of protecting the interests of the Government against those who sought concessions; of the manipulating, through a lax and corrupt administration of government, of the steal which gave privilege the oil reserve leases they sought; of the transfer to Secretary of the Interior Albert B. Fall by one E. L. Doheny of a hundred thousand dollars in cash contained in a little black satchel, and the transfer by Mr. Fall to Mr. Doheny of naval oil reserve No. 1; of the transfer by the same Albert B. Fall of other naval oil reserves to interests represented by Robert W. Stewart, head of the Standard Oil Co. of Indiana, and Harry F. Sinclair, high official in another oil company subsidiary to the Standard Oil Co. of Indiana, and the transfer of at least $233,000 in 3½ per cent Liberty loan bonds and cash to Fall by Sinclair; of the starting of an investigation into the leases thus gained; of the wonderful vision of the late Senator Robert M. La Follette, of Wisconsin, in instigating the investigation; of the court actions which followed; and of the tremendous drive made to halt the investigation and the means adopted by defendants with their money to stave off justice, even to the extent of engaging the greatest detective talent on the continent to influence a jury.

This history shows no branch of our Government to have been considered beyond the reach of those interests thus placed on the defensive. The administrative, the legislative, and the judicial branches all were made to feel the power which they exercised, power through political influence and the use of great wealth.

From whence did this wealth for such usage come? What was its source? Here enters the Continental Trading Co. of Canada. But, before giving thought to that, let it be recited that every penny of it came first from the pockets of the American people—taken from them through the control by a few of great natural resources often won by fraud and corruption. Thus taken from the American people, the wealth is used to corrupt the very institutions which are set up by the people to protect their interests and promote the welfare of the people. First it is poured out to influence the administrative branch of government. More of it is available to influence the legislative branch away from its duty, and still more of it is available for the engagement of most expensive legal talent and the engagement of high-priced detectives to influence activities in the judicial branch of government.

THE CONTINENTAL TRADING CO.

A contract which would, but for the Senate investigation, have reaped a profit of $8,000,000 for its originators without the necessity of a penny of capital, without risk and without effort, is the beginning of the Continental Trading Co., the affairs of which have played so integral a part in the Senate investigation of this winter. Had the existence of this organization been known in 1923, the Senate investigations might have then been ended. But it was only through the tracing several years later of the Liberty loan bonds which Sinclair delivered to Secretary of the Interior Albert B. Fall as having once been the property of the Continental Trading Co., that the probable purpose of the company became known and the corruptions and frauds traced to the doorstep of Robert W. Stewart, chairman of the board of directors of the Standard Oil Co. of Indiana, Harry F. Sinclair, chairman of the board of directors of the Sinclair Consolidated Oil Corporation, which company, together with the Standard Oil Co. of Indiana, each control 50 per cent of the Sinclair Crude Oil Purchasing Co., James E. O'Neil, president of the Prairie Oil & Gas Co., another of the Standard Oil group, and Harry M. Blackmer, chairman of the board of directors of the Mid-West Refining Co. in the Salt Creek oil fields, Wyoming, a child of the Standard Oil Co. of Indiana.

Who conceived the organization of the Continental Trading Co. of Canada is not so essential as is an understanding of the purpose of the organization. A profit to the Continental Trading Co. of more than $3,000,000 was enjoyed by Stewart, Sinclair, Blackmer, and O'Neil or their companies. This profit was first at the expense of the stockholders of their companies and the consumers of oil. Whether the purpose of the company was that of winning quietly a neat profit for the four participants, a profit that others need never know about, or whether the purpose was that of creating a fund to be used to corrupt and influence elections and public officials like Albert B. Fall, or other "slush" purposes, is a question for debate.

It is hard to conceive that these four men, Stewart, Sinclair, Blackmer, and O'Neil, would stoop to such scheming to enrich themselves at the expense of stockholders in the companies they represented, in view of the fact that all of them were men of great means.

In view of what Sinclair did with his share of Continental Trading Co. profits and the interests of all of the men and their companies concerned, it is much easier to believe that it was the purpose of the organization of the Continental Trading Co. to create a huge slush fund to be available for such purposes as have been suggested. It is true that the investigation of the committee has disclosed that only one-fourth share of these profits, that share going to Sinclair, ever entered into such channels as would call for use of a "slush" fund, but it must be borne in mind that the inauguration of these investigations in 1922 was at the time that distribution of the profits was taking place, and the participants in the profits immediately became cautious in the use of the Liberty loan bonds into the purchase of which the profits of the company were turned. In fact the testimony received by the committee discloses such caution on the part of at least one participant, namely, Robert W. Stewart. There is, under the circumstances, ample ground upon which to base the belief that the entire profit was intended for propaganda, corrupt and "slush" purposes.

The use to which the Sinclair share of the bonds was put is well set forth in the report submitted for the committee by the senior Senator from Montana [Mr. WALSH]. In addition thereto there is appended to this report a carefully prepared account of the organization and activities of the Continental Trading Co. which doubtless contains information which ought to be fully recorded. (See p. 9.)

The combined story of the facts relating to the leasing of the naval oil reserves, the Continental Trading Co., and the uses to which the profits of that company were put demonstrates a frightful influence of money upon our political and economic life as a Nation. It also demonstrates that there is realization on the part of despoilers of the influence which their means can, under the prevailing order, exercise.

In addition to the direct evidence bearing out that conclusion, the committee has heard much evidence of the nonpartisanship of many of those who give support to political parties. Witness after witness has testified before the committee to the effect that he has not confined his contributions to any one political party. The only conclusion to be drawn is that the contributions are not made because of enthusiasm for any one party, but for the sake of such returns as might be won through the winning party. Doheny, once prominently mentioned as a candidate for Vice President on the Democratic ticket, has been liberal with his contributions to both parties. Sinclair has by no means confined his contributions to one party. Liberal contributions seem, for the most part, to be in the nature of investments, the investors not caring much under the circumstances which ticket wins so long as they have made their investment with both. This is somewhat in keeping with the testimony of one witness, who declared his knowledge of one campaign which found the assistant treasurers of both major parties with offices together. This same witness, with still another, testified that in 1923 there was an agreement between the treasurers of the major parties to refrain from filing any report of campaign contributions received by them. Let it be noted, however, that one treasurer referred to, the second having since died, denied there had been any such agreement or understanding.

Laws now in force do not seem to regulate contributions as fully as is desired. One witness before the committee admitted that his corporation had made a liberal contribution to a campaign fund in direct violation of the corrupt practices act which was at the time in existence. The statute of limitations has since run.

All in all, we are confronted with the picture of a most unhealthy influence upon our life as a Nation and upon our democracy through campaign contributions. The problem is one meriting study, with a view to better regulate by legislation the source and amount of money contributed for political purposes. The great masses of people who are without great means can never hope to compete politically with influences which can pour unreasonable sums into partisan coffers.

INVESTIGATION ACCOMPLISHMENTS

In any review of benefits which have grown out of the investigations by the Committee on Public Lands and Surveys thus far, there must not be overlooked the prospect at this time for a general housecleaning in the oil industry. Powerful influences are at work to place the industry in honest hands and upon an honorable business basis. It must be admitted that the public interest will profit through such a reformation of the industry.

Also, the investigation is bound to bring some measure of political reform. It seems quite evident that in this campaign year, for example, there is going to be greater caution exercised in the use of money in the campaigns and in the source of funds collected for campaign purposes. Less money for campaign purposes is greatly to be desired.

The investigation must certainly have awakened the people of the Nation to the theft of, and the threats against, the public rights and equities in our natural resources. Such an awakening can not help but cause many people to give greater thought to their duties as electors and to the associations and connections of men who seek their favor at the polls. One very evident truth demonstrated by the investigation is that the affairs of our Government must have honest administration, or government is meaningless.

A very direct benefit accomplished by the investigation is the collection of millions of dollars of taxes properly due the Government

from sources uncovered by the investigation. A very recent report from the Treasury Department discloses the collection of something like $2,000,000, as a result of the light played by the investigation upon the Continental Trading Co. and the affairs of those who participated in its profits.

But the greatest benefit growing out of the investigation has been that confidence restored to people in government by the manner in which conspirators against the Government have been made to respond. The action of the Supreme Court of the United States, in ordering the return to the Government of the naval oil reserve leases and rights which had been given away through a program of fraud and corruption, stands out as the one great bright spot in the whole sad experience. The positive action of this great body with relation to these matters must have certainly steadied a shaken faith in justice.

A most interesting chapter of this report would be a recitation of those many interesting, sometimes amusing, efforts of those who have been on the defensive through the investigation to explain away the circumstances surrounding their participation in the affairs of the Continental Trading Co. Such a chapter must and will be written and made of record when better opportunity is afforded. For now the report must be confined merely to the following editorial taken from the issue of the Washington Daily News for April 27, 1928:

COLONEL STEWART ENTERTAINS

The Senate oil investigation has consistently suffered from lack of a comedian.

This weakness was never more apparent than during the testimony of Col. Robert W. Stewart, head of the Standard Oil of Indiana, recounting how he unfortunately stumbled into possession of $759,500 in Liberty bonds which he had a strong suspicion came from the malodorous Continental Trading Co.

It seems, according to Stewart's statement to the committee, that on November 26, 1921, a Canadian named Osler told him he was going to participate in a "squeeze play" in oil. The play had been put over in a New York hotel room in Stewart's presence a few days previously. Indeed, Stewart had signed a financial guaranty necessary to put it over.

Stewart did not think he was entitled to any of the profits which Osler determined to thrust upon him because he was connected with one of the companies being squeezed, but always a gentleman he did not want to make a scene about it. So, without inquiring about the Continental Trading Co.—who was in it or why it was—he graciously agreed to accept a share of the profits.

Then, lest there be the slightest suggestion of impropriety, he penciled a secret agreement, terminable at his option, providing that his share of the profits should be held in trust for companies with which he was associated.

Having made a righteous disposition of any profits which might come to him from the Continental deal, Stewart at once joined all of the principal parties to the transaction—Sinclair, Blackmer, O'Neil, Osler—in a special car for a trip to the Mexia oil fields in Texas.

Although he had only the vaguest kind of an idea of what the Continental Trading Co. was or why it insisted on giving him one-fourth of its profits, it never occurred to him to ask anyone of the Continental group, packed into the same car with him on a trip of many days.

Later he took a long trip with Blackmer, central figure in the Continental deal, to see former Interior Secretary Fall in New Mexico, but on that trip it seems that the Continental Trading Co. never got into the conversation.

And from time to time Stewart went to the Belmont and Biltmore Hotels in New York City and picked up packages of Liberty bonds, finally aggregating $759,500, which he had a strong suspicion were from the Continental Trading Co., but it never occurred to him to make any inquiries about the concern.

Silently, and with amazing fortitude, Stewart let bonds to which he thought he was not entitled be heaped upon him, and thence into his secret trust fund.

The big business executive whose very name is terror to the small fry in the oil business was victimized by a group insistent upon showering him with gold. He said nothing; he asked no questions; he simply endured.

At least that is the story which Stewart conveyed to the Senate committee, and the story about which the committee solemnly questioned him for hours.

The occasion was obviously not one for solemn cross-examination. It was one for uproarious laughter.

RECOMMENDATIONS FOR LEGISLATION

Perhaps instead of recommending at this time specific legislation to correct any irregularities which may have been developed by the investigation, there should rather be suggested now such lines of legislation for consideration as might prove beneficial.

The ease with which the intent of the corrupt practices act has been evaded makes apparent the need for such enactments of law as will require from year to year more accurate accounting of all receipts and expenditures for political campaign purposes, and afford a thorough and accurate recording of those accounts. Three bills, offered by Senator BRONSON CUTTING in the present session of the Seventieth Congress, are representative of such legislation as merits consideration in this connection. They are S. 4422, S. 4424, and Senate Joint Resolution 149. There can be no excuse for the ability, for example, to conceal as large a contribution as $160,000, such as was disclosed in one instance by this investigation.

Tax evasions, such as the investigation has disclosed, merits the enactment of legislation that will tighten up the machinery of Government, and make more readily available knowledge of the sources of taxable income and provide a check upon taxes paid. In this connection the Treasury Department should suggest legislation which might be needed, together with what is already provided, to meet such situations as this investigation has uncovered.

This report has already suggested the need for such changes in the law governing court procedure as will avoid delays and make justice as certain and as available to one individual as to another, no matter what their rank in our social structure may be.

The investigation has indicated need for Congress, the direct representative of the people, to pass upon and approve or disapprove any leases or transfers having to do with the naval oil reserves.

This report is respectfully submitted, not with any intent of disagreeing with the committee report submitted by the senior Senator from Montana, Mr. WALSH, but for the purpose of presenting in a little different light the story of the theft of valuable national resources belonging to the people, and the corruption attendant thereupon. The story is one of gross fraud and corruption, involving an administration of government and betrayal of confidence, which no individual, no matter how partisan he may be, dares or desires to excuse. No statesman holds a brief for those who betrayed their Government or those despoilers who betrayed those who were trusting and honoring them.

HISTORY OF THE CONTINENTAL TRADING CO. (LTD.) OF CANADA

(NOTE.—Page numbers refer to printed hearings of committee.)

The existence of the mysterious Continental Trading Co. (Ltd.), of Canada, was first brought to light in the fall of 1924, through evidence introduced in the trial of Mammoth Oil Co., Sinclair Crude Oil Purchasing Co., and Sinclair Pipe Line Co. v. United States, tracing first issue 3½ per cent Liberty loan bonds used by Harry F. Sinclair in his alleged purchase of a one-third interest in the Fall ranch properties in New Mexico. The bonds, which Sinclair gave to M. T. Everhart, son-in-law of the then Secretary of the Interior, Albert B. Fall, were traced to the New York branch of the Dominion Bank of Canada, the bank's records showing that the bonds in question had been purchased on behalf of the Continental Trading Co. by order of one H. S. Osler.

In the early summer of 1921 Col. A. E. Humphreys brought in what was known as the Mexia oil field in Texas. Humphreys and his friend, H. M. Blackmer, at that time chairman of the board of directors of the Mid West Refining Co., in the Salt Creek oil field, Wyoming, a subsidiary of the Standard Oil Co. of Indiana, met Robert W. Stewart, chairman of the board of directors of the Standard Oil Co. of Indiana, at Cheyenne, Wyo., relative to the purchase of the Mexia properties. Humphreys wanted to exchange Mexia stock for Standard of Indiana stock, as did also Blackmer, but Stewart would not consider the proposition except on a cash basis, stating that he would like to buy the oil and would give as good a price for it as anybody else. (Stewart, pp. 166, 167.) While Humphreys continued to make overtures for the exchange of stock during the summer (Stewart, p. 167; Dawes, p. 230), Stewart, through James E. O'Neil, then president of the Prairie Oil & Gas Co., was making efforts to obtain the oil on a cash purchase (Stewart, p. 170). Blackmer, in correspondence with Stewart (Stewart, pp. 168–177; Clark, pp. 103–108), was advising and making efforts to bring Humphreys and Stewart together in a deal for the oil.

In the latter part of the summer Sinclair called on Humphreys at the Waldorf-Astoria Hotel in New York and endeavored to purchase an interest in the Humphreys properties, but Humphreys informed him that he was at that time negotiating for the sale of a portion of his properties to the Pure Oil Co., of which Beaman Dawes was president, and would not be interested in selling an additional portion of his companies. (Sinclair, p. 1058.)

Stewart made a trip to the Mexia field in September (Stewart, p. 172; Seubert, p. 154), being joined en route by O'Neil, Blackmer, and C. S. Clay, Humphreys's attorney from Denver, Colo. (Stewart, p. 172; Humphreys, jr., p. 202), but no proposition was arrived at in respect to the purchase of the oil (Humphreys, jr., p. 202).

Because of the shortage of crude oil at this time and the fact that the Mexia field was considered to have vast possibilities in the production of oil and was therefore exceedingly desirable, many companies were trying to obtain the Humphreys oil, among them being the Standard Oil Co. of New Jersey, Magnolia, the Prairie Oil & Gas Co., and the Sinclair Consolidated Oil Corporation. (Stewart, p. 167.)

The Pure Oil Co. purchased from Humphreys about a 25 per cent interest in the stock, representing about $7,500,000, being approximately a one-quarter interest in both the Humphreys Mexia Co. and the Humphreys Texas Co., and advanced the money necessary to continue and operate the field. In early July or August the Pure Oil Co. purchased 1,000,000 barrels of oil from Humphreys at a dollar a barrel. In October Humphreys agreed that they (Humphreys and the Pure Oil Co.) should handle 50 per cent of the production of the Mexia field and sell the remaining 50 per cent. Dawes, pp, 226, 227.)

In the latter part of October A. E. Humphreys, jr., president of the Humphreys Mexia Co. and the Humphreys Texas Co., came east in company with his wife and several other people, amongst whom was Blackmer. During a four or five day stop at French Lick, Ind., Blackmer inquired of Humphreys whether his father would be interested in the sale of a large amount of oil (Humphreys, jr., p. 202), which opened up negotiations for the purchase of the Mexia oil. This culminated in a final meeting of Humphreys, sr., and Blackmer in New York City at 60 Broadway, the office of Humphreys's chief geologist, Fohs, on November 14, 1921 (Humphreys, sr., p. 8), where Blackmer made a proposition to buy 30,000,000 barrels of oil at $1.50 a barrel, which was accepted by Humphreys (Humphreys, jr., p. 203). The Prairie Oil & Gas Co. and the Sinclair Crude Oil Purchasing Co., the latter company being controlled one-half by the Sinclair Consolidated Oil Corporation and one-half by the Standard Oil Co. of Indiana, represented by James E. O'Neil and Harry F. Sinclair, respectively (Sinclair, pp. 1057, 1061), were apparently the companies for which Blackmer was negotiating for the oil (Dawes, pp. 227, 228; Thomas, pp. 144–146; Humphreys, sr., p. 8).

Former Senator Charles S. Thomas, of Colorado, was called to New York by Humphreys to act as his attorney in the negotiations. He arrived there on the morning of November 15 and breakfasted at the Waldorf-Astoria Hotel with Humphreys and one or two other gentlemen connected with the Humphreys companies and the Pure Oil Co., after which Humphreys told Thomas of his agreement to sell one-half the output of the Mexia field to Blackmer—also mentioning Sinclair and O'Neil—together with any portion of the other half which was not taken by the Pure Oil Co. to the extent of 33,000,000 barrels of oil, and also a second agreement with the "same parties" for the purchase of the 50 per cent production of the entire field following the fulfillment of the contract for the 33,000,000 barrels. (Thomas, pp. 144, 145.)

At a luncheon served at 1 o'clock in a private room at 60 Broadway (Thomas, p. 145), or at the Bankers' Club (Sinclair, p. 1058), the matter was discussed in detail, there being present Blackmer, Sinclair, O'Neil, Humphreys, and Thomas. In the course of the discussion about the table, Humphreys requested that the contract should be made for 33,333,333 barrels of oil, which, if the production reached the maximum amount, would make the consideration $50,000,000, and, as he said, "I have some pride in wanting to be a party to a contract of these dimensions." About half past 2 o'clock, when those present were about to separate, Thomas asked who their attorneys were so that he might put in the afternoon with them in going over the details and expression to be incorporated in the contract, to which they replied that while the contract was of tremendous size the details of it were comparatively simple and that they did not think it necessary to see any other attorney. According to Senator Thomas, they said, "We think that your construction of the contract or drafting of it will be all right, and if we need any counsel, here is Mr. Blackmer, an attorney of experience, and you and he, of course, can thresh out any differences." Thomas went back to the Waldorf-Astoria Hotel about 3 o'clock, where he made a rough memorandum of the substance of the proposed contracts. (Thomas, pp. 145, 146.)

The next morning, November 16, at 10 o'clock, Blackmer, Sinclair, O'Neil, Humphreys, Thomas, Stewart (who was representing the Standard Oil Co. of Indiana, p. 178), and Dawes met in Blackmer's apartment at the Vanderbilt Hotel. The contract was again discussed, especially in regard to that part of the contract which provided for the purchase of oil that was not needed by Humphreys and the Pure Oil Co. in excess of the 50 per cent allowed thereunder, and following a rather heated discussion the maximum to be allotted the Pure Oil Co. was placed at 40,000 barrels per day. About 3 o'clock in the afternoon Thomas announced that as far as he was concerned he had practically all the information necessary and would, therefore, go into another room and draw up the contracts. Then at this juncture Blackmer (Thomas, p. 146; Sinclair, pp. 1060, 1064) said, "The party of the second part in this contract, Senator, is the Continental Trading Co. of Canada." Humphreys looked at Thomas and asked, "How is that, Governor?" Thomas replied that this introduced an entirely new feature into the transaction (Dawes, p. 229; Humphreys, jr., p. 203; Thomas, p. 146), and it would be necessary to learn something about the status, character, and responsibility of the corporation, inasmuch as Humphreys had informed Thomas when employing him that the contract was to be made with the Sinclair Crude Oil Purchasing Co. and the Prairie Oil & Gas Co. Sinclair then stated, "Why, we will guarantee that contract. We receive the oil and we pay for it," to which Humphreys replied that was satisfied. (Thomas, pp. 146, 147.) The guaranty of the contract was discussed and agreed upon by Sinclair and Stewart. (Sinclair, p. 1070; Stewart, p. 179.)

Thomas proceeded to draw up the two contracts (one for the sale of the 33,333,333 barrels of oil to the Continental Trading Co. and the other covering the purchase by the Sinclair Crude Oil Purchasing Co. and the Prairie Oil & Gas Co. of the entire 50 per cent output of the Mexia field at posted prices following the fulfillment of the contract of the Continental Trading Co.), the contract with the Continental Trading Co. containing the guaranty clause. In reply to an inquiry of Thomas relative to who was going to execute the contract for the Continental Trading Co., Blackmer stated that H. S. Osler, the president of the company, would be there the following morning. Before separating Thomas submitted his first draft and there were several minor corrections, chiefly in expression, whereupon he returned to the other room and had both the contracts corrected by a stenographer accordingly. A third contract by the Humphreys Co. for the Pure Oil Co., embodying the same terms as to price, was agreed upon, but was not actually drawn up for a month. (Thomas, p. 147.)

The next morning November 17, 1921, the same group met in Blackmer's apartment in the Vanderbilt Hotel, where they were presented to Osler, a man of about 50 years old, who was a barrister of Toronto, Canada, and the contracts and the guaranty were thereupon executed, the guaranty being signed by the Pacific Oil & Gas Co., by J. E. O'Neil, president, and the Sinclair Crude Oil Purchasing Co., by H. F. Sinclair and R. W. Stewart, "for the" directors. (Thomas, p. 147; Stewart, p. 184; Carlson, pp. 114, 115.)

Under the contract between the Continental Trading Co. and the Sinclair Crude Oil Purchasing Co. and the Prairie Oil & Gas Co., the payment for the oil was to be made on the 10th day of each succeeding month, whereas payments under the contract entered into by the Humphreys Mexia and Texas Cos. with the Continental Trading Co. were to be made on the 15th day of each month, thereby giving the Continental Trading Co. five days' grace before making payments on its purchase from the Humphreys Cos. (p. 142).

About the middle of November, 1921, Osler met a certain "gentleman" in New York, with no previous knowledge as to the nature of the business, which proved to be the purchase and sale of a very large quantity of crude oil. The "client" informed Osler at the outset that the transaction was of a confidential nature and that he did not wish his name disclosed, later revealing that he had associates who were interested with him in the matter and whose names he also desired not disclosed. In the course of the conferences the client informed Osler that arrangements had been made for the purpose of 30,000,000 barrels of oil from a Colonel Humphreys, and that arrangements had also been made for the resale of the oil at an advance of 25 cents per barrel to the Prairie Oil & Gas Co. and the Sinclair Crude Oil Purchasing Co., and that Osler should act as counsel in preparing and settling the contracts.

The client further stated that Humphreys had imposed very onerous conditions as to the delivery, storage, and transportation of the oil, and that as litigation with Humphreys was obviously possible, it was also desired that Osler should take charge of the receipt and payment of all moneys as legal business so that Osler might be on the alert to avoid litigation. Osler reached the conclusion that if litigation did ensue as apprehended, his position would be difficult and embarrassing unless the business were incorporated. He advised his client of his position, also advising him that the incorporation of the company would not prevent carrying out the instructions and conducting the business as confidential legal business. (Osler, pp. 33, 34.)

The application for incorporation of the "Continental Trading Co. (Ltd.)" was filed by Osler's law firm, Osler, Hoskin & Harcourt, at Ottawa, Canada, on November 16, 1921, the incorporators and officials thereof being two members and three employees of Osler's firm, the company being in effect merely a corporate clerk in his office. The application and papers attached thereto were witnessed by a Harold E. Boston, also an employee of the firm. The application was approved by W. O. J. O'Meara, for undersecretary of state, on November 17, 1921. The amount of the capital with which the company was to carry on business to be not less than $500,000, and the capital stock of the company to be divided into 100,000 shares, five shares of which were subscribed to by the two members and three employees heretofore referred to (pp. 14–20). The Continental Trading Co., under an agreement dated November 17, 1921, acquired from G. Evans Atwood, of Toronto, Canada, for $500,000 certain contractorial rights, and Atwood agreed to accept 99,994 shares of the capital stock in payment and satisfaction therefor (p. 22).

The business of the company was conducted consistently with the position that the company was in effect merely a corporate clerk in the office, and Osler remained in entire charge of the matter as effectively as if no company had been formed (Osler, p. 34), requiring, according to Osler, about a half hour a month of his time during the period in which the business was going on. (Osler, p. 42.)

On the very same day that the Continental Trading Co. executed the contract with the Humphreys Mexia and Texas Cos. for the purchase of the 33,333,333 barrels of oil at $1.50 a barrel (November

17, 1921), and unknown to Humphreys, sr., Dawes, Thomas, or Humphreys, jr. (pp. 9, 201, 200, and 201), a contract drawn up by Blackmer was entered into between the Continental Trading Co. and the Sinclair Crude Oil Purchasing Co. and Prairie Oil & Gas Co. for the resale of the 33,333,333 barrels of oil just purchased at $1.50 a barrel to the latter companies for $1.75 a barrel, thereby allowing the Continental Trading Co. to realize a profit of 25 cents a barrel on the transaction. (Stewart, pp. 179, 205.)

The negotiations leading up to the resale of this oil at $1.75 a barrel by the Continental Trading Co. are very indefinite, except for the fact that those engaged in the negotiations were Blackmer, Sinclair, O'Neil, and Stewart. (Sinclair, p. 1063.) According to Stewart, Blackmer told him that if they (the Sinclair Crude Oil Purchasing Co., one-half of which is controlled by the Standard Oil Co. of Indiana and one-half by the Sinclair Consolidated Oil Corporation) wanted the oil they would have to pay $1.75 a barrel for it. (Stewart, p. 178.) Sinclair states that the price of $1.75 a barrel was mentioned on November 17, and that the only price mentioned in the presence of Humphreys, Dawes, and Thomas was $1.50. (Sinclair, p. 1063.) In regard to the transaction, Sinclair told Blackmer—who he "assumed" was "the Continental Trading Co." (Sinclair, p. 1092)—in private that he understood some one was making a 25-cents a barrel commission and that if he, on behalf of the company he was representing in the negotiations—the Sinclair Crude Oil Purchasing Co., signed the contract and made the guaranty, he would expect for his company a fair share of that 25 cents, to which Blackmer replied that he would see that this was carried out. (Sinclair, p. 1072.)

Following the execution of the contract between the Continental Trading Co. and the Sinclair Crude Oil Purchasing Co. and Prairie Oil & Gas Co., Stewart left for Chicago, and shortly after his arrival presented the contracts at a meeting of the board of directors of the Standard Oil Co. of Indiana for their approval. There was a discussion among the directors as to the difference in price of the two contracts executed on the same day, November 17, and Stewart replied that the $1.75 was the best price they could get. The directors approved the contracts because of their "implicit confidence" in their chairman, Stewart, and thereupon advised their nominees who were directors in the Sinclair Crude Oil Purchasing Co. of their approval of the making of such a contract between the latter company and the Continental Trading Co. (Seubert, pp. 138, 143.)

The board of directors of the Sinclair Crude Oil Purchasing Co., whose offices are at Tulsa, Okla., met pursuant to the call of its president, Gorge H. Taber, jr. (who did so at the request of either Stewart or Sinclair (Taber, p. 288)), on November 26, in the Standard Oil Building, 910 South Michigan Avenue, Chicago, Ill. (Carlson, p. 121.) Stewart and Sinclair were present with the contracts. Following a general meeting the directors held a board meeting, at which the contracts (the one providing for the purchase of the 33,333,333 barrels of oil from the Continental Trading Co. at $1.75 per barrel, and the other the purchase of 50 per cent of the production of the Mexia field from the Humphreys Mexia and Texas Cos. following the fulfillment of the Continental Trading Co. contract) and the guaranty of the contract (but not the contract itself (Taber, pp. 289, 290; Phillips, pp. 275, 276)) between the Continental Trading Co. and the Humphreys Mexia and Texas Cos. for the 33,333,333 barrels of oil at $1.50 a barrel, were presented by either Sinclair or Stewart.

According to H. L. Phillips, at that time vice president and now president of the Sinclair Crude Oil Purchasing Co., the company had every confidence in Stewart and Sinclair and that what they did was for the best interests of the company. (Phillips, p. 276.) Phillips had no recollection of any discussion as to why Stewart and Sinclair signed the guaranty of the contract between the Continental Trading Co. and the Humphreys Mexia and Texas Cos., inasmuch as Stewart and Sinclair were the chairmen of the board of directors of the Standard Oil Co. of Indiana and the Sinclair Consolidated Oil Corporation, respectively, both of which companies each control 50 per cent of the stock of the Sinclair Crude Oil Purchasing Co. (Phillips, p. 274.) The board of directors authorized the president and secretary to execute the contract on behalf of the company. (Phillips, p. 271.)

Arrangements had been made for the parties in the transactions to visit the Mexia field, to arrange for putting in the Sinclair pipe lines, headquarters for the company, and various and sundry other details, and also to attend a barbecue to be given by Colonel Humphreys in celebration of the fact that he had made these contracts for his oil. The party was to leave Chicago on Saturday evening, November 26, following the meeting of the board of directors of the Sinclair Crude Oil Purchasing Co. (Stewart, p. 973.)

Osler came to Chicago and saw Stewart at his office the morning of the 26th, on his way to Mexia. He told Stewart that he (Stewart) would receive a "participation" in the profits of the contracts, to which Stewart answered that "I don't care to have any of these profits; I don't think I am entitled to them." Osler replied, "Well, you can do what you want to about this matter of expending this money." (Stewart, p. 974.) Stewart, however, made no inquiry as to "why" he should receive these profits. (Stewart, p. 996.) That afternoon Stewart called in the tax commissioner of the Standard Oil Co. of Indiana, Roy J. Barnett, who agreed at the request of Stewart to act as trustee of the profits Stewart was to receive, and Stewart thereupon sat down and wrote in pencil, because he did not want the stenographer or anybody else to know anything about it (Stewart, p. 989), a trust agreement, which, according to Stewart, generally provided as follows: That Stewart assigned, transferred, and set over to Roy J. Barnett, as trustee for the Sinclair Crude Oil Purchasing Co. and the Standard Oil Co. of Indiana, as their interests might appear, all his right, title, and interest in and to any profits that might be handed to him arising out of these contracts; that any profits received should be invested in first issue 3½ per cent Liberty loan bonds, and any interest thereon should be invested in additional Liberty loan bonds; that in case of Stewart's death Barnett should turn over the bonds, property, or money, or anything that might have come to Stewart, in equal divisions to the Standard Oil Co. of Indiana and the Sinclair Crude Oil Purchasing Co.; and that in case Stewart desired at any time to terminate the trust, Barnett was then to turn over all properties in his hands to the Standard Oil Co. of Indiana and the Sinclair Crude Oil Purchasing Co., in such proportions as Stewart should direct or designate. (Stewart, p. 974; trust agreement, p. 1016.) The only time, however, that Barnett ever had the trust agreement in his possession was when he signed it. (Barnett, p. 1009.)

The trust agreement was drawn late in the afternoon of November 26, and at 6 o'clock that evening Stewart, who took the agreement with him, and the other members of the party left for Mexia. Upon his return to Chicago it was "determined" that Stewart should put the agreement in an envelope with the inscription on the outside that "In case of my death this envelope is to be opened by my executors or administrators in the presence of the then treasurers of the Standard Oil Co. of Indiana and the Sinclair Crude Oil Purchasing Co.," which envelope was sealed and placed by Stewart in his safe deposit box. (Stewart, pp. 973, 974.) The only persons knowing anything about the trusteeship were Stewart and Barnett (Stewart, p. 987) up to 1924, when Stewart told L. L. Stephens, an attorney for the Standard Oil Co. of Indiana, all about it. (Stewart, p. 988.)

With the net profits of the monthly transactions realized by the Continental Trading Co., as a result of its 25 cents a barrel profit on the oil sold to the Sinclair Crude Oil Purchasing Co. and Prairie Oil & Gas Co., were bought first issue 3½ per cent Liberty loan bonds approximating $3,080,000, which were delivered personally to H. S. Osler (usually in four separate packages of equal amounts—Howard, pp. 337, 338) from time to time at the New York branch of the Dominion Bank of Canada. Osler delivered these bonds either directly or indirectly to Blackmer, Sinclair, Stewart, and O'Neil, he himself receiving about a 2 per cent commission.

Sinclair received some of his bonds from Blackmer and some were sent to him by messenger, totaling in all $757,000. (Sinclair, pp. 1073, 1074.) However, Blackmer requested Sinclair not to clip the coupons from the bonds. (Sinclair, pp. 1079, 1080.) Two hundred and thirty-three thousand dollars of these bonds were used by Sinclair in his alleged purchase of the Fall ranch properties in New Mexico, following his obtaining of the fraudulent Teapot Dome lease on April 7, 1922, while $260,000 went to Will H. Hays in 1923 for the use and benefit of the Republican National Committee in its clearing up of the 1920 campaign deficit, $100,000 of which was subsequently returned to Sinclair. (Everhart, pp. 54, 55; Hays, pp. 460, 461.)

Stewart was handed a package by Osler at the Belmont Hotel in New York in the early part of 1922, and, without opening the package, took it to Chicago, called in Barnett, opened the package and found it contained 3½ per cent Liberty loan bonds. Stewart on four or five subsequent occasions received packages of this kind from Osler at New York, and took them out to Chicago before opening them with Barnett, the last delivery by Osler to Stewart being made in late May or June, 1923. The coupons were clipped from the bonds on June 15, 1922, December 15, 1922, June 15, 1923, and December 15, 1923. (Stewart, p. 988.) Stewart gave Barnett in exchange for the coupons personal Liberty loan bonds (Stewart, p. 975) of equal value, which, together with the bonds from Osler, were kept in Stewart's safe. The bond coupons were not clipped after December 15, 1923, because Stewart desired to avoid publicity. (Stewart, p. 988.) Stewart received from Osler in all $759,500 in 3½ per cent Liberty loan bonds. (Stewart, p. 975.)

On May 26, 1923, following negotiations between Osler and H. L. Phillips, president of the Sinclair Crude Oil Purchasing Co., after the deal had apparently been arranged by O'Neil, the Continental Trading Co. assigned its contract with the Humphreys Mexia and Texas companies for the purchase of the 33,333,333 barrels of Humphreys oil at $1.50 a barrel over to the Sinclair Crude Oil Purchasing Co. and Prairie Oil & Gas Co. for $400,000, each of the latter companies to pay $200,000 thereof. (E. W. Sinclair, pp. 304, 305; Phillips, pp. 276, 277.) Following this assignment of the contract, and as the whole business of the company had come to an end, all proceedings were taken by Osler to bring about, as far as legally possible, the dissolution of the Continental Trading Co., the charter of the corporation being returned to the State Department at Ottawa, Canada. (Osler, p. 34.)

In May, 1925, W. S. Fitzpatrick, chairman of the board of directors of the Prairie Oil & Gas Co., received in Denver a telegram from Montreal, Canada, signed by O'Neil, who had "resigned" as president of the Prairie Oil & Gas Co. on September 13, 1923, leaving for Europe early in 1924 (Fitzpatrick, pp. 259, 260), requesting Fitzpatrick and Judge Flannelly, general counsel of the Prairie Oil & Gas Co., who was then in Chicago, to meet him at Montreal. Clark H. Kounz, vice president of the Prairie Oil & Gas Co. and former secretary to O'Neil, was also there.

O'Neil told them that he had a share in the profits of the Continental Trading Co., which he had kept intact, and thought rightly belonged to the Prairie Oil & Gas Co. He had made no income-tax return on it because he did not believe it belonged to him. His doctors had advised him that he had only 18 months or 2 years to live, and he now wanted to right the matter. Inadvertently O'Neil had cashed a part of the coupons from the bonds, to cover which he had put back enough additional bonds to account for the interest derived by virtue thereof. This brought what he considered his share and the bonds replacing coupons cashed thereon up to an even $800,000. (Fitzpatrick, p. 249.) O'Neil requested Fitzpatrick not to cash the coupons because he did not wish to embarrass anybody. (Fitzpatrick, p. 255; Kountz, p. 302.)

Pursuant to O'Neil's instructions, Fitzpatrick and Kountz went immediately to New York, where, on May 20, 1925, Kountz received $800,000 in 3½ per cent Liberty loan bonds from O'Neil's son, Wayne O'Neil, and delivered them to Fitzpatrick at the hotel. (Fitzpatrick, p. 256.) Fitzpatrick took the bonds back to Independence, Kans., the office of the Prairie Oil & Gas Co., and called the members of the board of directors together and explained the situation to them. He advised them that he had accepted the bonds in settlement of any claim against O'Neil, and that if any income tax had to be paid as a result of O'Neil's possession thereof the company would do so. Fitzpatrick then turned the bonds over to the treasurer of the company, E. T. Patterson, and received a receipt therefor. The bonds were retained for awhile and then transferred to the Prairie Pipe Line Co. in payment or part payment of a note. (Fitzpatrick, pp. 249, 256, and 253; Kountz, pp. 301–303.)

In July, 1926, Blackmer advised his attorney, Karl C. Schuyler, of Denver, Colo., to meet him at Montreal, Canada, upon his arrival from Europe. Schuyler went to Montreal and had conferences with Blackmer at the Mount Royal Hotel, in which Blackmer sought Schuyler's professional advice concerning the rights to $750,000 in 3½ per cent Liberty loan bonds, which he had received for services in the purchase and resale by the Continental Trading Co. of the Humphreys oil. He told Schuyler that his rights to the bonds might be questioned by the Midwest Refining Co., of which company he had been chairman of the board of directors at the time of the Humphreys transaction, and by the Standard Oil Co. of Indiana, of which company the Midwest Refining Co. is a subsidiary, and that action might be brought against him for recovery of the bonds. Blackmer had kept the bonds intact awaiting developments, because to convert them to his own use might jeopardize the good faith of his position relative to the liability for income-tax thereon. Some coupons from the bonds had, however, been cashed and then reinvested in other Liberty loan bonds, which in turn had been placed and kept with those he had received from the Continental Trading Co. He retained one bond for himself as reimbursement for his personal expenses in connection with the matter. The bonds at this time were in a safe-deposit box in the Equitable Trust Co., New York, held in the joint names of George E. Holmes, George Gordon Battle, and Karl C. Schuyler, where they had been placed in November, 1925. (Schuyler, pp. 359, 360.)

Schuyler suggested to Blackmer that in order to place his good faith beyond question a trust be created to handle the bonds. Blackmer thereupon requested Schuyler to take possession of them, Schuyler consenting to do so subject to such terms and conditions as he might think advisable. On the evening of July 22, Schuyler left Montreal for New York, and upon his arrival there the following morning wrote Blackmer a letter, under which he (Schuyler) took possession of the bonds and informed Blackmer that he had placed the bonds (amounting in all to $763,000—$750,000 received by Blackmer from the Continental Trading Co. and the $13,000 in reinvested bonds) in box 3004 of the Equitable Trust Co., New York, and stating that he had received these bonds as Blackmer's attorney to be held pending determination of the right and title thereto, as follows:

NEW YORK CITY, N. Y., *July 23, 1926.*

DEAR MR. BLACKMER: This is to acknowledge that this day I received and placed in box 3004 Equitable Trust, Forty-fifth and Madison, New York, the bonds which came into your possession in connection with Continental Trading Co. I have checked and inclose to you list of numbers of them. This is to acknowledge and declare that I have no personal interest in these bonds of any kind or nature whatsoever and that I receive these bonds as your attorney, to be held by me pending the determination of the right and title thereto and for disposition thereof, as follows:

1. If any adverse claim be sustained by arbitration thereof or as a result of litigation, I shall deliver these bonds to the successful claimant; it is within my discretion to accept as final, without appeal, the judgment of any court of competent jurisdiction or to agree to an arbitration of a binding, final nature and accept the decision thereof as final.

2. If your ownership of these bonds is established by arbitration, result of litigation, or the running of the statute of limitations applicable (and of this I am to determine), then disposition of these bonds by me shall be as follows, as per your direction, which I hereby specify: (a) Payment of Federal income taxes thereon; (b) payment of any expense incurred by me together with a reasonable attorney's fee for conducting arbitration or litigation as the case may be; (c) delivery of the balance to you or your personal representatives.

I do not assume any responsibility, nor am I instructed, to manage, handle, or invest these bonds, coupons thereon or proceeds, but my sole responsibility is to hold these securities intact for disposition as above specified; and in no event shall I be held responsible except for fraud, willful misconduct, or gross negligence.

Sincerely yours,

KARL C. SCHUYLER.

On the advice of Frederick D. Anderson, counsel for the Midwest Refining Co., and the company's special counsel, Tyson S. Dines, the board of directors of the Midwest Refining Co., at Denver, Colo., on April 25, 1928, adopted unanimously a resolution declaring that the company had no claim on the $763,000 in Liberty loan bonds obtained by Blackmer as his share of the profits of the Continental Trading Co.

The bonds for which Stewart created a trustee in the person of the tax commissioner of the Standard Oil Co. of Indiana, Roy J. Barnett, on November 26, 1921, remained in a safe in the Standard Oil Building in Chicago until April 21, 1928, when Stewart called together such members of the board of directors of the Standard Oil Co. of Indiana as were in Chicago on the latter date. He read to them the trust agreement, recited the facts in the matter, and showed them the bonds in the safe. The directors, of whom seven out of the nine were present, decided that the $750,500 in 3½ per cent Liberty loan bonds, together with the $38,000 in additional bonds which Stewart exchanged for the coupons, should be turned over to the Sinclair Crude Oil Purchasing Co. Whereupon the treasurer and general counsel of the Sinclair Crude Oil Purchasing Co. were called in, and the bonds in question were turned over to them by Barnett, being placed in the safety deposit vault in the First National Bank at Chicago, Ill. (Stewart, p. 975.)

The following is an extract from the minutes of the Sinclair Crude Oil Purchasing Co. of April 30, 1928, showing delivery to, and acceptance by, the Sinclair Crude Oil Purchasing Co. of Sinclair's share in the profits of the Continental Trading Co.:

I, K. Porter, assistant secretary of Sinclair Crude Oil Purchasing Co., do hereby certify that the following is a true and correct copy of—

A certain statement made to the board of directors by Edward H. Chandler, general counsel, at a special meeting of the board of directors held at Tulsa, Okla., April 30, 1928.

The letter addressed by Mr. Sinclair to Mr. K. Porter, assistant treasurer, dated April 27, 1928.

The resolution adopted by the board of directors in pursuance of the offer of Mr. Sinclair, as appears in the minutes of the special meeting of the board of directors held at Tulsa, Okla., April 30, 1928.

Thereupon Mr. Edw. H. Chandler, general counsel of the corporation, announced to the board that on April 27, 1928, he attended a conference in New York City at which time Mr. H. F. Sinclair delivered to K. Porter, an assistant treasurer of this corporation, an offer in writing or letter, which reads as follows:

APRIL 27, 1928.

SINCLAIR CRUDE OIL PURCHASING CO.,
Attention Mr. K. Porter, Assistant Treasurer,
45 Nassau Street, New York City.

DEAR SIR: During the years 1922 and 1923 I received $757,000 principal amount of United States first Liberty loan 3½ per cent bonds, representing a portion of the profits which had accrued under certain contracts involving the Humphreys Mexia Co., the Humphreys Texas Co., Western Oil Fields Corporation, A. E. Humphreys, trustee, Continental Trading Co. (Ltd.), Prairie Oil & Gas Co., and Sinclair Crude Oil Purchasing Co.

By reason of the fact that Sinclair Crude Oil Purchasing Co. was involved in the transaction which gave rise to such profits, I held bonds equivalent in amount to those I received and of the same issue as those so received for the account of Sinclair Consolidated Oil Corporation or Sinclair Crude Oil Purchasing Co. I placed such bonds in a safe-deposit box with other bonds. I did not earmark or identify in any way the particular bonds received and in fact did not know the serial numbers of said bonds. The safe-deposit box in which I placed such bonds has at all times since the first receipt of such bonds, contained an amount of United States first Liberty loan 3½ per cent bonds equal or more than equal to the amount of such bonds so received and there was at all times in said safe-deposit box a memorandum showing the amount of such bonds held for the account of Sinclair Consolidated Oil Corporation or Sinclair Crude Oil Purchasing Co.

I handled the matter as I did to await the termination of agitation in Congress and of the civil suit against the Mammoth Oil Co. and

of the criminal proceeding against myself which grew out of such agitation.

Said suit and action having now been concluded, I hereby deliver to you $757,000 principal amount of United States first Liberty loan 3½ per cent bonds, together with accrued interest amounting to $142,808.75, and with June 15, 1928, and subsequent coupons attached, a list of which bonds is hereto attached. I deliver these bonds to you, however, subject to all charges and/or liabilities, if any, which may attach to said bonds, and particularly any liabilities of the Continental Trading Co. (Ltd.), for taxes which may be a charge upon said bonds.

It is of course understood that the charges and/or liabilities hereinabove referred to do not include and are not intended to include any charge and/or liability that may be asserted against me for personal income taxes growing out of the receipt and retention by me of said bonds and coupons, as distinct from taxes asserted or assessed against the Continental Trading Co. for income it received.

Very truly yours,

H. F. SINCLAIR.

I hereby accept said bonds subject to the approval of the board of directors of Sinclair Crude Oil Purchasing Co., hereby agreeing that in the event such approval is not given, said bonds shall be returned to you.

K. PORTER.

That pursuant thereto Mr. Sinclair delivered to K. Porter, subject to the approval of this board, United States Liberty loan first 3½ per cent bonds of a total face amount of $896,000, being $757,000 face amount on account of principal and $139,000 face amount of such bonds on account of accrued interest and in addition thereto $200.59 in currency, the total amount of accrued interest being figured at $142,808.75—139 bonds of $1,000 face amount at a market value of $101.3125 plus accrued interest from December 15, 1927, to April 27, 1928, amounting to $142,608.16, to which is added the currency of $200.59, made a total of $142,808.75 for the accrued interest as above set forth, and that said K. Porter, as assistant treasurer, received and has in a safe-deposit box in a bank or trust company in New York said bonds and currency awaiting the action of this board as to whether it will accept said bonds upon the terms and conditions set forth in said offer of H. F. Sinclair of April 27, 1928.

Thereupon, upon motion duly made and seconded, the following resolution was unanimously adopted:

"*Resolved*, That this corporation accept said bonds and currency in the aggregate amount of $896,200.59 upon the terms and conditions set forth in said offer or letter of April 27, 1928, of said H. F. Sinclair addressed to said K. Porter, assistant treasurer, above recited, and that said bonds and cash be placed among the assets of this corporation as other funds and securities of this corporation are and have been deposited."

K. PORTER, *Assistant Secretary.*

Dated May 7, 1928.

NAVAL OIL RESERVES AND LEASES

Mr. BLAINE subsequently said: Mr. President, I ask unanimous consent to have inserted in the RECORD a chronology of the oil scandal prepared by Mr. Edwin E. Witte, chief of the Wisconsin Legislative Reference Library.

Mr. WALSH of Montana. Mr. President, may I suggest to the Senator from Wisconsin that he have the chronology printed immediately following the reports which the Senator from North Dakota [Mr. NYE] and I submitted this afternoon.

Mr. BLAINE. I amend my request to ask that that may be done.

The VICE PRESIDENT. Without objection, it is so ordered.

The chronology referred to is as follows:

CHRONOLOGY OF THE OIL SCANDAL AS DISCLOSED TO THE PUBLIC UP TO APRIL 9, 1928

[Events set forth as they occurred, not in the order in which they were disclosed]

(Compiled by Edwin E. Witte, chief, Wisconsin Legislative Reference Library, assisted by Miss Ann Neal, April 9, 1928)

1. 1912–1915. Creation of naval oil reserves: The naval oil reserves involved in this scandal (the only petroleum reserves of the United States Navy) were the following: No. 1, Elk Hills, Calif., 38,969 acres; No. 2, Buena Vista Hills, Calif., 29,341 acres (this reserve involved in the present scandal only in a minor way); No. 3, Teapot Dome, Wyo., 9,481 acres.

The public lands included in these reserves were withdrawn from entry during the administrations of Presidents Roosevelt and Taft, and the two California areas were definitely reserved for the use of the United States Navy by President Taft in 1912 and the Teapot Dome by President Wilson in 1915.

2. February 25, 1920. Passage of oil leasing act: This act passed practically unanimously by both Houses of Congress on the recommendation of Secretary of the Navy Daniels, being questioned only by Senator LA FOLLETTE. This act was thought at the time to authorize only the drilling of "off-set" wells on the edges of the naval reserves, where considered necessary to prevent wells drilled on adjoining private lands from depleting the reserves. Later interpreted by Secretaries Fall and Denby to authorize leasing of the reserves in their entirety to private parties.

3. Summer, 1920. Activities of the oil men in the presidential campaign: Despite the fact that the Senate investigating committee in 1924 found that there was no satisfactory proof that Sinclair, Doheny, and other big oil men formed a conspiracy prior to the presidential election of 1920, to gain control of the naval oil reserves, there are many facts which, at least, suggest the possibility of such a conspiracy. Among these facts, perhaps, the most important are the following:

(a) The nomination of Warren G. Harding as the Republican candidate for President was decided upon in a "back-room" conference held in the Blackstone Hotel in Chicago during the Republican National Convention, in which two of the participants were Harry M. Daugherty, later Attorney General, and Jake Hamon, Republican committeeman from Oklahoma and a prominent oil man and an associate of Harry F. Sinclair.

(b) Leonard Wood, jr., in March, 1924, revealed that oil men offered his father the nomination for President at the Republican convention in 1920 if he would agree to appoint Jake Hamon, of Oklahoma, as Secretary of the Interior. Hamon, a close associate of Sinclair, was killed prior to the inauguration of President Harding by Mrs. Clara Smith Hamon, a woman with whom he was living in bigamy. At the trial of this woman for this murder, in March, 1921, William D. Nichols, a political lieutenant of Hamon, testified that he knew that Hamon prior to his death had been offered the position of Secretary of the Interior by President-elect Harding, and that on his deathbed Hamon asked him (Nichols) to "take direct to Harding" the matter of securing Federal appointments for several of his friends. (This testimony was given more than a year before the oil leases were made.)

(c) Both H. F. Sinclair and E. L. Doheny made large contributions to the party campaign funds in 1920—Doheny to both parties.

(d) William B. Thompson, a director of the Sinclair Oil Co., was selected to serve as treasurer of the Republican National Committee in the campaign of 1920.

(e) E. L. Doheny at this time placed on the pay roll of his companies three former members of Wilson's Cabinet—McAdoo, Gregory, and Lane. (The law firm with which ex-Secretary of War Garrison was connected was also employed by one of Doheny's companies.)

4. March 4, 1921. Appointment of A. B. Fall as Secretary of the Interior: As a United States Senator Fall was a determined opponent of conservation. He was also a close personal friend of E. L. Doheny and H. F. Sinclair. At that time was "land poor," not having paid the taxes on his New Mexico ranch for 10 years (shortly before he had described himself as "broke").

5. May 31, 1921. Transfer of control over the naval oil reserves from the Secretary of the Navy to the Secretary of the Interior: This transfer was made by an Executive order of President Harding. It was suggested by Secretary of the Interior Fall and was recommended by Secretary of the Navy Denby. This transfer was opposed by the Engineering Bureau of the Navy Department, which had charge of all matters relating to oil for the Navy. At Secretary Denby's request, the officer in charge of this bureau, Admiral Griffin, under date of May 27, 1921, prepared a memorandum setting forth the objections of the naval officers to this transfer. This memorandum Secretary Denby testified was submitted to President Harding, but it was never found in the White House files. The recommendations of Secretaries Fall and Denby to the President for the transfer were made orally, not in writing.

6. Summer and fall of 1921. Preparations for oil leases: Soon after the transfer of the naval oil reserves to the Interior Department initial steps were taken toward the leasing of these reserves. Admiral Griffin, who was opposed to the leasing policy, was relieved from his position in charge of the Engineering Bureau in the Navy Department, and replaced by Admiral Robison. This admiral previously commanded a vessel on which a son of E. L. Doheny was stationed. E. L. Doheny himself had spent some time on this vessel and discussed with the admiral the advisability of executing leases to private parties to take out the oil in the naval reserves, upon condition that they should turn back a part of this oil to the Government in storage tanks at Pearl Harbor, Hawaii, and other points. Admiral Robinson was subsequently credited by Senator Lenroot with being the real originator of the leasing and storage plan ultimately adopted.

On July 21, 1921, a contract was let to E. L. Doheny as the lowest bidder, for drilling "offset" wells in Naval Reserve Nos. 1 and 2. (This did not turn over to Doheny the entire reserves, but was, perhaps, a step in this direction.)

7. November 15–17, 1921. Organization of the Continental Trading Co. of Canada: A. E. Humphreys, a Texas oil man, on November 15, 1921, by a prearranged conference met H. F. Sinclair, Robert W. Stewart, chairman of the board of directors of the Standard Oil Co. of Indiana; James O'Neil, of the Prairie Oil & Gas Co., and Henry M. Blackmer, of the Midwest Refining Co., in New York City. At this conference Humphreys agreed to sell 33,333,333⅓ barrels of oil from his

wells, at $1.50 per barrel, to the Prairie Oil & Gas Co. and the Sinclair Crude Oil Purchasing Co. When on the next day the same parties met with their attorneys to draw up this contract, Humphreys was advised that the real purchaser of the oil was the Continental Trading Co. of Canada. Because Humphreys had never heard of this company he refused to go on with the deal until the four men on the other side agreed, on behalf of their companies, to guarantee the fulfillment of the contract by the Continental Trading Co.

The Continental Trading Co. of Canada, party to the above contract, was actually organized on the same day at Toronto, Canada. The incorporators were Henry Smith Osler, a Toronto attorney, and employees in his office.

On the next day—November 17, 1921—Osler, as president of the Continental Trading Co., appeared in New York and signed the contract with Humphreys, which Sinclair, Stewart, and O'Neil also signed, on behalf of their companies, as guarantors. By another contract executed on the same day, the Continental Trading Co. in turn, sold the oil it was to receive from Humphreys to the Sinclair Crude Oil Purchasing Co. and the Prairie Oil & Gas Co., jointly, at $1.75 per barrel—an advance of 25 cents, realized without ever handling any oil.

Up to the time of its dissolution on May 26, 1923, the Continental Trading Co. realized between $2,000,000 and $3,000,000 on its contracts. It then assigned its rights to the remaining 25,000,000 barrels to be furnished by Humphreys, to the Sinclair Crude Oil Purchasing Co., for $400,000.

The entire profits of the Continental Trading Co. were invested, from time to time, through the Dominion Bank of Canada, in 3½ per cent Liberty bonds, of which a total of $3,080,000 were acquired. These bonds, as purchased, after taking out 2 per cent, which was apparently Osler's commission, were divided into four equal packages and delivered to Osler.

Nothing was known about the Continental Trading Co. and its connection with the oil scandal until some of the Liberty bonds purchased and distributed by this company were traced to Secretary Fall by Government agents testifying in the trial of the civil suit brought by the Government to cancel the Teapot Dome lease in the United States District Court of Wyoming in April, 1925. Even now only a part of these bonds have been traced, but it has definitely been established that $233,000 were turned over by Sinclair to Everhart, Secretary Fall's son-in-law, for the Secretary (see 16 below), and $185,000 were given by Sinclair to Will Hays to help meet the deficit of the Republican National Committee in the 1920 campaign (see 23 below). Of the balance, $800,000 went to O'Neil and were assumed to have been turned over by him in 1925 to the Prairie Gas & Oil Co., but a further check has shown that the $800,000 which were given to this company by O'Neil were not Continental Trading Co. bonds. Seven hundred and sixty-three thousand dollars of the bonds went to Blackmer and are believed to still be in his possession.

Senator WALSH in an article in the New York Times on April 1, 1928, has characterized the Continental Trading Co. deal as "a contemptible private steal, the peculations of trusted officers of great industrial houses, pilfering from their own companies, robbing their own stockholders, the share of the boodle coming to one of the freebooters serving in part as the price of the perfidy of a member of the President's Cabinet."

8. November 30, 1921. "Loan" of $100,000 by Doheny to Fall: This "loan" was arranged by long-distance telephone from Fall in Washington to Doheny in New York. The money was taken in cash, all in $100 bills, by Doheny's son from New York to Washington, and then carried in a satchel by Secretary Fall to a bank at El Paso, Tex. Doheny's son took back to his father a note for this $100,000 loan; but subsequently Doheny cut off the signature and gave this to his wife. The note minus the signature was presented to the congressional committee, but the signature has never been produced, although Doheny stated he would send it to the committee. No part of this "loan" has been repaid by Fall; nor has any interest been paid thereon.

9. Winter, 1922. Negotiations of Doheny and Sinclair for leases and visit of Sinclair to Fall: Negotiations for leases to the naval oil reserves were begun with Secretary Fall about January 1, 1922, by E. L. Doheny and H. F. Sinclair. These negotiations were conducted in secret, and apparently continued several months. Fall has since testified that all negotiations for the Teapot Dome lease were conducted with Colonel Zevely, Sinclair's attorney, not with Sinclair himself, but it is of record that Sinclair visited Fall at his ranch at Three Rivers, N. Mex., late in December, 1921.

10. December, 1921, and winter, 1922. Sudden acquisition of wealth by Secretary Fall: In December, 1921, Secretary Fall bought another ranch for $91,150 and paid for it at once. In the next months he bought still another ranch for $33,000, paid his back taxes amounting to $8,000, bought blooded stock for $3,000, constructed a hydroelectric plant for $40,000–$50,000, and spent large sums in the construction of roads, the building of fences, and other improvements about his 600,000-acre ranch. It was this sudden acquisition of wealth by Secretary Fall, which first made his neighbors in New Mexico suspicious and led in November and December, 1923, to the discovery of the Doheny "loan" and the "black satchel" episode.

11. April 7, 1922. Lease of the Teapot Dome to H. F. Sinclair: This lease was made in secret, without public bids. Originally it was signed only by Fall and Sinclair, but on April 12, 1922, Secretary Denby also signed on behalf of the United States.

This lease gave Sinclair the right to exploit all of Naval Reserves No. 3 (Teapot Dome). It provided that in payment Sinclair should turn over to the Government a part of the oil, on a complicated sliding-scale basis, netting the Government on the average less than 20 per cent of the oil produced. A large part of the Government's oil, moreover, was to be returned to Sinclair for storage tanks which he was to furnish in which to keep the oil. Sinclair has testified that he expected to realize $100,000,000 profit from this lease.

The excuse advanced by Fall and Denby for this lease was that wells of oil companies in the neighborhood of the Teapot Dome were depleting this reserve. These wells were all located on the public domain and were drilled under leases granted by the Interior Department. The percentage of oil going to the Government under these leases, moreover, was considerably greater than under the Sinclair contract. Both the Circuit Court of Appeals and the United States Supreme Court, in their decisions canceling this lease, held that "the drainage danger was unquestionably not imminent enough to force immediate action in the leasing of the entire property."

12. April 14, 1922. Teapot Dome lease becomes public: The lease to Sinclair was kept secret for a week after it was executed. Senator KENDRICK, of Wyoming, several days after April 7 made inquiries at the Navy and Interior Departments as to whether the Teapot Dome had been leased and was advised that no leases had been executed. The Wall Street Journal, however, on April 14, 1921, announced the lease to Sinclair and immediately thereafter Sinclair stock enjoyed a great boom on the stock market.

In the hearings upon the oil leases before the Senate Committee on Public Lands in 1923–24 there was considerable testimony that certain persons high in Government circles speculated in Sinclair stocks after the Teapot Dome lease was executed, the persons most frequently mentioned being C. Bascom Slemp, Secretary to the President, and Senator Elkins, of West Virginia. The Senate committee, however, reported that its investigation into these rumors "revealed no facts of sufficient importance to report." In the 1928 hearings it was revealed that Will Hays, who in 1922 was Postmaster General and chairman of the Republican National Committee, did at the time speculate in Sinclair stocks but lost heavily.

13. April 15, 1922. Kendrick resolution: On this day Senator KENDRICK introduced a resolution, which was immediately adopted by the Senate, calling upon the Secretaries of the Navy and Interior to send to the Senate a copy of the Sinclair lease. This was done by these officers on April 22, 1922.

14. April 25, 1922. Doheny given preference to lease naval reserve No. 1 (Elks Hills, Calif.): A contract was given Doheny to build storage tanks for storing oil to be taken from naval reserves Nos. 1 and 2 at Pearl Harbor, Hawaii, and to transport oil thereto. This contract also provided that if naval reserve No. 1 should be leased thereafter Doheny should have first call upon such lease. This contract was awarded after public bids had been called for and received, but the contract was not in accordance with the bids. In its announcements the Government made no mention about preference in the future in leasing naval reserve No. 1, and the oil companies, other than Doheny's, did not bid on this basis. Doheny himself made one bid in accordance with the specifications and another in which he named a lower figure, if allowed a first option on naval reserve No. 1. This alternative bid was accepted by Secretary Fall.

15. April 29, 1922. La Follette investigation resolution: Resolution introduced by Senator La Follette and adopted by the Senate calling upon the Secretary of the Interior to make a complete report upon the leasing of all the naval oil reserves and directing the Senate Committee on Public Lands to investigate the entire subject.

The report called for by this resolution was made on June 7, 1922, and transmitted with a letter from President Harding in which he said that every step taken with respect to the leasing of the naval oil reserves was with his knowledge and consent.

Hearings pursuant to the La Follette resolution were not actually begun until October 22, 1923, 17 months later, due, apparently, to the fact that Senator Smoot, then chairman of the Public Lands Committee, was engrossed in the work of tariff revision. In the meantime, however, Senator La Follette interested Senator Walsh of Montana, a member of the Public Lands Committee, in this matter, and Senator Walsh devoted much time to digging out the facts which were revealed when the investigation was actually begun.

16. May 29, 1922. Continental Trading Co. Liberty bonds turn up in Fall's possession: On May 29, 1922, M. T. Everhart, son-in-law of Secretary Fall, brought $230,500 in Liberty bonds to a Pueblo, Colo., bank. These bonds were in 1925 traced by their numbers to the bonds purchased by the Continental Trading Co., which represented its profits in the deal in which Sinclair and his three associates robbed their own companies, 25 cents per barrel of oil, in the deal with Humphreys. (See 7, above.)

Everhart, by pleading that he would incriminate himself, avoided testifying about the source from which he got these bonds until February, 1928, when he told the Senate Public Lands Committee that he got them from Sinclair, together with $2,500 more of bonds, which he turned over directly to Fall.

Of the $230,500 in bonds which Everhart had on May 29, 1922, the greater part were used to pay notes which Fall, Everhart, and the Tres Rios Cattle Co. (owned by Fall and Everhart) had given to the M. D. Thatcher estate. Ninety thousand dollars were deposited to Fall's credit, of which amount $20,000 were later transferred to the cattle company and the other $70,000 sent to Fall. The latter disposed of these bonds for cash in the fall of 1922.

Fall has since claimed that Sinclair gave him these bonds to buy a third interest in the Tres Rios Cattle Co., but neither the Senate Committee nor the United States Supreme Court credited this story.

17. Summer, 1922. Steps to protect the Sinclair lease and to prevent exposure: During the summer of 1922 the Navy Department sent marines to the Teapot Dome to drive out trespassers who were engaged in drilling wells in and about this reserve. These people claimed to have leases to drill these wells, but were driven off after the Sinclair lease was executed.

Immediately after the execution of the Sinclair lease, the Navy Department transferred to sea duty Lieutenant Commander Stuart, the officer who had had immediate charge of the naval oil reserves in the Bureau of Engineering of the Navy Department. Stuart had protested against the leasing policy, even after Admiral Robison had been placed in charge of this bureau.

During this summer, also, Sinclair made a contract with the Pioneer Oil Co., under which he gave this company $1,000,000 for their claims to the Teapot Dome (which seems to have had no legal basis). Among those who shared in this $1,000,000 paid to the Pioneer Oil Co. was F. G. Bonfils, publisher of the Denver Post, which paper had run a series of articles attacking the Teapot Dome lease and had gotten hold of the facts relating to the granting of the Sinclair and Doheny leases, recited under 10 above. After this payment to the Pioneer Oil Co., the Denver Post stopped its attacks on the Sinclair lease and never published the story brought by its reporter [Stackelberg] from New Mexico.

At this time also, Carl G. Magee, who later revealed the facts regarding Fall's acquisition of wealth, was forced to sell the Albuquerque Mining Journal, because the bankers who held his notes called them, after agreements to renew. Magee previously had been warned by Senator Bursum, of New Mexico, that he would lose his paper unless he stopped his attacks on Secretary Fall.

18. December 12, 1922. Lease of naval reserve No. 1 (Elk Hills, Calif.) to E. L. Doheny: This lease was for the entire reserve. At the same time a second contract was executed with Doheny for construction of tanks at Pearl Harbor. No public bids preceded these leases.

In the hearings before the Congressional Committee, Doheny later stated that he estimated the amount of oil he would get from his several contracts and leases at 250,000,000 barrels, and gave his expected profits as $100,000,000.

19. March 4, 1923. Resignation of A. B. Fall as Secretary of the Interior: Subsequent to his resignation, Fall was employed as attorney by both the Sinclair and Doheny companies.

20. May 26, 1923. Dissolution of the Continental Trading Co. of Canada: On this date the Continental Trading Co. assigned its contract with Humphreys, under which it still stood to profit $6,250,000, without any expense whatsoever, to the Sinclair Crude Oil Purchasing Co. for $400,000. The company was then dissolved and in January or February (when the oil investigation was in progress) all its books and records were destroyed.

21. Summer, 1923. $25,000 in Liberty bonds "loaned" by Sinclair to Fall, through Colonel Zevely: This "loan" made in connection with Fall's trip to Russia at this time. The bonds involved not Continental Trading Co. bonds. This "loan" never paid, nor any interest thereon.

22. October 22, 1923–November 2, 1923. Beginning of congressional hearings: During the period the congressional committee, of which Senator Smoot was then chairman, took the testimony of Secretary Fall, H. F. Sinclair, naval officers and geologists. Nothing sensational was developed in these hearings and most of the testimony was in the nature of an attempt to justify the leases.

23. Latter part of November and early December, 1923. Sinclair makes $160,000 contribution, through Will Hays, toward payment of the deficit of the Republican National Committee in 1920 in the form of Continental Trading Co. bonds: In the Senate investigation in 1924 Hays testified that Sinclair contributed $75,000 on December 3, 1923, toward payment of the deficit of the Republican National Committee. His testimony with reference to this contribution was extremely vague, but conveyed the impression that it was made by Sinclair in cash. Through another witness, however, the committee discovered that this contribution was actually made in Liberty bonds, and these were later traced by their numbers to the Continental Trading Co.

When the Senate Committee on Public Lands resumed its hearings in 1928 Hays appeared voluntarily and testified that in addition to the $75,000 contribution he had revealed in 1924 Sinclair, in November, 1923, "loaned" the Republican National Committee $185,000 in Liberty bonds, which he disposed of as follows: $60,000 were sent to Fred W. Upham, then treasurer of the committee, at Chicago; $25,000 to John W. Weeks, then Secretary of War; and $50,000 to John T. Pratt, of New York, a member of the "Standard Oil group"; while $50,000 were never used. Hays further testified that altogether $100,000 of the bonds were returned to Sinclair, so that his total contribution (with the $75,000 revealed earlier, which was turned over to Senator COLEMAN DU PONT in bonds, to pay a note of the Republican National Committee to the Empire Trust Co., New York) made the total contributed by Sinclair toward payment of the deficit $160,000, all of which was paid in bonds.

Hays, in his testimony to the committee, was extremely vague upon the reasons for the "loan" of the $185,000 in bonds by Sinclair; but the committee, through other testimony, discovered that these bonds were taken to wealthy Republicans, who were asked to pay cash for them, and then credited on the records of the Republican National Committee with having made a contribution toward payment of the deficit to the face value of the bonds. Twenty-five thousand dollars of these bonds were "cashed" by James Patten, a Chicago grain man, and $2,000 by one Eckhardt, a Chicago miller. Some of these bonds were also taken to Andrew W. Mellon and William M. Butler, as recited in 24 following, but they refused to have anything to do with them. The testimony of Hays, however, is clear to the effect that $85,000 of Sinclair's bonds were distributed to Upham, Weeks, and Pratt, and presumably all of them were disposed of in the manner disclosed by Patten and Eckhardt.

24. November, 1923. Secretary Mellon and Chairman Butler were apprised of the Sinclair "loan" of bonds to pay the deficit of the Republican National Committee, but kept complete silence with reference to this transaction until it was revealed by other testimony: The discovery that some of the Continental Trading Co. Liberty bonds which Sinclair "loaned" to Hays, to help pay the Republican deficit, were presented to Mellon and Butler, was made when a representative of the estate of John T. Pratt gave the Committee on Public Lands a memorandum on which were given the names "Weeks," "Andy," "Butler," and "du Pont." On this lead the committee called Mellon and Butler, and both acknowledged that some of the Sinclair bonds were offered to them in November, 1923, but both refused to become parties to the scheme to thus cover up Sinclair's contribution. Mellon was asked by Hays to cash $50,000 of the bonds, kept the bonds for about 10 days, but then returned them to Hays (who seems to have sent them back to Sinclair), and, instead, himself contributing $50,000 toward payment of the deficit. Butler received $25,000 of the Sinclair bonds from John W. Weeks, but, like Mellon, sent them back.

These incidents occurred at the very time when the Senate committee was first advised of Fall's enrichment in 1922 and the suspicious circumstances pointing to Doheny and Sinclair as the source of this sudden wealth. Both Mellon and Butler knew that the bonds they were asked to cash came from Sinclair and also that the Senate committee was seeking to ascertain what contributions Sinclair made to the campaign funds. Despite these facts, however, both Mellon and Butler kept silent about this transaction until summoned by the Senate committee in 1928.

25. Ex-Secretary Fall and E. B. McLean conspire to mislead the investigating committee about the sources of the $100,000 which Fall in December, 1921, took from Washington to El Paso, Tex., in a satchel: In November, 1923, ex-Secretary Fall wrote to Price McKinney, of Cleveland, asking that he (McKinney) should testify before the congressional committee that he loaned Fall $100,000 in December, 1921. When McKinney did not reply to this request, Fall sent his son-in-law, C. C. Chase, to Cleveland to see McKinney and renew his request. McKinney refused, however, to thus perjure himself.

After the McKinney turndown, Fall wired to E. B. McLean at Washington, to meet him at Atlantic City. At this meeting at Atlantic City it was arranged that McLean should testify falsely that he loaned $100,000 to Fall.

26. November 30, 1923. First testimony suggesting graft: On November 30, 1923, the Senate Committee on Public Lands resumed its hearings on the oil leases, after nearly an interval of a month. Senator Lenroot now replaced Senator Smoot as chairman of the investigating committee, because Smoot had become chairman of the Committee on Finance.

On the very first day of the resumption of the congressional hearings, sensational testimony was offered by Carl G. Magee and other witnesses from New Mexico, detailing the facts regarding Fall's great expenditures in connection with his ranch property immediately before the oil leases were executed, as set forth under 10 above.

In the week following, H. F. Sinclair and E. L. Doheny testified, denying that they gave any money to Secretary Fall in connection with the oil leases.

27. December, 1923. Efforts by Hays to stop the Senate investigation and to mislead the committee and the public: D. H. McArthur, secretary to the late Senator Ladd, who was the ranking member of the Public Lands Committee, has recently made the statement that Will Hays, former chairman of the Republican National Committee

and Postmaster General, came to Senator Ladd and pleaded with him to stop the investigation of the oil leases, which Senator Ladd refused to do. In this statement McArthur is corroborated by ex-Senator Adams, of Colorado, another member of the Public Lands Committee.

On a deposition given by Fall on April 2, 1928, in connection with the criminal case against Sinclair (see 74 below), he makes the charge that he was urged by Hays to write the letter to the Senate Public Lands Committee, noted under 29 below, in which he falsely informed this committee that the $100,000 he received from Doheny was loaned him by E. B. McLean.

28. December, 1923. Conference of Senators Lenroot and Smoot with ex-Secretary Fall: Fall came to Washington shortly after December 15, 1922. Some time between this date and December 26th, Senators Smoot and Lenroot conferred with ex-Secretary Fall at the hotel at which he was staying in Washington, regarding the sources of his sudden wealth in the winter of 1921. Which Senator suggested this conference is not clear as each credits the other with this suggestion.

What was said at this conference is also still somewhat in doubt. Lenroot and Smoot said (after this conference became public) that they called on Fall to urge him to tell the truth about the sources of the wealth which he acquired in the winter of 1921–22, and that they were told that this money came from a loan from Edward B. McLean. Fall, in his deposition on April 2, 1928 (noted in 27 and 74), was first reported by the newspapers to have claimed that Lenroot and Smoot, on the occasion of this call, expressed fear that the Republican Party would be adversely affected if it became known that Fall's money came from Doheny, and suggested to him that he write a letter to the Senate committee to the effect that he (Fall) borrowed this money from McLean. This version of what occurred at this conference was promptly denied by both Smoot and Lenroot, and the newspapers have since reported that the first version of what Fall said in his deposition was incorrect, and that his agrees substantially with that told by Senators Lenroot and Smoot.

29. December 26, 1923. Fall advises committee that he borrowed $100,000 from McLean to finance his ranch purchases in December, 1921: In a letter addressed to the Public Lands Committee on December 26, 1923, ex-Secretary Fall pleaded that illness prevented him from appearing before the committee with reference to the testimony regarding his New Mexico expenditures in December, 1921, and the winter of 1922. In this letter he made the statement that he raised the money he spent in New Mexico by a loan of $100,000 from Edward B. McLean, publisher of the Washington Post, and that he received this amount in cash and took it to El Paso in a satchel. He also stated that he borrowed the balance of the money he spent in New Mexico from a bank at Pueblo, Colo.

30. January 3, 1924. McLean confirms Fall: On this date ex-Attorney General Palmer sent a letter to the Public Lands Committee, as attorney for McLean, in which he stated that McLean was ill in Florida, but that he wished to confirm the statement of Fall that he (McLean) loaned Fall $100,000 on an unsecured note late in December, 1921. (Fall actually took $100,000 to El Paso early in December.)

31. Last part of December, 1923, and first half of January, 1924. McLean, Fall, Slemp all at Palm Beach, Fla.: Immediately after Christmas Fall joined McLean at Palm Beach, Fla., as his guest and stayed there until about the middle of January.

After Christmas Slemp, Secretary to President Coolidge, also went to Palm Beach "to recuperate." While there he conferred frequently with both McLean and Fall. The oil scandal, however, was not discussed, according to Slemp, except that he once asked Fall what was the truth with reference to where he got the money for his New Mexico transactions, and was told to read his (Fall's) testimony.

32. Last part of December, first part of January. Frantic efforts to prevent the Public Lands Committee from taking the testimony of McLean: The frantic efforts which were made while McLean was in Florida to prevent the Committee on Public Lands from taking his testimony have come to light within the last two weeks through the action of the committee in issuing a subpœna for the production of the telegrams sent to and from McLean in Washington. These telegrams have disclosed that:

(a) Messages were exchanged daily between McLean and his employees in Washington, reciting efforts made to get Members of Congress and others of political influence to see Senator WALSH and other members of the committee to prevent efforts to take McLean's testimony.

(b) A number of the telegrams sent to and by McLean were in the secret code of the United States Department of Justice, which appointed McLean a $1 per year employee in 1921. Many of these messages were sent by one Duckstein, an employee in the Bureau of Criminal Investigation in the Department of Justice and also an employee of McLean.

(c) McLean installed a private wire from Washington to Palm Beach, whose operator was E. W. Smithers, chief telegrapher at the White House. All messages sent over this private wire were destroyed each evening; and the contents of none of them have as yet been disclosed. The installation of this private wire was decided upon by McLean on December 22, 1923, upon the advice of one of his secretaries, Major, that this wire "will give you quick access to the White House." Smithers hired to take charge of this private wire December 28. Actually used from January 9.

33. January, 1924. Disappearance of all witnesses connected with the Continental Trading Co. of Canada and destruction of all its records. Sinclair left for Europe before Christmas, 1923, taking with him all his records relating to the Teapot Dome and all his canceled checks. He did not return until March, 1924, and then refused to testify.

Fall left Palm Beach for New Orleans about the middle of January with Colonel Zevely, the attorney for Sinclair. He intended to "go abroad for his health" from New Orleans, but before he could leave was served with a subpœna to appear before the Senate committee.

Everhart, Fall's son-in-law, remained in this country, but was able at this time to avoid testifying, by pleading that his testimony might incriminate him. In 1928, after Congress had changed the law to bar this excuse, Everhart testified in a frank manner and revealed the fact that he got the Continental Trading Co. bonds which he took to Pueblo (see 16 above) from Sinclair for Fall.

Blackmer and O'Neil, at this time, left this country for France and neither has ever returned. Letters rogatory were issued for both to testify in the Government case against Sinclair in 1925, but both declined to do so. Thereafter both made short and secret visits to Canada, O'Neil to turn over the part of the Continental Trading Co. boodle which went to him to his company, and Blackmer apparently to keep his company from getting his share. After these secret visits to Canada, both O'Neil and Blackmer returned to Europe and are still there, despite the fact that they have made themselves subject to a penalty of $100,000 for failing to respond to a subpœna to testify in the criminal trial against Fall and Sinclair, under a statute enacted by Congress allowing subpœnas to be served in foreign countries and providing for a maximum $100,000 penalty to be enforced against their property in this country for failing to obey such subpœnas.

Stewart at this time went to South America and while he later returned to this country successfully dodged all subpœnas. When the Senate committee resumed its hearings in 1928, however, he was persuaded by John D. Rockefeller, jr. (the largest stockholder in the Standard Oil Co. of Indiana, of which Stewart is president), to come from Cuba to Washington to testify. On the stand, however, Stewart refused to answer the questions regarding the distribution of the Continental Trading Co. profits, and for this he has been indicted for contempt. (See 71 below.)

Osler, the president of the Continental Trading Co., did not leave Toronto, but when in 1924 the Government sought to compel him to testify in the Teapot Dome suit he refused to do so on the ground that his relations with this company were those of an attorney for his clients, and hence privileged. The United States Government then appealed to the Canadian courts to compel Osler to testify, and on December 13, 1924, Justice Riddell, of the Supreme Court of Ontario, decided that Osler would have to testify. From this decision Osler took an appeal, but the appellate division of the Supreme Court of Ontario also decided against him on March 12, 1925. In the meantime, however, Osler went to Egypt to hunt lions and did not return to Canada until after the trial of the Teapot Dome suit, and hence he has never been compelled to reveal what he knows about the Continental Trading Co. and the use made of its ill-gotten gains.

34. January 7, 1924. Walsh resolution instructing President to start suits to cancel oil leases: This resolution, amended to place the prosecution of these suits in the hands of special prosecutors instead of the Department of Justice, passed January 29, 1924.

35. January 9, 1924. The Senate Public Lands Committee sends WALSH to Florida to take McLean's testimony. Lenroot wires Fall that WALSH has no authority to take his testimony: The resolution passed by the committee read as follows: "That Senator THOMAS J. WALSH be, and is hereby, appointed a subcommittee to take the testimony of Edward B. McLean at Palm Beach, in the State of Florida, or elsewhere, and any other witness whom the said Senator THOMAS J. WALSH may require to attend before him by subpœna; and authority is hereby given to the said committee to issue subpœnas in the name of the committee to require the attendance before him of said Edward B. McLean or any other witness."

On the same day Fall wired Chairman Lenroot from Palm Beach as follows: "Am I to understand from recent telegram sent McLean that you have given Walsh authority to subpœna me as witness? Wire answer."

To this telegram Senator Lenroot replied: "There was no such intention. Walsh stated he might wish to examine McLean's secretary or other employees who might be there and that was only purpose of his authority to subpœna."

36. January 11, 1924. McLean acknowledges that he did not loan $100,000 to Fall: On this date Senator Walsh at Palm Beach took McLean's testimony, to the effect that he did not loan $100,000 to Fall, but only gave him a check for this amount, which Fall later returned uncashed. Fall on the same day refused to appear before Senator Walsh to testify, but sent him a note stating that this last story of McLean was correct.

Subsequent testimony has thrown grave doubt upon even this last story of McLean. It has been established that in December, 1921, when McLean, according to this story, gave Fall the check for $100,000 which he is supposed to have returned, McLean had less than $9,000 in the bank. It has also been established, by the testimony of Major, McLean's secretary, that the lie told to the committee by Fall and McLean as to the $100,000 loan, was framed at a meeting of these men at Atlantic City months before the oil hearings began. (See 25 above.)

37. January 12, 1924. Telegram from President Coolidge to McLean at Palm Beach: "Prescott is away. Advise Slemp with whom I shall confer. Acknowledge."

38. January 16, 1924. Telegram from Asst. Attorney General E. W. Rochester to McLean: Gave McLean the tip that the Senate committee would investigate whether he (McLean) had $100,000 in any bank in December, 1921, when, according to his testimony, he gave Fall a check for $100,000 as a loan, which he later returned uncashed.

39. January 24, 1924. Doheny acknowledges that he "loaned" Fall $100,000 November 30, 1921: Doheny's reason for making this loan, he testified, was that he and Fall were old friends and that he felt that Fall was entitled to great credit for his services while in the Senate in fighting for the rights of Americans in Mexico.

Doheny's testimony at this time was supplemented by further testimony on February 1, in which it was brought out that he cut Fall's signature off the $100,000 note, which the Secretary gave him in return for the "loan."

40. January 25, 1924. Colonel Zevely testifies that Sinclair loaned $25,000 in Liberty bonds to Fall in the summer of 1923: (The facts with reference to this "loan" are set forth in 21 above.)

41. January 28, 1924. Resolution for dismissal of Secretary Denby: This resolution was introduced by Senator ROBINSON.

42. January 29, 1924. "Principal" telegram Bennett to McLean. This telegram sent by Bennett, managing editor of McLean's Washington Post to McLean at Palm Beach, read as follows: "Saw principal. Delivered message. He says greatly appreciate and sends regards to you and Mrs. McLean. There will be no rocking of the boat. He expects reaction from political attacks."

Bennett has since testified that the "principal" referred to in this message was Senator CURTIS, of Kansas. Senator CURTIS, however, has denied that he talked to Bennett. Senator HEFLIN, in a speech in Congress in 1924, claimed that the "principal" referred to is clearly President Coolidge.

43. January 29, 1924. Resolution directing President to start suit to cancel oil leases and to engage special prosecutors for this purpose passed by Congress: Under this resolution President Coolidge first appointed Silas H. Strawn and ex-Attorney General Gregory as prosecuting attorneys. Both names were later withdrawn when it was discovered that both had been attorneys for oil companies (Gregory directly for Doheny). In lieu of these two attorneys, ex-Senator Pomerene, of Ohio, and Owen J. Roberts were appointed. These appointments were confirmed about the middle of February. Subsequently, a third prosecuting attorney was appointed to deal with the California leases, a Mr. Knight, of San Francisco.

44. February 2, 1924. Fall refuses to testify further: On this day Fall, pursuant to subpœna, appeared before the Senate committee, and read a statement denying the jurisdiction of the committee and declining to testify on the ground that he might incriminate himself. The committee then excused Fall and secured from the Senate a readoption of the resolution authorizing its investigation.

45. February 7, 1924. Resolution adopted by Senate confirming the authority of the Committee on Public Lands and Surveys to continue its investigation of the oil leases: This resolution was adopted because the authority of the committee was questioned, on the theory that its powers conferred by the La Follette resolution in the preceding Congress expired with that Congress, on March 3, 1923.

46. February 11, 1924. Senate adopts resolution asking Denby to resign as Secretary of the Navy: In reply to this resolution President Coolidge issued a statement to the effect that he would not ask Secretary Denby to resign.

47. February 11, 1924. "X" telegram Bennett to McLean: This telegram read as follows: "'X' telephoned me last night. Said tell you not to worry." Bennett testified that "X" was Attorney General Daugherty.

48. February 12, 1924. Telegram Coolidge to McLean: "Thank you for message. You have always been most considerate. Mrs. Coolidge joins me in sending kindest regards to Mrs. McLean."

On behalf of the President it has been stated that this message was sent in response to wire of McLean congratulating the President on his stand with reference to demand of the Senate for Denby's resignation.

49. February 15, 1924. Resignation of Denby: This resignation took effect March 10, 1924.

50. March 11, 1924. Ladd succeeds Lenroot as chairman of the Public Lands Committee: During much of the time that the Senate Public Lands Committee conducted its hearings in 11923–24 (November, 1923–March, 1924), Senator Lenroot was unable to attend, being ill.

51. March 11, 1924. Starting of Government suits for the cancellation of the oil leases: Suits were brought for the cancellation of both the Teapot Dome and Elk Hills leases, and (as noted under 64 and 66 below) were ultimately successful.

52. March 22, 1924. Sinclair defies Senate and refuses to give further testimony: Sinclair was recalled by the committee to be questioned further upon his transactions with Fall. His refusal to testify practically marked the end of the senatorial investigation in 1924, although the committee's report was not filed until June, 1924. (See 54 below.)

53. March 28, 1924. Resignation of Attorney General Daugherty: This resignation seems to have been practically requested by President Coolidge, although, in accepting the same, the President praised Daugherty for his services. This resignation resulted rather from the facts revealed through the investigation of charges brought by Senator WHEELER relating to Daugherty's conduct of the office of Attorney General, than to anything connected with the oil leases.

54. March 30, 1924. Indictment of Sinclair for contempt for refusal to answer the questions of the Senate Public Lands Committee: This indictment was returned in the District of Columbia after the Senate had voted to refer Sinclair's contempt to the district attorney. For the outcome of this case see 65 below.

55. June 5, 1924. Criminal indictments against Fall, Sinclair, and Doheny: These indictments were returned in the District of Columbia. Fall and Sinclair were indicted for conspiracy, Fall and Doheny for conspiracy, and Fall, Doheny, and his son for bribery.

On April 6, 1925, the Supreme Court of the District of Columbia quashed the indictments against Fall and Doheny on the ground that improper witnesses had been brought before the grand jury. The United States acquiesced in this decision in so far as the conspiracy charge was concerned, but appealed from the finding quashing the indictment for bribery. Upon this appeal the Court of Appeals of the District of Columbia on December 7, 1925, sustained the Government and held the original indictments for bribery to be good. New indictments for conspiracy were returned against Fall and Doheny on May 27, 1925. (For the outcome of these criminal cases, see 63, 67, and 75 below.)

56. June 6, 1924. Report of Senate Committee on Public Lands and Surveys upon its investigation of the oil leases: This was the majority report of the committee and was signed by Senators Ladd, Norbeck, A. A. Jones, Adams, Kendrick, Dill, Walsh, and Pittman. This report strongly condemned the oil leases and characterized the transactions connected therewith as "essentially corrupt."

The minority of the committee did not file its report until January 15, 1925. (See 59, below.)

57. Summer, 1924. The oil scandal in the presidential campaign: The revelations unearthed in the oil-scandal investigation figured very prominently in the presidential campaign, both the Democratic and Progressive platforms trying to fasten responsibility for this scandal upon the Republican administration. The Republican platform said that "the recent congressional investigations have exposed instances in both parties of men in public office who are willing to sell official favors and men out of office who are willing to buy them, in some cases for money and in others of influence," and called for "the speedy, fearless, and impartial prosecution of all wrongdoers." It also said, however, that "no greater wrong can be committed against the people than the attempt to destroy their trust in the great body of their public servants" and condemned attempts to do this for partisan advantage.

58. September 30, 1924. The first information about the Continental Trading Co. and its connection with the bribery of Fall by Sinclair revealed to public: The discovery of the Continental Trading Co. and its connection with the Teapot Dome lease was the work of Atlee Pomerene and Owen J. Roberts, the special prosecutors for the Government, and of detectives connected with the United States Treasury Department whom they employed.

The facts regarding the Continental Trading Co. were revealed at this time in an affidavit filed in the Canadian courts at Toronto by the special prosecutors in an attempt to obtain process to compel H. S. Osler, president of the Continental Trading Co., to give a deposition about the operations of the company and the disposition of its bonds for use in the Government suit to cancel the Teapot Dome lease, which suit was then pending in the United States District Court of Wyoming. (See 33, above.)

59. January 15, 1925. Report of the minority of the Senate Public Lands Committee upon the oil leases: This report was signed by Senators Smoot, Stanfield, Bursum, Cameron, and Spencer. This report amounted practically to a defense of the oil leases and sought to fasten responsibility for inaugurating the leasing policy upon the preceding Democratic administration. It also condemned the majority of the Public Lands Committee for having devoted a great deal of "unwarranted and unnecessary" time in running down "mere rumors," and said that this action of the majority had "produced an impression in the country concerning the investigating inclinations of the Senate that was exceedingly unfortunate, and one neither the Senate nor the country is likely soon to forget."

60. May 28, 1925. United States district court holds lease to Doheny invalid: This decision was rendered in the case of United States v. Pan American Petroleum Co. (6 Fed. (2d) 43) by Judge McCormick, of the

United States District Court of the Southern District of California. This was the "first blood" drawn by the Government in the suits growing out of the oil leases. In his decision in this case Judge McCormick found the dealings between Fall and Doheny to have been "contra bonos mores and against public policy" and held that the Government was entitled to an order in equity setting aside the Elk Hills lease.

From this decision an appeal was taken by Doheny to the Circuit Court of Appeals, Ninth Circuit, which, however, on January 4, 1926, upheld the trial court (9 Fed. (2d) 761), and from this decision to the Supreme Court, which also upheld the Government (see 64 below).

61. June 19, 1925. Decision of Judge Kennedy, of the United States District Court of Wyoming, upholding the Sinclair lease: This decision (reported in U. S. *v.* Mammoth Oil Co., 5 Fed. (2d) 330) was rendered, after a long trial, in April, 1925, in which the United States established the fraudulent character of the Continental Trading Co. and traced $90,000 of the Continental Trading Co. bonds to Fall. Direct proof that these bonds came from Sinclair, however, was lacking, because everybody connected with the Continental Trading Co. had put himself outside of the jurisdiction of the court. The Government's request to hold the case open until the testimony of H. S. Osler (then in Africa) could be taken was refused by Judge Kennedy.

62. September 28, 1926. The circuit court of appeals reverses the trial court and sets aside the Teapot Dome lease: This decision (reported in 14 F. (2d) 705) was rendered by Circuit Judge Kenyon upon the appeal of the Government from the decision of Judge Kennedy noted under 61 above.

63. December 16, 1926. Acquittal of Fall and Doheny on a conspiracy charge: This was a jury verdict, arrived at after a long trial, and after Fall and Doheny had made every effort to quash the indictments. (See 55 above.)

64. February 28, 1927. The United States Supreme Court cancels the Doheny lease to the Elk Hills reserve: This was the final stage of the Government civil suit to set aside the Doheny lease, the earlier stages of which have been noted under 60 above. The Supreme Court's opinion was delivered by Justice Butler and was unanimous. It rested upon the conclusion that this lease was "corruptly secured."

65. March 3, 1927. Sinclair convicted of contempt of the Senate and sentenced to three months in jail: This conviction was premised upon Sinclair's refusal to answer questions put to him by the Public Lands Committee in March, 1924, which is noted under 52 above.

Sinclair has taken an appeal from this conviction for contempt and this appeal is still pending.

66. October 10, 1927. The United States Supreme Court cancels Teapot Dome lease: This decision (reported in 48 Sup. Ct. 1) was the final outcome of the Government suit in equity to set aside the Sinclair lease to the Teapot Dome, earlier phases of which are noted under 51, 60, and 61 above.

In this decision (opinion by Justice Butler) the Supreme Court most severely scored Fall as "a faithless public officer" condemned the Continental Trading Co. as having been "created for some illegitimate purpose," and said that the lease of April 7, 1922 (11 above) was made "to circumvent the law and defeat public policy."

Not only did the Supreme Court set aside the Teapot Dome lease, but it also held that Sinclair's company could not recover the tanks and other property it had already put on the naval reserve, preparatory to draining this reserve. The court held that only Congress could give Sinclair relief in this matter of recovering his investment in the Teapot Dome lease.

67. October 17–November 2, 1927. Trial of Sinclair and Fall on criminal charge of conspiracy, resulting in a mistrial, due to jury tampering: This trial occurred in the court of Justice Siddon of the Supreme Court of the District of Columbia. After this trial had proceeded for three weeks, the Government asked for a mistrial, because evidence indicating jury tampering was published in a Washington newspaper.

A long-drawn-out investigation of this jury tampering followed, in which it was established that Sinclair and some of his friends employed the Burns Detective Agency to shadow the jurors in the Fall-Sinclair trial. Some evidence was also presented that one juror was offered a direct bribe on behalf of Sinclair. The final outcome of this investigation was the conviction of Sinclair, Burns, and two others for contempt, which is noted under 70 below.

68. January 9, 1928. The Senate adopts resolution directing the Public Lands Committee to resume its investigation of the oil leases: This resolution was offered by Senator NORRIS on January 4, 1928, and was premised mainly upon the new evidence revealed since 1924, particularly the Continental Trading Co. transaction.

69. January 24, 1928 to date. New hearings upon the oil leases by the Senate Public Lands Committee: These hearings have been conducted intermittently and are to be resumed. The main line of inquiry in these hearings has been the tracing of the Continental Trading Co. bonds.

While hardly as sensational as the testimony in the first hearings in 1923 and 1924, these new hearings have given the public a much more complete picture of the oil scandal and particularly of the Continental Trading Co. phase of this scandal, than was extant before. The high spots in this new testimony have been the following:

(a) The testimony of Everhart, Fall's son-in-law, which has established that the Continental Trading Co. Liberty bonds which Everhart took to Pueblo, were given him by Sinclair to be turned over to Fall. (See 16 above.)

(b) Information about the $160,000 contribution, in the form of Continental Trading Co. Liberty bonds by Sinclair toward payment of the Republican National Committee deficit in November, 1923, which is discussed in 23 and 24 above. This information has been gotten piecemeal and in spite of apparent attempt to mislead the committee (see also 72 below).

(c) Proof for the first time that, in addition to Secretaries Fall, Denby, and Daugherty, two other members of President Harding's Cabinet, Hays and Weeks, were implicated in the oil scandal, at least, to the extent of having knowledge of and trying to cover up the Sinclair contribution to pay the Republican deficit. In addition, moreover, Secretary Mellon and Chairman Butler of the Republican National Committee of 1924, have been shown to have had knowledge of the Sinclair contribution, but failed to disclose this information to the investigating committee in 1924. (See 24 above.)

70. February 3, 1928. Robert W. Stewart, president of the Standard Oil Co. of Indiana, and an associate of Sinclair in the Continental Trading Co., defies the Senate and is subsequently indicted for contempt: Stewart came from Cuba to testify, after having previously dodged all subpœnas (see 33 above), but on the stand refused to answer questions about the disposition of the Continental Trading Co. bonds. For this refusal he was reported to the Senate as a contumacious witness and, at the request of the Senate, was arrested and charged with contempt. He was thereafter released from jail upon a writ of habeas corpus, but after a hearing this writ was dissolved by Justice Bailey of the Supreme Court of the District of Columbia and Stewart ordered held for trial. From this order, Stewart took an appeal on April 2, 1928, to the appellate court of the District.

71. February 21, 1928. Conviction of Sinclair and William J. Burns for jury tampering in trial of Fall and Sinclair for conspiracy in October and November, 1927: This was the final outcome of the investigation following the mistrial in the Fall-Sinclair conspiracy case, discussed in 67 above. After a prolonged preliminary investigation, Sinclair, William J. Burns, his son, Sheldon Burns, and Mason Day and Sheldon Clark, officers of oil companies with which Sinclair is connected, were cited for contempt of court. After trial all of these defendants except Clark were found guilty, and Sinclair was sentenced to 6 months in jail, Day to 4 months, and William J. Burns to 15 days in jail, while Sheldon Burns was fined. From this conviction these defendants have taken an appeal, and all of them are free on bonds.

72. March 1, 1928. First testimony establishing that Sinclair contributed $160,000 in Continental Trading Co. Liberty bonds to help pay the Republican deficit in 1920 (see 23 above): The first testimony to this effect was given by Will Hays, who appeared voluntarily to state that in addition to the $75,000 which he testified in 1924 Sinclair contributed to pay the Republican defict Sinclair also "loaned" the Republican National Committee $185,000 in bonds, of which all but $85,000 were subsequently returned to him. Hays in his testimony at this time, however, denied that these bonds were turned over to others who cashed them and were credited with the contribution really made by Sinclair, and also failed to disclose that the $75,000 contribution made by Sinclair about which he testified in 1924 likewise took the form of Continental Trading Co. bonds and was really part of the same transaction. When later the committee developed that some of these bonds "loaned" by Sinclair were turned over to Chicago parties to be cashed and also that they were offered to Mellon and Butler (see 23 and 24 above), Hays pretended to know nothing about what was done with the bonds, although forced to acknowledge that he approached Mellon (Hays explained his silence upon this action on the ground that he did not think it was of any importance because Mellon would not enter into the deal.)

73. March 10, 1928. Discovery of fact that Secretary Mellon and Secretary Butler were approached to cash the Continental Trading Co. Liberty bonds which Sinclair turned over to Hays for the Republican deficit: This discovery was made through the filing with the committee of all memoranda of the late John T. Pratt relating to the Republican deficit, by the administrators of his estate, on the subpœna of the committee. As recited in 24 above, this memoranda included a slip on which were written the names "Weeks," "Andy" (or "Handy"), "Butler," and "DU PONT."

74. April 2, 1928. Deposition by Fall implicating Will Hays and, perhaps, Senators Lenroot and SMOOT in the attempt to mislead the Senate Public Lands Committee in December, 1923, with regard to the $100,000 Fall received from Doheny: This deposition was taken for use in the conspiracy trial of Sinclair, which is noted under 75, below. Its contents are not yet definitely known, but all accounts agree that this deposition charges Will Hays with having induced Fall on December 27, 1923, to write his letter in which he reported that the $100,000 which Doheny gave him was a loan from McLean (see 27, above). The newspapers also first reported that Fall in this deposition charged Sena-

tors Lenroot and SMOOT with having given him the same advice on the occasion of their visit to him in December, 1923 (see 28, above), but this is now denied.

75. April 9, 1928. Opening of new trial of Sinclair for conspiracy: This new trial was made necessary by the mistrial in the case against Fall and Sinclair in October and November, 1923. (See 67, above). This time Sinclair is being tried alone, because Fall is reported to be dying. Fall's deposition for use in this case, in which he claims that there was nothing wrong in his dealings with Sinclair, was taken April 2, 1928.

FLEET SUBMARINE

Mr. HALE. Mr. President, House bill 13248 came over to the Senate this morning, and has been referred to the Committee on Naval Affairs. I ask unanimous consent that a similar bill, which has been reported to the Senate from the Committee on Naval Affairs, be indefinitely postponed, that the Committee on Naval Affairs be discharged from the further consideration of this bill, and that it be taken up and acted upon.

The PRESIDENT pro tempore. Is there objection?

Mr. KING. Let it be read.

The PRESIDENT pro tempore. The bill will be read for the information of the Senate.

The bill (H. R. 13248) to authorize an increase in the limit of cost of one fleet submarine was read, as follows:

Be it enacted, etc., That the limitation imposed in the Navy Department and naval service appropriation act, fiscal year 1925, on construction and machinery expenditures on account of one fleet submarine (mine-laying type), increased to $6,300,000 by the act of March 2, 1927 (44 Stat. L. 1343), is hereby further increased to $6,500,000.

The PRESIDENT pro tempore. The Senator from Maine moves that the Committee on Naval Affairs be discharged from the further consideration of the bill.

The motion was agreed to.

Mr. HALE. I now ask for the present consideration of the bill.

The PRESIDENT pro tempore. Is there objection?

Mr. KING. Mr. President, I should like a little explanation of the bill to which the Senator refers.

Mr. HALE. Mr. President, the bill simply increases the limit of cost on the mine-laying submarine *V–4*, which was launched last fall and put into commission some months ago. There are certain improvements on it which have not yet been made, and could not be made because the vessel had reached the limit of cost allowed under the law. This bill increases the limit of cost $200,000. One of her periscopes has not been put on, because they have not had the money to finish her up.

The PRESIDENT pro tempore. Is there objection to the present consideration of the bill?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

The PRESIDENT pro tempore. Without objection, the Senate bill on the same subject will be indefinitely postponed.

CONTRACTS BY THE SECRETARY OF WAR TO BE IN WRITING

Mr. REED of Pennsylvania submitted the following report:

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 12352) to require certain contracts entered into by the Secretary of War, or by officers authorized by him to make them, to be in writing, and for other purposes, having met, after full and free conference have agreed to recommend and do recommend to their respective Houses as follows:

Amendment numbered 1: That the House recede from its disagreement to the amendment of the Senate numbered 1, and agree to the same with an amendment as follows: In lieu of the language proposed to be inserted by said amendment insert the following:

"*Provided*, That this act shall cease to be in effect after June 30, 1930"; and the Senate agree to the same.

DAVID A. REED,
FRANK L. GREENE,
DUNCAN U. FLETCHER,
Managers on the part of the Senate.
W. FRANK JAMES,
L. A. FROTHINGHAM,
WILLIAM C. WRIGHT,
Managers on the part of the House.

The report was agreed to.

Mr. REED of Pennsylvania. I ask for the immediate consideration of the report.

The PRESIDENT pro tempore. Is there objection? The Chair hears none.

Mr. KING. Let it be read.

The PRESIDENT pro tempore. The report will be read.

The Chief Clerk read the report.

The PRESIDENT pro tempore. The question is on agreeing to the conference report.

The report was agreed to.

FRANK MURRAY

Mr. LA FOLLETTE. From the Committee on Indian Affairs I report back favorably, without amendment, H. R. 3539, and ask for its immediate consideration. It is for the relief of an Indian who, the committee believes, was illegally banned from his reservation. The bill has passed the House. It has the approval of the Secretary of the Interior and the Bureau of the Budget, which is very unusual. I ask unanimous consent for its immediate consideration.

The PRESIDENT pro tempore. Is there objection? The Chair hears none.

The Senate, as in Committee of the Whole, proceeded to consider the bill (H. R. 3539) for the relief of Frank Murray, which was read, as follows:

Be it enacted, etc., That the Secretary of the Interior is hereby directed to investigate the removal of Frank Murray, a member of the Bad River Band of Chippewa Indians, and an allottee upon the Bad River Reservation in Wisconsin, from said reservation; and if he shall find that such removal by officers and agents of the Government was illegal, the Attorney General concurring, he shall so certify to the Secretary of the Treasury.

Upon such certification being made to the Secretary of the Treasury, he is hereby authorized and directed to pay to said Frank Murray the sum of $3,000 to compensate him for injuries to his business and property by reason of such illegal removal.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

Mr. LA FOLLETTE. I ask unanimous consent that Order of Business 1359, Senate bill 2441, be indefinitely postponed.

The PRESIDENT pro tempore. Without objection, it is so ordered.

PRESIDENTIAL CANDIDATES

Mr. SHEPPARD. Mr. President, at the request of Rev. Atticus Webb, Anti-Saloon League superintendent of Texas, I ask that his address at Eastland, Tex., on May 20, 1928, on the subject "Can a wet President hurt prohibition?" be inserted in the RECORD.

There being no objection, the address was ordered to be inserted in the RECORD, as follows:

CAN A WET PRESIDENT HURT PROHIBITION?

An address delivered at a mass meeting in the First Baptist Church, of Eastland, Tex., at 8 p. m., Sunday, May 20, 1928. When Dr. W. T. Turner, the pastor, introduced Dr. Atticus Webb, the Sunbeam Band, led by Mrs. W. T. Turner, greeted him with the following song:

"Mr. Webb, how do you do?
Mr. Webb, how do you do?
As you lead the league in Texas,
We're praying for you.

Mr. Webb, we're for you,
Mr. Webb, we're for you,
As you fight the liquor forces
We're all for you.

Mr. Webb, fight hard! be true!
Mr. Webb, fight hard! be true!
As we hold the fort for temperance
We're counting on you."

Dr. ATTICUS WEBB. My friends, your greetings touch me tenderly. I thank Doctor Turner for his gracious words of introduction and these dear children for their gracious song of greeting and pledge of loyalty to me in the temperance work.

To one who accepts the current propaganda it is surprising that the American people still tolerate the Volstead Act. It is supposed to impeach our reputation for common sense. On the other hand, it may be a vindication of our common sense in refusing to be stampeded by propaganda and in insisting upon facts.

Common observation reveals the absence from our streets of the large numbers of drunks we used to meet. The bleared eyes and red noses are also conspicuous by their absence. They point us to the police blotters, but while there are reports of drunks, they are far fewer than formerly. Just what proportion of them are "repeaters" we are not informed. The number of drunks reported may be all from a very few who are arrested frequently.

SIGNS OF IMPROVEMENT

When we turn to reliable data this supposition is strengthened. Three recent reports, one by Judge Gemmill, of Chicago, one by the World League Against Alcohol, and one a special Federal census report, each remarkably corroborating the other, all combine in telling us that we are having 500,000 drunks annually fewer than we had under the saloon régime.

DECREASED DRUNKENNESS

Chronic drunkenness has about disappeared from the land. This is evidenced by the fact that practically all the Keely institutes and other institutions for treating chronic drunkenness have had to close their doors. Those that have not done so admit that their main support now comes from the treatment of other diseases.

Deaths from alcoholism were around 60,000 per year during saloon days, but have now dropped to about 2,000 per year, though the liquor used to-day is admittedly far inferior to that of the bar.

Dr. Irving Fisher estimates that only about 10 per cent as much liquor is drunk now as in former days. Henry Ford corroborates him in a recent statement. He said that in pre-Volstead days in every block of 5,000 workmen at least 100 of them gave constant trouble from drink. Now, in such a block of 5,000 fewer than 10 give trouble.

In Chicago, a city infested with bootleggers who operate under the protection of politicians, the night court has been discontinued, and it was expressly stated that prohibition had left it with so little to do that it was not justified. For generations under the saloon régime it had done a flourishing business.

These and many other well-known facts seem to the great impartial citizenry to contradict the propaganda of the day so that it fails to impress voters who make intelligent observations.

Much has been written about the great "crime wave" which the wets charge up to prohibition. But in November, 1924, the Federal Government released a census report comparing those in prison for crime in 1910 with those in prison for similar crimes in 1923. This report revealed a general decrease in crimes of about 50 per cent, except hijacking and one or two other spectacular forms made possible by the automobile.

A WIDER SHARING OF PROSPERITY

In the industrial field the harvest has been equally as great for good. In 21 basic industries the production per man has had an increase of 34 per cent. This increased efficiency enables the factories to pay better wages and is the basis of a prosperity as remarkable as it was unexpected by those who had not accepted at face value the promises of dry advocates as to what would come from abolishing the saloon.

If, when we get better wages, the cost of living goes up equally, we get no benefit from increased wages. Our standard of living is determined by dividing our wages by the cost of living. Formerly when this was done it was noted that as the wages advanced, so did the cost of living advance, keeping the standard of living on a level. For 40 years this never varied more than 4 per cent, except once. In 1897 it varied 7 per cent. The first year after the enactment of the Volstead Act this standard of living rose 28 per cent above the level it had maintained for 40 years. This was made possible by the increase in efficiency arising from increased sobriety prevalent under the eighteenth amendment.

A recent statement from our Internal Revenue Department indicates that we now enjoy a 43 per cent higher standard of living than we did before the ratification of the eighteenth amendment.

The distribution of this prosperity has been more general because sober men can handle their financies better than can those whose brains are befuddled with liquor. When America went dry there were a little more than 10,000,000 individual savings accounts. To-day there are more than 46,000,000 individual savings accounts.

It used to be that when we talked of closing the saloons, they would tell us that the saloon was the poor man's club. Where would he go? Since closing 200,000 "poor men's clubs" we have built 2,000,000 homes for those who used to patronize the saloon. The home is the "poor man's castle." We have open 10 "castles" for each "club" closed.

Oh, it is a wonderful story, this harvest we are reaping from the eighteenth amendment. This is why sensible and sane American citizens turn a deaf ear to the highly financed campaign of propaganda. They are too busy reaping the harvest from prohibition to listen to its traducers' howl about the calamities that are befalling us under the Volstead Act. They are more interested in its harvest than in its "modification."

A FAIR SHARE OF THE CREDIT

Some one may ask: "Do you give prohibition all the credit for all these good things?" No, no; not at all. This would not be fair. But Roger W. Babson, probably the world's greatest statistician, declares that prohibition is a big factor. Few men in America have the confidence of our thinking men like Herbert Hoover. He gives prohibition credit for being a tremendous factor in our increased prosperity. Recently a British industrial commission closed a three-months' investigation of our prosperity, and in their report to their government gave prohibition as a big factor in our prosperity.

But Dr. Irving Fisher, of Yale, has set himself to the task of working it out in exact terms. When testifying under oath before the United States Senate investigating committee, April, 1926, he said: "Personally I am inclined to believe that prohibition has saved and added much more than $6,000,000,000 that I have estimated as a safe minimum per year." Six billion dollars per year means that prohibition is annually worth $52 to each man, woman, and child, or $260 to each normal family of five. This is one mighty good reason why the sane, sensible citizen is so little interested in "modifying the Volstead Act." He knows a good thing when he sees it, and is unwilling to exchange it for something that gives no such promise of good.

But can you find evidence of this $6,000,000,000 bonus that the eighteenth amendment is giving us each year? We think so. When it was ratified the total wealth of the United States was estimated at $220,000,000,000. One year ago last December it was estimated at $375,000,000,000. This was an increase of $155,000,000,000. Now, take Doctor Fisher's estimated increase, due to prohibition exclusively $6,000,000,000 annually—and add to it $2,000,000,000 from the pre-Volstead liquor bill. It gives you $8,000,000,000 per year. In seven years our increased wealth due solely to prohibition equals $56,000,000,000 and leaves $99,000,000,000 due to other causes.

OF CURRENT POLITICS

In spite of the great harvest of good that we are reaping from the eighteenth amendment the outlawed liquor traffic has been conducting a tremendous propaganda for the last eight years to discredit prohibition, to convince the public that it is a farce and a failure, to discourage the dry forces, to discredit those persons and organizations standing for the law, all with the ultimate purpose of bringing back the licensed saloons. This propaganda has doubtless cost them into the millions. This year they believe that the political situation places their goal within their reach and that they will be able to collect the dividends on their eight years' investment in propaganda.

This year we are witnessing the grand attack of the outlawed liquor traffic. Their objective is to capture the citadel of American Government and place a friend of the bootleggers in the White House.

For nearly a year they have been sending agents from the liquor centers of the East into Texas to get their grappling hooks in on our political leaders, and they have succeeded with some of them. They are now drawing in their hooks and you see these politicians dancing to the music of the bootleggers' brigade. They have covered the entire southland in similar efforts and have gone into the West.

By all the crookedness known to corrupt politics they are endeavoring to place on your ticket and mine as a candidate for President one who would nullify the eighteenth amendment. When they have done so they are coming to you and me and ask us to O. K. at the ballot box what they have arranged in secret caucus.

My friends, it is this that they order you and me to O. K. at the ballot box next November. But I say unto you that, if you and I are more loyal to our country than we are to our party, truer to our God than we are to our political leaders, we will balk at that proposition.

Evidently they are afraid of the dry sentiment of the South, for they are diligently endeavoring to convince the public that a wet man, though President, could not hurt the cause of prohibition, and as proof they say that such a President can not repeal the eighteenth amendment without the consent of the people, nor repeal or modify the Volstead Act without the consent of Congress, and that, therefore, he could not hurt the cause of prohibition.

THE HARM TO PROHIBITION THAT A WET PRESIDENT COULD DO

As President he will have the right to appoint every man in the United States who will have anything whatever to do with enforcing our national prohibition laws. He will appoint the Federal prohibition agents and everyone else charged with the responsibility of catching violators of the Volstead Act, and he will also appoint the Federal attorneys and their assistants, and everyone charged with the responsibility of prosecuting those that are caught, should any be caught.

WHOM WOULD HE APPOINT?

It is the rule of politics that the man who wins office is allowed to make his appointments from among his own bunch. Even his political enemies will allow him this privilege. "To the victor belong the spoils."

This wet man, winning the office of President upon the one issue of prohibition, will know that but for the support given him by the outlawed liquor traffic he would never have been elected. But who are the outlawed liquor traffic? They are the rumrunners, the moonshiners, the bootleggers, and their patrons. These constitute the bunch from which the President will make his selection for office.

Now, friends, consider this fact: A friend of the bootleggers in the White House, knowing that he owes his office to their backing, appoints those who are to catch them and those who are to prosecute them from among their own bunch. Pray tell me, then, who will enforce prohibition?

The President will also have the right to appoint the Attorney General of the United States, and constitute the whole Department of Justice. There is where the prosecutions head up, where the policies are formed, and from where the orders are issued as to who shall be prosecuted or not.

He will also have the right to appoint the Treasurer of the United States and constitute the whole Department of the Treasury. There is where nine-tenths of the trouble with enforcing national prohibition has arisen. A friend of the bootleggers has been the Treasurer.

This Treasurer's department is where the Federal prohibition agents, the custom officers, the revenue agents, and the Coast Guard all head up. There is where the policies are formed and the orders are issued to those in the field as to whom they shall catch and whom they shall not catch.

My friends, you will see that to put the friend of the bootleggers in the White House means to put absolutely all of the machinery for enforcing our national prohibition laws into the hands of its enemies. Then for them to tell you that this could not hurt prohibition is an insult to your intelligence.

It also impeaches our sincerity. They tell you that this wet President would have to let the eighteenth amendment remain and ask you and me to be satisfied with it as a dead letter in our Constitution and not to desire that it be enforced. That means to charge you and me with hypocrisy when we asked for the eighteenth amendment, and assumed that it was not prohibition in fact but merely in name that we sought.

APPOINTING THE JUDGES

This wet President will also have the right, when a judge dies or resigns from the infirmities of old age, to appoint his successor. It is a well-known fact that a large part of our trouble in enforcing the Volstead Act originates with the court, but, passing over the lower judges, let us consider the Supreme Court of the United States.

The Supreme Court, as you know, interprets the law and the Constitution. It may not, however, have occurred to you that their interpretation of the law becomes the law and the Constitution under which we must live. A second thought will convince you that this is true.

It makes no difference what a legislative body may mean when they write certain language in a bill. When that bill becomes the law and the court interprets that language, regardless of what the legislature meant, their interpretation of the language becomes the law of the land. Likewise, it makes no difference what the people may mean when they write certain language into their Constitution, as the eighteenth amendment. When the Supreme Court interprets that language, the court's interpretation becomes the Constitution under which we live.

Well-informed lawyers tell me that nine-tenths of the laws under which we live is court-made law, and not legislative-made law. This is a question on which I am not competent to pass, but you will see the importance of the personnel of the court.

The Supreme Court of the United States is made up of nine members; five of them, a bare majority, may render an opinion. It so happens that many of the important opinions concerning the eighteenth amendment or the Volstead Act, opinions whereon hang the integrity of the law, opinions whereon hang the efficacy of the law in carrying out the mandates of the eighteenth amendment—these opinions were handed down by five members of the court, the other four vigorously protesting.

Suppose we elect a wet President, and one of these five should die. He will have the right to appoint his successor, and that successor will certainly take his stand with the other four. They then will become five, the majority, and the present five will become four, the minority, and helpless to protect the Volstead Act or the eighteenth amendment.

WETS ARE NOW PLANNING JUST SUCH AN ATTACK

Under date of May 2 the Associated Press, from New York, brought the news that the National Constitution Liberty League (a wet organization) proposed to endeavor to force upon the Supreme Court a new consideration of the question whether or not the eighteenth amendment was legally and constitutionally adopted. This question has already been passed upon by the Supreme Court and its legality and constitutionality thoroughly sustained. We quote from the Associated Press statement:

"Mr. Cuvillier (chairman of the league) said it is the hope of the league that due to four new justices having taken their places on the supreme bench since the cases were originally heard, a rehearing might result in a different construction of the eighteenth amendment. The original decision upholding the amendment as constitutional was a divided opinion."

My friends, you can see why now they are turning heaven and earth in order to capture the citadel of the American Government for the bootleggers and to place their friend in charge.

The members of this court are old men, generally. One has already celebrated his eighty-seventh birthday, two others their seventieth birthdays, and the youngest man on the court his fifty-fifth birthday. By the course of nature you may expect them to rapidly die off or resign from the infirmities of age. When they do, the President in power will appoint their successors. It is generally believed that the one who is in power during the next eight years will, during that period, have appointed by far the majority of the entire court.

If that President is a friend of the bootleggers, his appointees will also most likely be their friends, and by one stroke of the pen they could cut the heart out of the Volstead Act or paralyze the eighteenth amendment.

In saying this we do not impeach their sincerity, for it is a well-known fact that even courts are not entirely immune to their own personal convictions on liquor questions.

THE GREAT POWER TO ENFORCE OR DEFEAT THE ENFORCEMENT OF OUR LAWS BY OUR PRESIDENT

My friends, we Texans have been in the habit of making a bitter fight for the election of a dry governor of our State. We always say that we want a dry governor to insure the enforcement of our dry laws.

But let me call your attention to the fact that the laws of Texas do not put into the hands of the governor of our State more than 1 per cent of the power in enforcing our dry laws that the laws of the United States put into the hands of the President. Yet with this limited power last year, with a dry governor, we had 25 per cent more convictions of bootleggers than the year before, with the wet governor.

To-day we have 50 per cent more criminals in our penitentiary than we had when the present governor entered upon his duties January a year ago. If with these limited powers our governor has such tremendous power in the enforcement or the defeat of the enforcement of our laws, what must be said of a President with almost unlimited powers!

Consider this comparison: Suppose that our governor had the right to appoint every sheriff in our State, every deputy sheriff, every constable, every judge, every prosecuting attorney, and every justice of the peace, what would his powers be to enforce or defeat the enforcement of our dry laws? This is exactly what is granted the President, for he appoints every man in the United States who has anything whatever to do with enforcing our national prohibition laws.

Now, my friends, you can see why they are spending their millions to capture the citadel of our American Government in behalf of the outlawed liquor traffic.

By common consent it is recognized that the laws of the United States grant more power to its President than do the laws of any other nation. There may be some exceptions among some little monarchies, with which we are not acquainted. Of course, we do not here include the dictators. They are irregular. But no king, no emperor, no president, nor ruler of any nation of consequence other than ours has the power we grant to our President.

THE SUPREME ISSUE WE FACE

My friends, in view of the above facts, the real issue that we face this year is whether or not we shall take this law written into our fundamental charter, the Constitution, written there after one hundred years' fighting on a thousand moral battle fields, written there at a tremendous cost of labors, and toils, and heartaches, and sacrifice, sometimes even to their life blood, by the heroes of righteousness sweeping down the history of our Nation; written there in defense of the childhood of our land, of the womanhood of our land, and of the homes. To the sons and daughters of these heroes of righteousness inheriting the blessing of this greatest law ever written upon the statutes at such a tremendous price the question is: Shall we prove ungrateful to those who won this victory by now laying the law into the hands of the most powerful ruler in all the world to do with it as he pleases, knowing beforehand that his supreme wish is to destroy that law?

In view of this issue, the real issue of to-day, I repeat with emphasis, when they have laid their plans to put the friend of the bootleggers into the White House and ask you and me to O. K. those plans at the ballot box, if you and I are more loyal to our country than we are to our party, truer to our God who holds the destiny of nations in His hands than we are to the petty politicians who will trade our country for a mess of pottage or a place at the "pie counter," then you and I will refuse to O. K. their plans. Our supreme duty is first to our country!

HON. F. M. SIMMONS

Mr. McKELLAR. Mr. President, yesterday an article was printed concerning my splendid friend, Senator F. M. SIMMONS, and on May 26, 1928, an editorial was published about Senator SIMMONS in the Winston-Salem Journal. Both articles pay him richly deserved compliments; and I ask unanimous consent to have them printed in the RECORD.

The PRESIDENT pro tempore. Without objection, it is so ordered.

The matter referred to is here printed, as follows:

WASHINGTON BUREAU,
NORTH CAROLINA ASSOCIATION OF AFTERNOON DAILIES.

By Robert M. Lynn

WASHINGTON, D. C., May —.—In one of its aspects the remarkable address of Senator SIMMONS, of North Carolina, on the subject of Gov-

ernor Smith's candidacy has not been written about. That aspect was the exposure of the speaker's inner self, drawn from the depths of his being—a revelation of character to colleagues and associates so simply done, so unaffectedly and spontaneously disclosed, that the effect was dramatic. His contribution to the debate moved veteran Members profoundly. It reached them in the vital heart region under the surface of case-hardened exteriors which most of them have acquired and wear protectively.

One got the impression that here was a man casting to the winds every consideration except one, and that the lofty purpose to vindicate the dignity of manhood, come what might. In a moment it was quite apparent that the speaker was setting out to unburden his mind and heart of things which had made him suffer—things which the voice of prudence selfishly had admonished him to keep buried in his soul that worldly profit might be his portion.

It might be likened to the breaking up of the great deep of a tortured soul, long silent in perhaps mistaken loyalty to others, with elemental inner voices crying out against compromise in a great crisis which, real or fancied, his judgment convinced him was at hand. When he arose to speak it is open to question whether Senator SIMMONS intended to so utterly lay bare his most profound convictions upon the subject under debate. It easily may be that in the stress of emotion long restrained he found himself under the imperative urge of his finest instincts to vindicate essential character.

Looking back over the speech it does not appear to have been an attempt at oratorical effect. It is eloquent, but the eloquence is of that rare type where the moving effect upon listeners is produced by the evident sincerity of the speaker and where one senses unaffected, unconscious revelation of the very life of a good man. The comparatively brief address not only informed the Senate why Senator SIMMONS does not indorse the aspirations of Governor Smith. It did this also: It drew aside the curtain and permitted a glimpse of the world into which the speaker was born, with its ideals, its philosophy of government and politics, and, too, its preconceptions or prejudices. It made plain how the orator came by his convictions and established their verity.

Long after SIMMONS's arraignment of Smith has passed out of mind, Senators will remember the speech because it revealed to them the real character of the man. And its admirable quality made its own appeal.

The writer listened to the Nation's champion spellers, boys and girls, one day last week. Among the eager young contestants was an 11-year-old girl from the West. She proved a splendid speller, though she did not win the first prize. But her spelling will not be remembered by the audience. The child had a marvelously sweet voice. Whenever the word came round to her the whole audience would listen in rapturous silence while vocal melody rippled through the hall. The charm was in the voice, in the pronunciation of the word and of each letter as the child spelled it through. We were glad when she spelled the word correctly, but chiefly because it insured our hearing her spell another. Interest in her correct spelling was incidental. The voice revealed character, and the listening company took the charming child into their hearts.

[Editorial from the Winston-Salem (N. C.) Journal of April 26, 1928]

AN IMMORTAL SPEECH

Senator SIMMONS has had too much experience to be merely elated at the hearty reception accorded his already famous address in the Senate Wednesday. But the veteran legislator is no doubt deeply moved by the favorable reaction that has followed the deliverance of that stirring speech. If the candidacy of Governor Smith for the Democratic presidential nomination is defeated in North Carolina, that result will be due in no slight degree to the masterful analysis of the situation presented by the senior Senator on the floor of the Senate. That analysis constitutes perhaps the most effective campaign document that the opponents of Governor Smith possess.

Echoes from Washington indicate that the speech by Senator SIMMONS was easily the masterpiece of this session of Congress. Delivered with feeling and earnest conviction, the address was wholly free from invective, tirade, personal reflections, scathing abuse, and all the other objectionable features with which some speakers seek to adorn their outbursts. The Senator impugned the motives of no one, called no one a liar, and laid nasty charges and mean accusations at the feet of no one.

The only regrettable feature in connection with the Simmons speech is the circumstance that it was not delivered sooner in the Senate. But even as it is, it will prove a powerful factor in the precinct meetings to be held to-day throughout the State. Senator SIMMONS defined the grounds for his opposition to Governor Smith as the record of Tammany and the avowed "wet" character of Tammany's presidential candidate. With these two facts as the backbone of his remarks, he delivered the now immortal address delineating his views on the Smith question.

Senator SIMMONS sounded a high note of idealism when he declared that he would give up willingly all his property and every one of the numerous honors which the people of North Carolina have heaped upon him rather than see Tammany succeed in having its candidate invested with the mantle of the party presidential nomination. This assertion was no mere gesture. It had the quality of sincerity and genuineness that wins men. That is why his speech is being acclaimed as the masterpiece of all the contributions that have been made to the discussion of the issues in the present presidential campaign.

After quoting the immortal declaration of Senator SIMMONS, the News and Observer says of it:

"No North Carolinian, whose heart is in the right place, no matter what his presidential preference may be, can read the above declaration by the senior Senator from North Carolina without involuntary admiration and respect. It is the sincere declaration of a man grown gray in public service, and honorable public service, betrayed and flouted by men who without his help would have held no public position, who is animated by the spirit of Luther: 'I can do no otherwise, God help me.'"

FARM RELIEF

Mr. DILL. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the New York World of Saturday, May 26, 1928, with reference to the McNary-Haugen bill.

The PRESIDENT pro tempore. Without objection, it is so ordered.

The matter referred to is here printed, as follows:

THE TERMS: UNCONDITIONAL SURRENDER

Mr. Coolidge has never acted more boldly than when he put his name to the message vetoing the McNary-Haugen bill. This message is not a mere veto of an unworkable and unsound measure. It is an uncompromising defiance of the whole philosophy of the farm bloc. Mr. Coolidge was not content to reject the McNary-Haugen bill as it is written. He went far beyond that and took the occasion to denounce the principles for which the agrarian wing of his own party has fought. The message is a declaration that the Coolidge-Mellon-Hoover wing of the Republican Party will not permit the agricultural producer to obtain governmental privileges equivalent with the governmental privileges enjoyed by industrial producers.

The President is perfectly uncompromising in his position. He intends to maintain high protection for industry and he does not intend to give agriculture its equivalent. He does not offer the farm bloc any alternative even to save their faces. He orders them to surrender and to abandon their cause. He tells them that their ideas are a "Preposterous economic and commercial fallacy," that their proposals are "futile," that they are "repugnant" to "the spirit of our institutions," that they are "naive," "cumbersome and crudely camouflaged," and so on and so on. He is not content to veto the McNary-Haugen bill. He insists upon holding up those who voted for it to contempt. He not only rejects the measure, he humiliates its sponsors.

If the Republicans of the farm bloc submit at Kansas City, allow the platform to indorse the philosophy of this message, and consent to the nomination of Mr. Hoover on such a platform, they will acknowledge that they have ceased to count in the councils of their party. And if after that the Republican candidate is elected the Coolidge-Mellon-Hoover wing of the party will have demonstrated what it now believes to be the fact, that the western Republicans are of so little real importance that it is not even necessary to be courteous to them. Mr. Coolidge has taken the position that the faction devoted to protected big business must rule the Republican Party. The leaders of the farm bloc are offered no quarter. They can fight or they can surrender. Mr. Coolidge has staked the immediate future of his party on the theory that they will surrender.

They usually do surrender, and nobody is farseeing enough to say now whether they are strong enough and resolute enough to withstand the overwhelming political force which the administration wields. But whether they fight or surrender, one thing is clear. The historic alliance between eastern industry and western agriculture which began with the first election of Abraham Lincoln is no longer an alliance of equals. The industrial faction has taken charge of the party and governs it in its own interest. The agrarian faction is a second-rate collection of camp followers with preposterous, futile, and un-American notions in their heads.

No doubt Mr. Coolidge and his supporters would have preferred to avoid the necessity for such a sharp declaration that they mean to rule the Republican Party. They would as politicians have preferred to rule the party without having openly to defy so important a section of their constituency. But they were forced into a situation by the second passage of the McNary-Haugen bill where they had to choose between defying the farm bloc and losing the confidence of their industrial supporters. For years they neglected the agrarians. For years their attitude toward the claims of agriculture has been negative. They have had clear notions as to what was wrong in the remedies proposed, but no clear notions and no action in the wrongs which the remedies were de-

signed to correct. As a result the farm bloc has developed an independent philosophy and independent leadership which has now come into irreconcilable conflict with Coolidge Republicanism.

That would not have happened had Mr. Coolidge's sympathies been broader than Mellonism. There has been plenty of time and plenty of opportunity for a statesmanship which recognized that an equalization of privileges is in the interest not only of agriculture but of industry as well. But for such statesmanship there was needed a man who could see over the heads of Pennsylvania Republicans like Mr. Mellon and of Massachusetts textile manufacturers like Chairman Butler, a man who, though a protectionist, was not a cast-iron protectionist of the narrowest sort. Mr. Coolidge is not such a man, and the result is that he has brought his party to a pass where it must either reject his leadership or go before the country naked by proclaiming itself the party of special privileges to eastern big business.

GOV. ALFRED E. SMITH

Mr. EDWARDS. Mr. President, I ask unanimous consent to have printed in the RECORD a brief item appearing in the New York Times of March 4, 1928, with reference to Gov. Alfred E. Smith.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, March 4, 1928]

HUGHES PAYS TRIBUTE TO GOV. ALFRED E. SMITH

Charles Evans Hughes, president of the city bar association, in presenting Gov. Alfred E. Smith to the members of that association yesterday described him as not only holder of the highest office in the State "but as one who represents to us the expert in government and, I might say, a master in the science of politics." Mr. Hughes further said:

"If we had the customs of other lands, he would long ago have been elevated to the peerage. We would have started him, perhaps, as Baron Oliver. Then later we would have made him the Earl of Manhattan, and finally the Duke of Albany. But we do better than that. He long since became a member of high distinction of the fine aristocracy of public service—the American peerage. We have watched him, some of us carefully, all with fascination. The title that he holds is the proudest title that any American can hold, because it is a title to the esteem and affection of his fellow citizens."

INTERPARLIAMENTARY UNION

Mr. BORAH. From the Committee on Foreign Relations I report with an amendment the bill (H. R. 13930) to authorize an appropriation for the American group of the Interparliamentary Union. I ask for the immediate consideration of the bill.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill.

The amendment was, in lines 5 and 6, to strike out the words "authorized to be."

The amendment was agreed to.

The bill was reported to the Senate as amended, and the amendment was concurred in.

The amendment was ordered to be engrossed and the bill to be read a third time.

The bill was read the third time and passed.

The title was amended so as to read: "A bill making an appropriation for the American group of the Interparliamentary Union."

BOULDER DAM

Mr. ASHURST. Mr. President, during the heat and sensation of the debate on the Boulder Dam bill at an early hour this morning I used some caustic verbiage toward the Senator from New York [Mr. COPELAND] and the Senator from Iowa [Mr. BROOKHART] whilst they respectively occupied the Chair. I now perceive that these expressions were offensive, and not justified. I probably could whisper a secret apology into their ears, but that would not satisfy me, and should not satisfy them; and I now, therefore, in the open Senate, in the place where the offensive language was used, tender to each of them my sincere apology.

Mr. COPELAND. Mr. President, I will detain the Senate but a moment to say the few words I want to say. I want to thank the senior Senator from Arizona [Mr. ASHURST] for his very manly statement. As far as I am concerned, I have no feeling about the matter. The Senator knows we all love him. I love him, and my hope is that he will be reelected to succeed himself. If the people of Arizona are at all appreciative of noble service, they will send him back, because he has fought valiantly for his State on all occasions, and especially on this one.

Mr. ASHURST. Mr. President, I can reciprocate the statement of the Senator very heartily.

POST-OFFICE CONTRACTORS

The PRESIDENT pro tempore. The Chair, in his capacity as chairman of the Committee on Post Offices and Post Roads, reports back favorably from the Committee on Post Offices and Post Roads the bill (H. R. 12952) to amend the act entitled "An act for the relief of contractors and subcontractors for the post offices and other buildings and work under the supervision of the Treasury Department, and for other purposes," and he calls the attention of the senior Senator from Georgia [Mr. HARRIS] to the bill.

Mr. HARRIS. Mr. President, this bill is reported unanimously by the Committee on Post Offices and Post Roads, and I hope there will be no objection to its passage.

There being no objection, the Senate as in Committee of the Whole, proceeded to consider the bill.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

GUSTAVE HOFFMAN

The PRESIDENT pro tempore Still acting in his senatorial capacity, the Chair reports back favorably from the Committee on Post Offices and Post Roads the bill (S. 4588) for the relief of Gustave Hoffman, to which he calls the attention of the Senator from Minnesota.

Mr. SHIPSTEAD. Mr. President, I ask for the immediate consideration of the bill.

The PRESIDENT pro tempore. Is there objection?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill.

Mr. REED of Pennsylvania. Let the bill be read.

The PRESIDENT pro tempore. The bill will be read if the Senator requests, but the Chair will state that it is a bill which has already passed the Senate in a different form.

The bill was read, as follows:

Be it enacted, etc., That notwithstanding the provisions and limitations of the act entitled "An act to amend the act entitled 'An act for the retirement of employees in the classified civil service, and for other purposes,' approved May 22, 1920, and acts in amendment thereof," approved July 3, 1926, as amended, in respect of eligibility for retirement, the Commissioner of Pensions is authorized and directed to pay to Gustave Hoffman, formerly a letter carrier in the Postal Service at St. Paul, Minn., an annuity computed as provided in section 4 of such act of July 3, 1926, as amended, in the same manner as if he had continued in the service after May 2, 1917, until the date he would have been eligible for retirement. Payment of such annuity shall date from the passage of this act.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

CAPT. LOUIS C. BRINTON

Mr. FLETCHER. Mr. President, I ask unanimous consent to discharge the Committee on Claims from the further consideration of the bill (H. R. 7492) for the relief of Capt. Louis C. Brinton, and I ask for the immediate consideration of the bill.

The PRESIDENT pro tempore. Is there objection to the request of the Senator from Florida? The Chair hears none, and the committee is discharged.

Is there objection to the request of the Senator that the Senate proceed to the immediate consideration of the bill?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

WHITE RIVER BRIDGE, ARKANSAS

Mr. SHEPPARD. From the Committee on Commerce, I report back favorably the bill (H. R. 13108), granting the consent of Congress to the State Highway Commission of Arkansas to construct, maintain, and operate a toll bridge across the White River at or near Newport.

Mr. ROBINSON of Arkansas. I ask for the immediate consideration of the bill.

The PRESIDENT pro tempore. Is there objection?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

HARRIMAN GEOGRAPHIC CODE SYSTEM

Mr. BINGHAM presented the views of a minority of the Select Joint Committee on the Harriman Geographic Code System, appointed under the provisions of Public Resolution No. 70, Sixty-ninth Congress, approved March 4, 1927, which were referred to the Committee on Printing and ordered to be printed as part 2 of Senate Document No. 159.

INVESTIGATION OF THE TARIFF COMMISSION

Mr. ROBINSON of Arkansas. Mr. President, I desire to present the report (Rept. No. 1325, pt. 1) of the select committee on the investigation of the Tariff Commission, appointed pursuant to Senate Resolution 162, Sixty-ninth Congress, first session. I will not attempt now to discuss the report, but will take occasion to do so early in the next session. I submit with the report certain testimony taken by the committee, and ask that the report be printed.

The PRESIDENT pro tempore. Does the Senator wish to have it printed as a document or in the RECORD?

Mr. ROBINSON of Arkansas. I ask that it be printed in the RECORD.

The PRESIDENT pro tempore. Without objection, it is so ordered.

The report is as follows:

To the Senate of the United States:

The select committee of the Senate organized under Senate resolution 162 (69th Cong., 1st sess.) respectfully submits its report as follows:

The Senate resolution creating this select committee and defining its powers and duties is as follows:

"*Resolved,* That a special committee composed of five Senators, three of whom shall be members of the majority (and include one who is a Progressive Republican), and two of whom shall be members of the minority, said committee to be appointed by the Vice President, is hereby authorized and directed to investigate the manner in which section 315 (the flexible provision) of the tariff act of 1922 has been and is being administered. The inquiry shall have a particular reference to the regulations and procedure of the Tariff Commission, the powers exercised and the functions performed by said commission, and to the institution, investigation, hearing, and decision of cases arising under said section.

"Said inquiry shall also comprehend the agents and processes employed by the Tariff Commission in proceedings to ascertain the difference in costs of productions in the United States and in competing countries, as well as the method of ascertaining which country constitues the principal competing country within the meaning of said tariff act of 1922.

"The committee may inquire into any and all other facts, circumstances, and proceedings which it deems relevant in arriving at an accurate conclusion touching the operation and administration of the tariff laws. The committee shall also investigate the appointment of members of said commission and report to the Senate whether any attempt has been made to influence the official action of members of said commission by any official of the Government or other person or persons; and if so, what were the means or methods so used?

"The committee shall promptly report its proceedings, findings, and recommendations to the Senate."

By subsequent resolution the Senate continued until the end of the present Congress the authority of the committee and made available for its use all funds remaining unexpended.

EVIDENCE

The evidence has been transcribed and printed temporarily in 10 parts and consists of 1,461 pages of printed matter. An index, which is believed to be adequate for a full examination of the record, was prepared at the request of the committee under the supervision of Mr. E. P. Costigan, until lately a member of the United States Tariff Commission. This index with the testimony is submitted to the Senate as a part of this report.

BRIEF SUMMARY OF TARIFF COMMISSION HISTORY

It appears from an examination of the hearings before the select committee that as early as 1865 a revenue commission functioned in recommending changes in revenue laws and in advising modifications in tariff laws. From 1866 to 1870 the Commissioner of Revenue, Hon. David A. Wells, was authorized to report facts and suggest changes in the revenue laws.

In 1882 a temporary Tariff Commission was created by Congress. This commission consisted of nine commissioners, who held hearings at various places in the United States, and submitted to the Congress in 1882 recommendations for tariff legislation. The commission expired and Congress took no immediate action, but it has been asserted that the tariff act of 1883 was impressed with the work of the commission.

From 1888 to 1891 studies relating to the cost of production were carried on by the Department of Labor, particularly with reference to iron, steel, glass, textiles, coal, and coke.

The tariff act of 1909 authorized the President to "employ such persons as might be required" to determine whether other governments were unduly discriminating against our commerce.

The board appointed by President Taft first consisted of three members and later five. It collected and reported to Congress information on various schedules, and in 1912 ceased to function for lack of appropriation.

In 1913 a division in the Bureau of Foreign and Domestic Commerce known as the cost of production division was established and conducted studies on various commodities and schedules pertaining to the tariff. In the meantime sentiment in favor of the creation of a permanent tariff commission had been growing and found expression in the platforms of the various political parties.

THE TARIFF COMMISSION

By title 7 of the revenue act of 1916, the United States Tariff Commission was created with power to investigate and report upon tariff regulations between this and foreign countries. The commission was also authorized to report on special subjects when requested by the President, the Ways and Means Committee of the House, the Finance Committee of the Senate, or either branch of Congress.

For a full definition of the powers of the commission as defined in the act of 1916 see pages 249–250.

For information respecting the personnel and changes in the early tariff history see pages 270–271 of the hearings.

FLEXIBLE PROVISION OF 1922

The origin of the flexible provision is stated in the testimony by Mr. Page, a former member of the commission (p. 40 of the hearings), to have been in a conference at the White House during Mr. Harding's administration. There had been previous discussion of the subject by various Members of the Congress. When the conference occurred the tariff act had passed the House of Representatives and was in the Senate. Mr. Page made the following among other statements:

"Chairman ROBINSON. What occurred at the conference at the White House to which you have referred?

"Mr. PAGE. There was a discussion of the expediency of eliminating from the act the proposal to base duties upon domestic rather than upon foreign values. At least the press had been approximately unanimous in opposing that provision. The difficulties of administration, the confusion that would arise from the change, had been impressed upon the members of the Finance Committee of the Senate, and they felt that if something could be substituted for it which would accomplish the purpose that Members of the House had had in mind in adopting that provision, it would improve the act, and it would be desirable, both as an economic measure and likewise for the political impression that it would make upon the country.

"Senator LA FOLLETTE. May I ask who were present at the conference, if you remember?

"Mr. PAGE. I can not be certain of all those who were present. All of the gentlemen who were at that time members of the Tariff Commission were present. Senator SMOOT was present. Mr. Hoover was present. Whether there were others at the time, I do not remember.

"Chairman ROBINSON. Was the President there?

"Mr. PAGE. The President was there.

"Chairman ROBINSON. Were there any members of the Committee on Ways and Means of the House of Representatives present?

"Mr. PAGE. There were none.

"Senator BRUCE. Who was President then?

"Mr. PAGE. President Harding."

This conference was held November 28, 1921. A draft was prepared at the suggestion of President Harding. (Pp. 258, 259 of the hearings.)

It seems from the testimony that the general expectation as to the manner in which the flexible provision (sec. 315 of the act of 1922) would operate would be to result in reductions rather than increases. The present chairman of the Finance Committee, who was actively connected with the preparation of the flexible provision, said, as appears at pages 1192, 1193 of the CONGRESSIONAL RECORD for August 10, 1922:

"I think the Senator has heard me make the statement before on the floor of the Senate that if the President is given this power I think there will be many, many more occasions when he will exercise it in lowering rates than in increasing them; in fact, if the conditions become normal, I expect the President of the United States to lower, I was going to say, the majority of rates."

Objections were urged to the flexible provision on the ground that section 315 conferred on the President legislative powers and constituted an abdication by Congress of its authority. Other grounds of opposition were presented sounding in questions of public policy. (Pp. 260, 261 of the hearings.)

ANALYSIS OF SECTION 315

It is believed that a fair analysis of section 315 appears in the hearings at page 264.

The section provides that the President, after investigation showing the need therefor, may increase or decrease rates of duty and change the classification of articles so as to equalize the cost of production in the United States and the principal competing countries.

If such cost can not be equalized in that way, the President may substitute as a basis of assessing ad valorem duties the selling price of competitive articles in all the principal markets in place of the foreign market value of the imported article. The President's power to increase rates is limited to 50 per cent and does not apply at all if the American price is substituted.

The incorporation of the flexible provision, section 315 of the tariff act of 1922, produced an important effect on the proceedings of the Tariff Commission. (P. 264 of the hearings.)

OPERATION OF FLEXIBLE PROVISION

Prolonged study has been devoted by the select committee to the manner in which the flexible provision has operated.

Former Commissioner Page anticipated its failure and resigned from the commission in part because he did not believe the commission could function to advantage under it. (Page 39 of the hearings.)

Doctor Taussig expressed in his testimony the opinion that the flexible provisions imposed a certain strain upon the commission, provoked pressure upon it by interested parties and invited the exertion of influence to secure a different character of personnel on the commission from that which might have served in the absence of the flexible provision. (Pages 7 and 32 of the hearings.)

Your committee believes that the evidence justifies the conclusion that the enactment of the flexible provision of the tariff worked a radical change in the functions actually performed by the commission. Since the passage of the act of 1922 and up until the hearings were concluded the commission devoted its labors largely, not to say almost exclusively, to the consideration of cases under the flexible provision with no substantial result of general importance to the public.

Controversies of such acute character arose in the commission that certain of its members became suspicious of the good faith of others and bitter disputes, sometimes personal, occurred, resulting about the time this select committee was created in a partial breakdown and a threatened complete breakdown of the Tariff Commission. It is not the purpose of your select committee to review the details of these sharp differences within the commission, but it is apparent to the committee that the commission as a body was not functioning in an impartial or quasi judicial manner, as we believe it was the intention of Congress that it should function. Some members who had come on the commission had formerly been the agents of business interests or enterprises directly concerned in the administration of the tariff laws, and we believe that these failed in a proper appreciation of the true functions of their office.

In the opinion of this select committee public confidence in the Tariff Commission was impaired by the appointment of members in the habit of appearing before congressional committees on behalf of proposed legislation; as, for instance, in the cases of Messrs. Marvin and Burgess, and by the refusal of Mr. Glassie to recuse himself in the sugar case when three fellow commissioners insisted that the interest of members of his family in the subject matter of the investigation should be held to disqualify him in that case.

The usefulness of the commission has been also diminished by the appointment of one or more members lacking in knowledge and training with respect to tariff subjects.

Without attempting in this report to analyze the various cases brought before the commission under the flexible provision of the tariff law, it seems sufficient to point out the fact that the flexible provision has resulted in increases by the Executive of important duties, and in no substantial reductions being made in important cases where the commission found facts justifying lower duties.

The cases for investigation instituted by the United States Tariff Commission for the purpose of section 315 (the flexible provision) of the act of 1922 with the findings regarded as warranted by members of the commission and the action of the President thereon as of June 9, 1927, when the hearings were concluded, are printed as Appendix "A" to this report. Up to March 19, 1928, comprising approximately six years of operation of the act of 1922 increases have been made in 19 cases, many of which are of relative importance, while only five decreased duties have been put into effect, all of them applying to commodities of unimportance, such as mill feed, live bobwhite quail, paint-brush handles, phenol, and cresylic acid.

Important cases resulting in no final action prolonged for a period ranging from four to five years, include sugar, cotton hosiery, linseed oil, halibut, and Canadian logs.

The constitutionality of the flexible provision of the act of 1922 was assailed in both Houses of Congress. It has, however, been decided in court proceedings. In the case of J. W. Hampton, jr. & Co., petitioner *v.* the United States, decided by the Supreme Court of the United States on the 9th of April, 1928, the court through Chief Justice Taft held that it constitutes a valid delegation of power on the part of the Congress.

The evidence shows that foreign manufacturers are reluctant, and in many instances refuse, to furnish to the commission the data essential to the successful and accurate operation of the formula, and even a commission ideally constituted would find it a difficult task in many cases to administer the act in a manner satisfactory to the public.

Commissioner Dennis attributed the unsatisfactory administration of the flexible provision largely to personnel and factional differences among the members of the commission (p. 139 of the hearings), and expressed the belief that the flexible provision should be retained. He believed that as the commission was then constituted the administration of the flexible provision was a failure (p. 140 of the hearings). He particularly complained as to the manner in which the lower duty cases had been dealt with by the commission (p. 140 of the hearings). For a description by Mr. Dennis of the wrangle which took place in the commission as then constituted see pages 193, 194, 198, etc.

Upon the whole record the select committee make the following recommendations for legislation. Members of the committee will probably present bills to carry out the same.

RECOMMENDATIONS

The committee recommends:

(1) That the flexible provisions of the tariff act of 1922, particularly section 315, be repealed.

Among others the following reasons are given to support this recommendation:

(a) Experience has not demonstrated the practical value of the provision. The administration of it has absorbed almost the entire time of the commission without corresponding benefits.

(b) It is impracticable for the President to devote the time and attention essential to the proper performance of the duties imposed upon him by the flexible tariff law. The Chief Executive is already overburdened with executive duties.

(c) Tariff making and revision under our Constitution are legislative duties, and to impose such responsibilities on the President as are carried in the flexible provision confuses legislative and executive responsibility.

(2) It is believed that the Tariff Commission should be made a congressional agency, and should recommend duties and report the same direct to the two Houses of Congress. Various plans for organization of the commission have been suggested. It should be accomplished in such a manner as to relieve the President of acting on the commission's reports, and to restore tariff rate making to the legislative branch of the Government.

(3) If the United States Tariff Commission is to be continued its prestige can only be restored and maintained by safeguarding against membership on the board of former representatives of special interests or organizations concerned directly with the work of the commission. Membership on the commission should be made attractive by liberal compensation and by expanding the powers of the body so that it may report at the beginning of each session of Congress information and recommendations.

(4) The findings and recommendations of the commission when reported to Congress should be made public.

Respectfully submitted.

JOS. T. ROBINSON.
WM. CABELL BRUCE.
ROBERT M. LA FOLLETTE, Jr.

Summary table of investigations instituted by the United States Tariff Commission for purposes of section 315 of the tariff act of 1922, showing the findings regarded as warranted by members of the commission and the action of the President thereon

FINAL REPORT SENT TO THE PRESIDENT

[Prepared as of June 9, 1927]

Investigation No.	Commodity	Date instituted	Instituted in response to—	Nature of request	Date of hearing	Report to President		Action by the President		Ad valorem equivalent based on foreign value [1 7 17]	
						Date of report	Findings regarded as warranted by members of commission	Nature of action	Date of proclamation or statement	Of rate of duty specified in act of 1922	Of new duty made effective by presidential proclamation
1	Oxalic acid	Mar. 27, 1923	Application and decrease.	Increase and decrease.	Nov. 5, 1923	Dec. 19, 1924	Marvin, Culbertson, Lewis, Costigan, Burgess, Glassie, concurred. Increase from 4 cents to 6 cents per pound.	Increase 4 cents to 6 cents per pound.	Dec. 29, 1924	81.63 per cent.	122.45 per cent.
2	Diethylbarbituric acid and derivatives (barbital or veronal).	do	do	Increase	Nov. 7, 1923	Nov. 6, 1924	Marvin, Culbertson, Lewis, Costigan, Burgess, Glassie, concurred. Existing rate of duty to be assessed on American selling price.	Basis of assessment changed to American selling price; no change in duty.	Nov. 14, 1924	25 per cent	96.68 per cent.
3	Barium dioxide	do	do	Increase and decrease.	Nov. 9, 1923	May 14, 1924	Marvin, Culbertson, Lewis, Costigan, Burgess, Glassie, concurred. Increase from 4 cents to 6 cents per pound.	Increase 4 cents to 6 cents per pound.	May 19, 1924	56.98 per cent.	85.47 per cent.
4	Casein	do	do	Decrease	Aug. 13, 14, 1923, Sept. 25, 1923, June 23, 1924.	Mar. 15, 1926	Marvin, Dennis, Glassie, Baldwin, Brossard, concurred. Data do not warrant change of duty. Conclusion, but not all reasons therefor, concurred in by Mr. Costigan.				
6	Potassium chlorate	do	do	Increase and decrease.	Nov. 14, 1923	Apr. 2, 1925	Marvin, Culbertson, Costigan, Burgess, Glassie, Dennis, concurred. Increase from 1½ cents to 2¼ cents per pound.	Increase 1½ cents to 2¼ cents per pound.	Apr. 11, 1925	40.87 per cent	61.31 per cent.
7	Sodium nitrite	do	do	Increase	Sept. 10, 26, 1923, Oct. 6, 1923.	Apr. 26, 1924	Marvin, Culbertson, Lewis, Costigan, Burgess, Glassie, concurred that facts warrant increase in rate from 3 cents to 4½ cents per pound.	Increase 3 cents to 4½ cents per pound.	May 6, 1924	69.77 per cent	104.65 per cent.
9	Iron in pigs	do	do	do	Apr. 20, 1926	Feb. 2, 1927	Marvin, Dennis, Glassie, Brossard, Lowell concurred. Increase from 75 cents to $1.125 per long ton. Costigan submitted separate statement; legal problem raised by use of invoice prices; doubts validity of findings as to principal competing country.	Increase 75 cents to $1.125 per ton.	Feb. 23, 1927	4.39 per cent	6.58 per cent
11	Paint-brush handles.	do	do	Decrease	July 17, 1923 Sept. 6, 1923.	Oct. 2, 1926	Dennis, Glassie, Brossard, Lowell, concurred facts warrant decrease from 33⅓ per cent to 16⅔ per cent ad valorem. Marvin and Costigan absent on official business.	Decrease, 33⅓ per cent to 16⅔ per cent.	Oct. 14, 1926	33⅓ per cent	16⅔ per cent.
12	Sugar	do	do	do	Jan. 15–18, 21–24, 1924.	July 31, 1924 [2] Aug. 1, 1924 [3]	Culbertson, Costigan, Lewis: Decrease on 96° sugar, from 2.202 cents to 1.54 cents per pound; on Cuban, 20 per cent less to 1.2307 cents.	Action postponed.	June 15, 1925		
					Mar. 27, 1924 Mar. 28, 1924	Nov. 14, 1923 [4] Nov. 17, 1924 [5]	Marvin, Burgess: Available data seem to warrant slight increase in duty; incompleteness of data render it impossible to determine amount. Glassie not participating.				
13	Cotton warp-knit fabric.	do	(6)		Nov. 16, 1923 [6]	June 12, 1925	Marvin, Glassie, Dennis: No change warranted. Costigan: Concurs in conclusions on grounds of inadequacy of data.	No change	Oct. 3, 1925		
14	Cotton warp-knit fabric gloves (knit on a warp-knitting machine).	do	Application.	Increase	Nov. 16, 1923	June 12, 1925	Marvin, Dennis, Glassie Embroidered: Basis of assessment to be changed to American selling price; rate from 75 per cent to 50 per cent. Unshrunk, under 40 loops: Existing rate of 50 per cent to be assessed on American selling price. Shrunk, single fold, or 40 loops per inch or over, not over 11 inches: Increase from $2.50 per dozen and 10 cents for each additional inch to $3.75 and 15 cents, respectively, subject to limitations of par. 915 that duty shall in no case be less than 40 or more than 75 per cent ad valorem. Having 2 folds or more, not over 11 inches: Increase from $3 per dozen and 10 cents for each additional inch, to $4.50 and 15 cents, respectively, subject to limitations of par. 915. Dennis: Concurs as to facts and conclusions, calls attention to changed conditions in competition. Costigan: No change warranted on basis of existing data. Submitted separate statement.	do	do		
15	Cotton hosiery	do	Application.	Increase	Nov. 20, 1923; Jan. 10, 11, 30, 1924.	Dec. 22, 1926	Report transmitted to President; not acted upon to date; according to established practice of commission, reports treated as confidential until released by President.				
16	Wall pockets	do	Increase	Application	July 24, 1923	Oct. 1, 1925	Marvin, Dennis, Glassie, Baldwin, Brossard, concurred data do not warrant action. Costigan absent.	No change	Oct. 3, 1925		

18	Linseed oil	May 4, 1923	do	Increase and decrease.	Mar. 5–7, 1924	Mar. 3, 1925	Under data then before the commission, following findings appear warranted; Marvin, Burgess, Glassie, decrease from 3.3 to 2.7 cents per pound; Culbertson, Costigan, decrease from 3.3 to 2.44 cents per pound; Lewis, decrease from 3.3 to 2.43 cents per pound.	Report returned to commission Feb. 6, 1926; additional information requested.			
24	Print rollers	do	do	Increase	Jan. 29, 1924; Feb. 4, 5, 1924.	Oct. 7, 1925 [8] Oct. 24, 1925 [9] Nov. 16, 1925 [10] Apr. 17, 1926 [11]	Marvin, Dennis, Glassie, Baldwin, Brossard: Increase from 60 to 72 per cent ad valorem. Costigan: additional data favored; existing data, if used, would indicate decrease to 57 per cent ad valorem.	Increase 60 to 72 per cent.	June 21, 1926	60 per cent	72 per cent.
25	Taximeters	do	do	do	Feb. 12, 26, 1924; Mar. 12, 1924.	Oct. 1, 1925 [12] Oct. 15, 1925 [13] Nov. 16, 1925 [14]	Marvin, Baldwin, Brossard: Basis of assessment changed to American selling price. Existing rate of $3 per meter and 45 per cent ad valorem changed to $3 per meter and 27.1 per cent ad valorem, assessed on American selling price (transportation not included). Dennis: Basis of assessment changed to American selling price. Existing rate of $3 per meter and 45 per cent changed to $3 per meter and 26.2 per cent ad valorem, assessed on American selling price (transportation included). Costigan: Data insufficient to justify change. Glassie: Absent on official business.	Basis of assessment changed to American selling price; rate changed from $3 per meter and 45 per cent ad valorem to $3 per meter and 27.1 per cent ad valorem.	Dec. 12, 1925	54.52 per cent	105.74 per cent.
33	Wheat and wheat products.	Nov. 14, 1923	do	do	Nov. 23, 27, 1923; Feb. 18, 19, 25, 26, 1924.	Mar. 4, 1924	Wheat: Marvin, Burgess, Glassie: Increase from 30 cents per bushel to 45 cents; Culbertson, Lewis, Costigan: Increase from 30 cents per bushel to 42 cents. Wheat flour, semolina, etc.: Marvin, Burgess, Glassie: Increase from 78 cents per 100 pounds to $1.11; Culbertson, Lewis, Costigan: Increase from 78 cents per 100 pounds to $1.04. Bran, shorts and by-product feeds: Decrease from 15 to 7½ per cent ad valorem. Commission concurred except Mr. Marvin, who appended statement against action on bran, shorts, and by-product feeds for lack of raw material costs.	Wheat increased from 30 cents to 42 cents per bushel; flour increased from 78 cents to $1.04 per 100 pounds; mill feeds decreased from 15 to 7½ per cent.	Mar. 7, 1924	Wheat, 30.58 per cent; flour, 30.56 per cent; mill feeds, 15 per cent.	Wheat, 42.91 per cent; flour, 40.75 per cent; mill feeds, 7½ per cent.
36	Gold leaf	Apr. 5, 1924	do	do	May 18, 28, 1925	July 22, 1925	Marvin, Dennis, Baldwin: Increase from 55 to 82½ cents per 100 leaves. Costigan: Decrease from 55 to 54 cents per 100 leaves.	Increased 55 to 82.5 cents per 100 leaves.	Feb. 23, 1927	46.89 per cent	70.33 per cent.
37	Men's sewed straw hats.	May 29, 1924	do	do	June 12, 1924; May 4, 1925; May 14–16, 1925.	July 17, 1925 [15] Feb. 4, 1926 [16]	Marvin, Dennis, Costigan, Glassie, Baldwin, signed report. Costigan added statement in part concurring and in part dissenting. Valued at not over $9.50 per dozen: Marvin, Glassie: Basis of assessment changed to American selling price; rate changed from 60 to 50 per cent ad valorem (transportation not included). Costigan, Dennis, Baldwin: Increase from 60 to 88 per cent ad valorem (transportation included). Valued at over $9.50 per dozen: Marvin, Glassie: Increase from 60 to 69 per cent ad valorem (transportation not included). Costigan, Dennis: Decrease from 60 to 55 per cent ad valorem (transportation included). Costigan: Separate statement.	Increase from 60 to 88 per cent ad valorem on straw hats valued at $9.50 or less per dozen.	Feb. 12, 1926	Under $9.50, 60 per cent. Over $9.50, 60 per cent.	Under $9.50, 88 per cent. Over $9.50, 60 per cent.
38	Butter	July 14, 1924	Senate resolution.	Increase	Apr. 21, 22, 1925	Feb. 25, 1926 [18] Mar. 2, 1926 [19]	Marvin, Glassie, Baldwin: Increase from 8 to 11.9 cents per pound. Brossard: Increase from 8 to 12 cents per pound (statutory limit). Dennis and Costigan: Submitted separate statements, taking exception to exclusion of centralizer costs and various other matters, and find no change of duty warranted.	Increase from 8 to 12 cents per pound.	Mar. 6, 1926	19.97 per cent	29.96 per cent.
39	Swiss cheese	Aug. 9, 1924	President	do	Dec. 11, 1925	Apr. 16, 1927	Marvin, Dennis, Brossard, Lowell: Increase from 5 cents per pound but not less than 25 per cent ad valorem to 7½ cents per pound but not less than 37½ per cent ad valorem. Costigan: Data insufficient.	Increase from 5 cents per pound but not less than 25 per cent ad valorem to 7½ cents per pound but not less than 37½ per cent ad valorem.	June 8, 1927	25 per cent

31	Amino acids, etc	do	do	do							

[1] Ad valorem equivalents are based on average of the unit values for the months preceding and following the change of rate. Exceptions are as follows: Barbital, new duty computed upon the value of imports for the entire year 1925. Complete import statistics are not available for any month, but are available for the year. Potassium chlorate, equivalent of old and new duty computed on value of imports for June, 1925, the first month for which imports of potassium chlorate are reported separately. Iron in pigs, equivalent of old and new duty computed on value of imports for December, 1926.

[2] Final report by Culbertson, Lewis, and Costigan.

[3] Final report by Marvin and Burgess.

[4] Supplementary information, in response to President's request, by Marvin and Burgess.

[5] Supplementary information, in response to President's request, by Culbertson, Lewis, and Costigan.

[6] Extension of investigation No. 14.

[7] Ad valorem equivalents are based on average of the unit values for the months preceding and following the change of rate. Exceptions are as follows: Taximeters, old and new duty computed on value of imports for January, 1926, the first month in which imports of taximeters are reported separately. Gold leaf, equivalent of old and new duty computed on value of imports ($1.17 per 100 leaves) for November, 1926. December import figures were not used because the value ($0.71 per 100 leaves) was not representative of imports for the entire year, which averaged $1.08 per 100 leaves.

[8] Final report by Marvin, Dennis, Glassie, Baldwin, Brossard.

[9] Separate dissenting statement by Costigan.

[10] Report by Marvin, Glassie, Baldwin, Brossard, on dissenting statement of Costigan.

[11] Supplementary report by Marvin, Dennis, Glassie, Baldwin, Brossard, concerning transportation.

[12] Final report by Marvin, Dennis, Baldwin, Brossard.

[13] Separate dissenting statement of Costigan.

[14] Report by Marvin, Baldwin, Brossard, on dissenting statement of Costigan.

[15] Final report by Marvin, Costigan, Glassie, Dennis, Baldwin. Included a separate statement by Costigan.

[16] Report resubmitted to President together with statement on transportation. (Statement not printed as data contained therein are of confidential nature.)

[17] Ad valorem equivalents are based on average of the unit values for the months preceding and following the change of rate. Exceptions are as follows: Quail, equivalent of old and new duty computed on value of imports for February, 1926, the first month in which imports of quail are reported separately. Methanol, equivalent of old and new duty computed on value of imports for November, 1926

[18] Report by Marvin, Dennis, Glassie, Baldwin, Brossard; with comment by Dennis and memorandum by Costigan.

[19] Statement of Marvin, Glassie, Baldwin, and Brossard, and separate statement by Costigan.

Mr. REED of Pennsylvania subsequently submitted the following minority report (Rept. No. 1325, pt. 2):

Senate Resolution 162, Sixty-ninth Congress, first session

I can not agree with the foregoing recommendations. I agree, however, that the record of the Tariff Commission has been disappointing, and that its action has been so slow that the purposes of the law of 1922 have largely been frustrated. The reasons for this, in my judgment, have been three: First, a continued wrangle among the members of the commission upon almost every question coming up for decision, accompanied by great personal bitterness between some of the individuals involved. No commission, court, or legislature could function well under such conditions. Second, an honest disagreement within the commission as to the necessity of seeking direct evidence of foreign costs of manufacture from the books of the foreign manufacturers, instead of relying upon the natural inference that their cost must be less than the average of their factory invoice prices. Together with this, there has existed a disagreement as to the inclusion of transportation costs as an item in the calculation of comparative costs of production. Third, the fear of criticism from fellow members and from the public has led the members of the commission to aim at an extreme accuracy in cost data, with the result that by the time the information has been assembled and digested conditions have changed and the data have ceased to be correct.

Most of these difficulties have disappeared. Changes in the personnel of the commission have put an end to the bickering that has prevented efficient work in the past. The use of invoice prices as evidence of foreign costs, and the inclusion of transportation costs in comparing American and foreign costs of placing the same goods in the same American markets, have been settled by opinions of the Attorney General. It is hoped that this greater harmony in the commission, and this greater certainty in these principles of procedure, will lead to speedier conclusion of the cases under consideration. Neither the "flexible-tariff" provisions of the law of 1922 nor the commission itself, can fairly be judged until opportunity has been given to the commission to function under these changed conditions.

For these reasons, I do not favor any change in the law at the present time.

DAVID A. REED.

The views of former Senator James W. Wadsworth, jr., were subsequently set forth in the following letter to Senator REED of Pennsylvania:

I have read the report of the majority of the select committee appointed to investigate the Tariff Commission, as well as the minority report submitted by the Senator from Pennsylvania, Mr. REED, both reports having been printed in the CONGRESSIONAL RECORD of May 29, 1928. My knowledge of the exhaustive testimony taken by the select committee, of which I was at the time a member, and my recollection of the lengthy discussions which took place during the period of the investigation, impel me to concur in the views expressed by Senator REED in his minority report. As urged by him, and, indeed, as indicated in the majority report, the Tariff Commission was in no condition to undertake the functions assigned to it under the provisions of section 315 of the tariff act. I venture to say that no body of men, torn and distracted as was the Tariff Commission in the period following the enactment of section 315, could perform any important function much less one involving pioneering in a new field. Furthermore, in certain important particulars the law itself fails to be sufficiently explicit, with the result that much time was consumed in securing authoritative opinions for the guidance of the commission. Such delays can not always be anticipated by the legislative body responsible for the enactment of the law. That they have occurred in this case does not convince me that the principle of the law is unsound. Believing as I do that the flexible tariff provision can be administered successfully, and that such an administration would be highly beneficial to the country, I can not bring myself to subscribe to the contention that the effort must be abandoned. Section 315 should be given a decent chance, something it did not have during the period following its enactment. Substitute experience for inexperience, certainty of procedure for mere groping, and cooperation for strife, and we shall have established a useful governmental agency.

J. W. WADSWORTH, Jr.

Mr. LA FOLLETTE. Mr. President, I have no objection, as I am one of the signers of the report, but I ask unanimous consent that I may be permitted to file additional views on or before the 10th day of December, 1928.

The PRESIDENT pro tempore. Without objection, that order will be entered.

Mr. REED of Pennsylvania. Mr. President, I was a member of that committee, but have not signed the report, because I disagreed with a few of the statements in the report, and with most of the conclusions. Therefore I ask permission later in the day to file a report and have it printed in the RECORD immediately following the report submitted by the Senator from Arkansas.

The PRESIDENT pro tempore. Without objection, that order will be entered.

(See further discussion of this matter on page 10643.)

COLLECTION OF INDEBTEDNESS DUE UNITED STATES

Mr. NYE. Mr. President, from the Committee on Public Lands and Surveys I report back favorably without amendment the bill (S. 4514) to authorize the Secretary of War to purchase certain property and real estate, to protect the interests of the United States, conveyed by the Charleston Industrial Corporation of Charleston, W. Va., in trust to secure the payment of certain indebtedness due to the United States and I submit a report (No. 1322) thereon.

I ask for the immediate consideration of the bill.

The PRESIDENT pro tempore. Is there objection?

There being no objection, the Senate as in Committee of the Whole proceed to consider the bill, which was read, as follows:

Be it enacted, etc., That the Secretary of War be, and he is hereby, authorized and directed to bid at any receiver's sale which may be had at the order and direction of the United States District Court for the Southern District of West Virginia, and, if the Secretary of War deems necessary for the protection of the United States in the collection of the indebtedness due from the Charleston Industrial Corporation to the United States, to purchase at said sale any and all property that may be sold, which was conveyed to the Kanawha National Bank of Charleston, W. Va., by two certain trust instruments executed by the Charleston Industrial Corporation, dated September 16, 1922, and July 15, 1925, respectively, to secure the payment to the United States of certain indebtedness arising out of contracts with and the transfer of said property by the United States to the Charleston Industrial Corporation: *Provided, however,* That the amount so bid by the Secretary of War, and the price at and for which said property may be purchased, shall not exceed the amount that shall be due to the United States from said Charleston Industrial Corporation by reason of said indebtedness at the date of such sale.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

CHEROKEE INDIANS

Mr. THOMAS. Mr. President, on behalf of the Committee on Indian Affairs I report back favorably the bill (S. 4464) authorizing an expenditure of certain funds standing to the credit of the Cherokee Nation in the Treasury of the United States to be paid to one of the attorneys for the Cherokee Nation, and for other purposes. This is a local bill, affecting the Cherokee Tribe of Indians. Last night the House passed an identical bill, House bill 13753. I ask that that bill be substituted for the Senate bill, and also for immediate consideration.

The PRESIDENT pro tempore. Is there objection to substituting House bill 13753 for Senate bill 4464? The Chair hears none, and it is so ordered. Is there objection to the request for immediate consideration?

There being no objection, the bill was read twice by its title, the Senate, as in Committee of the Whole, proceeded to consider the bill (H. R. 13753) authorizing an expenditure of certain funds standing to the credit of the Cherokee Nation in the Treasury of the United States to be paid to one of the attorneys for the Cherokee Nation, and for other purposes.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

POINTE AUX HERBES LIGHTHOUSE RESERVATION

Mr. RANSDELL. Mr. President, from the Senate Committee on Claims I report back favorably the bill (H. R. 13644), authorizing the Secretary of Commerce to sell at private sale a portion of the Pointe aux Herbes Lighthouse Reservation, La. This bill has passed the House. I ask for immediate consideration.

There being no objection, the Senate as in Committee of the Whole, proceeded to consider the bill.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

FARM RELIEF

Mr. McKELLAR. Mr. President, Gov. John J. Cox, of Tennessee, delivered a most excellent speech on farm relief before the Farm Board of Sullivan County, at Pleasantville, Tenn., May 24, 1928. I ask unanimous consent to print this speech in the RECORD.

The PRESIDENT pro tempore. Without objection, it is so ordered.

The matter referred to is here printed, as follows:

Two thousand five hundred years ago, 600 years before Christ was born, Aesop, the wisest counselor of all time, the adviser of Croesus, the richest man of the ancient world, advised farmers to organize in his great fable of the old farmer, his warring sons, and the bundle of sticks. This wise man at that early date saw the necessity of organization for the protection of farmers. Through all the centuries since farmers have made every effort to organize, but each effort has been a failure. Their vast numbers, their diversity of interest, seems to make organization for relief impossible. Yet when Congress votes the farmer relief the President vetoes the measure and advises farmers to organize.

Every suggestion the President makes for farm relief, except curtailing middlemen, would, if carried into effect, raise the price of bread and meat to the poor. Statistics show the balance of trade in favor of this country to be $870,000,000 per annum. The export of farm products to be $1,870,000,000 per annum. The $870,000,000 balance has made this Nation the richest and most prosperous on earth.

But for the farmer the balance would be against us $1,000,000,000 per year and would bankrupt our Nation. The farmer has made this wealth for our people. In doing so he has bankrupted himself. The larger the farmer the more complete the bankruptcy.

The President says if the farmer is given a subsidy all other interests will ask for subsidies. They are already getting subsidies—manufacturers, railroads, banks, utilities—65 per cent receiving, 35 per cent, the farm, paying. The farmer feeds and clothes us, creates our wealth; and if subsidies are handed out, the farmer should stand first in line. Is there no relief for the farmer's son? Paying subsidies to others has brought his downfall. I am opposed to all subsidies, but all must receive subsidies before all are denied subsidies. This is a Government by majority—65 beats 35.

The President says the farm relief bill is unconstitutional. A constitutional way has been found for relief to all other interests.

It is proposed to lend more money to the farmer. He already owes more than he can pay. When I was a boy, it was considered a disgrace to mortgage your farm. Now, there are few productive farms not mortgaged. Farmers are no longer buying farms for homes. If farmers do not get relief their mortgages will soon be foreclosed. The mortgagees will become the owners. Then, less than 10 men will meet in one room and fix the price of farm products without reference to supply and demand, seed time and harvest, sunshine and shower, drought and pests. Would it not be better to levy a tax on wealth, wealth created by farmers, and pay a subsidy to the farmer than to permit a condition that will raise the cost of living on the common people?

If the financial interests take over the farms, peasant farming will be established in this country with overseers and foremen. Peasantry destroys patriotism. The hired man does not fall in love with the soil. The recruiting stations for our captains of industry will pass forever. The great naturalist, John Burroughs, said:

"No race that does not take to the soil can long hold its country. In the struggle for survival, it will lose its country to some incoming race that loves the soil."

The farmer is looking to the Senate as his reliance. In my opinion, the wisest provision of our National Constitution is the one limiting the membership of the Senate to two Members from each State. Predatory interest can never control a majority of the States. Already has the manhood of the Senate stopped at the outer door the representatives of such interest. It will continue to do so.

The farmer is told that his relief lies in tariff reduction. I believe in tariff reform, but, living at Bristol, surrounded by Kingsport, Johnson City, Bemberg, Glantzstoff, Elizabethtown, Appalachia, and Damascus—Bristol, the gateway to the great Tennessee Valley that possesses one-fifth of the potential water power of America, with the manufacturing North turning to the South, with the starvation labor of Europe anxious to compete with our labor that has been the farmer's loyal friend—I deem this an inopportune time to tinker with the tariff.

You ask, "When shall it be done?" And I answer, when some Ford shall take over Muscle Shoals, develop Cove Creek, and other great water power, make this valley the Ruhr of America—the workshop of the world—produce a better article at a lower price, capture the markets of the world, the tariff wall will fall of its own weight. The only tariff we shall need then will be to protect our farmers against the cheap wheat, corn, and meats of Australia and South America.

When President Coolidge vetoed the McNary-Haugen bill, he raised the greatest campaign issue that has been fought in this country since 1860. That issue was the slavery of the black man. It carried Abe Lincoln into the White House. The campaign issue of 1928 will be the slavery of the white man, the farmer, and it will sweep the Democrats into power.

LAKE CHAMPLAIN BRIDGE

Mr. DALE. Mr. President, I report back favorably from the Committee on Commerce the following bills, for which I ask immediate consideration.

The PRESIDENT pro tempore. Is there objection to the present consideration of the first bill reported?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill (S. 4560) authorizing Elisha N. Goodsell, his heirs, legal representatives, and assigns, to construct, maintain, and operate a bridge across Lake Champlain at or near Rouses Point, N. Y., and a point at or near Alburgh, Vt. (Rept. No. 1323), which had been reported from the Committee on Commerce with an amendment.

The amendment was, on page 1, line 9, after the word "navigation," to insert "between a point"; on page 2, line 1, before the word "point," to insert "and," so as to make the bill read:

Be it enacted, etc., That in order to facilitate interstate commerce, improve the postal service, and provide for military and other purposes, Elisha N. Goodsell, of Alburgh, Vt., his heirs, legal representatives, and assigns, be, and he is hereby, authorized to construct, maintain, and operate a bridge and approaches thereto across Lake Champlain, at a point suitable to the interests of navigation, between a point at or near Rouses Point, N. Y., and a point at or near Alburgh, Vt., in accordance with the provisions of the act entitled "An act to regulate the construction of bridges over navigable waters," approved March 23, 1906, and subject to the conditions and limitations contained in this act.

SEC. 2. There is hereby conferred upon Elisha N. Goodsell, his heirs, legal representatives, and assigns, all such rights and powers to enter upon lands and to acquire, condemn, occupy, possess, and use real estate and other property needed for the location, construction, operation, and maintenance of such bridge and its approaches as are possessed by railroad corporations for railroad purposes or by bridge corporations for bridge purposes in the State in which such real estate or other property is situated, upon making just compensation therefor, to be ascertained and paid according to the laws of such State, and the proceedings therefor shall be the same as in condemnation or expropriation of property for public purposes in such State.

SEC. 3. The said Elisha N. Goodsell, his heirs, legal representatives, and assigns are hereby authorized to fix and charge tolls for transit over such bridge, and the rates of toll so fixed shall be the legal rates until changed by the Secretary of War under the authority contained in the act of March 23, 1906.

SEC. 4. After the completion of such bridge, as determined by the Secretary of War, either the State of New York, the State of Vermont, any public agency or political subdivision of either of such States within or adjoining which any part of such bridge is located, or any two or more of them jointly, may at any time acquire and take over all right, title, and interest in such bridge and its approaches and any interest in real property necessary therefor, by purchase or condemnation or expropriation, in accordance with the laws of either of such States governing the acquisition of private property for public purposes by condemnation or expropriation. If at any time after the expiration of 20 years after the completion of such bridge the same is acquired by condemnation or expropriation, the amount of damages or compensation to be allowed shall not include good will, going value, or prospective revenues or profits, but shall be limited to the sum of (1) the actual cost of constructing such bridge and its approaches, less a reasonable deduction for actual depreciation in value; (2) the actual cost of acquiring such interests in real property; (3) actual financing and promotion costs, not to exceed 10 per cent of the sum of the cost of constructing the bridge and its approaches and acquiring such interests in real property; and (4) actual expenditures for necessary improvements.

SEC. 5. If such bridge shall at any time be taken over or acquired by the State or public agencies or political subdivisions thereof, or by either of them, as provided in section 4 of this act, and if tolls are thereafter charged for the use thereof, the rates of toll shall be so adjusted as to provide a fund sufficient to pay for the reasonable cost of maintaining, repairing, and operating the bridge and its approaches under economical management, and to provide a sinking fund sufficient to amortize the amount paid therefor, including reasonable interest and financing cost, as soon as possible under reasonable charges, but within a period of not to exceed 20 years from date of acquiring the same. After a sinking fund sufficient for such amortization shall have been so provided, such bridge shall thereafter be maintained and operated free of tolls, or the rates of toll shall thereafter be so adjusted as to provide a fund of not to exceed the amount necessary for the proper maintenance, repair, and operation of the bridge and its approaches under economical management. An accurate record of the amount paid for acquiring the bridge and its approaches, the actual expenditures for maintaining, repairing, and operating the same, and of the daily tolls collected shall be kept and shall be available for the information of all persons interested.

SEC. 6. Elisha N. Goodsell, his heirs, legal representatives, and assigns, shall within 90 days after the completion of such bridge file with the Secretary of War and with the highway departments of the States of New York and Vermont a sworn itemized statement showing the actual original cost of constructing the bridge and its approaches, the actual cost of acquiring any interest in real property necessary therefor, and the actual financing and promotion costs. The Secretary of War

may, and upon request of the highway department of either of such States shall, at any time within three years after the completion of such bridge, investigate such costs and determine the accuracy and the reasonableness of the costs alleged in the statement of costs so filed, and shall make a finding of the actual and reasonable cost of constructing, financing, and promoting such bridge; for the purpose of such investigation the said Elisha N. Goodsell, his heirs, legal representatives, and assigns, shall make available all his records in connection with the construction, financing, and promotion thereof. The findings of the Secretary of War as to the reasonable costs of the construction, financing, and promotion of the bridge shall be conclusive for the purposes mentioned in section 4 of this act, subject only to review in a court of equity for fraud or gross mistake.

SEC. 7. The right to sell, assign, transfer, and mortgage all rights, powers, and privileges conferred by this act is hereby granted to Elisha N. Goodsell, his heirs, legal representatives, and assigns, and any corporation to which or any person to whom such rights, powers, and privileges may be sold, assigned, or transferred, or who shall acquire the same by mortgage foreclosure or otherwise, is hereby authorized and empowered to exercise the same as fully as though conferred herein directly upon such corporation or person.

SEC. 8. The right to alter, amend, or repeal this act is hereby expressly reserved.

The amendment was agreed to.

The bill was reported to the Senate as amended, and the amendment was concurred in.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

The title was amended so as to read: "A bill authorizing Elisha N. Goodsell, his heirs, legal representatives, and assigns, to construct, maintain, and operate a bridge across Lake Champlain between a point at or near Rouses Point, N. Y., and a point at or near Alburgh, Vt."

KANAWHA RIVER BRIDGE, WEST VIRGINIA

The bill (H. R. 13399) authorizing the Baltimore Gas Engineering Corporation, a Maryland corporation, its successors and assigns, to construct, maintain, and operate a bridge across the Kanawha River at or near Dunbar, W. Va., was considered as in Committee of the Whole.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

ST. LAWRENCE RIVER BRIDGE, NEW YORK

Mr. DALE. From the Committee on Commerce I report back favorably without amendment the bill (S. 4566) authorizing the New York Development Association (Inc.), its successors and assigns, to construct, maintain, and operate a bridge across the St. Lawrence River near Alexandria Bay, N. Y., and I submit a report (No. 1321) thereon. I ask unanimous consent for the present consideration of the bill.

There being no objection, the bill was considered as in Committee of the Whole, and was read, as follows:

Be it enacted, etc., That in order to facilitate international commerce, improve the Postal Service, and provide for military and other purposes, the New York Development Association (Inc.), a corporation organized under and by virtue of the membership corporation law of the State of New York, having its office and principal place of business at Watertown, N. Y., its successors and assigns, be, and is hereby, authorized to construct, maintain, and operate a bridge and approaches thereto, across the easterly channel of the St. Lawrence River at a point suitable to the interests of navigation at or near Collins Landing, in the town of Orleans, Jefferson County, N. Y., to some suitable and convenient point on Wellesley or Wells Island, and also a bridge and approaches thereto from the westerly side of Wellesley or Wells Island to Hill Island, sometimes known as LaRue Island, and also a bridge from said Hill Island across or over the westerly or Canadian channel of the St. Lawrence River to some suitable or convenient point between Brockville and Gananoque, in the Province of Ontario, Dominion of Canada, so far as the United States has jurisdiction over the waters of said St. Lawrence River, in accordance with the provisions of the act entitled "An act to regulate the construction of bridges over navigable waters," approved March 23, 1906, and subject to the approval of the proper authorities in the Dominion of Canada.

SEC. 2. That the New York Development Association (Inc.), its successors and assigns, shall commence the construction of said bridge within two years and shall complete the construction thereof within five years after the passage and approval of this act.

SEC. 3. That there is hereby conferred upon the New York Development Association (Inc.), its successors and assigns, all such rights and powers to enter upon lands and to acquire, condemn, occupy, possess, and use real estate and other property in the State of New York needed for the location, construction, operation, and maintenance of such bridge and its approaches as are possessed by railroad corporations for railroad purposes, or by bridge corporations for bridge purposes in the State of New York, upon making just compensation therefor to be ascertained and paid according to the laws of such State, and the proceedings therefor shall be the same as in the condemnation and expropriation of property in such State.

SEC. 4. That the said New York Development Association (Inc.), its successors and assigns, is hereby authorized to fix and charge tolls for transit over such bridge, and in accordance with any laws of New York applicable thereto, and the rates of tolls so fixed shall be the legal rates until changed by the Secretary of War under the authority contained in the act of March 23, 1906.

SEC. 5. That the right to sell, assign, transfer, and mortgage all the rights, powers, and privileges conferred by this act is hereby granted to the New York Development Association (Inc.), its successors and assigns, and any corporation to which or any person to whom such rights, powers, and privileges may be sold, assigned, or transferred, or who shall acquire the same by mortgage foreclosure, or otherwise, is hereby authorized and empowered to exercise the same as fully as though conferred herein directly upon such corporation or person.

SEC. 6. That the right to alter, amend, or repeal this act is hereby expressly reserved.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Haltigan, one of its clerks, announced that the House had concurred in Senate Concurrent Resolution 22, authorizing and directing the President of the Senate and the Speaker of the House of Representatives to close the first session of the Seventieth Congress by adjourning their respective Houses on the 29th day of May, 1928, at 5.30 o'clock p. m.

ENROLLED BILLS AND JOINT RESOLUTIONS SIGNED

The message also announced that the Speaker had affixed his signature to the following enrolled bills and joint resolutions, and they were signed by the Vice President:

S. 126. An act for the relief of May Gordon Rodes and Sara Louise Rodes, heirs at law of Tyree Rodes, deceased;

S. 343. An act for the relief of Sallie Stapleford, Mrs. J. C. Stuckert, Mary E. Hildebrand, Kate Wright, Mary M. Janvier, Harry L. Gray, Frank D. Carrow, Harry V. Buckson, George H. Swain, Claude N. Jester, and Charles H. Jamison;

S. 363. An act for the relief of Louise M. Cambouri;

S. 433. An act for the relief of Harry C. Bradley;

S. 443. An act for the relief of Larry M. Temple;

S. 444. An act for the relief of H. C. Magoon;

S. 471. An act for the relief of Agnes McManus and George J. M. McManus;

S. 513. An act for the relief of the Hottum-Kennedy Dry Dock Co., of Memphis, Tenn.;

S. 1486. An act for the relief of the owners of the schooner *Addison E. Bullard;*

S. 1609. An act recognizing the heroic conduct, devotion to duty, and skill on the part of the officers and crews of the U. S. S. *Republic, American Trader, President Roosevelt, President Harding,* and the British steamship *Cameronia,* and for other purposes;

S. 1645. An act for reimbursement of W. H. Talbert;

S. 1981. An act for the relief of the owner of Dry Dock No. 6;

S. 2061. An act for the relief of W. H. Kaufman;

S. 2076. An act authorizing the allotment of Carl J. Reid Dussome as a Kiowa Indian, and directing issuance of trust patent to him to certain lands of the Kiowa Indian Reservation, Okla.;

S. 2336. An act for the relief of Nina MacDonald, Zenus V. Johnston, Margaret E. Thompson, Arthur L. Beaman, and May Fee;

S. 2438. An act for the relief of the firm of M. Levin & Sons;

S. 2673. An act for the relief of James E. Trussell;

S. 2738. An act for the relief of C. R. Olberg;

S. 2788. An act for the relief of Charlie McDonald;

S. 2894. An act for the relief of Robert O. Edwards;

S. 3030. An act for the relief of Southern Shipyard Corporation;

S. 3088. An act for the relief of Donald M. Davidson;

S. 3632. An act for the relief of Commodore J. M. Moore, United States Coast Guard, retired;

S. 3794. An act for the relief of R. E. Hansen;

S. 3954. An act to quiet title in the heirs of Norbert Boudousquie to certain lands in Louisiana;

S. 4022. An act authorizing the Secretary of the Interior to lease land in Stanley County, S. Dak., to Henry A. O'Neil for a buffalo pasture;

S. 4315. An act authorizing and directing the Secretary of War to sell 3,304.8 square feet of the Fort Brown Military Reservation, Brownsville, Tex., to the Gateway Bridge Co.;

S. 4321. An act authorizing the Secretary of the Interior to dispose of two bridges on the San Carlos Indian Reservation, in Arizona, and for other purposes;

S. 4327. An act to relinquish the title of the United States to land in the claim of Seth Dean, situate in the county of Washington, State of Alabama;

S. 4344. An act granting the consent of Congress to the State Highway Commission of Arkansas to construct, maintain, and operate a bridge across White River at or near Clarendon, Ark.;

H. R. 6685. An act to regulate the employment of minors within the District of Columbia;

H. R. 13039. An act to amend the World War veterans' act, 1924;

H. R. 13512. An act to amend the act entitled "An act to create the Inland Waterways Corporation for the purpose of carrying out the mandate and purpose of Congress, as expressed in sections 201 and 500 of the transportation act, and for other purposes," approved June 3, 1924;

S. J. Res. 5. Joint resolution relating to the immigration of certain relatives of United States citizens and of aliens lawfully admitted to the United States;

S. J. Res. 130. Joint resolution suspending certain provisions of law in connection with the acquisition of lands within the Alabama National Forest;

S. J. Res. 155. Joint resolution authorizing the Secretary of War to receive for instruction at the United States Military Academy at West Point, Jose J. Jimenez, a citizen of Venezuela; and

H. J. Res. 238. Joint resolution providing for the granting of veterans' preference in civil-service examinations.

BOULDER DAM

Mr. ODDIE. Mr. President, I ask that there be printed in the RECORD a report from the State engineer of Nevada, Hon. George W. Malone, who is also chairman of the association of State engineers of a number of Western States, and a member of the Colorado River Commission of Nevada. This report is on the Boulder Canyon Dam problem and contains much valuable data in concise form, also transcript of part of the record of the Committee on Irrigation and Reclamation of the Senate, which passed on this matter and reported the bill favorably. I think it will be helpful to the Members of the Senate to have this information before them in order that they may familiarize themselves with the fundamental facts relating to this great project before the bill comes up for final action in the December session.

The PRESIDENT pro tempore. Without objection, it is so ordered.

The matter referred to is as follows:

BOULDER CANYON LOWER COLORADO RIVER POWER AND WATER SET-UP, JANUARY 1, 1928—PRESENTING THE FACTS

[This report presented to the Seventieth Congress, first session; House Committee on Irrigation and Reclamation, January 13, 1928; Senate Committee on Irrigation and Reclamation, January 20, 1928]

Part 1—Power set-up

IRRIGATION AND RECLAMATION CONGRESSIONAL COMMITTEES, SEVENTIETH CONGRESS, FIRST SESSION, 1928

Senate: LAWRENCE C. PHIPPS, Colorado, chairman; WESLEY L. JONES, Washington; CHARLES L. MCNARY, Oregon; FRANK R. GOODING, Idaho; TASKER L. ODDIE, Nevada; SAMUEL M. SHORTRIDGE, California; HIRAM W. JOHNSON, California; ROBERT B. HOWELL, Nebraska; MORRIS SHEPPARD, Texas; THOMAS J. WALSH, Montana; JOHN B. KENDRICK, Wyoming; KEY PITTMAN, Nevada; FURNIFOLD MCL. SIMMONS, North Carolina; C. C. DILL, Washington; and HENRY F. ASHURST, Arizona.

House: ADDISON T. SMITH, Idaho, chairman; NICHOLAS J. SINNOTT, Oregon; ELMER O. LEATHERWOOD, Utah; SCOTT LEAVITT, Montana; CHARLES E. WINTER, Wyoming; PHIL D. SWING, California; SAMUEL S. ARENTZ, Nevada; JOHN C. ALLEN, Illinois; FREDERICK M. DAVENPORT, New York; C. B. HUDSPETH, Texas; WILLIAM C. LANKFORD, Georgia; J. B. REED, Arkansas; MILES C. ALLGOOD, Alabama; SAM B. HILL, Washington; JOHN MORROW, New Mexico; LEWIS W. DOUGLAS, Arizona; and S. HARRISON WHITE, Colorado.

THE COLORADO RIVER COMMISSIONS CAN BE REACHED THROUGH

Wyoming: Frank C. Emerson, governor, Cheyenne.
Colorado: Delph Carpenter, commissioner, Denver.
New Mexico: Francis C. Wilson, commissioner, Santa Fe.
Utah: George H. Dern, governor, Salt Lake City.
Nevada: George W. Malone, secretary, Carson City.
Arizona: Mulford Winsor, secretary, Phoenix.
California: F. H. McIver, secretary, Imperial.

NEVADA'S RECOMMENDATIONS AS OUTLINED IN DETAIL IN TESTIMONY AND REPORT SUBMITTED

1. That Nevada and Arizona should benefit from the proposed development, at least to the extent that she would benefit if developed by private capital, second only to Government payments and any reasonable reserve.

2. That the power be not sold as low as the repayments to the Government will permit, but should be sold at a competitive figure, comparable with the cost of power available elsewhere for these markets.

3. That arrangements be made for the sale of the power so that fair offers may be had and that legitimate bidders be not handicapped.

4. That suitable readjustment periods be arranged for the power charges per kilowatt-hour and also for the proper charges for other service rendered.

5. That proper charges be made for other service rendered—flood control, silt control, irrigation water storage, and domestic water storage.

6. That the States shall have the right to withdraw, upon proper notice, certain blocks of power to be used within their own State.

7. That a board be arranged for from the three lower States to assist the Secretary of the Interior or any agency supervising the sale of the power and other service rendered in an advisory capacity to fix the proper charge per kilowatt-hour for power and proper charges for other service rendered.

8. That an attempt be made to equalize in some manner between the three States the benefits from reclamation financing.

9. That after the Government advancement is entirely repaid the benefits from this development accrue to the States.

BENEFITS

We are convinced that if the above recommendations are carried out the project is economically sound and will support legislation containing these provisions.

There will be benefits from this enterprise; whether or not Congress recognizes that fact is beside the question. If they do not recognize it, they will all accrue to the particular projects being financed in the set-up. If they do recognize it, then in the event the benefits are sufficient, the two States who own the site may benefit. (Page 43, cross-examination.)

FOREWORD

The Colorado River and Boulder Dam, due to political activities, voluminous advertising, and congressional difficulties, has become a byword in the western country.

There have been tons of printed matter distributed on various phases of the subject, purporting to prove certain conditions, and in the main colored to fit the particular district or organization financing the propaganda.

ENGINEER

Therefore we have engaged a board of engineers, consisting of H. W. Crozier, of San Francisco, one of the foremost power experts on the Pacific coast; Thomas R. King, of the engineering firm of King & Malone, Reno, Nev., who has had both engineering and construction experience; and Stanley Palmer, professor of electrical engineering, University of Nevada, as a board to pass on any engineering conclusions pertinent to our State.

In this paper we have made an earnest effort to analyze and present the power set-up that has been included to carry the cost of the development.

It is not practicable in this short space to include all of the data leading up to the conclusions here presented, but we are ready at any time to take these matters up and discuss them fully whenever necessary.

COMMISSION

The Nevada-Colorado River Commission, Gov. F. B. Balzar, chairman; George W. Malone, State engineer and secretary of the commission; Charles P. Squires; Roy W. Martin; E. W. Clark; and Charles B. Henderson are a unit in deciding to employ these methods to arrive at the facts, regardless of what they may show, so that Nevada may not take a position that might jeopardize the original object of the development.

We have consistently maintained that our State should benefit from the proposed development, at least to the amount that she would receive if developed by private capital, during the amortization period, and after the Government is fully repaid the benefit to the States should materially increase.

During the three-State conference held in San Francisco from December 1 to 18, inclusive, the three lower basin States were represented by five outstanding power experts: For California, E. S. Scattergood, of the Los Angeles Light & Power Co., and L. S. Ready, of San Francisco; for Arizona, Charles Cragin, chief engineer of Salt River project, and B. F. Jacobsen, of Los Angeles; for Nevada, H. W. Crozier, of San Francisco.

These men agreed substantially in their computations on similar set-ups, except on the question of steam stand-by service required in con-

nection with Boulder Canyon power, the Nevada and Arizona engineers holding with the Government that no steam stand-by plants were necessary because of reasons noted elsewhere in this report, and that if any stand-by service should be necessary only a very nominal amount would be chargeable direct to the Boulder Canyon power.

Charles Cragin, chief engineer for the Salt River project, agreed with the Nevada engineers; California agreed except in the matter of necessary steam stand-by service in connection with Boulder Canyon power; while Thomas Maddox and B. F. Jacobsen, also representing Arizona, Mr. Maddox being one of the Colorado River Commission, showed a slightly larger "spread" between Boulder power delivered in the power market and steam electric power developed at that point, due to certain changes made in the estimates of cost of the project.

The writer acted as chairman of the three-State conference held in San Francisco during November and December, 1927, where Arizona, California, and Nevada engineers made an earnest attempt to arrive at a correct set-up for the Boulder Canyon power, and the following data is in line with the results obtained at that time, based on investigations set down in Weymouth report.

It is not anticipated that all of the benefits mentioned in this report *will obtain* immediately upon completion of the project, but any legislation or agreement should be so written that, as the silt is controlled and the irrigation and domestic water is used, they can be taken into account and a proper distribution be made.

POWER DEVELOPED, BLACK OR BOULDER CANYON

With a dam 550 feet high and a reservoir capacity of 26,500,000 acre-feet, there would be 22,000 second-feet of continuous flow at this time, which would develop approximately 850,000 firm horsepower on an average head of approximately 475 feet and would provide 13,000 second-feet flow and 550,000 firm horsepower after full irrigation development upstream.

Long before Bullshead Reservoir is needed for regulation it will be developed for power purposes.

Bullshead Reservoir when completed will allow 550,000 firm horsepower to be developed at Boulder Canyon after full irrigation development above and below, which is predicted as 75 years or longer and will, in addition, develop 100,000 firm horsepower.

With either Bullshead or Parker Reservoir constructed, the water supply in the lower river can be entirely controlled without interfering with the proposed firm-power output.

BIBLIOGRAPHY

Weymouth report; 9 volumes, a Government report made up at a cost, including field investigations, of nearly $400,000, and is the last word in Government reports on the Colorado River. The writer has a copy of this report.

THE WEYMOUTH REPORT

The detail investigations made by the Department of the Interior, which resulted in the so-called "Weymouth" report, were made while Mr. Weymouth held the office of Commissioner of Reclamation.

The report was finished in 1924, and consisted of eight volumes of typewritten matter; there was another volume gotten out later when certain United States Geological Survey information became available, making nine volumes in all. Volume No. 9 was a summation of the data on the Colorado River development, including data from former reports.

This report contains the latest and most complete investigations that have ever been made on the Colorado River; there was a very substantial appropriation made for this work and $391,000 was expended, but no funds were ever made available for printing it.

Any reports made subsequent to 1924 are simply compiled from this work, since any superficial examination will not reveal further information.

In this report the Department of the Interior concludes that the Boulder or Black Canyon site is the only one available that is below all principal tributaries, not otherwise being controlled, with sufficient capacity for flood, irrigation, and silt control, and that will develop enough power within reach of the available markets to repay the cost of construction, and any subsequent report must decide likewise, for it is the only detail data available.

This work goes very thoroughly into the matter of foundations, capacities, and detail estimates of all of the available sites on the Colorado River, including detail geology, and, in the case of Black and Boulder Canyons and others, contains detail results of drilling foundations; also very complete detail estimates on power-plant installations and transmission lines.

The construction estimates were thoroughly checked by both Mr. Hill and Mr. Wiley, two of the most widely known engineers on the Pacific coast, and there is no doubt of their ability and experience.

Through the courtesy of the Department of the Interior the writer has had a copy of this report available.

ABSORPTION PERIOD

There have been some questions asked as to a possible deficit during the amortization period.

Fifty years are allowed for the return of the original investment, this in addition to the 10-year construction period, for which time the interest is included in the original appropriation, making a total of 60 years from the beginning of construction until advancement is repaid.

The 50 years are utilized by allowing 9 years for absorption of the power by the power markets, during which time interest, operation and maintenance, and depreciation are charged; then in the remaining 41 years the original advancement is repaid in 41 equal installments.

We estimate on past records that the entire amount will be taken up within six years, and under this condition there will be no deficit. Other engineers familiar with conditions in southern California, with the increasing tendency of large manufacturers to establish there, estimate three years, which would create an extra fund during the allowed absorption period.

It should be borne in mind that the plant is to be constructed in several units, and investments would not be made until justified.

BOULDER OR BLACK CANYON

The project here considered in detail is the Boulder or Black Canyon set-up; this site is located about 55 miles above the State line between Nevada and California, where the Colorado River forms the boundary between Nevada and Arizona, which site is the subject of proposed legislation at this time.

It is proposed to construct a dam 550 feet high to impound 26,500,000 acre-feet of water for flood and silt control and irrigation purposes and to generate power to pay the cost; this contemplates 1,000,000 installed horsepower, or 550,000 firm horsepower, at 55 per cent load factor and equals 3,600,000,000 kilowatt-hours per year.

Set-up according to Department of Interior estimates

	Cost estimate	Interest included
Dam	$41,500,000	$55,000,000
Power plant	31,500,000	35,000,000
All-American canal	31,000,000	35,000,000
Interest during construction	21,000,000	
Total	125,000,000	125,000,000

The plan as outlined in the Swing-Johnson bill provides that the dam, power plant, and all-American canal shall be financed by advances from the United States Treasury, bearing 4 per cent interest, and provided that the total amount must be repaid within 50 years after the completion of the project.

Interest has been included in the original proposed advancement, during the construction period. We have, therefore, considered a nine-year absorption period, following completion of the works, during which time the power would be completely utilized.

Records for past years show that the rate of increase of firm horsepower in the southwestern power markets has been of the rate of about 75,000 horsepower per year; the installed horsepower is always at least twice the amount of the firm; Boulder Dam, as estimated, will be 550,000 firm or 1,000,000 installed horsepower on the contemplated 55 per cent load factor. Therefore, it is estimated that, at the rate of 150,000 horsepower per year, installed, the 1,000,000 horsepower will be absorbed in about six years—some engineers predict even a shorter time, due to the increased consumption after the cost is stabilized by a large block of hydroelectric power. These records are taken from volume 8, Weymouth Report, and on this basis there should be no loss over the nine-year absorption period (see p. 18).

Fifty years is the length of time assumed after the project is constructed, for the Government investment to be returned. The 50 years include a nine-year absorption period, during which time the entire power output is assumed to be absorbed by the market and interest, operation and maintenance and depreciation charges only will be carried, then in the last 41 years the original investment will be returned in 41 equal installments, in addition to the above-mentioned charges.

Cost of annual operation during amortization period—41 years exclusive of 9-year absorption period

4 per cent interest and annual payments	$6,250,000
Operation and maintenance, dam and plant	700,000
Operation and maintenance, all-American canal	500,000
Depreciation on total cost power plant, three-fourths per cent	262,000
Total yearly charges	7,712,000

It is said by some that our depreciation item is low, but the total amount allowed conforms to that allowed for private projects in California (see p. 18).

Three billion six hundred million kilowatt-hours, corresponding to 550,000 firm horsepower, equals 2.14 mills per kilowatt-hour at switchboard, including the all-American canal complete, carried by the power—on basis of $7,712,000 annual expense.

If the lands under the all-American canal would, as was suggested in the Secretary's letter to Congress in 1927, pay the cost of amortization and operation and maintenance, the cost per kilowatt-hour would be reduced .376 mills, leaving 1.76 mills per kilowatt-hour to provide for the total payments on dam, power plant, and interest on all-American canal, and if the set-up was, as originally provided in the proposed legislation last year, that the all-American canal be constructed under the reclamation act, thereby no interest being charged and contracts with the lands benefited providing for original cost return and operation and maintenance before construction should be started, then the cost per kilowatt-hour would reduce further by the amount of the average interest, or .249, making the power bear only the cost of the dam and power plant, which would be 1.511 mills per kilowatt-hour at the switchboard on basis of 3,600,000,000 kilowatt-hours, or 550,000 firm horsepower.

Cost of power at switchboard in mills per kilowatt hour

Including dam and power plant	1.511
Including dams, power plant, and interest all-American canal	1.76
Including dam, power plant, and all-American canal	2.14

The above figures represent the cost of the power at the switchboard under the outlined conditions, based on 550,000 firm horsepower.

TRANSMISSION LINES

Six 220,000-volt, 3-phase circuits are proposed to carry the Boulder Canyon power to the power markets; the length of this line has been variously estimated, but the 300 miles which follow closely the line of the Union Pacific Railroad seems to be a conservative estimate. The cost of this line, including stepdown substations, transformers, condensers, and intermediate condenser substations, is believed to be conservatively estimated at $50,000,000, including interest during construction.

Some comment has been made on the amount of depreciation allowed on the transmission lines in this setup. The amount used here is comparable with similar projects under private management in California. Then again, the sum of $50,000,000, including interest, has been assumed as the cost, where the Department of the Interior estimates five lines costing $45,000,000, including interest, to be ample (see p. 18).

According to engineers and such internationally recognized transmission experts as Frank G. Baum, of San Francisco, transmission costs may be materially reduced within 10 years, on account of higher voltage lines, etc., so that a smaller number of lines would be required (six circuits are now contemplated) to be constructed as needed.

Cost of annual operation during amortization period of 35 years

	Per cent	Cost	Mills
Interest	5	$2,500,000	0.695
Annual payments	1.107	553.500	.1538
Depreciation (see p. 18)	1.25	625,000	.1933
Operation and maintenance	1	500,000	.1388
Total	8.35	4,178,000	1.1609

3,600,000,000 kilowatt-hours, corresponding to 550,000 firm horsepower annual charges of $4,178,000, is equal to 1.16 mills at the switchboard.

	Cost at switchboard	Cost at power market assumed 12 per cent line losses
Dam and power plant	1.511	1.72
Transmission line	1.160	1.32
Total	2.671	3.04

The power delivered into the power markets, without any reference to the all-American canal, is 3.04 mills.

All-American canal—41 years amortization exclusive of 9-year absorption period

		Mills per kilowatt-hour at switchboard	Mills per kilowatt-hour in power market
Average annual interest	$896,000	0.249	0.283
Average annual payment	854,000	.237	.270
Operation and maintenance	500,000	.139	.158
Total	2,250,000	.625	.711

Cost of Boulder Dam power in power market on basis of 12 per cent loss from Boulder Canyon

Item:	Mills
Cost, excluding all-American canal	3.04
Cost, including all-American canal interest only	3.323
Cost, including all-American canal interest and amortization	3.593
Cost, including all costs of all-American canal	3.751

DEPRECIATION

Relative to the depreciation item, which is thought to be low by some as assumed in this report, it is probably not understood.

If the "straight line" sinking fund method of depreciation is adopted, it means that for any given life in years of a piece of property of known value a certain sum is set aside each year so that at the end of that life the total amount will replace the property.

The sinking-fund method of providing for depreciation consists of setting aside a lesser sum, which, invested at compound interest, would, when set aside, annually plus the compound interest in the aggregate amount to the life of the property. This method is adopted here and is approved by utility commissions.

Item	Amount	Life	Equivalent straight line
	Per cent	*Years*	*Per cent*
Hydroelectric plants	0.75	28	3.57
Transmission line	1.25	30	2.34
Steam-electric plants	2.25	22½	4.45

Steam power costs at the power market

	Annual charge (per cent)	Mills per kilowatt-hour
Return on investment	7.50	
Depreciation (see p. 18)	2.25	
Operating expense	1.80	0.00019
Stand-by fuel (1.1 barrel/kilowatt):		
$1.00 per barrel	1.00	
$1.25 per barrel	1.25	
Operating fuel		.00200
$1.00 per barrel		.00200
$1.25 per barrel		.00250
General expense	.25	
	12.80	.00219 and .00269

Steam electric power in mills per kilowatt-hour at particular load factor, 25-year amortization period

FUEL OIL

	55 per cent	60 per cent	67 per cent
$1.00 per barrel	5.12	4.89	4.58
$1.25 per barrel	5.68	5.43	5.15

35-year amortization period

FUEL OIL

	55 per cent	60 per cent	67 per cent
$1.00 per barrel	4.86	4.66	4.37
$1.25 per barrel	5.42	5.20	4.94

NOTE: 25-year amortization period and Government interest rate is comparable to no amortization payments and 7½ per cent interest.

The foregoing estimates are made for comparative purposes and based on plant cost of $100 per kilowatt, with an added cost of $10 for transmission purposes, making a total cost of $110 per kilowatt of installed horsepower.

To new power plants constructed in the power market under conditions that now obtain a performance of 13,270 British thermal units, equivalent to 480 kilowatt-hours per barrel of oil, may be expected. This item will range from somewhat under 13,000 British thermal units to about 14,000 British thermal units at present.

If power plants can be financed on the basis of a total rate of 7½ per cent annually, such as is obtained by the public-utility corporations now operating steam power plants, and which is equivalent to public financing on a 5 per cent basis with 25 years partial payments, the above estimate of costs will apply.

It has been suggested that a decrease in steam costs might come about through the use of mercury vapor or the use of higher pressures, but it is the opinion of engineers that the increased cost of the mercury vapor in the first case and the increased cost of construction in the second will preclude any material reduction.

DIFFERENCE IN COST OF BOULDER CANYON POWER DELIVERED TO THE POWER MARKET AND STEAM POWER GENERATED AT THAT POINT

Steam power assumed 60 per cent load factor, 25-year amortization period, and $1 oil—4.89 mills per kilowatt-hour

	Steam power mills per kilowatt-hour	Boulder Canyon power mills kilowatt-hour	Difference mills kilowatt-hour
Steam, including transmission line	4.89		
Cost, excluding all-American canal		3.040	1.85
Cost, including all-American canal interest only		3.323	1.567
Cost, including all-American canal interest and amortization		3.593	1.297
Cost, including all costs of all-American canal		3.751	1.139

Engineers for California, on a basis of the inclusion of the all-American canal interest only, arrived at a difference of 0.92 mill after deducting 0.51 mill for steam stand-by service; this would make 1.43 mills difference as against 1.567 as noted above, which is comparable.

[NOTE.—$500,000 equal 0.14 mill in the Boulder Canyon set-up; 550,000 firm horsepower=3,600,000,000 kilowatt-hours per year; and 1 mill per kilowatt-hour=$3,600,000 per year on the Boulder Dam set-up; 1 horsepower=0.75 kilowatt-hour; 1 kilowatt=1,000 kilowatt-hours.]

STAND-BY STEAM POWER FOR USE IN CONNECTION WITH BOULDER POWER

Conclusions of engineers appear to vary somewhat as to the necessity for steam stand-by service in connection with Boulder Canyon power delivered into the power market, meaning idle plants to take up the load in case of failure of regular service; engineers in the employ of the California-Colorado Commission, including Doctor Durand, member of the Secretary's fact-finding commission, who has been employed by Los Angeles for some time, hold that idle steam stand-by service is necessary to the extent of approximately 0.4 mill, but our engineers favored the conclusion of the Government in this matter, as shown in the Weymouth report, that very little, if any, stand-by service was directly chargeable to Boulder Canyon power, for the following reasons:

1. Due to the all-western hook-up that will no doubt obtain at that time, and, in fact, does now to a certain extent.

2. Transmission lines on a six-line basis of 200,000 horsepower capacity each, means one extra line when running full capacity, and with a possible overload to 240,000 horsepower each, would mean that four lines will carry 960,000 horsepower, which would practically mean the peak load, leaving two extra lines available, and no difficulty is anticipated in switching from one line to another in case of trouble.

3. It will require approximately 240,000 horsepower to pump 1,500 second-feet, or 1,000,000 acre-feet per year of domestic water over the divide; a total lift of approximately 1,600 feet; this will mean a substantial decrease in the distance that approximately one-half of the 550,000 firm horsepower developed at Boulder Dam must be transmitted, and, in addition, by the aid of small storage reservoirs which are already largely constructed near Los Angeles, it can be so arranged that an interruption of this service will not be serious, thus entirely obviating need for stand-by service on more than one-half of the total supply.

4. With 550,000 firm horsepower it is not anticipated that the load will be above 700,000 horsepower over 35 per cent of the time, and not over 800,000 horsepower over 10 per cent of the time; therefore, except during short periods of peak loading, three extra lines would be available in case of trouble.

5. The increase in the use of power in the available markets is at the rate of approximately 150,000 installed horsepower per year; therefore only at the end of the absorption period would the balance of hydroelectric and steam electric power be top-heavy in favor of hydroelectric. It is contemplated that approximately 1,000,000 horsepower of steam electric power will be constructed during the period of construction of Boulder Dam, so the balance will be in favor of steam power until practically the end of the absorption period. Then, when all of the Boulder power is in use, more steam electric will be generated and again gaining the economic balance of approximately 20 per cent steam and 80 per cent hydro, making more steam power available, which, with possible overload, will in part act as stand-by in addition to extra transmission lines; and after the absorption period the balance will swing back to steam, until further hydroelectric power is brought in.

[NOTE.—A report submitted by Mr. Van Norman, assistant city engineer, of Los Angeles, stated that it would require 390,000 horsepower to pump the domestic water over the divide for the southern California cities.]

LOAD FACTOR

At the beginning of operation plant will develop 1,600,999 horsepower at 55 per cent load factor, and probably 70 per cent will be the peak, and will develop 1,000,000 horsepower at 88 per cent load factor; then as irrigation develops will drop back to probably 60 per cent load factor in 50 years.

The extra power developed, called dump power, can be sold for something, probably 1 mill per kilowatt-hour, which will materially boost the revenues during the earlier years, besides making up for the slightly under 100 per cent sale of the firm power.

Load factor for the Boulder Canyon is assumed 55 per cent as set up in Weymouth report.

SOURCE OF ADDITIONAL REVENUE

1. Flood control.
2. Silt control.
3. Water for irrigation.
4. Water for domestic use.

Five hundred thousand dollars is reported to be the amount expended annually upon levee construction and repairs. Of this amount, the greater part could be diverted toward the construction cost of the proposed dam with no greater assessment. Flood control would also remove a menace, which at this time makes land values in the Imperial Valley extremely unstable, interest rates are high, and there is no demand for the lands.

Five hundred thousand dollars is expended annually in removing silt from the ditches and canals; this problem will not be entirely eliminated at once, but after the proposed construction is completed it will immediately decrease, and, as the silt already deposited is worked over, will gradually adjust itself. A considerable portion of this amount could be applied to the silt-control storage, with no further assessment on the land.

Irrigation storage will stabilize the water supply on the lands now under cultivation and bring in approximately 300,000 acres additional. This will eliminate pumping on some of these lands and furnish a gravity system. If this land alone could stand $40 per acre, it would mean an additional sum of over $500,000 annually from this source, including interest.

Domestic storage will furnish 1,000,000 acre-feet of water for southern California cities at an estimated cost of $19.50 per acre-foot. This is where a considerable amount of the Boulder Canyon power will be used to pump it over the divide. Water for irrigation is now costing from two to nearly three times the estimated cost, so that an additional charge of $2 per acre-foot should not be unduly burdensome, and that considering the per capita use in southern California cities of 150 gallons per day, and that there are nearly 326,000 gallons in 1 acre-foot, that $2 per acre-foot which would be added to the water account of 72 people per month would be hardly noticeable; $2,000,000 would be added to the revenue from this source alone.

This would make a total of $3,500,000 from the four sources mentioned above, entirely aside from returns on the power, which is not unreasonable when the savings are effected as outlined above.

Mr. Lester S. Ready, former chief engineer of the California Railroad Commission and now in the employ of the California-Colorado River Commission, in a report to some of his California constituents in August, 1927, recommended that the service rendered in storing the irrigation silt and domestic water by the proposed construction may be worth up to $2,800,000. Even this amount would mean that the all-American canal, costing a total of $2,250,000 per year, would be carried and $550,000 additional, or about 50 cents per acre-foot on domestic water, considering the all-American canal of $2,250,000 carried by the benefits from flood control, silt, and storage for irrigation, and would mean a delivery of the Boulder Canyon power into the power market at well under 3 mills, as against 4.89 mills for steam electric power.

Quoting Mr. Ready further, from his August, 1927, report, he finds that the annual operating cost of the dam, power plant, and all-American canal, including interest and amortization payments, is $7,515,000, which is slightly under our own conclusions, and that a 2.5-mill charge at the switchboard will probably be justified, and at that rate the return would be $9,000,000, and with $2,000,000 from all other sources, instead of $2,800,000 would make $11,000,000 annual income, as against $7,515,000 annual outlay, leaving $3,466,000 annual surplus, and that a 2-mill charge at the switchboard on the same basis would leave $1,685,000 annual surplus—this on a basis of a 40-year amortization period.

This surplus, he concludes, could be used to retire the investment under the 40-year period, or lower the rate for power to the consumers, and finds further that the cost of the dam could be doubled and the project still be feasible.

METHODS BY WHICH AN AGREEMENT MAY BE HAD TO ASSURE NEVADA AND ARIZONA OF BENEFITS FROM THE CONSTRUCTION

1. Fix at the switchboard a price of 3 mills per kilowatt-hour and split all above the cost to the Government, on a 41-year amortization period, between Arizona and Nevada; power can then be delivered into the power markets at less than 4.5 mills, which is four-tenths mill under anticipated cost, if plants constructed at this time, and 1.5 mills under present cost, according to testimony before the California Railroad Commission.

2. A board of control to be appointed, consisting of three members, one to be appointed by the governor of each of the lower States, to assist the Secretary in the sale of the power and to secure adequate revenue from other sources, the Government to be paid first, then the three States of Arizona, California, and Nevada, to split the remainder between them, California's one-third to apply on the all-American canal until paid for, then to go to reduce the price of power to the purchaser, with suitable readjustment periods.

3. That a board of control be created and the power sold the same as above outlined and reasonable charges made for flood and silt control and irrigation and domestic water, but all the money received to be used to retire the amount expended by the Government at the earliest possible date; then the Government to retain control, and to deduct for operation, maintenance, and depreciation, the remainder to be divided between Arizona and Nevada.

[NOTE.—Whatever agreement is had, to assure Arizona and Nevada of reasonable return through the proposed development of their natural resources, that they be allowed in addition to withdraw, upon reasonable notice, certain blocks of power for use in their own States.]

CONCLUSIONS

1. That the States of Arizona and Nevada should receive an amount from the proposed development at least equal to the benefits that they would receive if this natural resource were developed by private capital, and upon reasonable notice be allowed to withdraw certain amounts of power for use in their own State.

2. That the power developed can be delivered into the available power markets, meeting competitive power costs, guarantee the Government investment and still meet the conditions outlined above, with a margin to spare, considering the set-up from the data gathered from the Weymouth report.

3. That the power can be delivered into the power markets for 4.5 mills, which is 1.5 mills under present plant cost, according to testimony before the California Railroad Commission, and 0.40 mill below anticipated cost, if plants were to be constructed at this time, and amortize the Government investment within from 15 to 18 years, proper charges being made for other benefits, irrigation, domestic water, flood, and silt control.

4. That overwhelming opinion of engineers and men who have studied the fuel situation is that steam electric power will never be produced in the southwestern power markets cheaper than is possible at this time; that the increased cost of fuel and construction costs will offset any decrease from other causes.

5. That it was the opinion of Arizona, California, and Nevada engineers who attended the three-State conference in San Francisco that the Government estimates for the construction of the project were liberal, if proper mehods were employed in prosecuting the work, based on the Weymouth report set-up.

RECOMMENDATIONS

First. That provision be made in any legislation for the States of Arizona and Nevada to benefit from the proposed development, and that provision be made for withdrawal of power upon proper notice for use in their own States, or that provision be made in any legislation to accept the provisions of an agreement between any of the lower States relative to distribution of benefits.

Second. That whatever method is used to provide for or recognize an agreement between the lower basin States relative to water and power, that a board be created as suggested to assist the Secretary in determining proper charges to be made for power, flood and silt control, and irrigation and domestic water storage.

Third. That the charges for power be not made as low as the repayment of Government charges will permit, but that the charges be comparable to and on a competitive basis with available power elsewhere for these markets.

FUEL COSTS AND RELATION TO STEAM-ELECTRIC POWER

Fuel costs are very uncertain, and are the most important variable factor in the steam-electric power set-up.

The southwestern market is at this time controlled by the oil supply, the legitimate price of which is approximately $1 per barrel, and in the judgment of men who have studied the fuel situation coal will begin gradually taking the place of oil in a comparatively short time, and that the change will come rapidly when the cost of oil reaches $1.30 to $1.40 per barrel. Utah is probably the most favored coal supply.

Coal supply

Location:	British thermal units per pound
Colorado	12,800 to 13,800
Utah	11,300 to 13,000
Alaska	13,176 to 14,800
Vancouver Island	11,100 to 13,400

To utilize coal in these markets will require large storage facilities, pulverizing machinery, etc.

Due to the limited oil fields near these power markets the fuel cost will stabilize near the turning point from oil to coal, which is apparently about $1.30 per barrel of oil.

It will be noted from the tables given on page 19 that $0.25 difference per barrel of oil makes approximately 0.5 mill difference in cost per kilowatt-hour, so that it is concluded that the increase in fuel prices will at least offset any reduction in costs that it is possible to make within the next few years.

The ratio of barrels of oil to tons of coal is approximately 4 to 1.

EQUIVALENTS

WATER

One acre-foot of water is that quantity that will cover an area of one acre 1 foot deep.

One second-foot flowing continuously 24 hours equals 1.98, or approximately 2 acre-feet.

One second-foot of water equals 1 cubic foot of water passing a given point every second, equals 7.48 gallons per second, equals 448.83 gallons per minute.

One acre-foot equals 325,850 gallons, or 43,560 cubic feet.

POWER

One second-foot falling 8.81 feet equals one horsepower, 100 per cent efficiency.

One second-foot falling 11 feet equals one horsepower (HP), 80 per cent efficiency (commonly used for estimating purposes).

Load factor is the ratio of the average power to the peak power.

One HP (horsepower) equals 750 kilowatt-hours.

One kilowatt equals 1,000 kilowatt-hours.

Firm horsepower equals installed horsepower multiplied by the load factor.

Three billion six hundred million kilowatt-hours equal 1,000,000 installed horsepower, or 550,000 firm horsepower on 55 per cent load factor.

SUMMARY

Arizona, most feasible project, 229,800 acres, 806,400 acre-feet.

Arizona, total irrigable, 891,000 acres, 2,673,000 acre-feet.

California, most feasible projects, 851,000 acres, 3,620,750 acre-feet.

California, total irrigable, 1,123,000 acres (this item includes 1,000,000 acre-feet for Los Angeles), 5,613,000 acre-feet.

Duty, consumptive use, above Laguna, 4.35 acre-feet.

Duty, consumptive use, below Laguna, 3 acre-feet.

Duty, pumping, head gate diversion, 4 acre-feet.

Duty, pumping, net duty on land, 3.25 acre-feet.

Evaporation, annually exposed surface Boulder Canyon, approximate, 5 depth.

Los Angeles, to get 1,000,000 acre-feet and is included in California's irrigable projects.

Mexico, 200,000 acres, 850,000 acre-feet.

Nevada, most feasible projects, 15,000 acres, 63,730 acre-feet.

Nevada, total irrigable, 80,000 acres, 340,000 acre-feet.

Power, firm horsepower available present time from 550-foot dam of 26,000,000 acre-feet capacity, approximately, 800,000 horsepower.

Power, firm horsepower available with full irrigation development from 550-foot dam and 26,000,000 acre-feet storage, 550,000 horsepower.

Water available for irrigation and domestic use in United States in the lower basin, 8,250,000 acre-feet.

Water available for power, on basis of 26,000,000 acre-feet capacity reservoir, 21,500 second-feet.

Water available for power on basis of full upstream irrigation development, approximately, 13,000 second-feet.

Water available for power on basis of full irrigation development of river with Bullshead or Parker for reregulating purposes, approximately, 13,000 second-feet.

Water, short, for complete lower basin development (this includes the 1,000,000 acre-feet item for Los Angeles), 375,980 acre-feet.

FOREWORD

Due to the widely divergent statements relative to the acreages available for irrigation development in the three lower basin States, the writer has considered it important that all the information available be compiled and collected in such a manner that a perspective of the lower basin irrigation development can be gained without wading through all of the voluminous reports on this subject; and the data is especially pertinent at this time, since the subject of water division will be a vital factor in any agreement reached.

In this brief résumé of the data on the Colorado River an attempt has been made to collect from the various reports—Document 142, Water Supply Paper 556, the Arizona Engineering Commission report, the Weymouth report, and various other reports—certain pertinent data pertaining to acreages, duty of water, consumptive duty, etc.

There are certain projects on which detail surveys are not complete, notably the Gila project in Arizona, and others on which opinions differ widely as to the correct gross and net acreages. Therefore it has been necessary to insert these acreages according to the best information available, with explanatory footnotes.

The writer has been assisted in this work by the following engineers: E. B. Debler, hydraulic engineer, Bureau of Reclamation, Denver, Colo.; R. I. Meeker, special deputy State engineer, Interstate Rivers,

Denver, Colo.; George M. Bacon, State engineer, Salt Lake City, Utah; William Herbert W. Yoe, State engineer, Santa Fe, N. Mex.; John Whiting, State engineer, Cheyenne, Wyo.; Thomas Maddox, member Colorado River Commission, former State engineer, Phoenix, Ariz.; M. J. Dowd, chief engineer Imperial irrigation district, Imperial, Calif.

It is not understood that each of the engineers mentioned agree in every detail with this report, but from data furnished by each of them an attempt has been made to arrive at a fair set-up for the lower basin.

DUTY OF WATER

Gross duty equal total amount diverted from the stream per acre.

Net duty equal total amount delivered to the land per acre.

Consumptive duty equals the amount actually consumed, meaning the difference between the gross amount diverted and the return flow to the stream (see p. 45).

SUMMARY OF WATER-SUPPLY DATA ON COLORADO RIVER

[From pages 101 to 123, United States Geological Survey Water Supply Paper No. 556, Water Supply and Flood Control of Colorado River Below Green River, Utah.]

Values in acre-feet per year

Colorado River at Lee Ferry: Average recorded flow, 1911–1923, computed from records of Green, Grand, and San Juan Rivers, 16,100,000. (Table 2, col. 6, pp. 104–106.)

Colorado River at Lee Ferry: 1911–1923 records extended back to 1895 to include dry cycle, 1895–1906, 15,200,000. (Table 3, col. 6, p. 108.)

Reconstructed River at Lee Ferry: This item is variously estimated at from 16,000,000 to 17,000,000 acre-feet, and, taking into account prior dry periods, it is estimated at even less than 16,000,000, 16,600,000. (Deducted from Table 6, cols. 4 and 5, p. 110.)

Colorado River at Lee Ferry: Corrected for depletion by irrigation, period 1895 to 1922, one complete cycle, 14,350,000. (Table 8, col. 3, p. 112.)

Estimated present consumption, upper Colorado Basin above Lee Ferry, 2,365,000. (Table 6, col. 4, p. 110.)

Estimated future consumption in river flow, upper Colorado Basin above Lee Ferry, 5,470,000. (Table 8, col. 4, p. 112.)

Estimated total present and future consumption in upper Colorado River Basin above Lee Ferry, 7,835,000. (Table 8, col. 4, p. 112.)

Future average yearly river flow at Lee Ferry after deduction of combined present and future water consumption by irrigation in upper Colorado River Basin, 8,880,000. (Table 8, col. 5, p. 112.)

Lower Colorado Basin Co. obligation at Lee Ferry, 7,500,000. (See Colorado River compact.)

COLORADO RIVER BASIN WATER SUPPLY

(Based on long-time mean covering wet and dry cycles. Recorded flow corrected for depletion by irrigation)

The figures represent approximately the total yearly flow of the Colorado River Basin, unreduced by irrigation consumption; in other words, the run-off of the reconstructed river. Upper and lower basin terms fit definitions of same in Colorado River compact, as drafted at Santa Fe, N. Mex., November, 1922.

TABLE 1.—*Total basin water supply*

Reconstructed river	Values in acre-feet	Per cent
Upper Colorado River Basin	16,600,000	84
Lower Colorado River Basin, less evaporation from the Gila River and Colorado River below Black Canyon, 1,500,000	3,100,000	16
Total	19,700,000	100

TABLE 2.—*Colorado River compact allocations*

Compact November, 1922	Values in acre-feet	Per cent
Upper Colorado River Basin	7,500,000	38
Lower Colorado River Basin	8,500,000	43
Unallocated surplus	3,700,000	19
Total	19,700,000	100

NOTE.—The problem of a reconstructed river is a controversial matter and is included here as a fair average of the various opinions. The unallocated surplus is variously estimated between two and five million acre-feet.

TABLE 3.—*Water supply data*

VALUES IN ACRE-FEET

Reconstructed Colorado River at Lees Ferry		16,600,000
Inflow to Colorado River between Lees Ferry and above mouth of Gila River:		
Utah (Kanab, Virgin Rivers)	225,000	
Nevada (Virgin)	75,000	
Arizona (other tributaries)	1,180,000	
	1,480,000	
Evaporation approximately 1,000,000, Black Canyon to Yuma	1,000,000	
		480,000
Reconstructed Gila River:		
New Mexico supply	443,000	
Arizona supply	2,677,000	
	3,120,000	
Evaporation approximately 500,000 on Gila River	500,000	
		2,620,000
Total water resources, Colorado River Basin		19,700,000

TABLE 4.—*Lower Colorado Basin water resources*

VALUES IN ACRE-FEET

Average yearly water supply:	
Utah	[1] 225,000
Nevada	[1] 75,000
New Mexico	443,000
	743,000
Arizona	3,857,000
Total	4,600,000
Evaporation from Black Canyon to Yuma, including Gila River, approximately 1,500,000	3,100,000

NOTE.—Figures for evaporation estimated for normal flow of both Colorado and Gila Rivers.

TABLE 5.—*Arizona water production, Colorado River Basin*

GILA RIVER SYSTEM

Average yearly values in acre-feet:		
Gila River at Kelvin		787,000
Salt River at McDowell		1,470,000
Verde River at McDowell		609,000
Aqua Fria at Glendale		181,000
Hassayampa		23,000
Consumption above gauging stations		50,000
		3,120,000
New Mexico production—		
Gila at Guthrie, Ariz.	244,000	
San Francisco at Clifton	199,000	
	443,000	
Gila system production in Arizona		2,677,000

TABLE 6.—*Summary—Arizona water contribution*

Average yearly values in acre-feet:		
Gila system production		2,677,000
Main Colorado River—		
Little Colorado River	200,000	
Williams River	75,000	
Other tributaries	900,000	
	1,175,000	
Total water production in Arizona		3,852,000

NOTE.—No allowance for evaporation in these figures.

TABLE 7.—*Showing flow of Colorado River*

LOWER COLORADO RIVER FLOW—CLIMATIC YEAR

[Records of United States Geological Survey]

	Lees Ferry	Grand Canyon	Topok	Yuma[1]
1921			21,543,000	19,437,000
1922	16,372,000		18,999,000	17,554,000
1923	16,135,000	[2] 16,965,000	18,175,000	17,056,000
1924	12,462,000	13,012,000	13,839,000	12,819,000
1925	11,300,000	11,800,000	11,700,000	11,827,000
1926	14,000,000	14,400,000	14,300,000	13,835,000

[1] U. S. R. S. station.
[2] Oct. 1 to Nov. 11 estimated from Lees Ferry record.

NOTE.—There is some question of the reliability of the Topok measurements and the fact that it is a new station is to be considered.

TABLE 8.—*Evaporation amounts in acre-feet annually*

With adequate storage on lower Colorado River, such as Boulder Canyon with 26,000,000 storage, supplemented by small reservoir at Bullshead or Parker, water supply available from Colorado River would be fully conserved.

The first draft on this supply will be reservoir evaporation, the following list indicating the most likely arrangement and losses therefrom, giving elevation water surface:

	Acres
Lees Ferry (Glen Canyon) Dam, 3127–3513, average reservoir area	50,000
Power dams, Glen Canyon-Havase, average reservoir area	20,000
Bridge Canyon, 1207–1773, Havase, average reservoir	15,000
Boulder (Black) 645–1197, Havase, average reservoir	95,000
Bullshead, 502–645, Havase, average reservoir	21,000
Parker, 358–457, Havase, average reservoir	39,000
Total area	240,000
Average loss in addition to losses occurring under present conditions, feet depth	3.5

[1] Virgin Gila.

MEXICAN USES

The above supply contemplates upstream development which will very closely correspond to anticipated flow at Lees Ferry under compact in critical period, but average flow remains sufficient so that Mexican allotment would entirely have to be supplied from this equaled flow. In the absence of Mexican treaty it is being assumed Mexico will be awarded sufficient water for 200,000 acres, requiring, at 4.25 acre-feet per year, 850,000 acre-feet.

Total supply after full development of upper basin

Mean flow at Lees Ferry		8,880,000
Average gain to Boulder Canyon		1,460,000
River losses below Boulder Canyon	400,000	
Evaporation on developed river below Lees Ferry, 240,000 acres at 3.5 depth	840,000	
Mexico, 200,000 acres duty, 4.25	850,000	
		2,090,000
Total available supply for use in the United States below Lees Ferry		8,250,000

Evaporation over exposed surface at Boulder approximately 5 feet depth annually.

Water Power and Flood Control, Water Supply 556	3.00	4.5	4.5	3.38
Average	3.00	4.35	4.00	3.25

[1] 4.0 acre-feet duty on basis of lined canal and tunnel which would require a somewhat lower duty with unlined canals.

Average as noted is assumed for calculations in this report.

NOTE.—The average duty is obtained as noted for the reason that practically every investigation has developed somewhat different amounts and it is desirable to arrive at some figure to be used comparable with the various results.

TABLE 10.—*Most feasible projects in California and Arizona*

(Net for United States irrigation use. Required for projects under way and projects not under way, but of most feasible character)

Project	Area		Water		Acre-feet
	Arizona	California	Arizona	California	
Bullshead	500		1,500		1,500
Hardyville	2,300		6,900		6,900
Mohave Valley	24,000		72,000		72,000
Parker Valley [1]	110,000		330,000		330,000
Palo Verde		79,000		237,000	237,000
Yuma	93,000	15,000	396,000	63,750	459,750
Imperial Valley [2]		685,000		3,014,000	3,014,000
Coachella Valley [3]		72,000		306,000	306,000
Total	229,800	851,000	806,400	3,620,750	4,427,150

[1] Indian project.

[2] All American with Coachella Valley pumping area and West Side Mesa omitted.

[3] Coachella Valley 72,000 acres includes only gravity lands according to later surveys information furnished by Imperial Irrigation District.

NOTE.—Nevada's gravity lands, 11,000 acres—46,750 acre-feet.

NOTE.—Nevada feasible acreage, 15,000 acres—63,730 acre-feet.

TABLE 11.—*Future water-supply conditions in lower Colorado River*

UPSTREAM DEVELOPMENT

Extent of development in upper basin assumed as in Weymouth report of February, 1924, which was also used as basis for water-supply computations by LaRue in W. S. Paper No. 556, except that there has been added power development in Colorado River in Dark Canyon (a short distance below mouth of Green River), as indicated on page 796 (vol. 6) of the hearings on Senate Resolution 320, Sixty-ninth Congress, first session.

LOWER BASIN DEVELOPMENT

Development on tributaries below Lees Ferry has been assumed as indicated in the Weymouth report of February, 1924. The plan for river regulation below the mouth of Green River has been assumed as indicated on page 796 of the hearings on Senate Resolution 320, Sixty-ninth Congress, first session. At and above Bridge Canyon, Ariz., the arrangement of dams would correspond to that on Plate 3, W. S. Paper No. 556.

Below Bridge Canyon the following dams would be built:

Dam	Present river surface	Maximum water surface behind dam
Boulder	645	1,197
Bullshead	502	645
Parker	358	457

TABLE 12.—*Gains and losses in acre-feet*

Year	Lees Ferry to Topok	Topok to Laguna	Lees Ferry to Laguna
1922	+2,627,000	−1,445,000	+1,182,000
1923	+2,040,000	−1,119,000	+921,000
1924	+1,377,000	−1,020,000	+357,000
1925	+400,000	+127,000	+527,000
1926	+300,000	−465,000	−165,000
Average	+1,349,000	−784,000	+565,000

Present loss from Boulder Canyon to Topok estimated at 300,000 acre-feet annually, making flow at Boulder Canyon 1,650,000 acre-feet greater than at Lees Ferry. This gain will be reduced to 1,460,000 acre-feet with future developments on Little Colorado, Virgin River, etc. (See p. 18, vol. 3, Weymouth Report of February, 1924.) This estimate of depletion compares with estimate of 260 second-feet (188,080 acre-feet) by Larue (see bottom p. 119, W. S. Paper No. 556).

The present average annual loss from Boulder Canyon to Leguna Dam is 865,000 acre-feet. Future losses through the Mohave, Parker, and Palo Verde Valleys are accounted for under consumptive irrigation uses, thus making present losses in these localities available for beneficial use. These losses are estimated at 2.5 acre-feet per acre for 200,000 acres, or 500,000 acre-feet annually, leaving a future loss from seepage, undeveloped areas, and undeveloped river channel of roughly 400,000 acre-feet.

TABLE 13.—*Water supply*

		Acre-feet
Mean flow at Lees Ferry		8,880,000
Average gain to Boulder Canyon		1,460,000
Total available from Colorado River		10,340,000
Reservoir and river losses—		
Reservoir evaporation, average exposed area of reservoirs from Glen Canyon to Parker, inclusive, 240 Canyon, to Parker, inclusive, 240,000 acres. Average rate of loss in excess of present losses, 3.5 feet.		
	Acre-feet	
Average annual loss	840,000	
River losses below Boulder Canyon	400,000	
Total nonbeneficial uses		1,240,000
Balance for beneficial uses		9,100,000
Mexico, estimated, 200,000-acre duty	4.25	850,000
Total for use in United States		8,250,000

TABLE 14.—*Source of Colorado River waters available for lower basin under future conditions*

		Acre-feet
Gain, Lees Ferry to Boulder Canyon		1,460,000
Less loss, Boulder Canyon to Laguna Dam		400,000
Net gain, Lees Ferry to Laguna Dam		1,060,000
	Acre-feet	
Contributed by New Mexico (Little Colorado system)	50,000	
Contributed by Utah (Virgin River, Kanab Creek, etc.)	100,000	
Contributed by Nevada	20,000	
		170,000
Net inflow creditable to Arizona		890,000

SUMMARY

	Acre-feet
Contributed by upper basin	8,880,000
Contributed by Utah	100,000
Contributed by Nevada	20,000
Contributed by New Mexico	50,000
Contributed by Arizona	890,000
Net supply (for reservoir evaporation and beneficial uses)	9,940,000
Reservoir losses (largely in Arizona)	840,000
Mexico, estimated 200,000-acre duty, 4.25 [1]	850,000
Net supply for beneficial use in United States	8,250,000

[1] There is some question whether or not the water finally allotted Mexico should all come from the main stream or should be furnished by the entire lower stream system. If the latter should be the case, it would have more water to be allotted the States from the main stream.

TABLE 15.—*Colorado River projects below Boulder Canyon Reservoir*

Project and tract	Average pumping lift	Irrigation area	Acre-feet (acre)	Total acre-feet	Arizona		California

Total	242,000

CONCLUSIONS

First. That with the contemplated storage at Boulder Canyon of 26,500,000 acre-feet there is water available for more than the acreage, feasible of irrigation at this time, including 1,000,000 acre-feet for domestic use.

Second. That with the contemplated storage at Boulder Canyon there will be a shortage of water in the lower basin for full irrigation development after full development above Lees Ferry; this shortage, estimated, will amount to 376,000 acre-feet, or 86,400 acres, after supplying 1,000,000 acre-feet for domestic use.

GEO. W. MALONE,
State Engineer, Nevada, Secretary Colorado River Commission.

BOULDER CANYON—COLORADO RIVER DEVELOPMENT—UNITED STATES SENATE COMMITTEE HEARINGS, IRRIGATION AND RECLAMATION COMMITTEE, WASHINGTON, D. C., JANUARY 20, 1928.

Part 2—Water set-up

(Statement and cross-examination by PHIPPS, JOHNSON, HAYDEN, and PITTMAN)

EQUIVALENTS

WATER

One acre-foot of water is that quantity that will cover an area of 1 acre 1 foot deep.

One second-foot flowing continuously 24 hours equals 1.98, or approximately 2 acre-feet.

One second-foot of water equals 1 cubic foot of water passing a given point every second, equals 7.48 gallons per second equals 448.88 gallons per minute equals 1 acre-foot, equals 325,850 gallons, or 43,560 cubic feet.

POWER

One second-foot falling 8.81 feet equals 1 horsepower, 100 per cent efficiency.

One second-foot falling 11 feet equals 1 horsepower, 80 per cent efficiency (commonly used for estimating purposes).

Load factor is the ratio of the average power to the peak power.

One horsepower equals 0.75 kilowatt-hour.

One kilowatt equals 1,000 watt-hours.

Firm horsepower equals installed horsepower multiplied by the load factor.

Three billion six hundred million kilowatt-hours equal 1,000,000 installed horsepower or 550,000 firm horsepower on 55 per cent load factor.

Whenever a charge of mills per kilowatt-hour is mentioned in this report, it means mills per kilowatt-hour on 3,600,000,000 kilowatt-hours per year; $500,000 additional income equals 0.14 mills per kilowatt-hour on 3,600,000,000 kilowatt-hours per year in this set-up.

One mill per kilowatt-hour on 3,600,000,000 kilowatt-hours equals $3,600,000 per year.

One mill equals one-tenth of 1 cent.

FOREWORD

Some doubt may arise in the minds of those not entirely familiar with the Colorado River situation as to the exact position taken by the Nevada Colorado River Commission.

The Nevada commission, F. B. Balzar, chairman; George W. Malone, State engineer and secretary of the commission; Charles P. Squires, Roy W. Martin, E. W. Clark, and Charles B. Henderson, are entirely in accord with the fundamental principles outlined on page 1, upon which the following statement and cross-examination are hinged.

The writer acted as chairman of the San Francisco three-State conference, held December 1-18, 1927, subsequent to the Denver seven-State conference, and the statement as outlined in this transcript conforms to the results obtained at that time.

The three-State conference was attended by the following power experts, in addition to the State commissions: For California, E. S. Scattergood, of the Los Angeles Light & Power Co., and L. S. Ready, of San Francisco; for Arizona, Charles Cragin, chief engineer of the Salt River project, and B. F. Jacobsen, of Los Angeles; for Nevada, H. W. Crozier, of San Francisco.

Our commission employed H. W. Crozier, power expert of San Francisco; Thomas R. King, of King & Malone, engineers, Reno, Nev.; and Stanley Palmer, head of electrical engineering, University of Nevada, as a board to work with power experts representing other State commissions in arranging a feasible financial set-up.

A report has been made on the power and water set-up of the lower basin, based on the results of the San Francisco conference; the following statement is taken from it. This report was submitted for the record of the United States Senate, Committee on Irrigation and Reclamation, January 20, 1928.

In Secretary Work's letter to Congress of December, 1926, he pronounced the project feasible by collecting only $1,500,000 per year from other service flood and silt control and irrigation and domestic water, and that the project could repay the Government investment under 25 years, and, including a 9-year absorption period, would make a total of 34 years from the date of completion of the project until the Government would be repaid.

Under the proposed legislation 50 years is allowed after completion of the project, including the 9-year absorption period, which leaves 41 years to repay the initial investment instead of 25 years.

Amortization, 25 equal payments	$5,000,000
Amortization, 41 equal payments	3,048,780
Total	1,951,220

The difference in annual payments between 25 and 41 equal payments is approximately $1,950,000. This amount would be available on the Secretary's own set-up, changing nothing but the amortization period, and could be diverted either to the States or to amortize the Government investment in a much shorter period.

This does not take into account revenues above $1,500,000 from other than power sources, which a study of the situation seems to justify.

A copy of the report on the power and water set-up can be secured by addressing George W. Malone, State engineer, Carson City, Nev.

It is not to be assumed that Nevada has taken an arbitrary position in these matters, but has submitted her statement, power report, conclusions, and recommendations as a basis to work out legislation, incorporating such principles as the committee may consider advisable.

NEVADA'S RECOMMENDATIONS AS OUTLINED IN DETAIL IN TESTIMONY AND REPORT SUBMITTED

First. That Nevada and Arizona should benefit from the proposed development, at least to the extent that she would benefit if developed by private capital, second only to Government payments and any reasonable reserve.

Second. That the power be not sold as low as the repayments to the Government will permit, but should be sold at a competitive figure comparable with the cost of power available elsewhere for these markets.

Third. That arrangements be made for the sale of the power, so that fair offers may be had and that legitimate bidders be not handicapped.

Fourth. That suitable readjustment periods be arranged for the power charges per kilowatt-hour, and also for the proper charges for other service rendered.

Fifth. That proper charges be made for other service rendered—flood contol, silt control, irrigation-water storage, and domestic-water storage.

Sixth. That the States shall have the right to withdraw, upon proper notice, certain blocks of power to be used within their own State.

Seventh. That a board be arranged for from the three lower States to assist the Secretary of the Interior, or any agency supervising the sale of the power and other service rendered, in an advisory capacity to fix the proper charge per kilowatt-hour for power and proper charges for other service rendered.

Eighth. That an attempt be made to equalize in some manner between the three States the benefits from reclamation financing.

Ninth. That after the Government advancement is entirely repaid the benefits from this development accrue to the States.

We are convinced that if the above recommendations are carried out the project is economically sound and will support legislation containing these provisions.

There will be benefits from this enterprise; whether or not Congress recognizes that fact is beside the qeustion. If they do not recognize it, they will all accrue to the particular projects being financed in the set-up. If they do recognize it, then in the event the benefits are sufficient, the two States who own the site may benefit. (P. 43, cross-examination.)

AFTER RECESS

The hearing was resumed at 2 o'clock p. m., pursuant to recess.

The CHAIRMAN. The committee will come to order, please. I have a letter from the Governor of Nevada, which I will read, addressed to the chairman of the committee:

Hon. LAWRENCE C. PHIPPS,
Chairman Senate Committee on Irrigation and Reclamation,
Washington, D. C.

MY DEAR SIR: This will advise you that Hon. George W. Malone, State engineer of Nevada, will act as my personal representative, and also as chairman of Nevada's Colorado River Commission at the hearing before the committee on the Swing-Johnson bill relating to the construction of the Boulder Canyon Dam or any other bills affecting the Colorado River.

Any courtesy extended to him and his fellow members of our commission will be appreciated by the writer.

Very truly yours,

F. B. BALZAR,
Governor of Nevada.

Mr. Malone, are you ready to proceed?

Mr. MALONE. Yes, sir.

STATEMENT OF MR. GEORGE W. MALONE, STATE ENGINEER OF NEVADA AND SECRETARY OF THE COLORADO RIVER COMMISSION

Mr. MALONE. Mr. Chairman and members of the Committee, our governor, F. B. Balzar, desires me to say that he regrets his inability to appear before your committee and, further, that Nevada is for the development of the Boulder Canyon project, providing a way can be found to deal fairly with the interested States.

Our State has expended considerable time in the preparation of data, reviewing both the water and power set-ups, and they are submitted with the hope that the situation may be somewhat clarified.

I acted as chairman of the three-State conference at San Francisco, held subsequent to the Denver seven-State conference, and the power report submitted herewith is in line with the results obtained at that time.

The Nevada-Colorado River Commission is ready and willing to negotiate with Arizona and California for the purpose of forming an agreement relative to the water and power situation on the Colorado River at this or any other time.

Our commission desires to see each of the States in the Colorado River Basin treated fairly and will recommend that our Senators and Congressmen support any legislation that in our judgment accords such treatment.

Nevada has claimed 300,000 acre-feet of water to be used within her borders, and Arizona and California have always conceded her right to that amount. She could no doubt use more water than is claimed if allowed an unlimited period for development, but is only claiming what she thinks can be used within a reasonable time, and both States have conceded her claim.

SUMMARY OF POWER SET-UP ON LOWER COLORADO RIVER

Costs given in mills mean mills per kilowatt-hours on 3,600,000,000 kilowatt-hours per year, corresponding to 1,000,000 installed horsepower, or 550,000 firm horsepower on 55 per cent load factor. Annual charges include depreciation operations and maintenance in all cases. I will read the summary of results relative to power, and will request that the reports on both the water and power set-up be placed in the record.

Item:	Cost
Dam, including interest during construction	$55,000,000
Power plant, including interest during construction	35,000,000
Transmission line, including interest during construction	50,000,000
All-American canal, including interest during construction	35,000,000
Annual cost, including interest and amortization, 41-year period, including dam, power plant, and all-American canal (9-year absorption period equal to 50 years)	7,712,000

	Mills per kilowatt-hour
Power cost at switchboard, including dam and power plant, including interest and amortization 41-year period (full period 50 years)	1.511
Power cost at switchboard, same basis, and including dam, power plant, and all-American canal, corresponds to 7,712,000 annual charges	2.140
Power cost at switchboard, same as above, including dam, power plant, and transmission line	2.671
Power cost delivered in market, including dam, power plant, and transmission line	3.040
Power cost in markets, including dam, power plant, and all-American canal interest only, including transmission line	3.323
Power cost delivered in market, including dam, power plant, all-American canal as present proposed legislation, including transmission line	3.751
Steam-electric power cost at market, based on $1 per barrel fuel oil, 60 per cent load factor, 25-year amortization period, and $110 per installed kilowatt-hour, including transmission	4.89

There has been considerable talk of possible deficit during the absorption period, or during the time estimated that all of the power will be taken up by the markets, following the construction period.

Interest during construction is included in the original estimate, then nine years are allowed for the full amount of 550,000 firm horsepower to be marketed; this power is made up of units, to be constructed as needed, and the interest on original investment and operation and maintenance only will be paid during this period, then the last 41 years, making a total of 50 years, the original investment will be repaid in 41 equal installments.

We estimate in our power set-up that the total amount of power will be absorbed by the markets within six years, and on that basis there would be no deficit; it is estimated by some a much shorter time; but if by any chance it took a longer period, the deficit, if any, would have to be made up before the States could benefit.

CONCLUSIONS AND RECOMMENDATIONS

First. That the States of Arizona and Nevada should receive an amount from the proposed development at least equal to the benefits that they would receive if this natural resource were developed by private capital, and upon reasonable notice be allowed to withdraw certain amounts of power for use in their own State.

Second. That the power developed can be delivered into the available power markets, meeting competitive power costs, guarantee the Government investment, and still meet the conditions outlined above, with a margin to spare, considering the set-up from the data gathered from the Weymouth report.

This Weymouth report compiled all the data up to date, and in addition secured an enormous amount of detailed data and made estimates at an approximate cost to the Government of $400,000, and is the last word in the Government reports.

Senator JOHNSON. Is that the unpublished report we have?

Mr. MALONE. Yes; that is the unpublished report.

Senator JOHNSON. That the Senator and I have been trying to get printed as a public document, but, because of the cost, they denied it. That is your understanding, Senator?

Senator ASHURST. That is true, Senator.

Mr. MALONE. I will say that Nevada spent about $500 copying it for themselves.

Third. That the power can be delivered into the power markets for 4.5 mills, which is 1.5 mills under present plant cost, according to testimony before the California Railroad Commission, and .40 mill below anticipated cost, if plants were to be constructed at this time, and amortize the Government investment within from 15 to 18 years, proper charges being made for other benefits, irrigation, domestic water, and flood and silt control.

Fourth. That overwhelming opinion of engineers and men who have studied the fuel situation, is that steam-electric power will never be produced in the southwestern power markets cheaper than is possible at this time; that the increased cost of fuel and construction costs will offset any decrease from other causes.

Fifth. That it was the opinion of Arizona, California, and Nevada engineers, who attended the Three-State Conference in San Francisco, that the Government estimates for the construction of the project were liberal, if proper methods were employed in prosecuting the work, based on the Weymouth report set-up.

RECOMMENDATIONS

That provision be made in any legislation for the States of Arizona and Nevada to benefit from the proposed development and that provision be made for withdrawal of certain blocks of power upon proper notice for use in their own States, or that provision be made in any legislation to accept the provisions of an agreement between any of the lower States relative to distribution of benefits.

PROBLEMS BEFORE COMMITTEE

In this great development there is an infinite number of important questions any one of which can be discussed at great length.

In the construction of any great project to control floods and silt and in the marketing of the power to return the investment, practically every problem that can be imagined will arise, and each a subject that would in its proper place be interesting discussion.

We have therefore read and endeavored to digest all of the reports, hearings, etc., to be found on this subject and have collected and correlated what in our opinion are pertinent to any development on the lower river.

You are interested as a committee to pass on any suggested legislation in the following five particulars:

First. Whether or not any development should be made by the Government on the lower Colorado River.

Second. Location of site best suited to the requirements.

Third. Cost of project.

Fourth. How best to arrange the financial set-up for the least ultimate cost to the Government.

Fifth. The States' interest in the development.

GOVERNMENT DEVELOPMENT

The flood and silt menace on the lower Colorado is a terrific problem. Floods will ruin the Imperial Valley and Yuma lands faster on occasion but not any more surely than continual heavy silt deposits.

It is the policy of the Government to assist in every possible way in serious flood-control problems, and incidentally in this case silt coming down the river in the future will be controlled.

Among the incidental benefits occurring by virtue of this development will be the reclaiming of large areas in both Arizona and California and a comparatively small acreage in Nevada, the supplying of domestic water for southern California cities, and development of power to assure the return of the investment, and since there are seven States interested in the problems they will require the services of a disinterested agency.

LOCATION OF SITE

A storage site to include the necessary benefits should have—

First. Capacity of twenty to twenty-five million acre-feet located below important tributaries.

Second. Located as near as possible to place of use of water and economic distance for transmission of power.

Third. High enough to develop sufficient power to pay the cost.

There are three sites that fulfill a part of the requirements:

"Topok, Glen Canyon, and Boulder or Black Canyon."

Topok has sufficient capacity, is below all tributaries not otherwise being controlled, and the construction cost is comparable with other sites, but it would necessitate moving several miles of railroad in difficult country and inundating the town of Needles, and it has been pronounced not practicable to make these changes, and it is not high enough to develop power to pay construction.

Glen Canyon has sufficient capacity, but even if construction costs were comparable, it is located above the Little Colorado River, whose waters can not be economically controlled on the stream itself, and the increased distance over which irrigation water would necessarily have to be regulated would cause an appreciable increased loss, and it is not within economic transmission distance of the power markets, thus definitely eliminating the project from returning the investment through the sale of power.

Boulder or Black Canyon is below all principal tributaries not otherwise capable of being economically controlled, has sufficiently capacity for flood control, and the power market is within economic distance.

COST

The cost of the project is estimated to be $125,000,000, including interest, during construction, including dam, power plant, and all-American canal.

This estimate is set up by Government engineers after the expenditure of nearly $400,000 in careful detail surveys, including foundation investigations, and these estimates were checked by Mr. Hill and Mr. Wiley, two of the most widely known consulting engineers on the Pacific coast. There can be no doubt of their ability and integrity. These results are set up in very great detail in the Weymouth report, a Government document of eight volumes.

FINANCIAL SET-UP

The power set-up for the Boulder project shows by this method that the Government advancement can be returned within a reasonable time. This is shown in detail in the report.

STATES' INTEREST

California's interest is, of course, in the fact that the power, domestic water, and a large portion of the water for irrigation are used to develop her State, and that the floods and silt will be controlled.

Arizona's interest is that a large portion of the water will go to develop her State. The records show that she has 891,000 acres to be developed through this project, and that her natural resource is being utilized by this development, and also that the floods and silt will be controlled with reference to the Yuma project. I understand that the Government is at this time financing the levee work.

Nevada's interest is that she has a very small amount of land, approximately 80,000 acres, that may be irrigated, and that she may obtain cheap power near the development; this will also obtain in Arizona; however, this is limited, because when small blocks of power are transmitted any distance, transmission costs make it an uneco-

nomic procedure; and that her natural resource is being utilized for the development of this project.

Nevada has only one other site, Bullshead, where a small amount of power can be generated in the future; this site is below Boulder Canyon.

She is convinced that if the site were not taken for this purpose that it would be developed, and that it would then become part of the wealth of the State.

The commissions of the seven States have agreed upon one point and that is that Nevada and Arizona should benefit from the development by virtue of the site being located within their borders; it is only left to determine the method by which this can be accomplished

Nevada has never contended that the Government is bound to allow her anything for the use of this site, but in the event profits are made from this development, Congress has the right to direct where they shall go, and, in justice, who would have a better right to participate in these benefits than the States within whose borders the site is located?

Our only request, then, is that arrangements be made whereby proper charges can be made for the service rendered—flood control, silt control, and irrigation and domestic water storage—and that this be added to the income from power and that the States of Arizona and Nevada participate in the excess over the payments due the Government, and that the charges for power be not made as low as the repayments to the Government will permit, but low enough to successfully compete with power from other sources. We believe that a supervisory board could be created from the three States to assist the Secretary of the Interior in determining where these charges shall be fixed.

SUGGESTIONS TO FORM BASIS OF POWER AGREEMENT BETWEEN THREE LOWER STATES

First. Fix at the switchboard a price of 3 mills per kilowatt-hour and split all above the cost to the Government on a 40-year amortization period between Arizona and Nevada. Power can then be delivered into the power markets at less than 4.5 mills, which is four-tenths mill under anticipated cost if plants were to be constructed at this time, and 1.5 mills under present cost, according to testimony before the California Railroad Commission.

Second. A board of control to be appointed, consisting of three members, one to be appointed by the governor of each of the lower States to assist the Secretary in the sale of the power and to secure adequate revenue from other sources, the Government to be paid first; then the three States of Arizona, California and Nevada, to split the remainder between them, California's one-third to apply on the all-American canal until paid for; then to go to reduce the price of power to the purchaser, with suitable readjustment periods.

Third. That a board of control be created and the power sold the same as above outlined, and reasonable charges made for flood and silt control and irrigation and domestic water, but all the money received to be used to retire the amount expended by the Government at the earliest possible date; then the Government to retain control and to deduct for operation, maintenance, and depreciation, the remainder to be divided between Arizona and Nevada.

Whatever agreement is had, to assure Arizona and Nevada of reasonable return through the proposed development of their natural resources; that they be allowed, in addition, to withdraw, upon reasonable notice, certain blocks of power for use in their own States.

At the San Francisco conference held in November and December, 1927, the three lower States were represented by engineers as well as their respective commissions, and at that time, after thoroughly investigating the power set-up, the California commission made a definite offer of $700,000 annually to each of the States of Arizona and Nevada. This amounts to practically four-tenths mill per kilowatt-hour, and some members of the Arizona delegation indicated that they would recommend that 1,080,000 for each, amounting to six-tenths mill per kilowatt-hour be accepted, with a provision that the two States be allowed to participate in any excess over that amount; this was closer than ever before to an agreement.

When it became evident that we would not close at that time I, as chairman, on December 18, wired the four upper State governors, suggesting that they do nothing to oppose the legislation until we had an opportunity to continue the conference in Washington, where we could confer with the congressional committee and the heads of departments and formulate some plan satisfactory to Congress; we are ready and willing to do this now.

In closing, will again say that we believe that Congress has the right to determine where the benefits from this development shall go, and we believe that proper charges should be made for service rendered in addition to the income from power and that the charge for this power should be comparable to available power elsewhere for these markets and that the two States should benefit, coming second only to the Government payments.

Nevada is convinced that the development is economically and physically sound if proper care and supervision is exercised in the following particulars:

First. That charges be made for power comparable to available power elsewhere for these markets.

Second. That the charges now made and expended for flood control be diverted to amortize the Government investment on the dam, as these expenditures become unnecessary by reason of the flood-control works.

Third. That the assessments now made and expended on cleaning canals and ditches be diverted to amortize the Government investment, as this work becomes unnecessary by reason of silt-control works.

Fourth. That a proper charge for irrigation storage be made on the three or four hundred thousand acres of new land receiving water by virtue of this development when it is able to support such charge.

Fifth. That a proper charge be made for water stored for domestic purposes for southern California cities when this water is utilized.

Sixth. That a board be created to assist the Secretary of the Interior in the determination of these charges.

In the report herewith submitted for the record all of these questions are taken up in detail, and we are ready to discuss them at any time.

The Nevada Commission will recommend the support of legislation that—

First. Takes into account a fair distribution of benefits accruing from this development, coming second only to the Government payments.

Second. Three hundred thousand acre-feet of water for Nevada.

Third. Right to withdraw, upon proper notice, certain blocks of power for use within the State.

These items may or may not be mentioned specifically in the legislation, but may be handled in the manner that the judgment of this committee may direct.

The 300,000 acre-feet of water has already been agreed to by both Arizona and California.

The CHAIRMAN. Mr. Malone, you spoke of the estimated cost of the dam and appurtenant structures supposed to be erected at Black Canyon. What is your own personal view as to the adequacy of the estimates? Are you prepared to express an opinion as to whether or not the $125,000,000 should be sufficient for this purpose?

Mr. MALONE. I will say in answer to that, Senator PHIPPS, that the only way anyone could check estimates would be by the expenditure of an enormous amount of money. The detail surveys that have been made on the Colorado River no one, I believe, questions—in other words, the capacity of the reservoirs, the height of the dam to do the necessary regulatory work, the distance across to be covered by the dam. In other words, the volume, etc., of the material for the dam no one questions.

The CHAIRMAN. And the possibilities for adequate foundations?

Mr. MALONE. That I am coming to. The foundation has been drilled, has been investigated, just as we would do it. Nearly all engineers have done some of that work. There is always an element of uncertainty, but in your estimates, whatever elements of uncertainty there were, the engineers were careful to allow for contingencies. I assume that this has been done. I have the highest regard for Mr. Weymouth, who is now in Mexico for the J. G. White Co., on the same kind of work, building dams for reclamation projects, and I have no reason to doubt he has made these allowances. Then, again, Mr. Hill and Mr. Wiley have checked them, and, as I say, the only way to go back of that is to spend an enormous amount of money, which none of us are prepared to do, and unless you did that your opinion is worth as much as mine as to whether he has done the thing properly or not.

The CHAIRMAN. Given a dam structure 550 feet in height, what would be about low water?

Mr. MALONE. Approximately 400 feet above the stream bed.

The CHAIRMAN. At what point in elevation or height of the dam would the water be taken out for the production of hydroelectric power and for irrigation?

Mr. MALONE. Well, that will vary, Senator; it may be the maximum height in case floods filled it to that particular point or the draught had not been such as to keep it down, or it may be the minimum height. I will not say what the minimum is definite, but I think the range is 400 feet to 540 feet.

The CHAIRMAN. That is really what I was trying to arrive at—the minimum at which water would be taken out.

Mr. MALONE. Approximately 400 feet.

The CHAIRMAN. If it were taken out at that elevation, it would not be taken out at that point when the dam was full or at the highest point.

Mr. MALONE. No.

The CHAIRMAN. It would be taken out at different points, depending on the amount of water impounded. Now, with flood control would there be conflicts? Would it be necessary, in order to assure flood control at all times, to take it out from a lower level than the approximate 400 feet?

Mr. MALONE. It would not. There is about eight or ten million acre-feet capacity estimated necessary for flood control. Now, it would be necessary, probably, during the period when floods would be liable to come down at any time, to keep that somewhat below the high-water mark, but it depends entirely on the time it would take water from

certain tributaries to reach the dam, certain floods to reach the dam, and the speed at which it could be emptied in case floods started to come down, and it has been computed, the records will show, that taking care of the condition you mentioned, that the water can be so regulated to develop the 550,000 firm horsepower. In other words, if the elevation of the water surface was 450 feet instead of 540 feet, it would simply take more water to generate the same amount of power at that height.

Therefore, it has been computed that over a long term of years, with that volume of storage, that your storage capacity and water is ample for the generation of 550,000 firm horsepower. Does that answer your question?

The CHAIRMAN. Yes; it does, to my satisfaction. What is the acreage estimated that is allowed for the accumulation of silt?

Mr. MALONE. Five million acre-feet, and according to the estimates the silt comes down at the rate of from 100,000 to 125,000 acre-feet per year, which would mean the volume of storage allowed for silt would last approximately 50 years, and then, of course, before the capacity of the reservoir was seriously affected, would probably be another 50 or 75 years.

The CHAIRMAN. Is it possible to have sluice gates, or outlets, near the base of the dam that would permit the flushing out of the silt in times of high water without the pressure being too great?

Mr. MALONE. I do not think it is practicable. We have the same problems in a small way in reservoirs that are smaller. It has never proved practicable at all. It will sluice out to a certain distance back of the gates, but it will fill up too far back to be touched by any sluicing process. You would have to have your reservoir nearly empty in order to get the velocity any distance back of your dam.

The CHAIRMAN. I know it has been recommended by none of the engineers.

Mr. MALONE. I do not believe it is practicable.

The CHAIRMAN. And they have agreed with you in that feature. Now, what is the distance from Black Canyon to what would be the available market for the power produced? Would that be the distance to Los Angeles or some other point?

Mr. MALONE. That is your only market of any extent. There will be certain small blocks of power, no doubt, used in our own State.

The CHAIRMAN. There would be other enterprises pick up small amounts along the line of the transmission lines, but Los Angeles is the only available market at the present time?

Mr. MALONE. It is the market which is supposed to take up that amount of power; yes, sir.

The CHAIRMAN. What is the distance in miles from the site of the dam, approximately?

Mr. MALONE. It has been variously estimated, but the distance we estimate is the one set down in the Weymouth report, 300 miles.

The CHAIRMAN. Three hundred miles?

Mr. MALONE. Yes, sir.

The CHAIRMAN. And you have stated a figure of 12 per cent as the anticipated line loss in any transmission of power for a distance of 300 miles. On what do you base that, Mr. Malone?

Mr. MALONE. I simply took that estimated loss because it is recommended by outstanding power experts. The Government, I believe, estimates in one of their set-ups 14 per cent, but 14 per cent is the highest I have ever seen used. The reason I adopted the 12 per cent was because in San Francisco, during our last conference, we went into that very thoroughly, and Mr. Ready, who is with the California Railroad Commission, Mr. Scattergood, with the Los Angeles Light and Power Bureau, and Mr. Cragen, with the Salt River project of Arizona, and Mr. Maddock and Mr. Jacobsen, also representing Arizona, and Mr. Crozier, employed by our State, all agreed that 12 per cent was ample, so we adopted that figure.

The CHAIRMAN. I wanted to have your statement on that point, because it struck me as being rather low.

Mr. MALONE. Fourteen per cent is the highest I have heard estimated at all, and since these four or five outstanding men agreed that 12 per cent was enough, we adopted it.

The CHAIRMAN. In your statement during your testimony you used the figures that we have used, that have been used in the Swing-Johnson bill; that is, they arrive at $125,000,000 aside from any estimate of the cost of the transmission lines.

Mr. MALONE. Yes.

The CHAIRMAN. You had not made any separate estimates of your own?

Mr. MALONE. I simply took the figure because it is set up that way in the Weymouth report on those items. If you exclude any of the items you change it that much, but, as I said before, there has been no comprehensive detailed surveys made, except the Weymouth investigations, and anyone who tries to make an independent estimate by changing the figures, by either the volumes or distances, or whatever might be taken into account, I believe is doing it without proper consideration. If we go back of the Weymouth report it will be necessary, from our point of view, for Congress to appropriate further money and go ahead and make a new investigation.

Mr. Weymouth, who held the office of commissioner of reclamation at that time, supervised the expenditure of approximately $400,000 in the preparation of this report, and at that time definitely recommended that the development be located at Black Canyon, and further recommended that the dam be constructed 550 feet high for flood and silt control and the storage of irrigation and domestic water, and that 550,000 firm horsepower be developed to help pay the cost, and sets out in eight volumes in very great detail just how this can be done.

Absolutely no investigations have been made by the Government or any of its agents since that time, but have taken all of their information from this report and have made no new recommendations not made substantially by Mr. Weymouth at that time.

I have been down the Colorado River into Imperial Valley, Yuma irrigation district, and old Mexico, and have seen practically all of the reservoir sites on the lower river, but a superficial examination such as is possible to be made in that manner does not reveal further information than that contained in the report, so anyone must conclude as Mr. Weymouth has done unless you make another very substantial appropriation and do the work over.

The CHAIRMAN. You gave the figure of 3.04 mills delivered as the cost of the hydroelectric power without, of course, including anything for the all-American canal, but including all other elements of cost?

Mr. MALONE. Yes.

The CHAIRMAN. Does that include depreciation or amortization?

Mr. MALONE. Yes, sir.

The CHAIRMAN. And interest?

Mr. MALONE. And interest.

The CHAIRMAN. You have given a figure of 4.89 mills as the present cost of producing power by steam, with oil at $1 per barrel.

Mr. MALONE. Not as it is being produced at this time, but if you were able to build your plant, starting at this time, with the efficiency, etc., they are capable of getting.

The CHAIRMAN. But is it not a matter of fact that it is being produced to-day in some of the more modern plants at much less than $4.89?

Mr. MALONE. I do not believe it is in that particular vicinity with the cost of fuel oil $1 per barrel.

The CHAIRMAN. The particular vicinity you have in mind being the Los Angeles market?

Mr. MALONE. Yes.

The CHAIRMAN. With a plant at tidewater, which is practically Los Angeles. I don't have the exact figures in my mind that I could quote, but that figure seems to me higher than those I have heard of.

Mr. MALONE. May I explain that I believe you have heard these costs where they are picking up stray lots of oil and gas. They have their engines so arranged that they can burn gas or oil and use either as fuel, and they pick up the fuel in odd lots much cheaper than a dollar. I believe some of it as low as 60 cents a barrel for oil. I imagine that is where you got your lesser costs.

The CHAIRMAN. That is not what I understood to be the fact. I understood it to be the practice in the modern, up-to-date steam plant, with oil at practically the figure you state, $1 a barrel, on account of the advances that have been made in the art of producing the power by steam, in which they are now securing something over double the output in kilowatt-hours that they did two or three years ago from a barrel of oil.

Mr. MALONE. They are getting the highest efficiency that we know anything about down there, I believe, somewhere around 13,500 British thermal units, and that means somewhere around 460 to 480 kilowatt-hours per barrel of oil.

The CHAIRMAN. Those are the exact figures that have been quoted to me—13,500 British thermal units and 460 to 470 kilowatt-hours per barrel.

Mr. MALONE. I believe they would come very close to the figure I gave you. However, I would be glad to go into the details if you have the time.

The CHAIRMAN. Well, if you can supplement your statement here to-day by giving us some figures as to the actual cost with present-day practices we would be glad to do it.

Mr. MALONE. It is the figures which I would give you on that efficiency.

The CHAIRMAN. Then you think any further inquiry that you might make of the power-producing companies and the results that they are getting to-day with what we call commercial crude oil, such as they would buy if they had to buy in large quantities right along, would not vary the figure you have submitted here.

Mr. MALONE. If it cost a dollar per barrel it would not change it very much.

The CHAIRMAN. Is it the tendency to-day for power companies furnishing the public with power to develop the possibilities of their hydroelectric resources or to devote their energy to further developing steam plants?

Mr. MALONE. It depends altogether upon the availability of the hydroelectric projects. In southern California the hydroelectric projects that are still left to develop are much more expensive than those which have been developed, and would run well over this figure. If you happen to be closer to your hydroelectric development, or the water supply is more dependable, like it will be on the Colorado River, then I think

they would turn their energy toward the hydroelectric plants again; but in your southern California territory your water supply is very indefinite. There have been years within the last 10—I think 1924 was the shortest year—when practically all the hydroelectric development was very uncertain, and that turned you toward the steam development more than anything else.

The CHAIRMAN. The information that I have picked up in a general way, without having endeavored to keep informed at all times as to the progress of the art, indicated to me that more and larger developments were being made in steam plants than in hydroelectric plants over the past three or four years, which was my reason for propounding the question to you. If, as you tell us, the transmission over 300 miles will result in a line loss of only 12 per cent——

Mr. MALONE. On large amounts of power, such as this?

The CHAIRMAN. On large amounts of power, naturally.

Mr. MALONE. I am satisfied that is a condition you will find that the hydroelectric plants of southern California that are still available for development will cost much more than most of the resources that have already been developed, and will run higher than your steam costs, but if you were in a territory where your water supply was stable and everything tended toward a steady dependable power, like it will on the Colorado, with the proper development you would have an entirely different condition.

The CHAIRMAN. Now, on the understanding that your market would be Los Angeles or its vicinity, where the hydroelectric power produced at Black Canyon would necessarily come into competition with the power produced by steam, you feel that there is a certain margin of profit or difference between the cost of the two which would permit of taking off a considerable amount for interest, amortization of the plant, and also a little for a tax or return of some kind, if you wish to call it a royalty, to the States of Nevada and Arizona, where the plant is to be located. Is that your contention?

Mr. MALONE. I will answer you this way, Senator Phipps; in this set-up I have endeavored to give you the cost of each unit. That is, the cost delivered at the power market, leaving out certain units and including certain others, and in this report which will be presented here for the record I have gone into very great detail into the question of interest on the all-American canal, and operation and maintenance, so that you can take each one and see what it amounts to. I do not say there is sure to be a margin, including all the features in the bill that are now included, if no charge is made for any other service rendered. What I have endeavored to say here is that our results show a margin. Of course, they are theoretical results. Your dam may cost you more than you figure or some other thing might happen, but I am convinced—I say I am convinced, our engineers whom we employed in San Francisco for this work, Arizona's engineers and Los Angeles's engineers, were convinced that if the Weymouth report is correct in its set-up, which, as I say, you can not go back of, for if you do it will require another appropriation and another investigation, so taking that as a basis and making the proper charge for your silt control and your flood control and for your domestic water and irrigation water, we were convinced that there will be a margin; yes.

The CHAIRMAN. Now, you have stated that in your calculations you figured that it might be nine years before the full capacity of the power plants at the dam could be utilized by marketing. Isn't the contention of Nevada that on the completion of the works and when operation is begun of the power plants that then the allowance to Nevada should attach immediately?

Mr. MALONE. It is our idea that our participation in any profits would only begin when there are profits. We are setting it up so that we are certain profits will be there, and on proper supervision—that is what we are concerned about—proper supervision and that proper charges be made. We will not participate in any benefits until such time as the project is on a paying basis. In other words, if we made an agreement with California—I do not think it was ever in our minds; this was aside from your legislation entirely—it was never in our minds to collect anything until such time that enough power was marketed so that it was paying its own way and the margin was there.

In answer to your nine-year absorption-period question I estimate it will take six years. This is based on the proposition that the records show that from 125,000 to 150,000 installed horsepower is the increase from year to year in the power being used in southern California. Now, installed horsepower is about double, just for rough calculation purposes, the firm horsepower always. Then the estimate I have assumes that a million installed horsepower would be taken up in approximately six years, and if it is, there will de no deficit. Mr. Durand, I understand, says two or three years. That is a possibility, because there will be other manufacturers coming in, and I do not doubt that at all, although I did not take a stand as optimistic as that. But I have allowed 9 of the 50 years. That is the reason we take the remaining 41 years for amortization payments, making the 50-year period, and to see whether or not there would be a margin as balanced against the steam power.

The CHAIRMAN. Given the installation of the plants, and all that, and the beginning of operations, if at the end of the nine-year period no profit had been derived over and above that required to meet the charges and amortization and interest, the State of Nevada would not expect to collect any revenue from the proposition.

Mr. MALONE. Not if, in addition, proper charges had been made for the other services rendered as I outlined.

The CHAIRMAN. Charges for other services rendered. Just what have you in mind?

Mr. MALONE. I mean the flood control, silt control, the irrigation water, and the domestic water. It would be perfectly possible to supervise this project so that there would be absolutely nothing available for anybody, simply by giving the service free of charge, flood control, silt control, and storing water for irrigation of new lands without any charge, and for domestic water without any charge, and then being lenient on the price of power. There could very easily in that set-up be no margin for anybody. You can even be below your requirements very easily. But our only contention is that if these other proper charges are made, and that is the idea of some assistance being given to the Secretary, not in any way taking from him his authority or superseding whatever he feels is his proper field, but assist him in the preparing of data supporting and determining what charges should be made and what charges are proper to be made on power, so that it will be a good set-up, and it is just the same as any other proposition in that respect, that the proper charges be made.

The CHAIRMAN. What do you have in mind as to the course you would pursue if it were given to you to allocate the overhead and investment?

Mr. MALONE. I beg pardon.

The CHAIRMAN. If you were called upon to allocate the overhead charges and other costs pertaining to the enterprise? To illustrate, would you take into consideration, or would you say that a certain proportionate amount of the cost of the dam should be assessed as against flood control, a certain other amount assessed as against the all-American canal, irrigation included, and another for power?

Mr. MALONE. Yes; that is the proper theory. You have a condition at this time—I would not want to make any definite statement as to how much it is costing. It is costing somewhere between $300,000 and $500,000 annually in the matter of levees and control works made necessary by the lack of flood control. While the point here is that if you built the dam and this expenditure is therefore necessary, or any part of it, for further protection, you can reasonably divert a part of that toward payments for the dam itself and make no further charge or no greater charge on the land than is being made at this time, and this only obtains during the amortization period. And the same with silt control. Silt control costs over a half million dollars annually in the cleaning of ditches and canals, so I am informed, and while that will not be entirely eliminated to start with it will be gradually eliminated. Therefore a part of these charges could be very properly diverted toward the cost of those works. Then in the all-American canal there are 400,000 acres of new land. If you are going to pay for the all-American canal as set up in this bill, by assessment of power, why not make a proper charge on this land?

I do not say $75, or $40, or $50 an acre, but a proper charge, which will no doubt be obvious at that time—an impartial arrangement in the matter—and make that proper charge, whatever it is, as it goes under cultivation, the same as we always have to do under reclamation work out there, even under reclamation districts. We have to pay back the original costs, and where we do not, we make arrangements for payments the same as this absorption period, and have what is known as 10–20-year bonds many times. The first 10 years would pay the interest and operating expenses, and the next 10 years the original investment and operating expenses and interest, and we have that all figured out to start with.

Then, the domestic water: You have 1,500 second-feet of water, which will make 1,080,000 acre-feet per year. The estimate is about $20 per acre-foot delivered over the Divide, taking over half the power that is available to do that, over half the 550,000 firm horsepower. Two dollars an acre-foot added to that will still be so far below the present charges for irrigation water over there that it will not be noticed; and as to domestic water, where the per capita allowance is about 150 gallons, and considering there are approximately 326,000 gallons in an acre-foot, $2 per acre-foot would be lost entirely. You can not find it, and that would amount to $2,000,000 in revenue, which in turn amounts to over .5 mill per kilowatt-hour additional revenue in this set-up.

The CHAIRMAN. You think there should be a charge for the water taken in addition to the amount that will necessarily be charged in the power consumed in pumping water to the elevation necessary to transport it?

Mr. MALONE. Yes, for the reason that that is not an unreasonable charge. As I say, $20 per acre-foot for domestic water is nothing, and, so far as some of the irrigation water in that particular country is concerned, is very low.

The CHAIRMAN. Is it your opinion that given this dam complete that further dikes or other flood protection along the lower reaches of the river would be rendered unnecessary?

Mr. MALONE. Not entirely, but much less expense would be necessary.

The CHAIRMAN. Even with the San Carlos or Coolidge Dam, you would still think flood protection necessary?

Mr. MALONE. Some levee construction will always be necessary because you will always have a flow of some kind and varying at intervals. In other words, the studies show that if the amount of storage I have just outlined is provided, it will hold the maximum flow of about 40,000 second-feet, which is quite a flow of water at that, and will necessitate some levee construction at all times, but nothing in comparison to the present, I should say.

The CHAIRMAN. I want to ask you, Mr. Malone, do you believe an agreement among the three lower basin States may be reached in the near future?

Mr. MALONE. I believe, Mr. Phipps, that it would be possible to reach an agreement if you could get everyone to say exactly what they would do. That is the problem. We are willing to say what we will do. I can not say that all of us are at this time. I believe that an agreement is possible, if this were so.

The CHAIRMAN. You think that decided progress, or satisfactory progress in negotiations has been secured during the past six months.

Mr. MALONE. If the two statements were sincere in California and Arizona which I read to you. I will not say that the Arizona commission offered to do this, but some of their delegates offered to recommend it. Their proposal amounted to about $350,000 more per year for each of the States than California offered to agree to. That was the difference when we finally adjourned our meeting. I will not say that the Arizona commission said they would accept that, simply some of their delegates indicated that they would recommend it, so I do not know for sure about an agreement.

The CHAIRMAN. Do I understand you are within 400,000 acre-feet in arriving on a settlement of the water, and $350,000 per year in revenue in arriving at an agreement?

Mr. MALONE. It was so indicated by those two statements. I would not say that now, however.

The CHAIRMAN. I have nothing further. Have you some questions, Senators?

Senator JOHNSON. Are you the State engineer of Nevada now, Mr. Malone?

Mr. MALONE. Yes.

Senator JOHNSON. There were five things that you discussed. Very hastily I go over them. First, whether there should be any development at all. You answered that in the affirmative, that there should, did you not?

Mr. MALONE. In my opinion, there should.

Senator JOHNSON. Secondly, was the site. The site, in your opinion, should be the Black Canyon.

Mr. MALONE. Yes, sir.

Senator JOHNSON. Thirdly, was the cost. You agree that the cost can be kept within the limit of the cost indicated in the bill, do you not?

Mr. MALONE. Based on the Weymouth report, which is all we have, and which, I think, has gone into it in very great detail.

Senator JOHNSON. And you believe it to be accurate?

Mr. MALONE. I believe it is.

Senator JOHNSON. The next was the best arrangement for a financial set-up. You have read what the Secretary of the Interior has reported, have you not?

Mr. MALONE. Yes.

Senator JOHNSON. And the financial set-up of the bill is satisfactory to you. I am not speaking now of division among States at all.

Mr. MALONE. What do you mean, the inclusion of everything that is now included?

Senator JOHNSON. Yes, sir.

Mr. MALONE. I believe it would be perfectly satisfactory with us if the proper charges were made as I outlined.

Senator JOHNSON. The last one you discussed was the matter of the State benefits. To that I advert for a moment. The entire project must be paid out of power, must it not?

Mr. MALONE. I might change that just a little. It might be guaranteed out of power, but I would not say that the entire project would have to be paid for out of power.

Senator JOHNSON. Well, substantially, isn't that so?

Mr. MALONE. No, sir; I do not believe it is.

Senator JOHNSON. Who would pay for it?

Mr. MALONE. As I outlined, we need $7,712,000 per year—that is, after the amortization period has begun. Some of the estimates are slightly under that. This is a couple of hundred thousand dollars over what Secretary Work submitted in a letter last year. Two million or two and a half million could easily be collected from the sources I have mentioned without any undue hardship if the conditions, or after the conditions as I outlined them here, have come about, and if they are not going to come about the object of the development is lost.

Senator JOHNSON. Well, the amortization of the proposition is what I was referring to particularly. That is from power, isn't it?

Mr. MALONE. I would not make any distinctions.

Senator JOHNSON. You would say that the amortization may be made from the various sources you have indicated?

Mr. MALONE. Yes, sir.

Senator JOHNSON. The largest of those, of course, is power.

Mr. MALONE. It is one thing we are sure of.

Senator JOHNSON. And without it you could not undertake the project, could you?

Mr. MALONE. I do not think so. I believe it is necessary, as I have said, to guarantee the cost through the power, but to be sure there is supervision enough so as to know you are getting the proper charges made——

Senator JOHNSON. I am not quarreling with you on that.

Mr. MALONE. No. I am just outlining them again, and that the power be not sold below, too much below other sources of power but simply low enough to make it competitive.

Senator JOHNSON. All right. Put it the other way around. You have got to rely upon the sale of power in order to have this project at all, haven't you?

Mr. MALONE. In my opinion; yes.

Senator JOHNSON. Yes. Now, the only market there is for this power is Los Angeles, isn't it, or southern California?

Mr. MALONE. Southern California; that is not the only market but the main market.

Senator JOHNSON. Without that market it would be impossible to finance this scheme at all?

Mr. MALONE. I think it would at this time.

Senator PITTMAN. Just another question. And without the dam site in Arizona and Nevada there would not be any project.

Mr. MALONE. That is undoubtedly so.

Senator PITTMAN. I said that because you had forgotten to mention the other two States.

Senator JOHNSON. No; I did not forget the other two States in the slightest degree.

Senator ASHURST. The trouble is that the Senator can not forget them.

Senator JOHNSON. No; that is perfectly obvious. I do not want to forget them either. I realize the alliance, and I am not complaining about it in the slightest degree.

Senator ASHURST. Keep that out of the record.

Senator JOHNSON. My dear sir, I do not complain about it.

Senator PITTMAN. The only alliance that exists, to my knowledge, between Arizona and Nevada—because there has never been a word spoken between them, and I wish to say that our commission is not tied to any proposition whatever—the only alliance, Senator, is a natural alliance made necessary by the position so far of California.

Senator JOHNSON. Well, I deny that, of course, because the last session of Congress will demonstrate that exactly, and the previous history of the entire project will demonstrate, too, who is accurate in that regard.

Mr. MALONE. I welcome your questions, Senator.

Senator JOHNSON. Oh, I realize that. I understand that you and the California people who met in San Francisco met on terms of amity, of course.

Mr. MALONE. And Arizona included.

Senator JOHNSON. All three of you sat down there and talked at great length about the matter.

Mr. MALONE. Yes.

Senator JOHNSON. In an honest endeavor on the part of every one of you, I assume——

Mr. MALONE. Yes.

Senator JOHNSON (continuing). To try to reach a conclusion in respect to it. There wasn't any desire, such as may have been indicated here, on the part of the California representatives not to reach a conclusion with you, was there?

Mr. MALONE. I would not say so. I believe it was sincere on the part of both Arizona and California.

The CHAIRMAN. I would like to say a word here. I have not heard any such allusion made.

Senator PITTMAN. What I mean by this is not the efforts of the commission to agree with Nevada or with Arizona. What I mean, Senator, is the form of cross-examination that you were just participating in which was leading to the conclusion that everything should be borne by power. That was the system of it. That it had to be borne by power, and it was unfortunate that there would not be anything left for the State of Nevada as a compensation.

Senator JOHNSON. Oh, no; that was not the point of it at all. I have in my mind very clearly—I do not think you will disagree with it—that without power and the possibilities of power from this project, why, the project could not go on at all.

Senator PITTMAN. Not at all.

Senator JOHNSON. And that is what I was examining him about. And that the only place you can sell power in reality is in southern

California under the circumstances. There is not any doubt on that score, I take it, and there ought to be no disagreement between us in respect to it.

Now, if I read the record correctly Congressman DOUGLAS asserted that the power set up in connection with the Boulder Dam project was economically unsound and would not permit or justify the payment of revenue therefrom to Arizona and Nevada. You do not agree with that, do you?

Mr. MALONE. I do not agree with that, considering the outline I made for proper charges.

Senator JOHNSON. Yes. Now, as part of your estimated cost of power from the project delivered in central markets, do you include the cost of steam stand-by to make such power reliable or steam stand-by for delivery from a distance, say, of 300 miles?

Mr. MALONE. I do not agree with your conclusions, and I may say that our engineers, our power experts, do not agree, and two of Arizona's engineers took the same view, and Charles Cragin, of the Salt River project, agreed that there might be a certain amount.

Senator JOHNSON. I really do not know what transpired at San Francisco, so I am asking you if you included those stand-bys.

Mr. MALONE. Yes; I appreciate that. Your engineers figured five-tenths of a mill would be required for steam stand-by service to make this power reliable in the power markets.

Senator JOHNSON. Exactly.

Mr. MALONE. We do not agree with that as I say, and Charlie Cragin figured that perhaps twenty-five one-hundredths of a mill, or something like that, would be required. In other words, a very small amount in comparison to your engineers' assumptions that would be directly chargeable to Boulder Canyon power, and I will say why briefly, and that is covered in the report which I will submit, and it can be studied by the committee if they so desire. Over one-half of the power, or about 240,000 horsepower, will be needed to lift 1,500 second-feet over your divide. That will be a much decreased distance—perhaps 200 miles; maybe 175 miles for that part of the power. Your own people can verify that. And then, too, on that particular power, by aid of small reservoirs at the point, and also near Los Angeles—they are already constructed, most of them, near Los Angeles—a small interruption in service, as much as would ever come about, except in a catastrophe that is impossible to gauge, you would not be handicapped. Therefore you only have left about 200,000 horsepower to figure steam stand-by on. This is taking for granted you are going to do what you maintain you are going to do with your water.

Senator JOHNSON. Well now, pardon me. Would steam stand-by at all be necessary? We will not go into the cost of them for the moment.

Mr. MALONE. The reason that I say I do not believe the amount you estimate will be necessary, I do not base it entirely on my judgment. I base it on the judgment of power experts employed by us and others. That with your all-southwestern hook-up that you have now practically and will have complete by that time, meaning all your different companies in the West are practically hooked up, even up in Nevada they are hooked up over there to California, and along with the steam plants that are necessary for economic balance between the hydroelectric and the steam power, meaning by that your base load is more economic in most cases to carry by hydroelectric, and your peaks by steam, simply because your steam investment is smaller, and as it stands idle your interest is smaller and when it is running it costs more; but if it is only running on peaks and short periods it is a more economic proposition to carry your peaks by your steam. Your hydroelectric costs more to install, or it costs more in this case on account of transmission, etc., but in turn it is a more reliable power and it does not cost so much to operate. Therefore you have your economic balance between steam and hydroelectric, and that a possible overload on this steam obviates to some extent the stand-by that you might otherwise need. What I am getting at is you have possible overloads on steam plants and you have hook-ups from various plants. Therefore each plant in the western country does not necessarily need the full amount of stand-by service, if you get what I mean; only a small amount would be directly chargeable to Boulder Canyon.

Senator JOHNSON. Yes; I will get what you mean if you will answer me directly.

Mr. MALONE. All right, I will.

Senator JOHNSON. Do you require in transmitting 300 miles of power steam stand-by?

Mr. MALONE. The reason it is impossible to answer you yes or no—I have to explain in each case; each case would be different.

Senator JOHNSON. Well, if you will just tell me if it is not so I will not trouble you further.

Mr. MALONE. In this particular case is what you want to know?

Senator JOHNSON. In this particular case would steam stand-by be essential?

Mr. MALONE. Yes; but a very small amount chargeable to Boulder Canyon. You did not ask that before.

Senator JOHNSON. Well, that was what I meant.

Mr. MALONE. You might possibly need half of what the California engineers included, but I do not think under any consideration you would need the full amount.

Senator JOHNSON. Are you speaking now in matters of cost or matters of amount?

Mr. MALONE. Both.

Senator JOHNSON. Well, as I understand you, you would need steam stand-by?

Mr. MALONE. You might need some. Twenty-five one-hundredths mill would probably be the maximum.

Senator JOHNSON. Is that taken in your estimate that you have given here?

Mr. MALONE. No.

Senator JOHNSON. That was the point I was getting at entirely.

Mr. MALONE. I just add to that, however, for the record, that in our opinion you need a very small amount on account of this project and it is gone into fully in the report.

Senator JOHNSON. By that you mean you do not need steam stand-by?

Mr. MALONE. That in my opinion a very small amount may be needed. I say it is a controversial question and there is no use of me saying that I know exactly what will come about when this project is entirely utilized.

Senator JOHNSON. Exactly. And at any rate any cost of those steam stand-bys is not included in the estimates that you have given here?

Mr. MALONE. No.

Senator JOHNSON. Correct, sir. Now is it not a fact that there are improved processes, tremendously improved processes that are being put into operation now for cheapening power from steam?

Mr. MALONE. In what regard?

Senator JOHNSON. I don't know. In many regards.

Mr. MALONE. Yes. I will try to answer that, although, of course, it is impossible to answer it. It is a controversial question, too. They have a process by which mercury vapor is used to increase the efficiency, and they also have a possibility of increasing the boiler pressure to increase the efficiency.

Senator JOHNSON. The reason I ask you the question, I will tell you, is because I read a statement by a gentleman—his name I forget; he is the president of one of the big southern power companies—in which he said that because of the improved processes and the cheapening in the production of power by steam he did not care anything about this power at Boulder Dam. I don't know whether he was in earnest or whether he was not, but at any rate that was the published statement that I saw.

Mr. MALONE. Our conclusions are, after studying the situation thoroughly and employing such power experts as I mentioned a while ago, that he was either mistaken or not serious.

Senator JOHNSON. I see.

Mr. MALONE. But, of course, that is a controversial question. But with regard to these increased pressures in boilers, it is the consensus of opinion among engineers that there will be some slight decrease, possibly, but that the increased cost in the construction will offset in a large measure any possible reduction in costs due to that fact, and that, with the mercury vapor, the increased cost of that product itself will do the same thing. And also it is the opinion of every disinterested fuel expert that I have been able to find on the Pacific coast that your fuel will become a problem in a few years, and that any decreased cost, if not offset otherwise, would be by the increase in fuel. Understand, those are all questions that you can get expert opinions on, and they will differ.

Senator JOHNSON. Well, I was asking you as an expert, because I confess I know nothing about it, but I saw this report of the increased facilities, the improvements that were enabling them in the vicinity of Los Angeles to produce power from steam at a greatly reduced cost. Are you familiar with that, Mr. Chairman? Did you see anything about it?

The CHAIRMAN. I read the same statement, I believe, and I think that from that I may have derived the figures that Mr. Malone himself agreed upon.

Senator PITTMAN. If that is true, then the Government would build the dam, depending entirely on the power to pay for it, and nobody will buy it.

Senator JOHNSON. Well, don't think that I am vouching for the statement of the gentleman who made the statement. I beg you not to think so.

Senator PITTMAN. I do not know who he is, but I have an idea.

Senator JOHNSON. Well, don't get me into the attitude of vouching for the statement of somebody that is at the head of a power company, please.

Mr. MALONE. When you referred to me, Senator, as an expert—I used to think I was an expert, but the further I go the more experts I consult on this kind of project.

Senator JOHNSON. You are a little like the rest of us. None of us are experts. Don't you think that the Government, considering what it has done and is doing in other reclamation projects, relieving settlers from interest, and so on, could fairly and reasonably relieve the all-American canal from interest charges?

Mr. MALONE. Under a bill, I believe introduced by yourself last year, the all-American canal was under the reclamation act, where there are

no interest charges, and provided that contracts be made prior to the construction of the all-American canal, providing for the payments, etc.

Senator JOHNSON. Well, I am asking you if you do not think that is a perfectly just thing under the circumstances?

Mr. MALONE. You could eliminate the interest and still make just charges. I do not say in this report that you shall pay any certain amount, but pay for the service rendered. Pay the just charges, whatever they are. And we consider that the Secretary should have some assistance from men who are on the ground, or are familiar with conditions, to determine what those just charges are.

Senator JOHNSON. Your plan, however, would provide that the Secretary should have the control?

Mr. MALONE. Oh, yes.

Senator JOHNSON. They would be advisers to him in respect to the matter, solely?

Mr. MALONE. I think it would be necessary that he be in control. Any board merely acting in an advisory capacity, I should say.

Senator JOHNSON. Merely in an advisory capacity.

Senator PITTMAN. Senator, may I ask you a question there on that same subject?

Senator JOHNSON. Sure.

Senator PITTMAN. Do you happen to know what amount per annum the interest would amount to on the all-American canal project?

Mr. MALONE. On what they call the straight-line basis, about $890,000—$896,000, I believe.

Senator PITTMAN. Eight hundred and ninety-six thousand dollars?

Mr. MALONE. Per year.

Senator PITTMAN. Now, let me ask you what the State of Nevada would think about it if $896,000 added to the cost of the power was such an amount that there would be no profit for distribution for Nevada? Would Nevada favor paying that interest?

Mr. MALONE. We would like to be treated fairly in the matter, and I would leave that to the judgment of the committee. I would not say that it all should be given to one State. The point I have tried to make in my reports is that there will be profits in this enterprise. Whether your committee recognizes that fact or not is beside the question. If you do not recognize it, they will all go toward the particular thing that is being financed in the set-up. If you do recognize it, then in case the profits are sufficient, the two States who own the site may benefit.

Senator PITTMAN. The reason I am asking your permission to interrupt here, Senator, is this: I am merely trying to ascertain the position to take in the matter. I am frank with you. And I have not conferred with Mr. Malone in this matter, and I am trying to understand his report, too, as much as you.

Senator JOHNSON. Well, I am not familiar with it, I confess to you. All of the charges that you have suggested are charges that should be made in the interest of increased power revenue, are they not?

Mr. MALONE. Not power revenue, Senator. All the charges that I suggest should be made would be made on a fair basis to the particular projects financed, and which would be made with a view of returning the investment to the Government in the proper time, and also allowing a fair return to the States furnishing the dam sites, if you please.

Senator JOHNSON. Yes. You would not expect, as I understand your plan, any profits to accrue to either of the States until after those profits had begun to come in?

Mr. MALONE. I would not expect anyone to borrow money to pay the State of Nevada.

Senator JOHNSON. Well, it would not be a question of borrowing money, perhaps, but you would wait until the project was self-sustaining, or until profits were coming in before, of course, you would pay any profits out, would you not?

Mr. MALONE. Well, that was the particular point on which I would like very much to have a board assist the Secretary, because it is very easy to make a showing, for instance, that your domestic water costs you so much that you can not at this time afford to pay for it. But if the facts were gathered by a board and laid before the Secretary, they could be judged on the facts of the case as to where the water was going and what charges were being made for it, whether or not the returns justified it. That is what I mean, Senator.

Senator JOHNSON. I see. Well, thank you very much, Mr. Malone. I wish to God there was some other place that Los Angeles could get domestic water than the Colorado River, but I don't know any other place.

Mr. MALONE. Well, why should you wish that, Senator?

Senator JOHNSON. Well, then we would not have any troubles, perhaps.

Mr. MALONE. There might be worse troubles, Senator.

Senator JOHNSON. No; if we could protect Imperial Valley in some fashion and give domestic water to southern California in some other way than by the erection of any of these works, I would love it, I confess to you. It is no pleasure to be here in opposition—well, never mind; excuse me for that.

The CHAIRMAN. Are there any further questions of the witness?

Senator PITTMAN. I just want to ask one further question there. Under the set-up in the Johnson bill would there be any profit on this power?

Mr. MALONE. With no revenues from any other source, Senator?

Senator PITTMAN. Just as he sets it up in his bill.

Mr. MALONE. There would be a theoretical small profit, but as suggested, there probably will be extra expense here and there that might very properly consume the entire margin unless proper charges are made. I would say that the set-up shows a profit on power alone.

Senator PITTMAN. Your set-up that you have there is made on the basis of paying interest on the investment in the all-American canal, is it not?

Mr. MALONE. There is a set-up in my report that takes every item set up in the Senator's bill into account, and then the separate items, what they amount to, which, by the way, are in your office, Senator. I wish I had them here.

Senator PITTMAN. And what margin does that leave between the cost and the market price of other power in the market at Los Angeles?

Mr. MALONE. With everything included, about an even mill; 1.1 mills theoretical margin.

Senator PITTMAN. Based on the set-up?

Mr. MALONE. The entire set-up.

Senator PITTMAN. The set-up in the Johnson bill?

Mr. MALONE. Yes.

Senator PITTMAN. That is all.

The CHAIRMAN. Anything further?

Senator HAYDEN. I attended the Denver conference when you were present and saw the States come very close in accord, and I was very much interested in your statement of the result of the conference at San Francisco. I understood you to say that the California offer was approximately four-tenths of a mill per kilowatt-hour as compensation to Arizona and Nevada, and that certain members of the Arizona commission offered to recommend approximately six-tenths of a mill per kilowatt-hour.

Mr. MALONE. Certain members of their delegation. I do not know whether they are even members of the commission. I do not hold the commission to that, you understand.

Senator HAYDEN. I understand, but those were figures that were seriously discussed.

Mr. MALONE. Yes.

Senator HAYDEN. Being a difference then on the basis of things of approximately about two-tenths of a mill per kilowatt-hour?

Mr. MALONE. Yes.

Senator HAYDEN. I was anxious to get those facts fixed firmly in my mind. I noticed in the course of your testimony, and I made some figures here, where you set up as the price of power laid down in Los Angeles, taking into consideration the set-up in the bill, at 3.75 of a mill, 3.75 per kilowatt-hour. And then I understood you to say that leaving out the set-up in the bill with respect to the all-American canal, that that power could be laid down in Los Angeles for 3.04.

Mr. MALONE. Yes; that was the statement I made.

Senator HAYDEN. Well, subtracting the one from the other, then the subsidy to the all-American canal in the bill amounts to seventy-one one-hundredths of a mill? Am I correct in that assumption?

Mr. MALONE. Yes; the difference amounts to that.

Senator HAYDEN. Well, if that is true, then there is a subsidy in the bill of over seven-tenths of a mill for the all-American canal, whereas California has offered to Nevada and Arizona only four-tenths of a mill by way of compensation, and Arizona, as was explained by the representatives of Arizona, has asked for only six-tenths of a mill?

Mr. MALONE. For the two States.

Senator HAYDEN. The two States. So the set-up that exists in the bill carries more by way of subsidy to the all-American canal than was asked by the representatives of Arizona in San Francisco as compensation to the two States?

Mr. MALONE. Yes. And in that connection, Senator, I want to say this: There is some difference of opinion between myself—I won't include too many members of the Nevada commission; I will speak for myself—but I believe they are in accord with me on that. We have always considered that the all-American canal does benefit all of the seven States to whatever extent that it might assist in the gaining of an agreement with Mexico at the proper time, but I or our commission are not in position to judge what that would be. You members of the committee are in a position to judge that. I have always considered there was some benefit. What that benefit is, it is probably not anything like as much as is included, but, whatever it is determined to be, it is perfectly all right with us. Arizona insists, on the other hand, and they argue it, and in some ways it looks like it is well taken, that it is no benefit whatever to the other States; but, as I say, the Members of Congress and the members of this committee are far better able to judge what benefits there would be in that particular than any commissions.

Senator HAYDEN. As I understood you to answer Senator JOHNSON, you would have no objection to the construction of the all-American canal as an ordinary reclamation project, without interest, for the

benefit of the lands in that section of the country, and it would be a positive advantage to the scheme to have it done in that way. In other words, this seven-tenths of a mill that is charged to power by having the all-American canal constructed as an ordinary reclamation project would be removed?

Mr. MALONE. Interest on the all-American canal amounts to, as I say, about $896,000 a year on a straight-line basis, meaning the average over the period, which in turn amounts to almost exactly a quarter of a mill in this set-up. That could be eliminated if the Senator's bill was drawn, as it was last year at one time, so that the all-American canal would be constructed under the Reclamation Service, contracts being made with the lands prior to starting construction, the same as you have it on the dam in regard to power, and then there would be no interest, and the lands would pay the cost. Does that answer your question?

Senator HAYDEN. Yes. I can see that. Now, the set-up in the bill, as I remember, last year provided for $31,000,000 for the construction of the all-American canal. The bill itself provides for the construction of the canal from the Laguna Dam into the Coachella Valley. My understanding of that $31,000,000 figure is that it would only carry the canal through the sand dunes and into what now comprises the irrigation district. That there would be some eighty-odd miles for the additional canal, and the figures for that, I think, are some $11,000,000, if I remember right, to carry out the purpose of the bill. Have you in your set-up counted on $31,000,000, or a total of $42,000,000 for that purpose?

Mr. MALONE. We have counted on $31,000,000—it is either $31,000,000 or $31,500,000. I have it in my report; and in addition the interest during the construction of the canal, which would only be a part of the 10 years as outlined for the dam, making a total of $35,000,000, including interest during construction and the original cost of the canal. Now, I am not exactly clear where the end of the canal would be, Senator, and I would not answer it without referring to the Weymouth report. You can get it from the report if you desire.

Senator HAYDEN. My recollection of the Weymouth report is that the cost of the all-American canal proper, carrying it only through the sand dunes, would be $31,000,000, and that there would be an additional cost of $11,000,000 to carry it from that point to the Coachella Valley. Now, the bill provides for delivery water into the Coachella Valley. So it seems to me that if the plan of the bill was carried out you would have to make your figure $42,000,000 instead of $31,000,000 and base your calculations on that assumption.

Mr. MALONE. I would be very glad to clear that point up for the committee. I am satisfied that Thomas Maddock or myself could do it. I could tell you, though, definitely in a day or so.

Senator HAYDEN. That is all.

Senator JOHNSON. Was not the only proposition that was made by Arizona in writing the proposition that was made in Denver of 1 mill?

Mr. MALONE. No, Senator. In that same proposition were included three others, or two other propositions signed by two Arizona men and two Nevada men, or three. I think Senator PITTMAN signed it with us. We had him there as our legal adviser. And two or three California men included two or three other propositions which were fairer to California, or closer—or a lower figure, put it that way, than 1 mill.

Senator JOHNSON. At any rate, it is in writing?

Mr. MALONE. Yes.

Senator JOHNSON. Very well. But the proposition was in writing?

Mr. MALONE. Yes; the proposition was in writing. And so are the others in writing.

Senator JOHNSON. So we can obtain that?

Mr. MALONE. Yes.

Senator JOHNSON. You say there were other propositions in writing in San Francisco?

Mr. MALONE. No; no propositions were made in writing. We simply held sessions, without keeping a record, simply so we could talk freely. I am not here quoting to bind anybody. Your commission is not bound by anything I say, because it was understood that if we did not arrive at an agreement it was off like that, and we would start new again.

Senator JOHNSON. All right. That is all.

The CHAIRMAN. Anything further? If not, that will be all, Mr. Malone. We thank you.

The above is a complete transcript of the statement and cross-examination before the United States Senate Committee on Irrigation and Reclamation made by the writer, January 20, 1928.

Full explanation of the power and water set-up on the lower Colorado River is contained in a report, copy of which can be obtained by addressing the writer, Carson City, Nev.

GEO. W. MALONE,
State Engineer, Nevada,
Secretary Colorado River Commission.

PRESIDENTIAL APPROVALS

A message from the President of the United States, by Mr. Latta, one of his secretaries, announced that the President had approved and signed the following acts and joint resolutions:

On May 28, 1928:

S. 162. An act for the relief of William M. Sherman;

S. 342. An act for the relief of George B. Booker Co.;

S. 362. An act to provide for the advancement on the retired list of the Navy of Lloyd Lafot;

S. 379. An act for the relief of William R. Boyce & Son;

S. 445. An act for the relief of the Florida East Coast Car Ferry Co.;

S. 456. An act to carry out the findings of the Court of Claims in the case of Edward I. Gallagher, of New York, administrator of the estate of Charles Gallagher, deceased;

S. 1217. An act for the relief of Albert Wood;

S. 1646. An act for the relief of James M. E. Brown;

S. 1852. An act to correct the naval record of John Lewis Burns;

S. 1955. An act for the relief of Lieut. Charles Thomas Wooten, United States Navy;

S. 2586. An act for the relief of the owner of the Coast Transit Division barge *No. 4;*

S. 2733. An act to amend the military record of Joseph Cunningham;

S. 2802. An act to provide for the appointment of midshipmen at large by the Vice President of the United States;

S. 3308. An act to confer jurisdiction on the Court of Claims to hear and determine the facts in the claim of John L. Alcock;

S. 3694. An act regulating juvenile insurance by fraternal beneficial associations in the District of Columbia;

S. 3868. An act authorizing an advancement of certain funds standing to the credit of the Creek Nation in the Treasury of the United States to be paid to one of the attorneys for the Creek Nation, and for other purposes;

S. 4124. An act to provide for notice to owners of land assessed for benefits by the verdict of condemnation juries in the District of Columbia, and for other purposes; and

S. J. Res. 82. Joint resolution providing for the erection of a public historical museum on the site of Fort Defiance, Defiance, Ohio.

STEAMSHIP "ALABAMA" SILVER SERVICE SET

Mr. BLACK. Mr. President, I ask unanimous consent that the Committee on Naval Affairs be discharged from the further consideration of the bill H. R. 13182, which provides that the Secretary of the Navy shall have authority to deliver to the State of Alabama a silver service set which was contributed by the State to the steamship *Alabama*. It is recommended by the Secretary of the Navy.

The PRESIDENT pro tempore. Is there objection?

Mr. HALE. I have no objection.

The PRESIDENT pro tempore. Without objection, the committee will be discharged. Is there objection to the immediate consideration of the bill?

There being no objection; the Senate, as in Committee of the Whole, proceeded to consider the bill.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

MARTHA ANDREW VIRGINIA JOHNSON

Mr. BLACK. Mr. President, I ask unanimous consent that the Committee on Claims be discharged from the further consideration of the bill (H. R. 4380) for the relief of Martha Andrew Virginia Johnson, which passed the House, to pay $180 to a soldier who failed to sign his name where the gratuity was to go to his mother. That is the sole question involved, and the amount is $180. If the committee shall be discharged, I will ask that the Senate immediately consider the bill.

The PRESIDENT pro tempore. Is there objection to discharging the committee from the further consideration of the bill? The Chair hears none, and it is so ordered. Is there objection to the immediate consideration of the bill?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

THE CALENDAR

Mr. CURTIS. Mr. President, I suggest that we begin at the beginning of the calendar and call from that point so that we may reach all the unobjected bills on the calendar.

The PRESIDENT pro tempore. The Chair will say to the Senator from Kansas that nothing has been disposed of from the calendar yet. These are all reports of committees or motions to discharge committees.

CONVICT LABOR

Mr. WALSH of Massachusetts. Mr. President, in view of the parliamentary situation which will probably prevent action during the present session upon the convict labor bill, I ask that a letter written by the junior Senator from Missouri [Mr. HAWES] which very clearly, concisely, and ably sets forth the progress of this bill and the arguments in its favor, with which I am in accord, be printed in the CONGRESSIONAL RECORD.

The PRESIDENT pro tempore. Is there objection?

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

UNITED STATES SENATE,
Washington, D. C., May 26, 1928.

Hon. DAVID I. WALSH,
United States Senate, Washington, D. C.

MY DEAR SENATOR: Thanks for your letter, inclosing telegram concerning the convict labor bill. It is another evidence of your fine interest in this legislation for which I am grateful, as joint author of the bill, and for which also, I am sure, both labor and capital and the women's group are equally grateful.

The bill now before the Senate was passed by the House last week by the overwhelming majority of 303 to 39, after six hours' debate, this being the third time the measure, or similar bills, have passed that body. The vote would have been even greater had the entire membership been present. For instance, 11 votes from New Jersey would have been for the bill, but the delegation was absent, due to the New Jersey primary.

A careful poll indicates that an overwhelming majority in the Senate is ready to vote for the bill, and only a very small minority can be counted on to oppose it.

The bill has not become a law before, because it has always been blocked by a Senate filibuster in the closing hours of a session. The same methods are again being employed—refusal to permit a vote.

As amended the bill grants three years in which managements of penal institutions may readjust their institutional affairs to meet whatever situation may arise, as the bill will not go into effect until the expiration of that time. This was a concession on the part of the proponents of the bill in compliance with requests of officials of several States.

Support of the measure comes from three distinct elements in our national life; the American Federation of Labor, the General Federation of Women's Clubs, and manufacturers representing more than $2,500,000,000 in invested capital, and an important group determined to bring national prison reform.

WIDE SUPPORT OF BILL

Through all of its State and local organizations the Labor Federation, with its 5,000,000 members, has appealed to Congress to pass this bill in the name of men and women working industrially who feel the resulting evil of competition with cheap prison labor.

The manufacturers seek this legislation in fairness to industries which have already suffered the ill effects of ruinous competition with smuggled prison-made goods.

The General Federation of Women's Clubs makes its appeal in the name of 14,000 women's clubs throughout the country, whose 2,000,000 members are interested in women workers in industry and in a great national prison reform looking to the proper employment and rehabilitation of the prisoner himself.

Also supporting the legislation will be found numerous other organizations of varied character, among them the national organization for the blind, whose industry—the broom business—is rapidly being wrecked by the concentration of prison labor in broom making.

The open opposition to the bill is largely confined to certain prison officials in States where prisoners are employed in the manufacture of articles thrown on the open market in competition with free labor and free capital.

The undercover opposition to the bill, an insidious opposition working in the dark and dealing in misrepresentations, is the prison contractor who does not come out in the open to defend his tainted business, but who works through agents, to mislead the public and Congress.

The first propaganda calculated to mislead was the charge that the total output of the prisons was a small percentage of the total output of the manufacturers and could not interfere with either private capital or free labor.

The fallacy of such an argument is apparent. The total volume of convict labor as compared to the total of manufacturing products of the Nation has nothing to do with the problem. Although this total prison output is actually large, amounting to something between $45,000,000 and $55,000,000 a year, the disastrous effect of it is found, not in its extent, but by falsely labeling the prison products and smuggling them into States to be sold on the open market, the prison contractor is in a position to depress an entire industry.

With such smuggling going on in a few concentrated industries the result is obvious.

Both labor and capital insist they are struggling against ruinous competition with prison products, and they are best qualified to determine this.

ANONYMOUS PROPAGANDA

Coincidental with the circularization of Congress by a committee of prison officials opposing this legislation anonymous communications were sent to persons in some 20 or 30 States.

The signed circulars which have been sent to Members of Congress recite statements made by a few prison officials to the committees of the Senate and House before whom exhaustive hearings on the question were held.

Nearly every prison official who signed the circulars was heard by these two committees composed of Members of the House and Senate representing 21 States.

It is significant that after hearing these opponents, cross-examining them, weighing their ideas and their theories, to say nothing of their charges, the two committees each reported this legislation favorably, there being but one dissenting vote on each of the Senate and House committees.

The record of the House debate is an eloquent answer to the statements made in these circulars. The vote of 303 to 39 in the House is a definite answer of that body as to the weight of the statements.

Therefore, the details of these circulars need not be discussed here, with the possible exception of a cunning attempt to mislead Congress into the fear that the legislation might interfere with the work of prisoners on prison farms in the raising of raw materials.

No single State in the Union has ever passed a bill against the sale of agricultural products, and it is a far stretch of the imagination and a far-fetched conclusion that at some future occasion any State might write a law prohibiting the sale of agricultural products. And the hearings are replete with statements of the proponents of the bill that no such State legislation has ever been contemplated. Every opponent of the bill knows, or should know, that the bill seeks only to end the smuggling of manufactured products.

This is one of the specious arguments advanced by the prison contractor in an effort to protect his profits made through prison-manufactured products. He, of course, has no interest whatever in agriculture, but the far-fetched idea gave him an opportunity to raise a false fear.

May I call your attention to a few facts in connection with the four New England States from which certain opposition to this legislation is emanating?

CONNECTICUT

The last available figures published by the United States Department of Labor, based on a survey made in 1923 and printed in 1925, show that in Connecticut the average number of prisoners in the State penal institutions was 916; the average in productive labor in the same institutions was 528.

The total estimated valuation of products manufactured in the Connecticut prisons was $2,308,000. The total estimated valuation of prison products made in Connecticut and sold outside of that State was $1,808,000, and only $500,000 worth inside the State.

The Connecticut prisons, according to the report, were operated on the "piece price" system, which differs only slightly from the contract system.

Under the contract system the State feeds, clothes, and guards the convicts. The contractor engages with the State for the labor of the convicts. He pays so much per capita for the prisoner's services and supplies the raw materials and superintends the work.

The piece price system differs principally in the method of paying for the convict's services. Under this system, instead of paying so much per capita for the services of the convict, the contractor pays an agreed price for the piecework done by the prisoner, or so much per "piece" or article. The supervision of the work is usually under a prison official, but witnesses at the hearings testified that very frequently the contractor had an agent in the prison actually doing the superintending.

I do not have before me a report of the Connecticut prison for 1923; but in the same bulletin of the Department of Labor from which the other figures are taken, it is stated that the Connecticut prison received $125,000 for the services of its convicts who turned out products valued at $2,300,000.

NEW HAMPSHIRE

The same bulletin shows that in the same year the total valuation of products produced in the New Hampshire penitentiary was $233,000.

Of the $233,000 worth of products, only $3,400 worth were sold within the State of New Hampshire and $229,000 sold outside the State.

RHODE ISLAND

The bulletin shows that in the State of Rhode Island, where certain prison officials have been active in opposition to this bill, the total production of prison-made products was $1,400,916.

Of this amount of manufactured products only $4,652 were sold in the State of Rhode Island.

Dumped upon the markets of other States, frequently in violation of the laws of other States, were $1,396,264 worth of convict-made goods from the State of Rhode Island.

The Bulletin shows that Rhode Island prisons operated under the piece-price system.

VERMONT

In the State of Vermont the Bulletin shows a total of $672,563 worth of prison-made products.

Of this large total, only $9,080 worth were sold in the State of Vermont.

A total of $663,485 worth of prison products were dumped into the open markets of other States, frequently in violation of State statutes.

The Vermont prisons, the Bulletin shows, are operated under the piece-price system.

The complaint of these States against this legislation is solely because they desire to continue the unmoral practice of selling from three-fourths to practically all of their prison products in other States, which States prohibit their own prisons from selling their products within their own borders.

In opposing this legislation they make an unconscionable appeal to be permitted to violate the expressed opinion of another State, as written into its laws, to the disadvantage of that State. In effect they demand the right to violate the laws of a neighbor and friendly State. It is an appeal to protect the business of smuggling contract goods into another State.

And by defeating the laws of friendly and neighbor States these States also make it possible for the prison contractor to defy the laws of all States and interfere with whatever prison reforms may be desired or contemplated by any State.

Convict-made goods manufactured, for instance, in Ohio, New Jersey, Pennsylvania, or New York can not be sold in those States under their own laws. The people of those States, through their legislatures, have written into their laws the protection of free capital and free labor from prison labor. Your own State of Massachusetts has taken progressive steps in this matter.

And yet Connecticut, New Hampshire, Vermont, and Rhode Island, among others, may dump their prison-made products into Massachusetts, New York, Ohio, Pennsylvania, New Jersey, or any other State, to the enrichment of the prison contractor and the detriment of honest men who either labor for their wages or invest their capital in industry.

NEW JERSEY

It is interesting to note that in New Jersey during the term of Gov. WALTER EDGE, now a Member of the United States Senate, the prison contract system was in effect.

Governor EDGE saw its waste and unfairness. He decided to place the penal institutions of his State on a business basis, and enlisted the interest of Mr. Dwight Morrow, at present United States ambassador to Mexico.

A survey was made, and Mr. Morrow assumed a place at the head of the board in charge of New Jersey's penal institutions. The contract system was abolished by him and the State-use system inaugurated. Ambassador Morrow served for four years, 1917 to 1921; a business-like administration was inaugurated and New Jersey's convicts to-day do not make products to be dumped into the open market, but manufacture only those products needed by the State institutions of New Jersey.

New Jersey took an early lead in such reform and is attempting to protect private capital and free labor from smuggling of convict-made goods. But the States of Vermont, New Hampshire, Connecticut, and Rhode Island may now send their convict-made unlabeled or falsely labeled products into New Jersey and nullify and defy New Jersey laws.

Senator EDGE and Senator EDWARDS, also a former Governor of New Jersey, have both been active in their support of this legislation, having had experience in a State living up to the principle underlying this bill.

CONSTITUTIONALITY

Recently an unsigned brief attacking the constitutionality of the convict labor bill was sent to Members of the Senate.

During the House debate on this bill its constitutionality was discussed, and so conclusive were the arguments made by able attorney Members of the House that the legal phases of the bill were sustained by the overwhelming vote.

The chairman of the Labor Committee of the House, Mr. KOPP, of Iowa, made a forceful speech on the subject and presented a comprehensive brief as to the constitutionality of the bill.

Mr. Donald R. Richberg, appearing as counsel for the American Federation of Labor before the Senate and House committees during the hearings, satisfied the members of these committees as to the constitutionality of the bill in an exhaustive brief.

It is significant to note also that Congressman L. C. DYER, acting chairman of the House Judiciary Committee, voted for the bill, as did Congressman HATTON SUMNERS, of Texas, ranking Democrat on the Judiciary Committee.

May I call your attention to the fact that the unsigned brief which was circulated to Senators in opposition to the bill takes up several pages of discussion without mentioning the Wilson Act, the language of which formed the basis for the drafting of the present convict labor bill, or the re Rahrer case, the Supreme Court decision in which the Wilson Act was sustained and the broad principles laid down as to the power of Congress in the matter of divesting statutes.

You will note in the unsigned brief, also, a lengthy discussion of the child labor laws, and the decisions under which they were declared unconstitutional.

It is significant to note in this connection that an eminent attorney, appearing against this bill before the House committee, representing, by the way, the State of Connecticut, on direct question stated that in his view the child labor case could not be accepted as a precedent against the proposed convict labor bill.

The proponents of the bill do not doubt the constitutionality of the bill. They would not urge the passage of an unconstitutional act; it is the prison contractor, the opponent of the measure, who advances this pet expedient of otherwise silenced opposition.

A CHARACTERISTIC APPEAL

The object of the telegram received by you from the warden of the Missouri penitentiary is apparent.

The Missouri delegation in the House, both Republican and Democratic, with the exception of one absentee, voted solidly for this bill. Both United States Senators from Missouri have spoken for it.

These representatives know Missouri. And so an appeal is made by the Missouri warden to a Senator in Massachusetts, more than 1,000 miles away. Unfortunately the writer of the telegram forgot to note that the Massachusetts delegation voted solidly for the bill in the House.

The opposition to this bill at first claimed that it would result in idleness among the prisoners by forcing the States into the State-use system.

Not satisfied with hearsay statements on this subject, I wrote to responsible executives of New York, Ohio, Pennsylvania, New Jersey, and other States, and obtained the facts concerning prison employment under the State-use system.

These facts, completely disproving the claims of the opposition made on hearsay evidence, were given to the Senate by me on April 17.

Some time ago there came to my attention a report of the State auditor of Missouri which throws additional light on this particular phase of the problem.

The following two excerpts are taken from the Report of the State auditor of Missouri in connection with the penitentiary's finances:

"About 2,200 is the largest number employed at one time, and this leaves a small army of about 1,100 or 1,200 men unemployed that must be fed and clothed 365 days in the year.

* * * * * * *

"It is also true that every outside industry is not a financial success, farms not excepted. There is entirely too much lost motion, too many trucks and automobiles operated, and too many leaks in these outside industries that are not accounted for."

Responsible officials in State use States declare that prison idleness is a disappearing problem in their penitentiaries; examiners for the State auditor of Missouri find that in the Missouri penitentiary, where products are manufactured and dumped into the open market "there is a small army of about 1,100 or 1,200 men unemployed * * *."

As a matter of fact, the bill now before Congress in itself has nothing to do with the employment of prisoners. After its passage, any prison management may employ its prisoners as it sees fit. The only change to be brought about with this Federal legislation as the initial step is to force the penitentiaries to sell their products in compliance with the laws of the State in which they are to be sold. At least one large penitentiary in the United States now labels its products "prison-made" and operates its penitentiary profitably, selling its products on the market.

The honest sale and distribution of prison products will put the prison contractor out of business, and the $40,000,000 or $50,000,000 worth of prison products now being sold through him will find their way to sale in an honest fashion, which is all that the proponents of this bill desire.

There are some honest opponents of this legislation; there are some prison officials who do not take the broader view, and there are those who prefer to go on as at present because it is the easy way, but the prison contractor is the real opposition to this bill and his organized opposition in an underhanded way has been difficult to meet. His work has been under cover and in the dark.

Thanking you for your continued interest, I am,

Very sincerely yours,

HARRY B. HAWES.

WORLD WAR VETERANS' LEGISLATION

Mr. WALSH of Massachusetts. Mr. President, I ask unanimous consent to have printed in the RECORD a communication from the assistant general counsel for the United States Veteran's Bureau, setting forth in detail the legislation affecting war veterans that has been passed during the present session. It will be helpful to the war veterans to have this summary of new legislation concisely presented.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

UNITED STATES VETERANS' BUREAU,
OFFICE OF THE DIRECTOR,
Washington, May 29, 1928.

Hon. DAVID I. WALSH,
United States Senate, Washington, D. C.

MY DEAR SENATOR WALSH: In accordance with your suggestion, there is submitted herewith a redraft of the résumé of legislation enacted at this session of Congress for the benefit of veterans of the World War which had previously been submitted to you. The redrafted résumé has been amplified in certain respects so as to explain in succinct manner the various amendments adopted.

1. Hospitalization: On May 23, 1928, the President approved Public, 480, Seventieth Congress, "An act to authorize an appropriation to provide additional hospital, domiciliary, and out-patient dispensary facilities for persons entitled to hospitalization under the World War veterans' act, 1924, as amended, and for other purposes," which authorizes an appropriation of $15,000,000 for the construction of additional hospital and out-patient dispensary facilities for the United States Veterans' Bureau; $7,000,000 of the total amount authorized by this act was appropriated in the second deficiency bill approved May 29, 1928 (Public, 563, 70th Cong.).

This construction program is to provide additions to or replacement of facilities at Bedford, Mass.; Oteen, N. C.; North Chicago, Ill.; St. Cloud, Minn.; Palo Alto, Calif.; American Lake, Wash.; Chillicothe, Ohio; Maywood, Ill.; Walla Walla, Wash.; North Little Rock, Ark.; Tuskegee, Ala.; Excelsior Springs, Mo.; Tucson, Ariz.; Northport, Long Island, N. Y.; Fort Snelling, Minn.; Sheridan, Wyo.; and the erection of a ward of 100 beds at Walter Reed Hospital (Army), Washington, D. C. It also includes new hospital projects to replace the existing structurally unsuitable Government-owned facilities at Philadelphia, Pa., and the leased facilities at Kansas City, Mo. Further, it authorizes construction of new facilities in the Kentucky and the southern New England areas, and includes an amount to supplement funds heretofore authorized for the erection of a permanent hospital in Louisiana. There is provided a special fund to permit of the revamping of other bureau hospitals to meet the changes in the hospital load and to erect a ward for women patients in the vicinity of Washington, D. C.

One of the important questions raised in connection with the consideration of this legislation was the mandatory provisions of section 202, paragraph (10) of the World War veterans' act, 1924, in so far as the hospitalization of neuropsychiatric patients was concerned. The Director of the Veterans' Bureau, by the issuance of Director's Decision No. 375, has held that hospitalization under the first provision of section 202 (10) of the act, as amended, is mandatory, and further, that hospital facilities under the control and jurisdiction of the bureau are equivalent to Government facilities. The Congress recognized to some extent the need for additional hospital facilities to meet the requirements for hospitalization under this section by adding authority for construction over and above that recommended by the Veterans' Bureau, which recommendation was based to a large extent on cases where the disabilities are service connected.

This measure further authorizes the President to accept from any State or other political subdivision, or from any corporation, association, individual or individuals, any building, structure, equipment, or grounds, suitable for the care of the disabled with due regard to fire or other hazards, state of repair, and all other pertinent considerations. The last section of Public, No. 480, repeals section 4 of the act entitled "An act to authorize an appropriation to provide additional hospital and out-patient dispensary facilities for persons entitled to hospitalization under the World War veterans' act, 1924," approved March 3, 1925. Had this section of the previous law not been repealed it would have been necessary, upon the completion of the hospital program authorized therein, which would have taken place some time during the current year, to have discontinued the use of other than Government facilities for Veterans' Bureau patients.

2. Adjusted compensation: On May 29, 1928, the President approved an amendment to the World War adjusted compensation act, as amended (Public, No. 570, 70th Cong.), which contains the following important provisions:

(1) The time for filing applications for benefits under the World War adjusted compensation act is extended two years, from January 1, 1928, to January 2, 1930.

(2) The Secretary of War or the Secretary of the Navy, as the case may be, is authorized, where the records of the department show that an application has been filed within the required time, but the application itself can not be found, to certify to the Veterans' Bureau the adjusted service credit of the veteran, the application of the veteran being presumed in the absence of affirmative evidence to the contrary to have been valid when originally filed. This will permit the extension of benefits to veterans and their dependents in cases where the applications have been lost after receipt in the proper department.

(3) The death of a veteran is presumed where he has been absent from his home and family for a period of seven years during which no intelligence of his existence has been received.

(4) Provision is made that where the person entitled is a minor, mentally incompetent, or under other legal disability payment may be made to the legally constituted guardian, curator, or conservator of the person entitled to payment, or to the person found by the director to be otherwise legally vested with the care of the person entitled to payment or of his estate. It is provided that prior to receipt of notice by the bureau that any such person entitled to payment is under such legal disability payment may be made to such person direct.

(5) Authority is given to the veteran to designate more than one beneficiary under his adjusted service certificate.

(6) False and fraudulent statements in connection with securing duplicate certificates are brought within the penal provisions of the law.

3. Disabled emergency officers: On May 24, 1928, the House and Senate passed by two-thirds vote Public, No. 506, Seventieth Congress, "An act making eligible for retirement, under certain conditions, officers and former officers of the Army, Navy, and Marine Corps of the United States, other than officers of the Regular Army, Navy, or Marine Corps, who incurred physical disability in line of duty while in the service of the United States during the World War," which provides for the retirement of ex-emergency officers of the World War who incurred physical disability in line of duty and who have been or may hereafter, within one year, be rated in accordance with law at not less than 30 per cent permanent disability by the United States Veterans' Bureau for disability resulting directly from such war service, with pay at the rate of 75 per cent of the pay to which they were entitled at time of discharge from their commissioned service, this pay to be in lieu of all disability compensation to which they are entitled under the World War veterans' act, as amended. This act also accords these ex-emergency officers the privilege of hospitalization and medical treatment from the Veterans' Bureau. It further provides that these ex-officers shall be entitled to the same privileges as are now provided or may hereafter be provided for the officers of the Regular Army, Navy, or Marine Corps retired for physical disability incurred in line of

duty. The same class of officers who have been, or hereafter may be, rated less than 30 per cent and more than 10 per cent permanently disabled by the United States Veterans' Bureau for disability resulting directly from such war service and incurred in line of duty are entitled to have their names placed on the appropriate emergency officers' retired list with the rank held by them when discharged from their commissioned service, but without retired pay, and are entitled only to such compensation and other benefits as are now or may hereafter be provided by law or regulations of the United States Veterans' Bureau, together with all privileges as are now or may hereafter be provided by law or regulations for officers of the Regular Army, Navy, or Marine Corps who have been retired for physical disability incurred in line of duty.

The act provides that the retired list created thereby of the officers of the Army shall be published annually in the Army Register, and said retired lists of the Navy and Marine Corps, respectively, shall be published annually in the Navy Register.

4. World War veterans' act, as amended: On May 29, 1928, the President approved an amendment to the World War veterans' act, as amended, which contains many notable amendments, the most important of which are as follows:

(1) A statute of limitations on insurance suits providing that suits on contracts of insurance must be brought within six years after the claim accrues or one year after the passage of the act, whichever is the later. Heretofore, under the conformity act, the statutes of limitations of the different States applied.

(2) Authority for payment of expenses of original appointments of guardians.

(3) Authority is granted the director for the waiver of recovery of payments made to any person who, in the judgment of the director, is without fault on his part, and where, in the judgment of the director, such recovery would defeat the purpose of benefits otherwise authorized, or would be against equity and good conscience. In all cases where waiver of recovery is made the disbursing officers are relieved from liability. The previous law only permitted the waiver of payments which had been made to a beneficiary and provided no relief for disbursing officers.

(4) The next change provided by the amendatory act is administrative in nature and authorizes the director to contract for the service of translators. This amendment was to facilitate translation of foreign mail which is received in the Veterans' Bureau from practically all the countries in the world.

(5) Authority is granted for the purchase of transcripts of records, including all evidence of trial of litigated cases.

(6) Authority for the payment of expenses of medical examinations, and inspections when necessary, in connection with the reinstatement of insurance, for the determination of the fact of permanent and total disability for insurance purposes, and the date of beginning and termination thereof.

(7) Authority for the payment of death compensation to children after the age of 18 and until the completion of education or training (but not after the age of 21 years).

(8) Authority for the payment of dependency compensation to parents irrespective of the time the dependency arises, but to continue only during the existence of actual dependency, and not until the death of the parent, as formerly provided.

(9) Provision for the payment of $107 for burial and funeral expenses in all cases in which the director, in his discretion and with due regard to the circumstances of the case, may decide. Contracts for burial services are authorized to be made within the limits of the amount allowed without regard to the laws prescribing advertisement for proposals for supplies and services or the awarding of contracts to the lowest bidder. This will permit the bureau to procure the best funeral for the money, regardless of the provisions of the Revised Statutes requiring the acceptance of the lowest bid. It is further provided that no deduction shall be made from the amount allowed because of any contribution toward the burial by a State, county, municipality, or other political subdivision.

(10) Provision to authorize the director, in his discretion, to apportion compensation where the veteran is a patient in the hospital or for any other reason is separated from his wife and children. This amendment is designed to overcome the difficulty encountered in the former law under which an apportionment was mandatory, regardless of the circumstances surrounding the separation, which resulted occasionally in an apportionment of the veteran's compensation to an undeserving wife.

(11) The time for filing proof of claim was extended to April 6, 1930, and the director was authorized, in his discretion, to extend the time for filing claims to April 6, 1930.

(12) The rates of compensation for widows and children receiving compensation under an accrued right under the war risk insurance act was equalized so as to make them entitled to the same amount as is payable to widows and children receiving benefits under the World War veterans' act.

(13) The provision permitting the payment of Government insurance to a restricted class was amended in so far as converted insurance is concerned. There is no longer any restriction on the designation of beneficiaries for converted insurance.

(14) Provision was made for reconversion of insurance to policies carrying a lower rate of premium, where the insured is in good health, provided, however, that no reconversion may be made to the five-year level premium form of policy. This amendment is effective as of June 7, 1924.

(15) Provision is made for the granting of converted insurance to any person who has heretofore applied or been eligible to apply for yearly renewable term insurance or United States Government life insurance, provided such person is in good health and furnishes evidence satisfactory to the director. The provisions of this section apply only to persons in the military or naval forces of the United States during the World War, and no more than $10,000 insurance may be carried by any one person at any time, nor can any person who has surrendered his United States Government life (converted) insurance for its cash surrender value apply for such insurance to the extent of the amount so surrendered.

(16) Provision is made for the inclusion of a new clause in the United States Government life (converted) insurance policy whereby an insured who is totally disabled for a period of 12 consecutive months shall be paid disability benefits under the contract as though he were permanently and totally disabled. This clause will be inserted only upon application and upon payment of the necessary premium. Benefits under this clause do not prejudice the rights of an insured who is otherwise permanently and totally disabled.

(17) Compensation which is uncollected by reason of the provisions of section 310 of the war risk insurance act, as amended, or section 210 of the World War veterans' act, 1924, as amended, which limit the period over which retroactive compensation is payable, is made available for the purpose of the revival of insurance under section 305 of the World War veterans' act, as amended. This provision places the legislative stamp of approval upon the bureau's construction of this section, and nullifies the ruling of the Comptroller General that the law would not permit the use of compensation uncollectible by reason of the provision limiting retroactive payments for the revival of insurance.

Very truly yours,

J. O'C. ROBERTS,
Assistant General Counsel.

PROPORTIONAL REPRESENTATION IN CHOOSING PRESIDENTIAL ELECTORS

Mr. WALSH of Massachusetts (by request) submitted a concurrent resolution (S. Con. Res. 23), which was referred to the Committee on Privileges and Elections, as follows:

Whereas the existing practice of having all the presidential electors in each State elected in one block, and of having the votes of such electors all cast for the presidential candidate who receives the largest number of votes, is detrimental to the interests of the Nation, because—

(1) It deprives of representation in the Electoral College, always some minority, often a large minority, and sometimes even a majority, of the votes of each State;

(2) It unjustly causes a part of the numerical strength of the voters of the State to be counted for candidates of whom they disapprove, thus giving in effect more than one vote to each citizen of the most numerous party, though that party may be a minority of the whole number of voters;

(3) It places an undue strain of excitement and temptation to corruption upon those States in which the principal parties are equally divided, and in which therefore each of the principal parties exerts itself to become the most numerous one;

(4) It deprives States in which either of the principal parties is sure of receiving a majority (or even a plurality) vote of the benefit of discussion and instruction of citizens in the principles of government and the issues of the day, which would result from an active effort to secure their votes;

(5) It deprives the National Government of the benefit of participation in its affairs by that great host of citizens in the sure States who, on the one hand, can not by voting give worth-while expression to their convictions, or who, on the other hand, because of the practical changelessness of election results in their States, fail to take that interest in national affairs which patriotism demands;

(6) It nullifies the efforts of truly patriotic, thinking citizens who vote according to conviction by placing elections mainly in the hands of those who vote accordingly to habit; and

Whereas proportional representation (both by the single transferable vote method used in England, Ireland, Canada, and some cities of the United States, and by the list method used in various continental European countries) has proved in practice to be easily workable, satisfactory to the voters, and just to all parties; and

Whereas the process of electing the President and Vice President of the United States is of grave import to the welfare of the Federal Government, yet Congress has no authority to modify it, because Article II, section 1, of the Constitution gives to the legislature of each State the sole authority to direct the manner of appointing the presidenial electors for that State: Therefore be it

Resolved by the Senate (the House of Representatives concurring), That is is the sense of the Congress that the legislatures of the several States should establish by appropriate legislation proportional representation in the choosing of presidential electors, and that the Secretary of State is hereby requested to transmit a copy of this resolution to the governors of the several States.

Mr. WALSH of Massachusetts, to accompany the concurrent resolution, presented a letter, together with notes, on the matter of proportional representation in the Electoral College, which was ordered to be printed in the RECORD, as follows:

1753 KILBOURNE PLACE,
Washington, D. C., May 17, 1928.

Hon. DAVID I. WALSH,
United States Senate.

MY DEAR SENATOR WALSH: You suggested that I prepare an argument in favor of the resolution, which you are to introduce by request, regarding the presidential election. Inclosed is such an argument, about 500 words long, which may be of use as a starter and which you, of course, can adapt as you see fit.

I am also submitting a revised form of the resolving paragraph, but am not sure it is any better. The differences are that it recommends to the legislatures instead of saying they ought; it makes reference to the national interest, and it provides for sending to all the members of the legislatures.

Hoping you may find it advisable to introduce the resolution at this session at the time when people are thinking about this subject of elections, and that good may come from it, I am,

Very respectfully yours,

WM. C. LEE.

NOTES ON PROPOSED RESOLUTION FOR PROPORTIONAL REPRESENTATION IN ELECTORAL COLLEGE

The customary practice of having all the presidential electors in each State elected in one block and their votes all cast for the presidential candidate who receives the largest number of votes is detrimental to the interests of the Nation, because it practically disfranchises the minority of the voters, since their votes do not count for the candidate they favor but are actually counted in favor of one they oppose. This is worse than not counting them at all.

To correct this condition does not require any amendment to the Federal Constitution, nor any act of Congress; but it can be corrected by State action, due to a provision in the Constitution which has received but little public attention, namely, that the manner of choosing presidential electors is placed under the authority of the State legislatures.

In view of the fact that the choosing of these electors determines who shall be the Chief Magistrate of the Federal Government, it may properly be discussed by Congress; yet since action can be taken only by the State legislatures, it seems fitting for Congress to call the attention of the States to the situation and suggest to them that suitable action be taken by the legislatures for the relief of the United States. Congress is frequently called upon to act for the relief of States and subdivisions of States, and we have here a case where reciprocal action is needed.

Senate Concurrent Resolution —— points out the disadvantages of the present block system of choosing presidential electors and the feasibility, as shown by experience, of having them chosen in such a way as to give proportional representation to the various parties; and it recommends to the State legislatures that the principle of proportional representation be embodied in the law.

Sometimes it is objected to proportional representation that it is contrary to the principle of majority rule, but this is not the case. The majority of the voters are entitled to a majority of the representation in the Electoral College, but not to the whole of it. The minority is justly entitled to its proportional minority share.

The present system is too often plurality rule rather than majority. Many States are carried in the election by a plurality vote, and then the numerical strength of all the other groups of voters is counted in favor of the one that has a plurality. Thus the majority are counted in favor of just one minority. This is not majority rule.

But even if a State is carried by a majority for one ticket, this is no reason why all the votes of the State should be counted for that ticket. The place where the majority should be effectual is in the Electoral College. By the present system we may at any time have a false majority in the Electoral College which does not represent a majority of the voters.

In each State every class of voters (whether the total majority party, the various elements of the majority party, the principal minority, or minor minorities) should have their due representation in the Electoral College; then let the Electoral College determine the choice of President. This is in accordance with the spirit and the definite intention of the Constitution. To make up a fictitious majority in the Electoral College by counting the votes of the minority in each State in favor of the majority (or plurality) ticket is utterly unjust.

There would be many advantages in having the Electoral College majority made up according to the principle of proportional representation, rather than in the manner now prevalent. Some of these are indicated in the resolution which I have introduced. (S. Con. Res. —.) These can be secured by some of the States, whichever ones will take the necessary action, even though other States of the Union continue to deprive themselves.

REVISED FORM FOR THE RESOLVING PARAGRAPH, PAGE 3

Resolved by the Senate (the House of Representatives concurring), That it is the sense of Congress that it would be an advantage to the Nation if the legislatures of the several States would by proper legislation establish proportional representation in the choosing of presidential electors; and on behalf of the Federal Government it is recommended to the respective legislatures that such action be taken.

The President of the Senate is requested to transmit copies of this resolution to the governors and the members of the legislatures of all the States.

SPRAY-PAINTING DEVICES

Mr. COPELAND. Mr. President, in connection with Senate bill 4186, which refers to the regulation of the use of spray-painting devices in connection with Government buildings and structures, whether done by direct labor or under contract, I wish to call the attention of the Senate to a paper read by Dr. Andrew F. McBride, commissioner of labor of the State of New Jersey, and one of the very able physicians of this country, at the convention of the Association of Labor Officials of the United States and Canada held in New Orleans, La., last week.

As this paper will give the members of the Senate Committee on Education and Labor, to whom Senate bill 4186 was referred, and the other Members of the Senate who may be interested in the subject a very adequate statement as to what is behind this bill, I am asking that it be inserted in the RECORD. It is perhaps not necessary for me to say that Doctor McBride was, at the time of his appointment as commissioner of labor of New Jersey, and is now, rated as one of the ablest physicians in New Jersey. He has specialized in the industrial side of the physician's work and is an authority not only on industrial diseases, as the term is technically known, but upon the general effects of industry in all of its forms upon the human system. Doctor McBride was elected president of the Association of Governmental Labor Officials of the United States and Canada, to which I have referred, at the New Orleans convention, and he is also president of the International Association of Industrial Accident Boards and Commissions, which is an association of State officials having in direct charge the administration of workmen's compensation laws.

The PRESIDENT pro tempore. Is there objection?

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

The use of the spray gun has penetrated so many industries and has been employed for such a wide variety of purposes that it is obvious that a new problem involving industrial health has arisen that will require expert engineering attention based on scientific technical investigation and research for its solution. If the materials used by the spray gun were nontoxic in their action and the only problem involved were to prevent dust particles from being inhaled by the operator, the intricacies of the situation would not be so pronounced, for exhaust-ventilation methods probably could be devised which, coupled with care and intelligent usage of apparatus, would afford a reasonable measure of health protection for operators. The facts are, however, that extremely dangerous and poisonous substances are used by the air gun, including benzol and lead, while silicates in a number of industries are involved, presenting a complicated and difficult industrial problem for solution.

The spraying of surface coatings by compressed air was introduced in this country as a practical method about 1890, at which time the apparatus used was of crude construction, but the results achieved from the viewpoint of economy in operation and quality of work secured were so satisfactory that the use of the spray gun began to increase rapidly until now it is used in an ever-increasing range of industrial activities, including the painting of buildings and the coating of innumerable objects from small metal parts in the novelty industry to large hides having extensive surfaces in the animal-leather industry. Engineering improvements in this type of equipment have kept pace with its increasing usage in such a manner that the quality of the work has improved to an extent that indicates that there will be, in the future, a much wider application of the industrial use of spray-brush apparatus.

At the present time the three outstanding health hazards that confront industry from the use of the spray-brush apparatus include benzol, lead, and silica. In the case of benzol its presence is found in a large number of coating compounds, including dope finishes used in the animal-leather industry as well as lacquers used for coating metal and wooden objects. The lead risk may be found in all cases where lead

paints or enamels are used by the spray brush. Silica includes the free silica that may be present in vitreous enamels. The spraying of vitreous enamels in the manufacture of sanitary ware, refrigerator linings, stove parts, milk tanks, etc., involves a risk to health, because the finely suspended silica dust is present and is taken into the lungs through the breathing efforts of the operator. This matter was given attention by Dr. Leonard Greenburg in his studies of the industrial-dust problem.

It is only within the last 10 years that possible health hazards in the use of the spray gun have been brought to the attention of industrialists, for prior to that time we do not find mention made of this risk by investigating experts whose industrial studies form the basis of what is known at the present date of industrial medicine. In the Hygiene in the Painters' Trade, by Dr. Alice Hamilton, published in 1913, there is no mention made of spray coating, which would seem to show that at that time the practice of using the spray gun in the painting industry was extremely limited. R. P. Albaugh, M. D., in 1915 discussed in the Ohio Public Health Journals a fatal case of slow poisoning in the person of a young man employed as a sprayer in a varnishing department, while the American Journal of Public Health, volume 6, No. 5, November, 1915, published an article on the dangers connected with the spray method of finishing and decorating. In 1917 Wade Wright, M. D., in the Monthly Labor Review, United States Bureau of Labor Statistics, mentioned cases of lead poisoning that he had diagnosed during the first year of his industrial clinical experience at Boston, which included an operator of a spray brush. In the Journal of Industrial Hygiene, April, 1922, volume 3, N. C. Sharpe reported the result of an investigation to determine the hazard to the health of operators using the spray machine for painting. This was probably the first really extensive study of the process of spray coating from the standpoint of the hazard of lead poisoning that had been made up to that time. In our State, in 1917, tentative standards were proposed by the Department of Labor covering the use of lacquers, shellacs, enamels, and japans, more with a view of protecting property and life from the resulting effects of fires than because of the health hazards involved, although at that time the department recognized fully the risk to health that was inherent in this process and established a rule that in all cases where it was possible to use the spray gun under a hood it should be done, and the hood should be constructed and arranged in such a manner that a free flow of air should be produced through the front of the hood of at least 100 lineal feet per minute in order to remove poisonous substances that might pollute the breathing zone of the worker.

We were deeply impressed about this time with the risk to health that was involved in the use of the spray brush because of a large number of cases of lead poisoning that occurred in a vitreous enamel plant. In this plant hoods were used, fans were operating in what to the casual observer would seem a satisfactory manner, but poisoning cases occurred that brought forcibly to the attention of the department the fact that health conditions were unstable. An examination of the apparatus seemed to show that the hoods were not of proper construction and that by enlarging their size and increasing the volume of air through the hoods, a reasonable degree of protection could be secured. This was done with the result that reported cases of lead poisoning ceased, although I am convinced now that a careful check of health conditions in these kinds of plants where exposures cover a long period of time would show that the health of susceptible individuals, at least, would be affected.

The studies made by N. C. Sharpe are extremely interesting, because they were probably the first that were made to determine the nature of working conditions that surrounded spray-brush operations. During a three-day experiment in spraying a wall the operator worked from four to five hours daily. The urine for the 24 hours following showed the presence of 0.3 milligram of lead. The plates exposed for half-hour periods indicated that with lead paints sprayed with the apparatus used at that time, lead was deposited 11 feet to the right of the operator and 3 feet behind the operator. In other cases where small objects were being coated in a cabinet provided with suction no lead was recovered from the air samples, although plates exposed at various points indicated that at certain positions in the neighborhood of the sprayer lead was deposited. The efficiency of various types of masks was tested in order to determine the degree of protection afforded the spray painter. He found that fine wire gauze masks afforded no protection whatever, while a mask of gauze and cotton made as thick as possible without causing constrained breathing reduced the lead present in 10 cubic meters of air from 90 to 10 milligrams.

A mask of gauze, cotton, wool, and charcoal, from 104.2 milligrams to 3.33 milligrams, but this mask was so uncomfortable that no workman could wear it. Masks of gauze and cotton wool, moistened with a 5 per cent solution of sodium sulphide, reduced the amount of lead present from 232 milligrams to 12.4 milligrams for 10 cubit meters of air, while a similar dry mask (that is, without the presence of sodium-sulphide solution) permitted 11.7 milligrams for 10 cubic meters of air to pass through. While the author called attention to the risk of poisoning from the inhalation of volatile fumes, used in paint, it was concluded that there was no danger from lead poisoning in spraying small objects if they were placed in an exhaust cabinet and provided with efficient exhaust ventilation. He concluded that when lead is present in paint that is used in spraying walls inside a building, there is real danger of lead absorption, but that in exterior painting there would probably be less risk from poisoning if the painter took advantage of the prevailing air currents. In this connection, especially on the subject of respirators, it should be remembered that the experiments made by the United States Bureau of Mines show that while it is possible to filter out dust the resistance to breathing is so pronounced that workmen could not wear them for any extended period of time.

The next important step in the investigation of this subject was made when Henry Field Smyth, M. D., Dr. P. H., assistant professor of industrial hygiene, University of Pennsylvania, made an exhaustive study of the problem in 1925 in the State of Pennsylvania under the State department of labor and industry. Thirty-two different industrial groups, comprising 233 plants using the spray gun in the production of furniture or small metal objects, were visited and studied. Ninety-one analyses were made for benzol, 22 for lead, 26 for dust, while 168 air-velocity determinations were made. In addition, 383 physical examinations were made and 43 specimens of urine were analyzed for lead, while special studies on benzol concentrations and exhaust ventilation in an experimental booth especially constructed for the purpose were conducted in the laboratory of hygiene, University of Pennsylvania. While no clearly marked clinical cases of poisoning were revealed in the course of the Pennsylvania studies, an appreciable proportion of workers exposed to benzol showed the disturbed blood picture characteristic of early poisoning.

This appeared to be the result of using lacquers and similar finishes having a benzol content, and it caused a feeling that exposure to this substance in certain industries was much more common than had been generally realized. The Pennsylvania study clearly demonstrated that there are three major health hazards which may be involved in the use of the spray gun for interior work. Where paints and enamels contain a definite proportion of lead, plumbism may result. Where benzol thinners are used in the dilution of paints or lacquers sprayed upon interior surfaces of structures or upon manufactured articles, there is danger of benzol poisoning, while vitreous enamel used in making bath tubs and similar vitreous ware frequently contributes finely divided silica to the atmosphere sufficient to create a silicosis hazard. Doctor Smyth found that both benzol and lead were often present in large amounts in the air breathed by the industrial sprayer, and that of 127 lacquer sprayers examined 5 plus per cent showed white blood cell counts indicative of benzol poisoning and 39 plus gave a disturbed picture. The study showed that 18 per cent of the men engaged in paint spraying showed stippled cells, while the examination of eight spray painters engaged in structural painting showed no cases of lead poisoning, it should be remembered that Doctor Smyth had but little opportunity to observe spray painting of buildings as only a small number of contracting firms used the spray gun, and in these cases employees were occupied with spray painting only a part of the time so that their exposure was probably not continuous. As far as lead is concerned the results seem to show that when paint materials contain more than 1 per cent of lead the amount inhaled during the working day is sufficient to cause toxic action, while where the content of the material goes above 5 per cent, poisonous action is sure to result no matter where the material is used, whether under the booth or not, and whether a respirator is used or not. A very serious condition was found in those plants where during moist weather a so-called "retarder" was employed. Investigation showed that this material was acetone oil and the men who used this "retarder" were obliged to quit work for one or two days after its use. The study also showed that but little had been known of the use of the spray gun in the work of applying vitreous enamels to steel or cast iron. It must be remembered that certain enamels contain soluble lead, while in other enamels the lead is insoluble. Those enamels which contain soluble lead show the same poisoning results as other lead-containing materials, while those which do not contain soluble lead, although they offer no lead risk expose the worker to silicosis. It was found that even with good exhaust ventilation 17 workers in 44 examined were affected with silicosis, and it should be especially noted that not one of the 17 affected had worked longer than one year at this occupation.

At the Cleveland Congress of the National Safety Council in 1925 the importance of making an unbiased study of health hazards of spray coating was recognized (as the results of the Pennsylvania study had not been published) and a special steering committee to carry on the work was appointed. This steering committee in turn appointed a spray-coating committee of 23 members representing Federal and State bureaus, universities, national health organizations, insurance companies, organized labor, and manufacturers of materials and equipment used in spray-coating operations. This committee at the outset recognized the fact that three outstanding health hazards obviously arose from the use of benzol, lead, and silica, and the investigations were conducted with the idea of determining the health risk that arose in industries where these substances were used in spray-gun processing. The investigation covered a large number of plants, physical examinations were made of operators, the results

were carefully noted, air velocities were measured to determine, if possible, the speed at which air should travel in order to provide safe working conditions, and in general the whole subject matter and all circumstances relating thereto were given practical and technical consideration. The results of the study showed that in many plants exhaust hoods were in service that were not giving the workers a fair measure of protection, and that in order to remove poisonous substances from the vicinity of spray-gun operators it would be necessary to produce air velocities in hoods very much higher than it had been the custom to develop heretofore. The physical examinations showed that a large number of people in the spray-coating industry were being affected by the poisonous compounds that were used in the spray guns and that measures of protection taken at that time were quite inadequate.

The committee thought that in the case of benzol the presence of this substance in spray paints was entirely unnecessary, for plants were in operation that used nontoxic lacquers successfully, and as a matter of fact many lacquer manufacturers had seen the wisdom of discontinuing the use of benzol and of replacing it with toluol as the hydrocarbon thinner for nitrocellulose lacquers. In the case of lead used in interior spray paints it was decided that there is no necessity for using lead base spray paints for such purposes as other materials are available which are entirely satisfactory in many varying light tints. It was further suggested that manufacturers experiment to find suitable colors to replace the lead pigments commonly used in automobile undercoats.

The investigators gave special consideration to the question of protecting the workers by means of masks or respirators, and it was found that the filtration type respirator, when constructed on effective lines, provided such a high resistance to the breathing of the worker that it would be impossible for a man to do vigorous physical work while wearing an effective filtration-type respirator. For many years these respirators have been used in lacquer and paint spraying operations for the purpose of filtering poisonous solvents and harmful lead particles from the air. While it is possible for the filtration-type respirator to collect solid particles in the air if the layers are numerous enough in the respirator, it probably would have little or no value in filtering volatile poisonous solvents that pass into the atmosphere. Nothing need be said of the Army gas mask, because while it is effective it is too uncomfortable and cumbersome to be worn for any continuous working period. The respirator with a positive air supply which bathes the face in fresh, pure air and maintains a constant outflow through the normal leakage spaces gives satisfactory results, but on the whole it is better not to place too much dependence on any available type respirator at this particular period of time.

The final conclusion of the committee urged as a most important and fundamental recommendation that manufacturers of paints, lacquers, shellacs, varnish, and vitreous enamels to be used in spray coating should, so far as possible, eliminate benzol, lead, and free silica from their products, and where this has been done should clearly label such products as containing less than a certain maximum amount of lead, benzol, or free silica, as the case may be, and that employers using the spray gun for indoor and booth work should, so far as possible, insist on obtaining and using only material so labeled. The far-reaching effects of the investigations herein noted should not be underestimated for their practical health values in demonstrating to the industrial world the pernicious effects that follow the practice of asking workers to suffer exposures that endanger health will, no doubt, do much to arouse the industrial conscience and enable the establishment of reforms based on sound, democratic procedure.

It is much better that these things that affect the health of industrial workers on a large scale be done by voluntary action and popular consent than for industry to refuse to recognize the dangers and thereby compel the State to use its police power in the establishment of drastic reforms to protect its industrial workers.

FARM RELIEF

Mr. COPELAND. Mr. President, I ask to have printed in the RECORD an article prepared by the American Farm Bureau Federation on the McNary-Haugen bill.

The PRESIDENT pro tempore. Is there objection?

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

WILL THE CONSUMER PAY?—THE MCNARY-HAUGEN BILL AND THE COST OF LIVING

(Prepared by the Washington offices of American Farm Bureau Federation)

One of the best evidences that the McNary-Haugen bill will bring real relief to agriculture is that the measure is overwhelmingly supported by the farmers.

It is significant that little protest has been heard from the great mass of consumers of farm products. The American Federation of Labor, one of the most powerful organized groups of consumers in this country and one which has never been averse to voicing its protest in vigorous terms whenever its interests are endangered, has gone on record unequivocably in favor of the McNary-Haugen bill as an act of justice to the American farmers.

FEDERATION OF LABOR APPROVES

Mr. Edgar Wallace officially representing that organization appeared before the House Committee on Agriculture on April 10, 1926, and urged the committee to give its approval to the McNary-Haugen bill.

In reply to a question as to whether organized labor would oppose this legislation if it should definitely raise prices, Mr. Wallace replied, "Absolutely not, even though we had to help pay. I have said that many times."

He declared that this was the attitude of labor, and explained that labor would fear instead "that some great corporation would get hold of all the foodstuffs. These are the ones who would raise the prices," he said, "but we have no fear that under Government supervision, with the farmers taking part, that this proposed law would result in undue raising of prices of the food upon which we depend for our living. We have not any fear of that. We would fear some selfish interest cornering the whole supply and telling the farmer then what they shall get and telling us what we shall pay. That has been done in many of the productive industries."

Indorsing the McNary-Haugen bill as an act of justice to the farmer, he placed his organization unequivocally on record in behalf of this measure.

PROMOTES EMPLOYMENT IN CITIES

The McNary-Haugen bill will bring the farmer increased purchasing power with which to buy manufactured goods. This means increased business for the manufacturing plants and industrial concerns. And this in turn means increased employment for laborers in these plants. It means also that the influx of farmers to the cities will be checked, thus checking the danger of an oversupply of labor in the cities. Labor has more to fear from unemployment and wage reductions due to an oversupply of labor coming from the farms to the cities if this bill is not passed than labor has to fear from an increase in the cost of living if this bill is passed.

INCREASES FARMERS' CAPACITY TO PURCHASE CITY GOODS

It is very significant that business organizations which have products to sell to the farmers are beginning to realize in increasing numbers that something must be done quickly to boost the purchasing power of the farmers, who constitute one of the most important markets and outlets for manufactured goods. They are coming more and more to the support of the McNary-Haugen plan, presumably attracted by its widespread support by the farmers and its adequacy to deal with the surplus problem. Among these might be cited examples among numerous interests, bankers who deal principally in loans to farmers, fertilizer dealers, business organizations in rural areas, a prominent fountain-pen manufacturer, and others.

BENEFITS TO CITY DWELLERS

Senator ROYAL S. COPELAND, of New York City, who may be expected to be concerned for the welfare of great consuming groups, coming, as he does, from the largest city in the United States, has been a strong advocate of the McNary-Haugen bill primarily because of the importance of maintaining the farmer's purchasing power as an outlet for manufactured products. In an address before the annual convention of the American Farm Bureau Federation in Chicago on December 6, 1927, Senator COPELAND warned of the potential dangers to city laborers if farm relief is not given. He insisted:

"Unless there can be found a means for farm relief, the cities will have bread lines to feed the unemployed."

He declared that—

"The condition of the farmer is of tremendous interest to the urban dweller. Overcrowding in the greater centers means undue competition and lowered wages for them." * * *

He cautioned against a short-sighted policy that would refuse to help stabilize agriculture for fear of higher retail prices. He declared:

"My training as a sanitarian has taught me the importance of an abundant supply of the essential foodstuffs. We can not have healthy and vigorous babies without an unfailing flow of pure milk. Good bread, the corn and meat products, the fruits of the orchards, and the vegetables of the garden are vital to the highest type of good health, and proper nourishment is essential to good citizenship.

"It must be apparent, then, that the city dweller regards with concern what is happening upon the farm. He knows that while happiness is the most elusive thing in the world, there can be no happiness in any home where there is economic distress. Any group suffering from this cause must be an unhappy group, and there is no doubt that the farmer, particularly the one-crop farmer, is in economic distress."

NO RIGHT TO DESTROY AGRICULTURE

In a speech before the Senate on June 12, 1926, in behalf of the McNary-Haugen bill, Senator COPELAND pointed out that—

"While labor has improved its condition and the manufacturer has improved his, the farmer has not had any chance to improve his condition."

And he declared:

"We have no right, Senators, to permit agriculture to breakdown."

Then he told why the consumers in the city would benefit if real farm relief were given:

"It is common to say that agriculture is a basic industry of our country. What would we do without it? It is not a question alone of what the farmers raise for us and what they give us to keep us alive, but they buy our products. Every citizen in my great city, New York, has an interest in whether the farmers in the Middle West are prosperous or not, because we have things to sell. We have clothing, dresses, and hats and cuffs and collars and everything else to sell. We have furniture to sell. The farmers of this country are the great purchasers of those products. They can not buy if they have no money. So I urge upon Senators to give consideration to this great agricultural problem. Let us not, because we are divided, because the farmers have been divided, make that an excuse for going home without taking some steps for the relief of this great group."

HIGHER FARM PRICES DO NOT NECESSARILY MEAN HIGHER PRICES TO CONSUMERS

An increase in farm prices does not necessarily result in an increase in the cost of living to the consumer. Practically all farm products are processed in some way and pass through many agencies after leaving the farm before they are purchased by consumers. It is estimated by Macklin, Grimes, and Kolb in a recent book entitled "Making the Most of Agriculture," that "processing as a marketing service is thus indispensable for four-fifths of all farm products. Most of this work under modern conditions is done by middlemen. Seven-tenths of the farm products used for food are unfit for consumption until they are processed." In support of this statement the following table was offered, which shows the percentages of various food products which are processed in some way before sold to consumers:

Percentage of 38 cents spent for food [1]	Processed	Not processed
Meats and fish, including poultry and shellfish	34.3	
Grain products	17.4	
Vegetables		10.1
Milk and cream		9.6
Butter and fats	8.6	
Eggs		5.7
Fruits and nuts		5.0
Sugar and molasses	4.5	
Cheese	1.0	
Miscellaneous	3.8	
Total percentages	69.6	30.4

[1] Henry C. Sherman: Chemistry of Food and Nutrition, 1918. Macmillan Co.

The cost of the raw material entering into the finished food product or the finished garment manufactured from cotton or wool frequently represents only a relatively small factor in the total cost of the finished product.

According to the recent report of the Federal Trade Commission on the baking industry, the producer of wheat receives only a little over 1 cent for the wheat necessary to bake a pound of bread retailing at about 8½ cents; or, in other words, the farm price of wheat represents only about 13 per cent of the retail price of bread. The following table taken from this report shows the margins exacted by each agency from the farm to the consumer. If the farmer's margin between what he paid out and what he received were shown it would probably show a deficit as compared with the gross margins which all of the middlemen show.

TABLE NO. 1.—*Distribution of the consumer's price of a pound of bread for the years 1922–1924*

Items	Margins: Cents per pound of bread	Margins: Per cent of retail price	First cost, cents per pound of bread
Producer of wheat	1.145	13.40	
(Price received by producer, covering all costs and net profit on flour content of wheat required for 1 pound of bread.)			
Country elevator	.068	.79	1.145
(Gross margin including all costs above wheat cost and net profit on flour content of wheat required for 1 pound of bread.)			
Transportation and terminal agencies for wheat	.278	3.25	
(Gross margin including all costs and net profit on flour content of wheat required for 1 pound of bread.)			
Flour miller	.406	4.75	1.491
(Gross margin, including all costs above wheat cost and net profit on flour required for 1 pound of bread.)			
1. Cost above wheat ..... cents .331		3.87	
2. Net profit ..... do .075		.83	
Transportation agencies for flour	.263	3.08	
(Gross margin, including all costs and net profit on flour required for 1 pound of bread.)			
Wholesale baker	5.110	59.77	2.160
(Gross margin, including all costs above flour cost and net profit on 1 pound of bread.)			
1. All costs except ingredients ..... cents 3.538		41.38	
2. Ingredient costs other than flour ..... do .921		10.77	
3. Net profit ..... do .651		7.62	
Retail grocer	1.279	14.96	7.270
(Gross margin, including all costs above bread cost and net profit on selling 1 pound of bread.)			
Total gross margins (retail price)	8.549	100.00	

HOLDING SURPLUS WOULD NET FARMER HIGHER PRICE

A comparison of the farm prices of wheat and the retail prices of bread over a period of years shows that farm prices of wheat even under existing conditions can fluctuate to a considerable extent without affecting appreciably the retail price of bread. The following table, used in part by Chester H. Gray, Washington representative of the American Farm Bureau Federation, in his statement before the House Committee on Agriculture on March 26, 1926, and based on figures published by the United States Department of Agriculture, shows the spread in prices of wheat at the time of harvest as compared with the price just before the next harvest season:

Summary of trend in recent years

	Cents per bushel
1922 average harvest price (July, August, September, October)	103.7
1922 average preharvest price (March, April, May, June)	116.1
Difference in price	12.4
1922 average harvest price	93.9
1923 average preharvest price	105.8
Difference	11.7
1923 average harvest price	90.3
1924 average preharvest price	97.7
Difference	7.4
1924 average harvest price	116.6
1925 average preharvest price	151.5
Difference	34.9

This table shows that the farm prices of wheat rose 12.4 cents per bushel following the harvest season of 1921 and the period just preceding the harvest season of 1922. The next year the price increased 11.7 cents per bushel. These increases took place despite a general downward trend in the price of wheat during the period of 1921–1923. This shows how dumping of the surplus on the market at harvest time unduly depresses the price below the real value at harvest time and enhances the price later, when most of the product has left the farmers' hands. During the next season the price of wheat rose 7.4 cents per bushel, and in the following season it rose 34.9 cents per bushel during a similar period of time. This shows that the dumping of the farmers' wheat on the market within a short time causes a temporary depression of price which results in benefits to the middlemen who take advantage of the public to buy up all stocks of wheat at low prices and market them in an orderly manner at considerably enhanced prices in later months.

ORDERLY MARKETING NEED NOT RAISE RETAIL PRICES

What effect do these increases in the farm prices of wheat have on the retail prices of bread? A comparison of average retail prices of bread during the months, July, August, September, and October, with the average retail prices during the months of March, April, May, and June in the succeeding year, shows the following results:

Average retail price of bread for 51 cities combined

Year	Per pound
	Cents
1921 (July, August, September, October)	9.65
1922 (March, April, May, June)	8.8
Difference in price (lower)	.85

Average retail price of bread for 51 cities combined—Continued

Year	Per pound
	Cents
1922 (July, August, September, October)	8.8
1923 (March, April, May, June)	8.8
No change.	
1923 (July, August, September, October)	8.8
1924 (March, April, May, June)	8.8
No change.	
1924 (July, August, September, October)	8.85
1925 (March, April, May, June)	9.4
Difference (higher)	.55

COMPARE FARM PRICES AND RETAIL PRICES

Comparing these two tables in the 1921–22 period, the price of wheat increased 12.4 cents per bushel, whereas the retail price of bread declined 0.85 cent or nearly 1 cent per pound. In the 1922–23 period the price of wheat advanced 11.7 cents per bushel, whereas the retail price of bread remained unchanged; in the 1923–24 period the farm price of wheat advanced 7.4 cents per bushel, whereas the retail price of bread remained unchanged. In the 1924–25 period the farm price of wheat advanced 34.9 cents per bushel, whereas the retail price of bread increased only about one-half cent per pound.

EFFECT ON BREAD PRICES IN NEW YORK CITY

To use a specific instance, the retail price of bread in New York City covering the same periods was perhaps even more striking by comparison.

Comparing these figures with the changes in the prices of wheat given above shows that the farm price of wheat in the period 1921–22 rose 12.4 cents per bushel, whereas the retail price of bread during the same period declined nearly one-half cent per pound; in the period 1922–23, the price of wheat rose 11.7 cents per bushel, whereas the retail price of bread in New York City declined about one-seventh of 1 cent per pound; in the period 1923–24, the farm price of wheat rose 7.4 cents per bushel, whereas the retail price of bread in New York City declined one-tenth of 1 cent per pound; in the period 1924–25, the farm price of wheat rose 34.9 cents per bushel, whereas the retail price of bread in New York City only increased one-tenth of 1 cent per pound.

Average retail prices of bread, New York City

Year	Cents per pound
1921 (July, August, September, and October)	10.1
1922 (March, April, May, and June)	9.7
Difference (lower)	.4
1922 (July, August, September, and October)	9.75
1923 (March, April, May, and June)	9.6
Difference (lower)	.15
1923 (July, August, September, and October)	9.6
1924 (March, April, May, and June)	9.5
Difference (lower)	.1
1924 (July, August, September, and October)	9.5
1925 (March, April, May, and June)	9.6
Difference (higher)	.1

In other words, the rise in the farm price of wheat between the harvest season of one year and the preharvest season in the succeeding year had little or no effort on the retail price of bread in New York City, even though there was a fluctuation of as much as 34.9 cents per bushel in the farm price of wheat. Therefore, it is reasonable to conclude that if the McNary-Haugen bill makes it possible for the farmer to avoid dumping his crops on the market and thus secure the benefit of the rise in price after harvest which now benefits the middlemen and speculators, this will not unduly raise the retail prices of food.

OTHER FACTORS CAUSE HIGH RETAIL PRICES

What has been said concerning the small cost of the wheat in a loaf of bread may be said, also, to a more or less degree of many farm products. There are so many other cost factors entering into the processing of farm products before they reach the consumer that the price which the farmer receives for the raw product is not always the determining factor in changing the retail price. The labor cost is often a very high factor, and it is this item more than the farm price which is keeping up the level of the retail prices of goods manufactured from farm products.

Other important factors entering into the cost of living by adding to the cost of the finished product after it leaves the farm are: High freight rates, manufacturing costs, including overhead with generous allowance for high-salaried executives, excessive profits of middlemen, high operating costs by reason of high-priced machinery, expensive plants, expensive public services, expensive advertising campaigns, as well as watered stock. Whereas the index figure indicating the level of farm prices dropped from 205 in 1920 to 136 in 1926, the index figure of union wages per hour (May 15 basis) increased from 199 in 1920 to 250 in 1926—the highest level of any year in the period 1913–1926. The index number for the earnings of New York factory workers (June basis) increased from 222 in 1920 to 229 in 1926—the highest level of any year in the period 1913–1926. Thus other factors besides farm prices are responsible mainly for maintaining the high cost of living.

According to a study of the canned vegetable and fruit industry by the Federal Trade Commission in 1918, the cost of the raw materials in the canning of corn represented only 32 per cent of the total cost. the cost of tomatoes, 37 per cent; peas, 29 per cent; string beans, 25 per cent; pears, 33 per cent; peaches, 32 per cent. The cost of the leather in a pair of shoes varied in 1918–19 from 22.6 per cent to 34 per cent of the total cost, and the cost of the raw stock in 1918 was 68 per cent of the total cost of the finished sole leather, and 67 per cent of the total cost of the finished upper leather, according to a study made by the Federal Trade Commission.

The average selling price of a pair of shoes increased in the period 1918–19 in varying amounts from 14 cents to $1.27 per pair, whereas the cost of the raw stock for leather manufacture increase but one-fifth of one cent per pound in the case of sole leather, and 9.6 cents per foot in the case of upper leathers, thus showing that other factors besides the cost of the raw product are mainly responsible for the increase in the retail price of shoes.

HOW MUCH RAW COTTON IN A SHIRT

In the case of cotton, the actual amount of raw cotton by weight used in the manufacture of many articles is so small as to be a minor factor in determining the total cost of the completed product. For example, a shirt which contains less than one-half pound of raw cotton and for which the farmers receive less than 10 cents, may retail at $1.50 or more. It does not seem reasonable, therefore, that an increase in the price of cotton should have any material effect on the ultimate price which the purchaser pays for a cotton shirt.

HOW MUCH WOOL IN A SUIT OF CLOTHING?

A study made by the Joint Commission of Agricultural Inquiry published in Part IV of its report (H. Rept. 408, 67th Cong., 1st sess., Oct. 15, 1921) still further substantiates the fact that the cost of the raw materials produced by farmers constitutes a relatively small factor in the price paid by the consumer for the finished products manufactured from these raw materials in the case of many commodities. For example, the cost of the cloth in a typical three-piece suit of men's clothing represents only about 18 per cent of the price paid for the suit by the consumer. The amount of raw wool or raw cotton contained in this cloth would likewise represent a small proportion of the cost of the cloth to the clothing manufacturer, so that the price received by the farmer for the raw cotton or raw wool necessary for the manufacture of a suit of men's clothing would probably represent not more than 5 or 10 per cent of the retail price paid, or approximately $42 paid by the consumer for a suit of clothing.

The price received by the farmer for oats used in the manufacture of rolled oats represents only about 18 per cent of the retail price paid by the consumer.

The price received by the farmer for corn represents only about 21 per cent of the price paid by the consumer for corn flakes manufactured from corn.

FARM PRICES COMPARED WITH RETAIL PRICES

Changes in the prices received by the farmer are not necessarily directly reflected in changes in prices paid by consumers. For example, the price of hogs received by the farmers increased 3.4 cents per pound in 1924 as compared with 1923, whereas the retail price of bacon decreased 1.4 cents per pound in 1924 as compared with 1923. The price received by farmers for hogs declined about three-tenths of a cent per pound in 1923 as compared with 1922, whereas the retail price of lard to the consumer increased seven-tenths of a cent per pound in 1923 as compared with 1922.

FARM PRICE INCREASED—RETAIL PRICE UNCHANGED

In the case of oats, the price received by the farmer increased 5.6 cents per bushel in the crop year of 1922–23 as compared with the crop year of 1921–22, whereas the retail price of rolled oats to the consumer remained unchanged in 1923 as compared with 1922.

FARM PRICE INCREASED—RETAIL PRICE DECREASED

In the case of corn the price received by the farmer decreased 1.6 cents per bushel in the crop year of 1919–20, as compared with the crop year of 1918–19, whereas the retail price of corn flakes to the consumer increased 0.2 of a cent per 8-ounce package; the price received by the farmer for corn increased 22.4 cents per bushel in the crop year of 1922–23 as compared with the crop year of 1921–22, whereas the retail price of corn flakes to the consumer decreased 0.3 of a cent per 8-ounce package in 1923 as compared with 1922.

FARM PRICE LOWER—RETAIL PRICE HIGHER

In the case of canned tomatoes the price received by the farmer for tomatoes for canning decreased 80 cents per ton in 1925 as compared with 1924, whereas the retail price of No. 2 cans of tomatoes to the consumer increased 0.4 of a cent per can; the price to the farmer increased 91 cents per ton in 1923 as compared with 1922, whereas the retail price of No. 2 canned tomatoes decreased 0.5 of a cent per can.

In the case of beef the price received by the farmer for live steer at Chicago decreased 3 cents per pound in 1920 as compared with 1919, whereas the retail price of sirloin steak to the consumer increased 2 cents per pound; the price received by the farmer for live steers increased 0.7 of a cent per pound in 1922 as compared with 1921, whereas the retail price to the consumer decreased 1.4 cents per pound in the case of sirloin steak and 1.5 cents per pound in the case of chuck roast. The price received by the farmer for live steers decreased 0.3 of a cent per pound in 1924 as compared with 1923, whereas the retail price to the consumer increased 0.6 of a cent per pound in the case of chuck roast and 0.5 of a cent per pound in the case of sirloin steak. The price received by the farmer for live steers decreased 1.1 cents per pound in 1926 as compared with 1925, whereas the retail price to the consumer increased 0.9 of a cent per pound in the case of chuck roast and increased 0.7 of a cent per pound in the case of sirloin steak.

FOOD AND CLOTHING ARE ONLY HALF OF LIVING COSTS

Another fact to be considered is that nearly one-half of each dollar spent by the consumer, or in other words, nearly one-half of the cost of living is spent for other purposes than food and clothing. According to estimates by Professors Macklin, Grimes, and Kolb, published in their book entitled "Making the Most of Agriculture," "Of each dollar spent by the consumer, food represents 38 cents and clothing 17 cents, a total of 55 cents."

In view of the fact that a considerable proportion of the clothing worn is not made from products grown on American farms, but of imported silk, the total spent for products made from farm commodities would be somewhat less than 55 cents out of each dollar, especially when the imported food, such as bananas, coffee, tea, and other products, are taken into consideration also. In other words, when the consumer's cost of living depends more on his expenditures for other purposes than for food and clothing, and when his expenditures for food and clothing are absorbed to a considerable extent by the costs of processing and distribution of farm products, it is obviously unreasonable to contend that the enactment of the McNary-Haugen bill should necessarily result in increasing the cost of living of the consumer.

DANGER OF MIDDLEMEN GETTING MONOPOLIES

The statement of Edgar Wallace, representing the American Federation of Labor, to the effect that organized labor did not fear the McNary-Haugen bill, but needed rather to fear that great corporations would get control of food products and exact exorbitant prices, is substantiated by the findings of the Federal Trades Commission in its recent report concerning the bakery industry. This report reveals gigantic consolidations among the bakery companies, whereby four corporations produce 20 per cent of the bread in the United States, and also startling revelations of collusion among associations of bakers and flour millers to prevent reductions in the prices of bread and of flour.

GIGANTIC MERGERS IN BAKERY INDUSTRY

For the past 20 years a program of consolidation has been going on in the bakery industry. First, local consolidations in various cities took place; then followed consolidation of bakeries located in different cities. In addition to these mergers there have also been consolidations of companies through affiliations or by means of control by common interest, even though the companies maintain themselves as separate corporation entities. Great holding corporations have been formed which control vast aggregations of capital invested in the bakery industry, involving the stock of subsidiary corporations which cover the Nation with a network of bakery plants.

The Purity Bakeries Corporation, organized December 1, 1924, is said to have operated through its subsidiary cooperations 33 bakeries in 24 cities located in 12 States. These bakeries employ 5,000 people and require 1,200 salesmen on approximately 1,000 routes to serve 45,000 retail grocery stores each day. The total sales of the bakeries under the control of this consolidation totaled approximately $24,000,000 in 1925.

The Ward Baking Corporation, organized December 27, 1923, is said to hold the controlling stock in the Ward Baking Co., which in 1926 is said to have operated 18 plants in 10 States, employed 1,800 salesmen, who traveled over 16,000 routes and called on 76,000 retail grocers each day. The total bakery sales in 1925 approximated $42,000,000, and the amount of bread produced totaled 306,000,000 pounds.

The General Baking Corporation, organized October 3, 1925, is said to have controlled in 1926, 7 companies comprising 42 bakers in 15 States and the District of Columbia.

The Continental Baking Corporation, organized November 6, 1924, is said to have controlled in 1926, 29 companies which operated 91 plants in 26 States and the District of Columbia, and also 5 companies in Canada, which operated 9 plants in the Provinces of Ontario and Quebec.

The following language quoted from the Federal Trade Commission's report tells vividly of still further consolidations through the interlocking of interests which were developed:

"THE INTERLOCKING OF INTERESTS IN BAKING CONSOLIDATIONS

"Imposing as is the size of the baking consolidations described above, their relations to one another were even more significant. At one time or another the three largest of these consolidations have been affiliated through a community of stock ownership and of organizing personnel and through close association of managing personnel, though they nominally are and may be presumed by the public to be entirely separate and competing interests."

COLLUSION TO PREVENT PRICE REDUCTIONS

The Federal Trade Commission in its investigation of the bakery industry also found startling indications of collusion among the bakers and millers to prevent reductions in the price of bread and flour. In the case of the bakers these efforts were usually directed through associations of bakers which held frequent meetings and in some instances employed a business manager, whose principal job seems to be to keep tab on the selling prices of all the members and other competitors and to exert every effort to prevent price cutting.

ACTIVITIES OF NEW ENGLAND BAKERS' ASSOCIATION

The Federal Trade Commission reported that a New England Bakers' Association, which was organized in 1921, had a membership on December 1, 1925, of 332 bakers and 272 allied tradesmen, divided into 17 local organizations each with its own officers and each holding monthly meetings, usually attended by officials of the general organization. It was also reported that the members of this organization are pledged to a code of ethics in their application for membership and this code contains the following significant paragraph:

"* * * We will be loyal to the principles of our association, and will always be mindful in building up our business that it is not necessary to tear down another's."

The Federal Trade Commission pointed out that this code is interpreted by the association as a pledge of the members to maintain prices against "cuts of any kind," and in substantiation of this interpretation the commission cited the following paragraph from a letter alleged to have been written by Horace D. Likins, business manager of the association, to an alleged price-cutting nonmember firm, a letter which it is stated was never sent "because the writer didn't like the looks of it":

"It is the earnest desire of the officers and governors of the New England Bakers' Association to promote the welfare of the baking business and to keep the industry on the highest possible plane.

"Wherever methods and prices are in effect which tend to disrupt the business it is our policy to offer our assistance, either to members or nonmembers, in straightening out the tangle.

* * * * * * *

"Through agreement members of our association are pledged against premiums and price rebates or cuts of any kind, but in cases where members are subject to such competition by other bakers not members, unless our organization is able to straighten out the trouble, we can not logically hold our members from reprisals.

* * * * * * *

"It is customary after a formal report has been received and acknowledged by the association, and all proper efforts for adjustment have failed, to relieve our members of all association pledges. May we not settle this matter immediately in a way which will promote future harmony?"

The commission also reported that the manager spent much of his time traveling among the membership, and that he admitted under questioning that prices were never discussed officially at any of the meetings, but that an after meeting might be held for this purpose and "everybody allowed to go to it."

The following copies of letters contained in the Federal Trade Commission's report are significant:

The commission called attention to the manner in which cases were followed up, by quoting the following paragraph of a letter reported to have been written by Mr. Likens, May 20, 1924, to Mr. George C. West, Vermont Baking Co., White River Junction, Vt., then president of the association:

"I was in Nashua, Manchester, and Lawrence yesterday, but did not make much progress, as my men were all out. I found things in Nashua very quiet and everything running smoothly, but in Manchester there is quite a little unrest and price cutting. I have been in correspondence with Cote Bros., but they do not answer my letters, so decided to go up there. I am also trying to arrange for a local association meeting there. Will know more later as to the results. I planted the seeds, and will have to wait to see if they grow."

The commission's report comments as follows:

"The correspondence found in the files of the association do not disclose the outcome of this attempt to bring the members interested in the Raymond (N. H.) market together on bread prices, but the 'quiet' in Nashua, N. H., referred to in the foregoing paragraph was apparently the fruit of the manager's earlier work in that locality, for in writing to Mr. West June 11, 1924, of what the association was accomplishing, he says:

"'When it comes to specific cases we have gotten the most important bakers of Nashua to see the error of their ways, get together and restore prices to a reasonable scale, and abolish premiums.'"

ATTEMPTS TO RAISE RETAIL PRICES

Further extracts from correspondence gathered by the commission indicate efforts to increase retail bread prices:

"In regard to bread prices, I have nothing to offer as yet. The large local bakers say there is nothing doing as yet, but some of the retail bakers are asking more for their products. I understand the bakers of New Hampshire have held a meeting and all agreed to ask more, with the exception of Romeo La Forme (Nashua Baking Co., Nashua, N. H.) and he telephoned me on Monday that they are waiting for him to act and he was waiting for Massachusetts bakers to go up, but after talking with me I was given to understand that they would raise their price everywhere except where they came in competition with bakers in Massachusetts.

"I certainly am as busy as I can be trying to get the bakers in different sections to go up on their prices, but in nearly every case no one is willing to go up unless they all do, and most all of them are waiting for the large producers. We are to have another meeting in Waltham, Mass., on Monday afternoon. I am to be in Brockton, Mass., to-morrow night and at Methuen, Mass., which is the Lowell, Mass., and Lawrence district, Mass., next Tuesday, the 10th. The bakers of New Hampshire are having a meeting in Manchester to-day and I hope to know the results to-morrow."

A great deal of other correspondence is cited which reveals the extensive activities toward price agreements, sometimes involving attempts to get general agreements to increase prices, or in other cases, to prevent price reductions not only in New England but in other regions also. This correspondence reveals in a startling manner the extensive activities of these associations in various sections of the country, presumably to prevent free and open competition by price agreements, thus arbitrarily holding up the prices, or increasing prices, and goes to show that the price which the consumer pays for bread does not represent the normal operation of supply and demand, but represents in part the degree of effectiveness with which the bakers can be brought to cooperate in fixing the price as high as the traffic will bear.

While the data concerning the activities of millers in preventing price cutting is not so extensive as in the case of the bakers' associations, the report of the Federal Trade Commission reveals some startling indications of efforts along this line. The following is quoted from the report of the commission:

"These activities were initiated during 1923, a year of comparatively low profits for milling companies, and culminated in April, 1925, in the adoption of a so-called code of ethics at a meeting of the Millers' National Federation.

"The principal activities of this kind here described included the use of a blacklist; curtailment of production; and agreements, understandings, and cooperation to sell at a profit; to exchange information on selling prices; to fix the elements of selling prices; to fix uniform carrying charges on 'forward' sales of flour; and to fix uniform differentials in the prices of flour sold in the different kinds and sizes of packages. Provision covering these activities are included in the code of ethics."

BLACKLIST OF CUSTOMERS

It was alleged by the commission that early in 1924 southwestern millers had a blacklist of customers secured frequently from the records of the Millers' Exchange which was then out of existence. The names on this list included companies located in various sections from Boston, Mass., to El Paso, Tex.

EFFORTS TOWARD PRICE AGREEMENT

The commission also reported activities in the millers' associations toward securing agreements, understandings, or cooperation among millers not to sell flour for less than cost or to sell only at a profit. Obviously this is but another way of reaching a price agreement. The commission's report states:

"In reporting to his members the discussions on trade conditions at the October 12, 1923, meeting of the Millers' National Federation, Frank H. Tanner, secretary of the Ohio State Millers' Association, made the following statement regarding the discussion on sales of flour:

"'Selling flour at or below cost was disapproved. Many present pleaded guilty to this, in order to keep the mills in operation. Some classified their sales as productive of profit, as of getting out without loss, and as selling below cost. It was the consensus of opinion that the matter was one that each must solve himself, but that all should determine not to sell without a profit. If all will do this, the problem will be solved.'"

The following is reported as taken from the annual report dated April 15, 1924, of A. P. Husband, secretary of the Millers' National Federation, and describes the effects of the cost and profit discussions at the federation meetings of October 12, 1923, and January 15, 1924:

"The semiannual meeting on October 12, 1923, was unusual in its character in that there appeared to crystallize at that meeting a sentiment that it was foolish for millers to continue longer the practice of selling flour at or below cost. There was a frank exchange of experiences, a number of millers confessing to their share in creating the condition which existed in the trade. However, there seemed to be a feeling that it was time to call a halt, and a number of those present left the meeting with the determination that they would sell no flour that did not show cost and a reasonable profit.

"A somewhat similar meeting was held at Hotel La Salle, Chicago, on January 15, 1924. No program was prepared for this meeting, no committees appointed, and no resolutions passed, but it developed into an experience meeting in which many millers recited their experiences under methods of operation as suggested at the October meeting of accepting no orders that did not show cost of manufacture and a profit.

"It is generally agreed among the trade that the beneficial effects of these two meetings were far-reaching; smaller groups of millers have met several times since these meetings were held and the same general sentiment prevailed throughout these local or sectional meetings. As a result, there is no doubt a better trade condition now than existed six months ago."

Mr. G. M. Palmer, president of the Hubbard Milling Co., Mankato, Minn., is reported to have written to H. H. King, of Minneapolis, Minn., in part as follows:

"The Atkinson Milling Co. has the reputation of being the worst cutters in the business. Do you suppose any influence can be brought to bear upon that concern to refrain from making such prices and of broadcasting their quotations everywhere? The St. Paul Milling Co. has been pretty bad themselves, but this gives us a chance to take the matter up with them and possibly it may do some good."

On the same date he is reported to have written to the K. G. Campbell Milling Co., Blooming Prairie, Minn., concerning the same meeting, as follows:

"We think we can notice a disposition on the part of millers to adhere to better business policies and firmer prices. The meeting in Minneapolis this week, we believe, was a step in the right direction, and we are hopeful that there may be cooperation between millers and a discontinuance of some of the practices that have helped to demoralize the industry."

MILLERS SEEK ASSURED PROFIT BASIS

The following quotation from the commission's report is significant:

"Mr. Sydney Anderson, president of the Millers' National Federation, in an address delivered at a dinner of the federation in Chicago on October 8, 1924, stated in regard to the activities of the federation:

"'The ultimate purpose of all our activities is to bring about in the industry a condition where every miller in the United States can demand and secure a reasonable profit on every barrel of flour manufactured and sold.'"

Mr. Anderson has been one of the most active opponents of the McNary-Haugen bill, which has for its purpose the prosperity of agriculture. When his own industry is concerned, however, he is willing to declare himself in favor of focusing all their activities upon a goal whereby every miller can demand and secure a reasonable profit on every barrel of flour sold. The farmers are not demanding a profit on every bushel of wheat or every pound of cotton which they sell; they are more moderate and are only asking for equality with other groups and for stabilization of prices on a profitable level.

Perhaps more data would have been secured had it not been for the fact, as the commission reported, that 17 flour-milling companies refused to permit any of their correspondence to be examined. These included some of the largest milling companies in the country. Three others refused to permit part of their correspondence to be examined; three others allowed their correspondence to be examined but refused to permit copies to be made.

The consumer has much more to fear from great corporations seeking to secure a monopoly of food supplies and extort high prices than he has to fear from the farmer. It is significant that among the chief opponents of the McNary-Haugen bill are representatives of the flour-milling industry. The McNary-Haugen bill will benefit the consumer as well as producer. It will not work an undue hardship on the middlemen, but on the contrary will prove a benefit to them in the long run, because it will promote the stabilization of prices and tend to reduce marketing risks. In opposing this bill the middlemen are taking a selfish, shortsighted attitude instead of a sane, long-time attitude.

PRICE STABILIZATION BENEFITS PRODUCERS AND CONSUMERS

The primary result of the McNary-Haugen bill would be to make possible the orderly marketing of the surplus of farm crops, with a resultant stabilization of prices, which would be to the advantage of both the producer and the consumer. Under existing conditions the farmer is forced by his economic necessities to dump his crop on the market within a short time. The result of this is that prices during the harvest season are unduly depressed because of glutted markets. The middlemen take advantage of this unequal bargaining situation to buy up the surplus above immediate requirements at an unduly low price, store it, and dispose of it throughout the year as the market demand

justifies at prices which are often greatly in excess of the price which the farmer received a few months before.

SURPLUSES ARE A BENEFIT TO SOCIETY

The holding of surplus supplies from periods of plenty to periods of scarcity has always been an economic necessity, but particularly so in the case of food, which is produced and ready for market only at certain seasons of the year but which must be consumed every day in the year.

PRESENT SYSTEM PENALIZES FARMER

The farmer must produce a surplus above immediate requirements or else the world will starve. If he produces this surplus, under our present marketing system, he is penalized by low prices. If he were enabled to withhold the surplus and market it in an orderly manner, he would be able to get the full value for it which supply and demand justify. What has been said concerning temporary surpluses applies also to yearly carry-overs from years of oversupply to years of undersupply.

How the farmers suffer from price depressions due to glutted markets and surpluses under the present marketing system is described vividly by Professor Macklin in the following extracts from his book, Efficient Marketing for Agriculture:

"Because farm products are so generally harvested within short periods, and as rapidly as possible forwarded to markets, where change of ownership takes place, it is almost universal for farmers to dispose of the bulk of their commodities at prices needlessly depressed as a result of market glutting."

DUMPING OF FARM SURPLUSES

According to the following tables, prepared by Professor Macklin, about 80 per cent of the total ginnings of cotton is ginned during the months of September, October, and November, whereas the total consumption of cotton during those three months represent 24½ per cent of the total yearly consumption; in the case of wool, 81.6 per cent is sheared in three months, whereas the total consumption during the three months of June, July, and August is 25.8 per cent of the total yearly consumption; in the case of wheat, 72.6 per cent moves to market during the four months of July, August, September, and October, yet only 33.6 per cent is milled during this period.

Cotton ginnings, movement, and consumption

Month	Cotton ginned [1]	Cotton movement [2]	Cotton consumption
	Per cent	*Per cent*	*Per cent*
August	6.5	1.4	8.3
September	22.6	9.5	8.0
October	38.9	21.0	8.1
November	18.4	22.2	8.4
December	7.8	17.4	8.2
January	[3] 5.8	8.8	8.7
February		5.6	8.0
March		4.9	8.7
April		3.2	8.3
May		2.7	8.8
June		1.7	8.4
July		1.6	8.1
Total	[4] 100.0	[5] 100.0	[6] 100.0

[1] Data from years 1915-16 U. S. Department of Commerce, Bureau of Census, Bulletin 140, p. 24.
[2] Data from U. S. Department of Agriculture, Bureau of Crop Estimates, 1919 crop.
[3] Includes all ginnings for balance of season.
[4] Represents 45,526,810 bales or crops of 1915, 1916, 1917, and 1918.
[5] Represents 11,329,755 bales of 1919 crop.
[6] Represents 25,518,543 bales or United States cotton-mill consumption for years 1915-1918, inclusive.

Monthly wool production and consumption in the United States [1]

Month	Monthly wool production	Monthly wool consumption
	Per cent	*Per cent*
January	0.3	8.8
February	.1	7.7
March	.2	8.7
April	(?)	9.1
May	1.9	9.3
June	12.9	8.4
July	33.0	8.0
August	35.7	7.9
September	11.6	7.8
October	2.3	8.4
November	1.1	8.1
December	.9	7.7
Total	100.0	100.0

[1] Data from U. S. Department of Agriculture, Bureau of Markets, the Market Reporter Vol. II, No. 24, p. 369.
[2] Negligible.

81.6 per cent sheared in three months, were as consumption varied throughout year only between figures 7.7 and 9.3 per cent.

Farm movement and mill consumption of wheat [1]

Month	Wheat receipts from farms	Mill grind of wheat
July	14.4	4.4
August	23.4	9.3
September	18.7	9.3
October	16.1	10.6
November	7.8	8.3
December	7.0	9.0
January	4.8	7.9
February	2.4	6.5
March	1.5	7.7
April	1.1	8.8
May	1.6	10.3
June	1.2	5.9
Total	[2] 100.0	[3] 100.0

[1] Table from Grain and Flour Statistics during the War, U. S. Grain Corporation, pp. 28, 29.
[2] Represents 730,161,000 bushels of wheat.
[3] Represents 539,058,000 bushels of wheat.

72.6 per cent of wheat moves to market during four months July, August, September, and October, yet only 33.6 per cent is milled during this period. When the producers offer an industry 72 per cent of a product when they are only prepared to use immediately 33.6 per cent of it the producers must expect depressed prices.

MIDDLEMEN TAKE LARGE MARGINS

The storage of farm commodities, however, has been largely given over to middlemen who operate this service for their own profit. Frequently, buyers exact larger margins than are warranted in protecting themselves from a possible decline in prices or from risks of losses. Economists have recognized these facts as the following quotation from Prof. Theo. Macklin's book, Efficient Marketing for Agriculture, will illustrate:

"Unless private middlemen who now render this storing service are able to make a profit in the long run, they must cease to operate. Their weakness lies in the fact that 'playing safe' results in too great a recession in prices before commodities are purchased for storing.

"Mistaken judgment under these circumstances necessitates wider margins than might otherwise be necessary in order to cover losses involved."

Professor Macklin illustrates this statement still further in the case of wool:

"To throw vast quantities of wool on the markets of the country without reference to mill consumption necessarily glutted the Nation's markets and brought seasonal depression in price to the producer. Analysis of the wool-marketing machinery indicates that a great amount of wool has normally been sold by farmers to local middlemen handling very small quantities who were not equipped either in knowledge, facilities, or finances to pay the farmer all his wool was worth locally, considering what mills eventually pay for it.

"Certainly it is no exaggeration to imply that the middlemen who store wool and feed it to the mills have done so at prices which were in line with the prices obtained by mills for their finished articles. It is beyond question that mills purchase wool on a relatively stable cost basis, while the middlemen storing wool buy their supply from more or less helplessly inefficient local dealers at a time when vast oversupplies have depressed the current speculative prices."

BENEFITS OF ORDERLY MARKETING

Prof. H. C. Taylor in his book Outlines of Economics recognizes the benefits of storage of surpluses to the producers and the consumer:

"Storing is a service to the farmer and to the consumer. It expands the market for the farmer and increases the supply for the consumer. It tends to stabilize supplies and prices to the advantage of both."

Professors Macklin, Grimes, and Kolb in their book Efficient Marketing in Agriculture likewise call attention to these benefits which accrue to the consumer as well as the producer if surpluses are marketed in an orderly manner:

"The service of storing is one of the most effective means of reducing unforeseen and serious changes in the prices of farm products; therefore it is work that must be done to help toward making prices steadier from month to month. * * * Any work like that of storing, which takes part of all of the surplus products of one season off the market and holds this surplus for some other season when there is bound to be great scarcity, helps to make prices steadier."

A practical illustration of the benefits which accrue to both the producer and the consumer as the result of price stabilization through orderly marketing of the surplus, is afforded by the following example of what has been done in the dairy industry in Wisconsin. The following statement of Professor Macklin is based on the University of Wisconsin Agricultural Experiment Station Bulletin 270, page 37:

"While only 10 per cent, approximately, of the year's output of creamery butter is held in storage from surplus to deficit, the steadying influence which the storage of this butter exerts on prices is truly remarkable. Before storage facilities were perfected and utilized for

holding butter, prices fluctuated on an average 120 per cent. With the development of storage and the operation of speculation, extreme fluctuation in price has been greatly reduced. Prices neither rise nor fall as they formerly did.

"This reduction in price fluctuation to one-third of the former range attended by benefits of adequate supply to consumers throughout the year and of greater service of storing, which costs only about 1.9 cents per pound for the butter actually stored. Inasmuch as one-tenth of the butter only is stored and this portion of the annual production stabilizes the prices for the total output, the cost may be thought of as less than two-tenths of 1 per cent per pound, or about one-half of 1 per cent of the retail value. The economic consequence of storing in this illustration vastly outweighs the expense of the service. These benefits of storing make it an essential part of the marketing system."

M'NARY-HAUGEN BILL ASSURES ORDERLY MARKETING

The McNary-Haugen bill would enable the cooperative marketing associations to acquire control of the surplus of a given farm commodity by providing the necessary machinery and finances so that the cooperative could purchase, store, and market the surplus in an orderly manner, so as to secure for the producers for their entire crop the price which supply and demand justify. In other words, it would give the farmers equality of bargaining power with the middlemen.

The stabilization of prices which would result would benefit both the farmers and the consumers. The ultimate effect would probably be to bring the farmers a better price without unduly increasing the retail price, by reducing the spread between the price the farmer receives and the price the consumer pays. This would not necessarily work a hardship on those middlemen who perform legitimate services in the distribution of farm products because of the reduction in risks and losses which would come about through elimination of excessive price fluctuations and the stabilization of prices.

In short, the principal effect of the McNary-Haugen bill would not be to increase the cost of living to the consumers, but to give the farmer a more equitable share in the price which the consumer pays for the product in its ultimate form. This would be accomplished primarily through the stabilization of prices as a result of orderly marketing and by giving to the farmer equality of bargaining power with the middlemen.

WAR-MINERALS RELIEF STATUTE

Mr. GEORGE. Mr. President, I ask unanimous consent for the present consideration of a resolution which I now send to the desk.

The PRESIDENT pro tempore. The Senator from Georgia offers the following resolution, which will be read for the information of the Senate.

The resolution (S. Res. 263) was read, considered, and agreed to, as follows:

Whereas the Attorney General of the United States has advised the Secretary of the Interior against the further administration of section 5 of the act of March 2, 1919, as amended, generally known as the war-minerals relief statute; and

Whereas claimants thereunder are demanding adjudication: Therefore be it

Resolved, That the Secretary of the Interior is hereby requested to transmit to the Senate copies of all rules, regulations, and promulgations which have been followed in the administration of said statute, together with all opinions as to the law which have been rendered by commissions or commissioners, solicitors of the Department of the Interior or their assistants, and Attorney Generals of the United States or their solicitors or assistants.

RIO GRANDE BRIDGE, TEXAS

Mr. SHEPPARD. Mr. President, from the Committee on Commerce I report back favorably the bill (H. R. 13318) authorizing the Val Verde County Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Rio Grande at or near Langtry, Tex., and ask for its immediate consideration.

The PRESIDENT pro tempore. Is there objection?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

SABINE RIVER BRIDGE, LOUISIANA

Mr. SHEPPARD. I also report back favorably from the Committee on Commerce the bill (H. R. 13777) authorizing the State of Louisiana and the State of Texas to construct, maintain, and operate a free highway bridge across the Sabine River at or near Burr Ferry, and I ask for its immediate consideration.

The PRESIDENT pro tempore. Is there objection?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

COFFEE SITUATION IN PORTO RICO

Mr. BINGHAM. Mr. President, at the request of Mr. DAVILA, the Delegate from Porto Rico, a bill was recommended to the Committee on Territories changing the organic act of Porto Rico so as to permit Porto Rico to charge a duty of 10 per cent on coffee imported into Porto Rico. The bill was on the calendar, and at the request of the Senator from Pennsylvania was referred to the Committee on Finance.

Mr. ROBINSON of Arkansas. I shall have to object.

The PRESIDENT pro tempore. The Senator has not yet made a request.

Mr. ROBINSON of Arkansas. I shall have to object to the consideration of the measure.

Mr. BINGHAM. Mr. President, this morning the Delegate from Porto Rico brought me a telegram he had received from the Governor of Porto Rico, which is as follows:

SAN JUAN, P. R., *May 29, 1928.*

Hon. FELIX CORDOVA DAVILA,
House of Representatives, Washington, D. C.:

If you can urge Senate committee that the coffee situation is serious in Porto Rico, both local and foreign trade being injured every day by irresponsible dealers, a duty for Porto Rico alone is the only thing that will save us.

HORACE M. TOWNER, *Governor.*

Mr. DAVILA also received the following telegram in relation to the same matter:

SAN JUAN, P. R., *May 28, 1928.*

CORDOVA DAVILA,
House Office Building, Washington:

Coffee planters ask your cooperation before Senate Finance Committee to obtain immediate approval bill imposing duty on coffee. Our market abroad seriously menaced. Possible reexportation. See Representative MCFADDEN. Limit 25,000. Fifteen thousand is not sufficient for local needs.

CAFETEROS DE PUERTO RICO (INC.).

At the request of the Delegate from Porto Rico, I ask unanimous consent that the Committee on Finance be discharged from the further consideration of the bill, and that the bill be passed.

The PRESIDENT pro tempore. Is there objection?

Mr. SMOOT. I object.

The PRESIDENT pro tempore. Objection is made.

ROSS F. COLLINS

Mr. HALE. From the Committee on Naval Affairs I report back favorably without amendment the bill (H. R. 3221) for the relief of Ross F. Collins, and I submit a report (No. 1324) thereon. I ask unanimous consent for the immediate consideration of the bill.

The PRESIDENT pro tempore. Is there objection?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

COMMENDATION OF SENATOR SHIPSTEAD

Mr. LA FOLLETTE. Mr. President, I ask unanimous consent to have printed in the RECORD a letter from Mr. James E. Smith, president of the Mississippi Valley Association, addressed to Hon. HENRIK SHIPSTEAD, expressing appreciation for his valuable service in behalf of the inland waterways measure.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MISSISSIPPI VALLEY ASSOCIATION,
St. Louis, May 28, 1928.

Hon. HENRIK SHIPSTEAD,
Room 111, Senate Office Building, Washington, D. C.

MY DEAR SENATOR SHIPSTEAD: Now that the first session of the Seventieth Congress is nearing its end and you will soon be returning to your home I want to express to you my sincere appreciation of the splendid work you have done throughout the session in securing the valuable waterway legislation for which the Mississippi Valley Association has been contending and which is of such vital importance to the population of the entire Mississippi Valley.

Your cooperation has been intelligent, forceful, and most effective, and its results will, I am sure, be beneficial not only to your own constituents but to the 60,000,000 people who inhabit our great valley which through the efforts of you and others of your ilk is destined to become the most populous, the most prosperous, and the most progressive area of the greatest Nation of the world. A consummation devoutly to be desired and one well worth working for.

With this assurance of my appreciation of the helpful cooperation you have given to the great cause in which our association is engaged, and wishing you continued success in your chosen career, I am,

Sincerely yours,

MISSISSIPPI VALLEY ASSOCIATION,
JAS. E. SMITH, *President*.

THE CALENDAR

The PRESIDENT pro tempore. Under the unanimous-consent agreement, the call of the calendar for the consideration of unobjected bills is in order.

The first bill to be called on the calendar was the bill (S. 2787) providing for the appointment of governors of the non-Christian Provinces in the Philippine Islands by the Governor General without the consent of the Philippine Senate.

Mr. SMOOT and Mr. LA FOLLETTE. Over.

The PRESIDENT pro tempore. The bill will be passed over.

AMENDMENT OF THE CONSTITUTION OF THE UNITED STATES

The joint resolution (S. J. Res. 1) proposing an amendment to the Constitution of the United States prohibiting war, was announced as next in order.

Mr. LA FOLLETTE. Let that go over.

The PRESIDENT pro tempore. The joint resolution will be passed over.

INTERSTATE COMMERCE IN COTTONSEED OIL

The bill (S. 1414) for the prevention and removal of obstructions and burdens upon interstate commerce in cottonseed oil by regulating transactions on future exchanges, and for other purposes, was announced as next in order.

Mr. COPELAND. Let that go over.

The PRESIDENT pro tempore. The bill will be passed over.

BILL PASSED OVER

The bill (S. 1728) placing service postmasters in the classified service, was announced as next in order.

Mr. BLEASE. Let that go over.

The PRESIDING OFFICER (Mr. BINGHAM in the chair). The bill will be passed over.

COLUMBIA BASIN RECLAMATION PROJECT

The bill (S. 1462) for the adoption of the Columbia Basin reclamation project, and for other purposes, was announced as next in order.

SEVERAL SENATORS. Over.

The PRESIDENT pro tempore. The bill will be passed over.

BUREAU OF LABOR STATISTICS

The bill (S. 1266) to create in the Bureau of Labor Statistics of the Department of Labor a division of safety was announced as next in order.

Mr. KING. Let that go over.

The PRESIDENT pro tempore. The bill will be passed over.

BILLS PASSED OVER

The bill (S. 2292) providing for the employment of certain civilian assistants in the office of the Governor General of the Philippine Islands, and fixing salaries of certain officials.

Mr. LA FOLLETTE. Over.

The PRESIDING OFFICER (Mr. BINGHAM in the chair). The bill will be passed over.

The bill (S. 759) to give the Supreme Court of the United States authority to make and publish rules in common-law actions was announced as next in order.

Mr. LA FOLLETTE. Over.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 2859) for the relief of Francis J. Young was announced as next in order.

Mr. BAYARD. Over.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 2864) to establish the standard of weights and measures for the following wheat-mill, rye-mill, and corn-mill products, namely, flours, semolina, hominy, grits, and meals, and all commercial feeding stuffs, and for other purposes, was announced as next in order.

Mr. BAYARD. Over.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 1093) to prevent the sale of cotton and grain in futures markets was announced as next in order.

SEVERAL SENATORS. Over.

The PRESIDING OFFICER. The bill will be passed over.

The joint resolution (S. J. Res. 57) requesting the President to immediately withdraw the armed forces of the United States from Nicaragua was announced as next in order.

Mr. BORAH. Over.

The PRESIDING OFFICER. The joint resolution will be passed over.

The bill (S. 2532) to provide for the designation of clerks or employees of the Department of the Interior to serve as registers and receivers in the land offices in Alaska was announced as next in order.

SEVERAL SENATORS. Over.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 2679) to limit the period for which an officer appointed with the advice and consent of the Senate may hold over after his term shall have expired was announced as next in order.

Mr. EDGE and Mr. BRUCE. Over.

The PRESIDING OFFICER. The bill will be passed over.

Mr. WALSH of Montana. Mr. President, I do not believe there could be any objection at all to the bill if it were understood. It has immediate reference to matters that we just had under consideration relating to the appointment of judges in Alaska. It is simply intended to cover the case of one whose term has expired and continued indefinitely because of the necessity for it. I do not believe there will be any objection if the bill were understood.

Mr. BRUCE. I object.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 728) to provide for the construction of works for the protection and development of the lower Colorado River Basin, for the approval of the Colorado River compact, and for other purposes, was announced as next in order.

SEVERAL SENATORS. Over.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 1263) to amend section 4 of the Interstate Commerce act was announced as next in order.

Mr. FESS. Over.

The PRESIDING OFFICER. The bill will be passed over.

The resolution (S. Res. 173) expressing it as the sense of the Senate that Andrew W. Mellon should resign as Secretary of the Treasury was announced as next in order.

Mr. SMOOT. Over.

The PRESIDING OFFICER. The resolution will be passed over.

The bill (S. 1748) relating to the qualifications of jurors in the Federal courts was announced as next in order.

Mr. BRUCE. Over.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 3151) to limit the jurisdiction of district courts of the United States was announced as next in order.

Mr. BRUCE. Over.

The PRESIDING OFFICER. The bill will be passed over.

The bill (H. R. 279) to amend section 8 of an act entitled "An act to incorporate the Howard University in the District of Columbia," approved March 2, 1867, was announced as next in order.

Mr. BLEASE. Over.

The PRESIDING OFFICER. The bill will be passed over.

The bill (H. R. 8298) authorizing the acquisition of a site for the farmers' produce market and for other purposes was announced as next in order.

Mr. BRUCE. Over.

The PRESIDING OFFICER. The bill will be passed over.

The bill (H. R. 10885) to amend sections 23 and 24 of the general leasing act approved February 25, 1920 (41 Stat. L. 437) was announced as next in order.

Mr. LA FOLLETTE. Over.

The PRESIDING OFFICER. The bill will be passed over.

The joint resolution (S J. Res. 25) to declare the 11th day of November, celebrated and known as Armistice Day, a legal holiday, was announced as next in order.

Mr. BAYARD. Over.

The PRESIDING OFFICER. The joint resolution will be passed over.

The bill (S. 1729) extending the classified civil service to include postmasters of the third class, and for other purposes, was announced as next in order.

SEVERAL SENATORS. Over.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 742) to provide for the establishment, operation, and maintenance of foreign-trade zones in ports of entry of the United States, to expedite and encourage foreign commerce, and for other purposes, was announced as next in order.

SEVERAL SENATORS. Over.

The PRESIDING OFFICER. The bill will be passed over.

SALARY OF PUBLIC PRINTER

The Senate resumed the consideration of the bill (H. R. 6669) fixing the salary of the Public Printer and of the Deputy Public

Printer (which had been previously passed and subsequently reconsidered), which was read, as follows:

Be it enacted, etc., That from and after the passage of this act the salary of the Public Printer shall be $10,000 per annum and the salary of the Deputy Public Printer shall be $7,500 per annum.

The bill was passed.

BILL PASSED OVER

The bill (S. 1995) placing certain employees of the Bureau of Prohibition in the classified civil service, and for other purposes, was announced as next in order.

Mr. BLEASE. Over.

The PRESIDING OFFICER. The bill will be passed over.

REGULATION OF PRACTICE OF HEALING ART, DISTRICT OF COLUMBIA

The bill (S. 3936) to regulate the practice of the healing art to protect the public health in the District of Columbia was considered as in Committee of the Whole.

The PRESIDING OFFICER. The pending amendment is the amendment offered by the Senator from New York, which will be stated.

The amendment of Mr. COPELAND was, on page 25, after line 11, to insert:

"Any person who was engaged in the practice of chiropractic in the District of Columbia on or before January 1, 1928, may deliver to the commission, within 90 days after approval of this act, a written application for license to practice chiropractic in the District of Columbia, together with satisfactory proof that the applicant is not less than 21 years of age and of good moral character, and had previously obtained a diploma from some legally chartered or incorporated and duly established school or college of chiropractic and was actually engaged in the practice of chiropractic in said District on January 1, 1928.

"When the commission is satisfied as to the qualifications of the applicant as aforesaid, it shall issue to him a license to practice chiropractic. Each license so to do shall show that it was issued on the basis of actual practice in the District of Columbia without examination.

"Also amend by adding the word 'other' at the end of line 14, page 25."

Mr. COPELAND. Mr. President, this amendment is offered instead of the one offered by the Senator from Maryland [Mr. BRUCE].

The amendment was agreed to.

The bill was reported to the Senate as amended, and the amendment was concurred in.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

BILLS PASSED OVER

The bill (S. 1215) for the relief of Helen F. Griffin was announced as next in order.

Mr. LA FOLLETTE. Over.

The PRESIDING OFFICER. The bill will be passed over.

The joint resolution (S. J. Res. 117) authorizing an investigation and survey for a Nicaraguan canal was announced as next in order.

Mr. EDGE. Mr. President, I have no intention of pressing the bill for passage at this time, but the Senator from Tennessee [Mr. MCKELLAR] wishes to have an amendment adopted, and I would like to have the bill perfected so it will be in the proper form.

Mr. MCKELLAR. I offer the following amendment.

The PRESIDING OFFICER. Without objection, the amendment will be received.

The CHIEF CLERK. Insert at the proper place the following:

SEC. 4. That the Government of Nicaragua having by treaty with the Government of the United States, signed at Washington on August 5, 1914, and duly ratified as required by the laws of both of said governments and proclaimed June 24, 1916, granted in perpetuity to the Government of the United States, forever free from taxation or other public charge, the exclusive proprietary rights necessary and convenient for the construction, operation, and maintenance of an interoceanic canal, by way of the San Juan River and the great Lake of Nicaragua, or by way of any route over Nicaraguan territory, the details of the terms upon which such canal shall be constructed, operated, and maintained to be agreed to by the two governments whenever the Government of the United States shall notify the Government of Nicaragua of its desire or intention to construct such canal, the President of the United States is hereby authorized, empowered, and directed to notify the Government of Nicaragua of its desire and intention to construct such canal and to agree upon the details of the terms under which such canal shall be constructed, operated, and maintained.

SEC. 5. The Senate of the United States having, in its ratification of the treaty with Nicaragua, as aforesaid, inserted the words: "It is declared by the Senate that in advising and consenting to the ratification of the said convention as amended such advice and consent are given with the understanding, to be expressed as a part of the instrument of ratification, that nothing in said convention is intended to affect any existing right of any of the said named States," namely, Costa Rica, Salvador, and Honduras, the President is authorized and directed to enter into negotiations with said States and determine whether they, or any of them, have any interest in said proposed canal.

The amendment was agreed to.

Mr. EDGE. I desire to offer an amendment to change section 4 of the original bill to section 6.

The amendment was agreed to.

Mr. EDGE. Also, on page 5, line 20, change the figures "$270,000" to "$150,000."

The amendment was agreed to.

Mr. EDGE. I move that all the whereases be stricken from the bill and that the bill as amended be reprinted.

The motion was agreed to.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 2097) to provide for the protection of municipal watersheds within the national forests was announced as next in order.

Mr. KING. Over.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 3458) to create the reserve division of the War Department, and for other purposes, was announced as next in order.

Mr. BROOKHART. Over.

Mr. REED of Pennsylvania. Mr. President, a word of explanation.

Mr. BROOKHART. Over.

Mr. REED of Pennsylvania. Will the Senator withhold his objection until I can make a brief statement?

Mr. BROOKHART. Very well.

Mr. REED of Pennsylvania. The bill was held up at the request of some officials of the National Guard Association——

Mr. BROOKHART. Those officers have not changed their position, but it is not on their account that I am making the objection, so I will have to insist upon my objection in any event.

Mr. REED of Pennsylvania. Very good; but I should like to make a statement.

Mr. BROOKHART. I thought I would save some time.

Mr. REED of Pennsylvania. The Senate has been proceeding so very rapidly that we can afford to stop for a moment to catch our breath. The Reserve Officers' Association and the National Guard Association have met and have considered this question in a big, broad, patriotic way, and have reconciled all their differences and now join in requesting the passage of the bill. I want to put in the RECORD as a part of my remarks a letter written by Colonel Markey.

Mr. BROOKHART. Mr. President, I think the Senator misunderstood my statement. It was that I would have to insist upon my objection notwithstanding the circumstances.

Mr. REED of Pennsylvania. I quite understand that, but I want the RECORD to show this fact, and then the bill can go over.

Mr. BROOKHART. Very well.

Mr. REED of Pennsylvania. This letter was written on May 24 by Colonel Markey, legislative representative of the National Guard Association, to the Senator from Iowa [Mr. BROOKHART]. I shall not take the time of the Senate to have the letter read, but I ask that it may be incorporated as a part of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

The letter is as follows:

WASHINGTON, D. C., *May 24, 1928.*

Hon. SMITH W. BROOKHART,
United States Senate, Washington, D. C.

MY DEAR SENATOR BROOKHART: It is noted in the CONGRESSIONAL RECORD that when Senate bill No. 3458, to create a reserve division for the War Department, was brought up for consideration last night, that you stated that the National Guard Association would like to have further consideration given to this legislation. It is also noted that you inserted in the RECORD on the 21st a statement made by the executive council of the National Guard Association, which statement was not qualified in any way. You are advised that this statement was given out with the attached explanation.

You are further advised that there was delivered to Senator REED and Congressman JAMES a joint letter, of which there is inclosed a copy, which letter makes it clear that the National Guard Association does not desire any further consideration of this legislation but joins in recommending passage of Senate bill 3458 at the present session of Congress.

It is regretted that you have been misinformed in this matter and I trust this letter will make clear the position of the National Guard Association.

Very truly yours,

D. JOHN MARKEY,
Legislative Representative National Guard Association.

The PRESIDING OFFICER. The bill will be passed over.

COMPENSATION, ASSISTANTS TO ENGINEER COMMISSIONER, DISTRICT OF COLUMBIA

The bill (S. 1624) to authorize the payment of additional compensation to the assistants to the engineer commissioner of the District of Columbia was considered as in Committee of the Whole. The bill had been reported from the Committee on the District of Columbia, with an amendment, on page 1, line 3, to strike out the word "from" and insert in lieu thereof the word "on," so as to make the bill read:

Be it enacted, etc., That on and after July 1, 1928, the assistants to the engineer commissioner of the District of Columbia, detailed as such from the Corps of Engineers of the United States Army, shall be entitled to receive from the District of Columbia such compensation, in addition to their Army pay and allowances, as will make their compensation equal to $6,000 per annum.

The amendment was agreed to.

The bill was reported to the Senate as amended, and the amendment was concurred in.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

BILLS PASSED OVER

The bill (S. 1625) to fix the salaries of the members of the Board of Commissioners of the District of Columbia was announced as next in order.

Mr. KING. Over.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 1945) to amend the act entitled "An act to provide that the United States shall aid the States in the construction of rural post roads, and for other purposes," approved July 11, 1916, and for other purposes, was announced as next in order.

Mr. REED of Pennsylvania. Over.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 1718) to authorize the President to detail engineers of the Bureau of Public Roads of the Department of Agriculture to assist the governments of Latin-American Republics in highway matters was announced as next in order.

Mr. KING. Over.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 1294) to suppress unfair and fraudulent practices in the marketing of perishable agricultural commodities in interstate and foreign commerce was announced as next in order.

Mr. COPELAND. Mr. President, I am sorry, but I have to object to the present consideration of the bill.

Mr. BORAH. Of course it will have to go over under objection, but I wish the RECORD correct. There is no question of an amendment pending. The amendment has been adopted.

The PRESIDING OFFICER. The Chair understands the amendment has heretofore been agreed to. On objection, the bill will be passed over.

The bill (S. 1762) granting consent to the city and county of San Francisco, State of California, its successors and assigns, to construct, maintain, and operate a bridge across the bay of San Francisco from Rincon Hill to a point near the South Mole of San Antonio Estuary, in the county of Alameda, in said State, was announced as next in order.

Mr. ODDIE. Over.

The PRESIDING OFFICER. The bill will be passed over.

The bill (H. R. 391) to regulate the use of the Capitol Building and Grounds was announced as next in order.

Mr. KING. Over.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 2475) to create a prosperity reserve and to stabilize industry and employment by the expansion of public works during periods of unemployment and industrial depression, was announced as next in order.

SEVERAL SENATORS. Over.

Mr. COPELAND. Mr. President, I wonder if we could not pass Calendar No. 862, Senate bill 2475?

Mr. KING. Objection has been made.

Mr. SACKETT. I shall have to object to the bill on account of the Senator from Washington [Mr. JONES] not being present, and having recommended the adoption of several amendments.

The PRESIDING OFFICER. The Senator from Kentucky insists on his objection.

Mr. COPELAND. The Senator from Washington [Mr. JONES] proposed some amendments and he has since telephoned my office asking that I should say to the Senate that he hoped the bill might be passed.

Mr. SACKETT. Is the Senator willing to accept an amendment making it 25 years?

Mr. COPELAND. How does it stand now?

Mr. SACKETT. Ten per cent and three years.

Mr. COPELAND. Would the Senator then withdraw his objection?

Mr. SMOOT. Mr. President, I shall have to object to the consideration of the bill.

The PRESIDING OFFICER. The bill will be passed over.

The bill (H. R. 11074) to promote the agriculture of the United States by expanding in the foreign field the service now rendered by the United States Department of Agriculture in acquiring and diffusing useful information regarding agriculture, and for other purposes, was announced as next in order.

Mr. KING. Over.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 3089) to increase the efficiency of the Military Establishment, and for other purposes, was announced as next in order.

Mr. EDGE. Over.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 2274) for the relief of William H. Chambliss was announced as next in order.

Mr. KING. Over.

Mr. EDGE. Mr. President, may I not prevail upon the Senator from Utah to relent in his opposition to this bill? I think every one has admitted that the man is entitled to some compensation. There can not be any question about it, although the amount allowed is arbitrary. The committee decided on $10,000, and I do hope the Senator will withdraw his objection.

Mr. KING. Mr. President, I have had sent to me from the Shipping Board letters from the State Department, and what the Senator says is controverted.

Mr. EDGE. The man's record has been cleared by the Shipping Board. Of course, if the Senator from Utah insists upon his objection, I can not press it, but I am sure he has been misinformed.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 4174) to establish a woman's bureau in the Metropolitan Police Department of the District of Columbia, and for other purposes, was announced as next in order.

Mr. KING. Over.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 1749) providing for the development of hydroelectric energy at Great Falls for the benefit of the United States Government and the District of Columbia was announced as next in order.

Mr. BRUCE. Over.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 3874) authorizing appropriations of funds for construction of a highway from Red Lodge, Mont., to the boundary of the Yellowstone National Park near Cooke City, Mont., was announced as next in order.

Mr. WARREN. Over.

The PRESIDING OFFICER. The bill will be passed over.

AMENDMENT OF CORRUPT PRACTICES ACT

The bill (S. 4179) to amend the corrupt practices act by extending the same to candidates for nomination and election to the offices of Representative and Senator in the Congress of the United States, and for other purposes, was considered as in Committee of the Whole and was read, as follows:

Be it enacted, etc., That title 3 of the act of February 28, 1925, Federal corrupt practices act, chapter 8, title 2, of the United States Code, be, and the same is hereby, amended by adding the following section:

"SEC. 320. (A) The word 'candidate,' as used in this section, shall include all persons whose names are presented or proposed for nomination for Representative or Senator in the Congress of the United States at any primary election or nominating convention, or by any other means or manner in which a candidate is so designated, or for indorsement or election at any general or special election held in connection with the nomination or election of a person to fill such office, whether or not such persons are actually nominated, indorsed, or elected.

"(B) Every person who shall be a candidate for nomination at any primary election or nominating convention, or other means or manner in which a candidate is so designated, which primary or nominating convention has for its purpose the fixing of the status of candidates running in the election of Senators by the people as provided in the seventeenth amendment, and of Representatives in Congress, and which primary or nominating convention or other means or manner in which a

candidate is so designated is hereby declared a part of and inseparably connected with the election machinery by which candidates may be elected to the House of Representatives under the Constitution, or for election at any general or special election, as Representative in the Congress of the United States shall not be less than 10 nor more than 15 days before the day for holding such primary election or nominating convention, or other means or manner in which a candidate is so designated, and not less than 10 nor more than 15 days before the day of the general or special election at which candidates for Representatives are to be elected, file with the Clerk of the House of Representatives at Washington, D. C., a full, correct, and itemized statement of all moneys and things of value received by him or by anyone for him with his knowledge and consent, from any source in aid or support of his candidacy, together with the names of all those who have furnished the same in whole or in part; and such statement shall contain a true and itemized account of all moneys and things of value given, contributed, expended, used, or promised by such candidate, or by his agent, representative, or other person for and in his behalf with his knowledge and consent, together with the names of all those to whom any and all such gifts, contributions, payments, or promises were made, for the purpose of procuring his nomination or election: *Provided,* That every person, association, or committee other than a candidate, except as herein provided, or a personal campaign committee of a candidate, or party committee, provided for by the laws of the State in which the candidate resides, who shall within any 12 months make any disbursements in support of or in opposition to a candidate, for any political purpose, exceeding in the aggregate $100 in amount and value, shall file within one week after making any disbursement causing the aggregate of such disbursements to reach such amount a sworn statement thereof with the officer with whom the candidate files his sworn statement. Such statement shall give in full detail, with date, every item of money, property, or other thing of value constituting any part of such disbursements, the exact means by which and the manner in which each such disbursement was made, and the name and address of every person to whom each was made and the specific purpose for which each was made: *And provided further,* That there shall be no joint expenditures in aid of a candidate or group of candidates for other offices by any person, association, or committee, except the personal campaign committee or party committee of the candidate, as may be provided for under the laws of any State in which the candidate resides: *Provided, however,* That there may be joint expenditures in aid of a candidate when associated with a group of candidates for other offices where a separate account is kept of the expenditures made on behalf of a candidate for Representative or Senator in the Congress of the United States, and the amount so expended for such candidate shall be included as a part of his expenditures provided for in this act: *And provided further,* That the total amount expended by such group of candidates shall not exceed twice the amount of the maximum amount which may be expended by a candidate. If the aggregate amount so expended by all persons, associations, or committees in behalf of any candidate shall exceed twice the sum which he may expend as herein provided, his election, if he is elected, shall be void: *Provided,* That the candidate may obviate such result by a satisfactory showing that he had no knowledge of such excessive expenditures and that he had no reasonable ground to believe that it had been made.

"(C) Every person who shall be a candidate for nomination at any primary election or nominating convention, or other means or manner in which a candidate is so designated, which primary or nominating convention or other means or manner in which a candidate is so designated has for its purpose the fixing of the status of candidates running in the election of Senators by the people as provided for in the seventeenth amendment of the Constitution of the United States, and which primary or nominating convention or other means or manner in which a candidate is so designated is hereby declared a part of and inseparably connected with the election machinery by which candidates may be elected to the Senate under said seventeenth amendment, or for indorsement at any general or special election, as Senator in the Congress of the United States, shall, not less than 10 nor more than 15 days before the day of holding such primary election or nominating convention or other means or manner in which a candidate is so designated, and not less than 10 nor more than 15 days before the day of the general or special election at which he is seeking indorsement, file with the Secretary of the Senate at Washington, D. C., a full, correct, and itemized statement of all moneys and things of value received by him or by anyone for him with his knowledge and consent, from any source, in aid or support of his candidacy, together with the names of all those who have furnished the same in whole or in part; and such statement shall contain a true and itemized account of all moneys and things of value given, contributed, expended, used, or promised by such candidate, or by his agent, representative, or other person for and in his behalf with his knowledge and consent, together with the names of all those to whom any and all such gifts, contributions, payments, or promises were made for the purpose of procuring his nomination or election.

"(D) Every such candidate for nomination at any primary election or nominating convention, or other means or manner in which a candidate is so designated, or for indorsement or election at any general or special election, shall, within 15 days after such primary election or nominating convention, or other means or manner in which a candidate is so designated, and within 30 days after any such general or special election, file with the Clerk of the House of Representatives or with the Secretary of the Senate, as the case may be, a full, correct, and itemized statement of all moneys and things of value received by him or by anyone for him with his knowledge and consent, from any source, in aid or support of his candidacy, together with the names of all those who have furnished the same in whole or in part; and such statement shall contain a true and itemized account of all moneys and things of value given, contributed, expended, used, or promised by such candidate, or by his agent, representative, or other person for and in his behalf with his knowledge and consent, up to, on, and after the day of such primary election, nominating convention, or other means or manner in which a candidate is so designated, general or special election, together with the names of all those to whom any and all such gifts, contributions, payments, or promises were made for the purpose of procuring his nomination, indorsement, or election.

"(E) Every such candidate shall include therein a statement of every promise or pledge made by him, or by any one for him with his knowledge and consent, or to whom he has given authority to make any such promise or pledge, before the completion of any such primary election or nominating convention, or other means or manner in which a candidate is so designated, or general or special election relative to the appointment or recommendation for appointment of any person to any position of trust, honor, or profit, either in the county, State, or Nation, or in any political subdivision thereof, or in any private or corporate employment, for the purpose of procuring the support of such person or of any person in his candidacy, and if any such promise or pledge shall have been made, the name or names, the address or addresses, and the occupation or occupations, of the person or persons to whom such promise or pledge shall have been made, shall be stated, together with a description of the position relating to which such promise or pledge has been made. In the event that no such promise or pledge has been made by such candidate, that fact shall be distinctly stated.

"(F) No candidate for Representative in Congress or for Senator of the United States shall promise any office or position to any person, or to use his influence or to give his support to any person for any office or position for the purpose of procuring the support of such person, or of any person, in his candidacy; but such candidate may, within the limitations and restrictions and subject to the requirements of this act, contribute to political committees having charge of the disbursement of campaign funds.

"(G) No candidate for Representative in Congress or for Senator of the United States shall give, contribute, expend, use, or promise, or cause to be given, contributed, expended, used, or promised, in procuring his nomination and election, any sum, in the aggregate, in excess of the amount which he may lawfully give, contribute, expend, or promise under the laws of the State in which he resides: *Provided,* That no candidate for Representative in Congress shall give, contribute, expend, use, or promise any sum, in the aggregate, exceeding $5,000 in any campaign for his nomination and election; and no candidate for Senator of the United States shall give, contribute, expend, use, or promise any sum, in the aggregate, exceeding $10,000 in any campaign for his nomination and election: *Provided further,* That money expended by any such candidate to meet and discharge any assessment, fee, or charge made or levied upon candidates by the laws of the State in which he resides, or for his necessary personal expenses, incurred for himself alone, for travel and subsistence, stationery and postage, writing or printing (other than in newspapers), and distributing letters, circulars, and posters, and for telegraph and telephone service, shall not be regarded as an expenditure within the meaning of this section, and shall not be considered any part of the sum herein fixed as the limit of expense and need not be shown in the statements herein required to be filed: *And provided further,* That in the State of New York it shall be lawful to expend the sum of $30,000 as a candidate for the Senate, and States of lesser population down to and including States of 3,000,000 of people $1,000 less for each million of population or fraction thereof less than the State of New York possesses: *And provided further,* That in States where there is a bona fide contest for both the nomination and election an additional sum of $2,000 may be expended by the candidate in any State whose population is in excess of 2,000,000 and does not exceed 3,000,000: *And provided further,* That in those States of a million and not exceeding 3,000,000 where there is a bona fide contest not alone for the nomination, but afterwards for the election, an additional $2,000 may be expended.

"(H) The statements herein required to be made and filed before the general election, at which such candidate seeks election, need not contain items of which publicity is given in a previous statement, but the statement required to be made and filed after said general election shall, in addition to an itemized statement of all expenses not theretofore given publicity, contain a summary of all preceding statements.

"(I) Every statement herein required shall be verified by the oath or affirmation of the candidate, taken before an officer authorized to administer oaths and shall be sworn to or affirmed by the candidate in

the district in which he is a candidate for Representative, or the State in which he is a candidate for Senator in the Congress of the United States: *Provided*, That the depositing of any such statement in a regular post office, directed to the Clerk of the House of Representatives or to the Secretary of the Senate, as the case may be, duly stamped and registered within the time required herein shall be deemed a sufficient filing of any such statement under any of the provisions of this act.

"(J) This act shall not be construed to annul or vitiate the laws of any State, not directly in conflict herewith, relating to the nomination or election of candidates for the offices herein named, or to exempt any such candidate from complying with such State laws.

"(K) All acts in conflict with the provisions of this act are hereby repealed."

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

REVISED STATUTES, HAWAII AND ALASKA

The bill (S. 2069) to extend the provisions of section 1814 of the Revised Statutes to the Territories of Hawaii and Alaska was considered as in Committee of the Whole, and was read, as follows:

Be it enacted, etc., That the provisions of section 1814 of the Revised Statutes are hereby extended to the Territories of Hawaii and Alaska upon the same terms and conditions and to the same extent as to the several States.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

BILLS PASSED OVER

The bill (H. R. 8988) for the relief of Milton Longsdorf, was announced as next in order.

Mr. BRUCE. Over.

The PRESIDING OFFICER. The bill will be passed over.

SEYMOUR BUCKLEY

The bill (H. R. 3241) for the relief of Seymour Buckley, was considered as in Committee of the Whole, and was read, as follows:

Be it enacted, etc., That in the administration of any laws conferring rights, privileges, and benefits upon honorably discharged soldiers Seymour Buckley, who served as corporal in Company C, Thirteenth Regiment Connecticut Volunteer Infantry, shall hereafter be held and considered to have been discharged honorably from the military service of the United States as a corporal in said company and regiment in May, 1865: *Provided*, That no bounty, back pay, or allowances shall be held as accrued prior to the passage of this Act.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

RELIEF OF POST-OFFICE CONTRACTORS

The bill (H. R. 11951) to amend the act entitled "An act for the relief of contractors and subcontractors for the post offices and other buildings and work under the supervision of the Treasury Department, and for other purposes," approved August 25, 1919, as amended by the acts of March 6, 1920, and February 27, 1926, was considered as in Committee of the Whole, and was read, as follows:

Be it enacted, etc., That the act of Congress entitled "An act for the relief of contractors and subcontractors for the post offices and other buildings and work under the supervision of the Treasury Department, and for other purposes," approved August 25, 1919, as amended by the acts of March 6, 1920, and February 27, 1926, be, and the same is hereby, amended so that said act shall include the Tanksley-Drumright Stone Cut Co., subcontractor for the Norman-Kerr Co. in the construction of the additions to the post-office building at Nashville, Tenn., and as to said subcontractor numbered claims for reimbursement as provided by said act of August 25, 1919, as amended by the acts of March 6, 1920, and February 27, 1926, may be filed within three months after the passage of this act.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

The PRESIDING OFFICER. The bill will be passed over.

STATE BANK & TRUST CO. OF FAYETTEVILLE, TENN.

The bill (H. R. 5894) for the relief of the State Bank & Trust Co. of Fayetteville, Tenn., was announced as next in order.

Mr. McKELLAR. Mr. President, the Senator from Nebraska [Mr. HOWELL] desires me to make a statement about the bill. The State bank at Fayetteville registered two bonds to its correspondent in New York City. They were stolen out of the post office in New York City. The evidence clearly shows that they were stolen and the employee who stole the bonds was afterwards discharged. The postmaster was asked to bring a suit against his bondsman, and he did not do it. Thereupon, the bill was first introduced in the House and has passed the House three times but has not passed the Senate. Some Senators thought that the Fayetteville bank was guilty of negligence in not insuring the letter before it left. The Government paid the $150, and the bill was introduced for the purpose of making good the remainder of $1,750.

The decisions are undisputed that the Government itself is bailee for hire in undertaking to transport such letters. Decisions were produced—and I shall not refer to them except to say that they are in the report—to show that under precisely similar circumstances the Government recovered from the bonding company the entire amount of the bonds where bonds were stolen in a similar manner. There is a favorable report in this case. I shall not detain the Senate any further in explaining the matter. It is certainly a claim that is just. Many other claims of a similar character have been paid, and I never have been able to see why this should not be paid.

Mr. HOWELL. Mr. President, out of courtesy to the Senator from Tennessee, I agreed not to object to the consideration of this bill and allow a statement to be made.

Mr. McKELLAR. I thank the Senator.

Mr. HOWELL. In my opinion this bill should not be passed. The bank at Fayetteville sent by registered mail $1,950 worth of negotiable bonds. The bank did not pay an additional 20 cents which it is necessary to pay to an insurance company in order to insure this amount of bonds passing through the mails. The bonds arrived at the post office in New York City; they then disappeared. The culprit who stole those bonds was not apprehended. The consequence of this theft was that the bank made claim upon the Post Office Department for the $50 which is the limit allowed to be paid

in connection with the loss of registered mail, and received its $50. Now the bank is asking Congress to reimburse it for the remainder of its loss. If that shall be done it must be evident that the regulations of the Post Office Department mean nothing; that an individual can register a parcel, and if he lose his property can come to Congress and obtain relief. The passage of this bill would mean a radical change in our registration system.

It has been suggested that an action should be brought upon the bond of the postmaster of New York City, and that thereby the Government could collect $1,950 and pay it over to the Fayetteville Bank. I will read the following letter from the Post Office Department respecting such a proposal:

OFFICE OF THE POSTMASTER GENERAL,
Washington, D. C., May 11, 1928.

Hon. R. B. HOWELL,
Chairman Committee on Claims, United States Senate.

MY DEAR SENATOR HOWELL: This is in connection with the telephone inquiry of the clerk of the committee to-day with reference to a registered article containing $1,950 in Liberty bonds, mailed at Fayetteville, Tenn., on December 16, 1920, addressed to the Hanover National Bank, at New York City, which disappeared after reaching the New York post office. This case was the subject of a letter from the department to you under date of May 8, 1928.

It is understood that you desire to know whether or not a civil action could be brought against the postmaster at New York and his sureties on account of this loss. While it appears it would be possible to do this, there could apparently be no reasonable prospect of securing judgment.

The conditions of a postmaster's bond are that he shall "faithfully discharge all duties and trusts imposed on him as postmaster either by law or by the regulations of the Post Office Department," and the Postal Laws and Regulations (sec. 989) provide that:

"Postmasters and other postal employees will be held personally responsible by the Post Office Department for the wrong delivery, depredation upon, or loss of any registered letter or parcel if such * * * loss be due to negligence or disregard of the regulations."

As previously stated, a very thorough and exhaustive investigation failed to develop sufficient evidence to fix the personal responsibility for the loss of this article. There appears to have been no negligence or disregard of the regulations attributable to the postmaster in this instance, and there would, therefore, be no grounds under his bond or the regulations for attempting collection from him or the sureties, either by suit or otherwise.

Very truly yours,

HARRY S. NEW, *Postmaster General.*

Under the circumstances, therefore, it seems to me that unless we propose to change the liability provisions of the registration service of the Post Office Department this bill should not be passed.

Mr. McKELLAR. Mr. President, just let me say that the Secretary of the Treasury——

Mr. HOWELL. Mr. President——

Mr. McKELLAR. I ask the Senator to let the bill come to a vote.

The PRESIDENT pro tempore. Without objection, the bill will be——

Mr. SMOOT. I object to the bill.

The PRESIDENT pro tempore. Objection being interposed, the bill will be passed over.

Mr. McKELLAR. A parliamentary inquiry, Mr. President.

The PRESIDENT pro tempore. The Senator will state it.

Mr. McKELLAR. After a bill has been discussed and is on the point of passage may it then be objected to?

The PRESIDENT pro tempore. Objection may be interposed at any stage under the rule.

JOINT RESOLUTION AND BILLS PASSED OVER

The joint resolution (S. J. Res. 9) to establish a joint commission on insular reorganization was announced as next in order.

Mr. BROOKHART. Let that go over.

The PRESIDENT pro tempore. The bill will be passed over.

The bill (H. R. 6185) for the relief of Thomas Jefferson Shropshire was announced as next in order.

Mr. KING. Over.

The PRESIDENT pro tempore. The bill will be passed over.

The bill (H. R. 12814) to increase the efficiency of the Air Corps was announced as next in order.

Mr. BLACK. Let that bill go over.

The PRESIDENT pro tempore. The bill will be passed over.

The bill (S. 3440) to vacate certain streets and alleys within the area known as the Walter Reed General Hospital, District of Columbia; and to authorize the extension and widening of Fourteenth Street from Montague Street to its southern terminus south of Dahlia Street was announced as next in order.

Mr. REED of Pennsylvania. Over.

Mr. BRUCE. Mr. President, I trust the objection to the consideration of that bill will be withdrawn. A similar bill passed the Senate last year after having been favorably reported by the committee and after having been fully discussed in the Senate. I shall not press the request if the objection is insisted on, but I hope it will be withdrawn.

The PRESIDENT pro tempore. Is the objection to the consideration of the bill maintained?

Mr. REED of Pennsylvania. I ask that the bill go over.

The PRESIDENT pro tempore. The bill will be passed over.

The resolution (S. Res. 113) favoring a restriction of loans by Federal reserve banks for speculative purposes, was announced as next in order.

SEVERAL SENATORS. Over.

The PRESIDENT pro tempore. The resolution will be passed over.

The resolution (S. Res. 159) to investigate the affairs and management of the Federal land and intermediate credit bank of Columbia, S. C., was announced as next in order. The resolution had been reported adversely.

The PRESIDENT pro tempore. Without objection——

Mr. BLEASE. I ask that the resolution go over.

The PRESIDENT pro tempore. The resolution will be passed over.

The resolution (S. Res. 213) to investigate certain circumstances connected with the matter of additional tax assessments upon Hon. JAMES COUZENS was announced as next in order.

SEVERAL SENATORS. Over.

The PRESIDENT pro tempore. The resolution will be passed over.

RECLASSIFICATION OF SALARIES OF POSTMASTERS

The bill (S. 1679) amending the act of February 28, 1925, reclassifying the salaries of postmasters, was announced as next in order.

Mr. SMOOT. I ask that that bill go over.

Mr. PHIPPS. Mr. President, a House bill has now come over, which I ask to have substituted on the calendar for the Senate bill.

The PRESIDENT pro tempore. A bill on the same subject has come over from the House in somewhat different form.

Mr. PHIPPS. I should like to have it substituted for the Senate bill.

Mr. COPELAND. The number of the bill to which the Senator from Colorado refers is House bill 5837.

Mr. EDGE. Mr. President——

The PRESIDENT pro tempore. The Senator from Colorado asks unanimous consent to substitute House bill 5837 for Senate bill 1679. Is there objection?

Mr. LA FOLLETTE. Mr. President, before that is done I should like to ask the Senator from Colorado how the House bill differs from the bill as reported by the Senate committee?

Mr. PHIPPS. It contains larger amounts than the bill reported by the Senate committee. I should like to have the House bill substituted for the Senate bill.

Mr. SMOOT. I ask that the bill go over.

Mr. PHIPPS. I merely ask that the House bill be substituted on the calendar for the Senate bill.

Mr. ROBINSON of Arkansas. Mr. President, that is a bill that ought to receive consideration; it is an important bill, and ought not to be passed under these circumstances.

Mr. PHIPPS. I do not want to have two bills on the same subject on the calendar.

Mr. ROBINSON of Arkansas. I have no objection to the substitution.

The VICE PRESIDENT. Without objection, House bill 5837 will be substituted on the calendar for Senate bill 1679, and Senate bill 1679 will be indefinitely postponed. The House bill will be passed over.

Mr. EDGE. Mr. President, if the bill shall be passed over, as we all know, that will be the last possible action at this session of Congress.

The PRESIDENT pro tempore. Objection has been made by several Senators.

Mr. EDGE. I should like to say just a word. The bill was introduced by me, and the House bill, I believe, is in the same form as the original Senate bill. If it shall become a law this will be the final act on the part of Congress to try to adjust the salaries of postmasters from the first class down to fourth class in a logical and equable manner. We have raised the salaries of all employees; we have raised the compensation for

night work; we have raised the allowances for expenses of fourth and third class offices, and we have left untouched the salaries of postmasters at first-class post offices, which include those in cities from the size of New York down the line to those of about the size of Salt Lake City.

Mr. ROBINSON of Arkansas. The Senator must realize that the bill will lead to discussion.

Mr. EDGE. Very well, I will not press it, but I desired to make an explanation.

SEVERAL SENATORS. Regular order!

The PRESIDENT pro tempore. The bill will be passed over.

DISTRICT COURT OF CANAL ZONE

The bill (S. 3938) relating to the district court of the Canal Zone was announced as next in order.

Mr. COPELAND. Mr. President, reserving the right to object, I should like to add my appeal to the appeal made by the Senator from New Jersey and the Senator from Colorado for the consideration of Senate bill 1679.

SEVERAL SENATORS. Regular order!

The PRESIDENT pro tempore. The Senator from New York is speaking on Calendar No. 1186, Senate bill 3938.

Mr. McNARY. The regular order.

The PRESIDENT pro tempore. The regular order is demanded. Is there objection to the present consideration of Senate bill 3938?

Mr. KING. I ask that the bill go over.

The PRESIDENT pro tempore. The bill will be passed over.

ADDITIONAL JUDGE, SUPREME COURT, DISTRICT OF COLUMBIA

The bill (S. 4127) to provide for the appointment of an additional justice of the Supreme Court of the District of Columbia, and for other purposes, was announced as next in order.

Mr. BLEASE. Mr. President, I should like to have printed in the RECORD a report from the House Committee on the Judiciary containing letters from Judge Ernest S. Cochran and Judge H. H. Watkins, of South Carolina.

The PRESIDENT pro tempore. Without objection, it is so ordered.

The report referred to is as follows:

[Rept. No. 1427, 70th Cong., 1st sess.]

ADDITIONAL DISTRICT JUDGE FOR THE EASTERN AND WESTERN DISTRICTS, SOUTH CAROLINA

Mr. DOMINICK, from the Committee on the Judiciary, submitted the following report, to accompany H. R. 12811:

The Committee on the Judiciary, to whom was referred the bill H. R. 12811, after consideration, reports the same favorably and recommends that the bill do pass.

A similar bill was reported from this committee on January 20, 1927, which set out statements made at the hearings on H. R. 10821 and showed the necessity for the appointment of this additional judge, as will be seen by reference to Report No. 1827, Sixty-ninth Congress, second session, accompanying H. R. 7391.

This legislation received the approval of the House on June 8, 1926, when it passed H. R. 10821.

Since that report, and in addition thereto, there is printed herewith and made a part of this report a letter from the Hon. Ernest F. Cochran, judge of the eastern district of South Carolina, dated March 8, 1928, and a letter from Hon. H. H. Watkins, judge of the western district of South Carolina, dated March 10, 1928, showing the necessity for the appointment of this additional judge.

UNITED STATES DISTRICT COURT,
EASTERN DISTRICT OF SOUTH CAROLINA,
Charleston, March 8, 1928.

Hon. FRED H. DOMINICK,
Member of Congress, Washington, D. C.

MY DEAR CONGRESSMAN: I am in receipt of your letter of the 1st instant requesting me to make a statement relative to conditions in this district, which you would like to use before the Judiciary Committee in regard to the proposed additional district judge for South Carolina.

My letter and telegram of February 5, 1926, to the Attorney General, with accompanying statement of the cases and business arising in this district from 1918 to June 30, 1925, were presented by you to the Judiciary Committee of the Sixty-ninth Congress at the hearing of April 6, 1926, on H. R. 10821, Serial 13, and all the data in this statement are, I presume, still available. Since the fiscal year ending June 30, 1925, the conditions have not grown better to any practical extent. There has been a decrease in the number of criminal cases arising since then, but this decrease is entirely in prohibition cases, mainly of a minor nature. This decrease has been due to the fact that I have discouraged the bringing into this court of the minor liquor cases and have urged officials to have them presented, as far as practicable, in the State courts. Another reason is that, owing to certain developments here, the details of which it will not be necessary to trouble you with, very few prohibition agents have been at work in this district until a few months ago. I am informed, however, that they are now very active, and that there will be another flood of liquor cases in this court before long.

As to the criminal cases, aside from prohibition cases, there has been an actual increase in the number of this class of cases. Moreover, the criminal cases are becoming more and more of a serious nature, and more of them contested, and they require more time than formerly. There have been a number of bankruptcy prosecutions, which have taken considerable time. You will recall that at Columbia recently I tried one of the cases growing out of the Beaufort Bank transactions, which took me nearly six weeks, and during the whole time I was trying that case I was holding court from six to seven actual working hours a day. Of course, that case was an exceptional one, and we are not likely to have such a long case again soon; though there are other cases growing out of the same transactions which will have to be tried and will consume considerable time.

The number of prosecutions for motor-vehicle thefts, under the Dyer Act, is increasing in this district. In fact, all kinds of criminal cases of a serious nature are on the increase.

As to the civil business, there has been an increase in the number of new cases arising. It is the civil business, as a rule, of course, that requires the time of the judge. I find each year that the civil cases arising in this district are taking more and more time for the hearing of them.

Without troubling you with further details, the fact remains that there is still in this district each year more work than one judge ought to be called upon to transact, if the parties are given a full and fair hearing and the due consideration of their cases to which they are entitled.

In order to relieve the situation in this district, I have been fortunate enough to obtain the assistance of Hon. Clarence Hale, retired United States judge, of Maine, who has been here for over two weeks, and will remain for several weeks more. We are sitting contemporaneously, hearing cases every day, in an effort to relieve the civil docket. Of course, this is helpful, but is only temporary.

Allow me to call your attention again to the fact that mere figures are very misleading. The real point to be considered is how much work the judge has to do and how much time is required. There is no doubt in the minds of those familiar with the situation here that there is too much business for one judge.

Respectfully,

ERNEST F. COCHRAN,
United States District Judge.

UNITED STATES DISTRICT COURT,
Anderson, S. C., March 10, 1928.

Hon. FRED H. DOMINICK,
House of Representatives, Washington, D. C.

MY DEAR MR. DOMINICK: I was away from home in attendance upon the Spartanburg court when your letter of March 1 reached here, returning to my office on Tuesday night of this week, and I am now taking the earliest opportunity of replying.

I am apprehensive that it will be impossible in the compass of this necessarily brief letter to give you any adequate statement of the conditions which prevail in this district so as to show the imperative necessity of additional help.

The published records of the Attorney General's office will furnish some indication of the nature and amount of the business transacted by the court, and what I shall say will be supplementary to those records. By way of preliminary, I desire to say that the burden of the work will best be understood by calling attention to the fact that for several years the trial of jury cases has engaged the attention of the court for approximately 20 weeks out of each year. Under a standing rule of the court, and both for the sake of economy and in order to render the attendance of the jurors less onerous, it is required that all preliminary motions, demurrers, etc., preparatory to the trial of the cases on their merits must be disposed of in chambers prior to the convening of the court for jury trials. We hold regularly both morning and afternoon sessions while these trials are in progress.

You will see, therefore, the tax upon both the physical and mental reserve of the presiding judge in conducting jury trials alone. In addition to these is not only the large volume of routine business but also the almost daily hearings of cases in equity, review of bankruptcy cases, and preparation of opinions as well as the disposition of demurrers and motions of varied character. Until recently, by the method adopted, I have been able to dispose of the business of the court with reasonable promptness. Within the last year the business has greatly accumulated, and a great many emergent matters have been the subject of unfortunate delay. The rapid development of corporate enterprises in my district, together with the growing tendency to draw litigation into the Federal courts, indicates that our business will greatly increase in the immediate future.

You are already aware of the fact that my health has been seriously impaired under the strain of continuing the work without opportunity for recuperation or proper hospital treatment. While I conceive it my duty to carry on to the limit under existing conditions, I can not

escape the view that, ignoring all personal considerations, it is unfortunate for the administration of justice to have cases tried by a judge who is not in excellent condition both physically and mentally, and that is especially unfortunate to have a condition in which for lack of time a judge must determine important questions without opportunity for adequate research or consideration.

I am informed that it has been suggested that an additional judge should not be provided for South Carolina for the reason that the dockets of this State are not congested as in other States. It is difficult to understand how such an argument could be seriously advanced. If the confidence of the public in procuring prompt and exact justice in the courts is to be preserved, it can only be accomplished by an assurance that he who has a just cause may assert it in the courts not only eventually but promptly. I know of no line of business in which it is not recognized that additional and adequate help should be provided to meet its expansion, and it would seem that if additional help is imperative to the prompt and proper administration of justice that it should be provided in each case without comparison with any other. This must necessarily be true unless the Government is unable to incur the expense.

In this connection may I not call your attention to the fact that it is generally recognized as the scandal of American courts that causes are so delayed. May I not suggest also that the increase in crime and open defiances of law, which are more and more appalling to law-abiding citizens with the passage of each month, may be at least in some measure attributable to the delays of the courts and the inadequate provisions which are being made for them. I think that you are already aware not only of the general situation which prevails here but also of the utter lack of comfortable or even adequate quarters in which my courts must be held. We are compelled to hold courts at five places, in only one of which we have a Federal building, and that of a most antiquated type.

With only one clerk's office for the entire district and with only two small rooms allotted to the clerk in which all the records of the district must be kept, the four deputies of the clerk with their desks and typewriters are herded in one small room subject to the distractions at all times of the numerous persons who have business with the office and during the courts at that place overcrowded at that time with the passing in and out of lawyers, litigants, jurors, and witnesses. Some time ago I endeavored to procure an additional room for the clerk's office, and one, which, under the original design of the building, and situated upon the same floor as the quarters of the court, was designed for and allotted for the use of the court. This office, however, was occupied by an official of the Post Office Department and we were unable to procure its use for the reason that the official was unwilling to go to another floor, although he was frequently absent from his office and left it unoccupied for days at a time. It has occurred to me that so long as the provisions for the places for transacting the business of the courts are made incidental to and subordinate to that of some other department and until adequate provisions be made both for comfortable places in which to hold the courts and for an adequate force to insure the prompt disposition of all their business, the public will be disposed to regard the administration of justice as an orphan unworthy of respect. The respect of the public must necessarily be measured in large degree by the consideration shown by the Government itself.

If there is any special recapitulation which you may desire to be taken from the records, I will be glad to have it tabulated and forwarded to you by the clerk.

Yours very truly,

H. H. WATKINS,
United States District Judge.

Mr. CAPPER subsequently said: Mr. President, I ask to revert to Order of Business 1199, being Senate bill 4127. The Senator from South Carolina [Mr. BLEASE] objected to the bill. He now authorizes me to say that he withdraws the objection.

The PRESIDENT pro tempore. Is there objection to the present consideration of the bill?

Mr. BLEASE. Mr. President, the Senator from Kansas says this is a very important bill and he is anxious to have it passed. Rather than to stand in his way I withdraw my objection.

The PRESIDENT pro tempore. Is there objection to the immediate consideration of the bill?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill, which was read, as follows:

Be it enacted, etc., That the President, with the advice and consent of the Senate, shall appoint an additional justice of the Supreme Court of the District of Columbia, who shall have the same tenure of office, pay and emoluments, powers, and duties as the present justices of that court. It shall be a duty of the chief justice of the Supreme Court of the District of Columbia to appoint from time to time, and for such period or periods as he may determine, one of the judges of the said Supreme Court of the District of Columbia to hear cases involving the condemnation of land in the District of Columbia, and it shall be the primary duty of such judge so appointed to preside at the hearing of such cases involving the condemnation of land in the District of Columbia, and that only when not engaged in such cases shall he be subject to assignment to the other business of the court. The chief justice may assign for service in condemnation cases any justice of said court in case of disability of the justice so serving or for any other reason.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

BILL PASSED OVER

The bill (H. R. 7729) to divest goods, wares, and merchandise manufactured, produced, or mined by convicts or prisoners of their interstate character in certain cases, was announced as next in order.

SEVERAL SENATORS. Over.

The PRESIDENT pro tempore. The bill will be passed over.

MEMORIAL BUILDING FOR NATIONAL MEMORIAL ASSOCIATION

The Senate as in Committee of the Whole, proceeded to consider the joint resolution (S. J. Res. 132) to create a commission to secure plans and designs for and to erect a memorial building for the National Memorial Association (Inc.), in the city of Washington, as a tribute to the negro's contribution to the achievements of America, which was read, as follows:

Resolved, etc., That a commission is hereby created, composed of 15 members of whom the Director of Public Buildings and Public Parks of the National Capital, the Supervising Architect of the Treasury, and the Architect of the Capitol shall be ex officio members, the 12 additional members to be appointed by the President, to be known as National Memorial Commission, to procure and determine upon a location, plans, and designs for a memorial building suitable for meetings of patriotic organizations, public ceremonial events, the exhibition of art and inventions, and placing statues and tablets, for the National Memorial Association (Inc.), in the city of Washington, as a tribute to the negro's contribution to the achievements of America.

SEC. 2. That the construction of the memorial herein and hereby authorized shall be upon such site as shall be determined by the commission herein created and approved by the Commission of Fine Arts, and said construction shall be entered upon as speedily as practicable after the plan and design therefor is determined and approved by the Commission of Fine Arts, and shall be prosecuted to completion, under the direction of said commission and the supervision of the Director of Public Buildings and Public Parks of the National Capital, under a contract or contracts as may be authorized to be entered into by said commission in a total sum not less than $500,000, which sum shall be provided by voluntary contributions, under auspices of the National Memorial Association (Inc.), in accordance with plans to be authorized by said commission.

SEC. 3. That in the discharge of its duties herein said commission is hereby authorized to employ the services of such artists, sculptors, architects, and others as it shall determine to be necessary, and avail itself of the services or advice of the Commission of Fine Arts, the Office of Public Buildings and Public Parks of the National Capital, the Supervising Architect of the Treasury, and the Architect of the Capitol.

SEC. 4. That vacancies occurring in the membership of the commission shall be filled by appointment by the President of the United States.

SEC. 5. That to defray the necessary expenses of the commission herein created and the cost of procuring plans and designs, site, and other incidentals necessary to the construction of a memorial building as herein provided, there is hereby authorized to be appropriated, out of any funds available in the United States Treasury, a sum not exceeding $50,000, to be available when the sum of $500,000 shall have been collected and paid into the hands of the National Memorial Association (Inc.), for purposes in this act provided.

SEC. 6. That said commission shall from time to time submit to Congress a detailed statement as to the progress of the work.

The joint resolution was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

CELEBRATION OF ANNIVERSARY OF BATTLE OF WYOMING

The PRESIDENT pro tempore laid before the Senate the bill (H. R. 14034) to establish a commission for the participation of the United States in the observance of the one hundred and fiftieth anniversary of the Battle of Wyoming, which was read the first time by its title and the second time at length, as follows:

Be it enacted, etc., That there is hereby established a commission to be known as the United States Commission on the Sesquicentennial of the Battle of Wyoming (hereinafter referred to as the commission) and to be composed of seven commissioners, as follows: One to be appointed

by the President of the United States, three Senators by the President of the Senate, and three Members of the House of Representatives to be appointed by the Speaker, to cooperate with the Wyoming Commemorative Association and the Wyoming Monument Association in the observance of the sesquicentennial of the Battle of Wyoming. The commission shall serve without compensation and shall select a chairman from among their number.

Mr. REED of Pennsylvania. Mr. President, this bill authorizes the appointment of a commissioner to arrange for the celebration of the sesquicentennial of the Battle of Wyoming in northeastern Pennsylvania. I ask unanimous consent for its immediate consideration. It carries no appropriation whatsoever.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

BILLS PASSED OVER

The bill (H. R. 9024) to authorize the appointment of stenographers in the courts of the United States and to fix their duties and compensation was announced as next in order.

SEVERAL SENATORS. Over.

The PRESIDENT pro tempore. Several Senators objecting, the bill will be passed over.

Mr. BRUCE subsequently said: I ask the Senate to return to Calendar No. 1215, being House bill 9024.

The PRESIDENT pro tempore. Is there objection?

SEVERAL SENATORS. Regular order!

The PRESIDENT pro tempore. The regular order is demanded. Objection being interposed, the bill will be passed over.

The bill (S. 4304) to provide for the storage for diversion of the waters of the North Platte River and construction of the Casper-Alcova reclamation project was announced as next in order.

SEVERAL SENATORS. Over.

The PRESIDENT pro tempore. The bill will be passed over.

The bill (S. 4305) to provide for the storage for diversion of the waters of the North Platte River and construction of the Saratoga reclamation project was announced as next in order.

SEVERAL SENATORS. Over.

The PRESIDENT pro tempore. The bill will be passed over.

MILITIA TARGET RANGE RESERVATION, UTAH

The bill (S. 1314) to authorize the Secretary of War to secure for the United States title to certain private lands contiguous to and within the Militia Target Range Reservation, State of Utah, was considered as in Committee of the Whole, and was read, as follows:

Be it enacted, etc., That for the purpose of eliminating certain private holdings within the Militia Target Range Reservation, the Secretary of War is authorized to acquire by purchase the fee simple and absolute title to certain private lands located within the boundary lines of the Militia Target Range Reservation, located in Utah and Salt Lake Counties, Utah, withdrawn and reserved by Executive order of the President dated April 24, 1914, and amended by Executive order of April 13, 1915.

SEC. 2. The Secretary of War is also hereby authorized to acquire by purchase for military purposes the complete title to certain other lands held under private ownership and situated contiguous to said Militia Target Range Reservation.

SEC. 3. The lands to be acquired under this act are to be used as a training camp for the National Guard, for other troops of the Army of the United States, and for other military purposes, and contain a total area of 7,221.21 acres, more or less. That for the purpose of acquiring titles to these lands and improvements thereon the sum of $54,160 is hereby appropriated, out of any money in the Treasury not otherwise appropriated, which amount shall become immediately available upon the approval of this act.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

BILL PASSED OVER

The bill (S. 4438) authorizing the State of Indiana to construct, maintain, and operate a toll bridge across the Ohio River at or near Evansville, Ind., was announced as next in order.

Mr. McKELLAR. I ask that the bill go over.

The PRESIDENT pro tempore. The bill will be passed over.

AMENDMENT OF POSTAL SALARY CLASSIFICATION ACT

The Senate, as in Committee of the Whole, proceeded to consider the bill (S. 2294) to amend the first paragraph of section 7 of the act entitled "An act reclassifying the salaries of postmasters and employees of the Postal Service, readjusting their salaries and compensation on an equitable basis, increasing postal rates to provide for such readjustment, and for other purposes," approved February 28, 1925, which was read, as follows:

That the first paragraph of section 7 of the act entitled "An act reclassifying the salaries of postmasters and employees of the Postal Service, readjusting their salaries and compensation on an equitable basis, increasing postal rates to provide for such readjustment, and for other purposes," approved February 28, 1925, be, and the same is hereby, amended to read as follows:

"SEC. 7. That the annual salaries of employees of the Railway Mail Service shall be as follows: Division superintendents, $5,000; assistant division superintendents and assistant superintendents at large, $4,500; assistant superintendent in charge of car construction, $4,500; district superintendents, $4,000, instead of chief clerks at $3,300; chief clerks, $3,500, instead of assistant chief clerks at $2,800: *Provided,* That the clerks in charge of sections in the offices of division superintendents shall be designated as chief clerks at $3,500 salary."

Mr. SMOOT. I should like to have an explanation of the bill.

Mr. McKELLAR. Mr. President, all that this bill does is to wipe out a discrimination against the money-order clerks. It applies only to one class of clerks, and my recollection is only to clerks in two or three offices in the country. The committee thought that there was a manifest discrimination against money-order clerks which ought to be corrected. That is all this bill does. I hope the Senator will not object. It has had the consideration of the committee for some time.

Mr. SMOOT. If this bill shall be passed, then it seems to me we ought also to pass Order of Business 1185, being Senate bill 1679.

Mr. McKELLAR. Oh, no; that is a very different bill. I hope the Senator will not object to the consideration of the bill now before the Senate.

Mr. SMOOT. I have not objected

The bill had been reported from the Committee on Post Offices and Post Roads with amendments. The first amendment was on page 2, after line 10, to insert:

SEC. 2. That section 3 of said act of February 28, 1925, be, and the same is hereby, amended so as to provide that in post offices where the receipts are $600,000 but less than $1,000,000 the salary of money-order cashiers shall be $3,100.

The amendment was agreed to.

The next amendment was on page 2, after line 15, to insert:

SEC. 3. That the first paragraph, and that portion of paragraph 4 as far as the first colon, of section 2 of said act of February 28, 1925, be, and the same is hereby, amended to read as follows:

"SEC. 2. That post-office inspectors shall be divided into seven grades as follows: Grade 1, salary $2,800; grade 2, salary $3,000; grade 3, salary $3,200; grade 4, salary $3,500; grade 5, salary $3,800; grade 6, salary $4,000; grade 7, salary $4,500; and there shall be 15 inspectors in charge, at $5,000: *Provided,* That inspectors shall be promoted successively to grade 5 at the beginning of the quarter following a year's satisfactory service in the next lower grade, and not to exceed 35 per cent of the force to grade 6 for meritorious service after not less than one year's service in grade 5, and not to exceed 10 per cent of the force to grade 7 for specially meritorious service after not less than one year's service in grade 6.

"PAR. 4. Grade 1, salary, $1,900; grade 2, salary $2,000; grade 3, salary $2,150; grade 4, salary $2,300; grade 5, salary $2,450; grade 6, salary $2,600; and there shall be one chief clerk at each division headquarters, at a salary of $3,500."

The amendment was agreed to.

The bill was reported to the Senate as amended and the amendments were concurred in.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

BILL PASSED OVER

The bill (H. R. 5527) to prevent fraud, deception, or improper practice in connection with business before the United States Patent Office, and for other purposes, was announced as next in order.

Mr. KING. I ask that the bill go over.

The PRESIDENT pro tempore. The bill will be passed over.

CURTIS P. WISE

The bill (H. R. 802) to correct the military record of Curtis P. Wise was announced as next in order.

Mr. KING. Mr. President, I should like an explanation of that bill.

Mr. BLAINE. Mr. President, I will say to the Senator from Utah——

Mr. KING. May I say to the Senator, if he will pardon me, that it is quite likely that that bill may not be passed at this session, and I shall be glad to examine the report very carefully.

Mr. BLAINE. I want to suggest to the Senator that it is a very worthy claim.

Mr. KING. I shall be very glad to examine the matter during the recess.

The PRESIDENT pro tempore. Does the Senator object to the consideration of the bill?

Mr. KING. Yes.

The PRESIDENT pro tempore. The bill will be passed over.

H. P. MILLIGAN

The bill (S. 3866) authorizing the appointment of H. P. Milligan as a major of Infantry in the Regular Army, was announced as next in order.

Mr. BLAINE. Mr. President, I wish to inquire if House bill 13440 has been messaged to the Senate.

The PRESIDENT pro tempore. The Chair is informed that it has not reached the Senate.

Mr. BLAINE. Then, Mr. President, I want to suggest that House bill 13440 accomplishes the purposes designed by Senate bill 3866, and I desire to substitute the House bill for the Senate bill as soon as the House bill comes over. I therefore ask that this bill go over temporarily.

The PRESIDENT pro tempore. That order will be entered; and the Senator from Wisconsin will be notified when the House bill reaches the Senate.

Mr. REED of Pennsylvania. Mr. President, I hope the Senator from Wisconsin will not attempt to pass the House bill to-day. This is a grave departure from the established policy of the War Department, and it ought not to be done without a full explanation to the Senate.

I ask that the bill go over.

The PRESIDENT pro tempore. The bill will be passed over.

JAMES ALOYSIUS MANLEY

The bill (S. 4107) for the relief of James Aloysius Manley was announced as next in order.

Mr. RANSDELL. I ask that House bill 13048, which has already passed the House and is identical with the Senate bill, be substituted for the Senate bill.

The PRESIDENT pro tempore. Is there objection to substituting House bill 13048, for the relief of James Aloysius Manley, for the Senate bill on the same subject?

Mr. REED of Pennsylvania. Mr. President, does the House bill carry the same amendment that was made in the Senate bill?

Mr. RANSDELL. Exactly the same amendment.

Mr. REED of Pennsylvania. It is the same as the Senate bill as amended?

Mr. RANSDELL. Yes, sir.

The PRESIDENT pro tempore. Without objection, the Committee on Military Affairs will be discharged from the further consideration of the House bill, and it will be substituted for Senate bill 4107.

The Senate, as in Committee of the Whole, proceeded to consider the bill (H. R. 13048) for the relief of James Aloysius Manley.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

The PRESIDENT pro tempore. Without objection, Senate bill 4107 will be indefinitely postponed.

BILL PASSED OVER

The bill (S. 668) amending section 1 of the interstate commerce act was announced as next in order.

Mr. BRUCE. Let that go over.

The PRESIDENT pro tempore. The bill will be passed over.

AMENDMENT OF EMPLOYEES' COMPENSATION ACT

The bill (S. 3433) to amend an act entitled "An act to provide compensation for employees of the United States suffering injuries while in the performance of their duties, and for other purposes," as amended, was considered as in Committee of the Whole.

The PRESIDENT pro tempore. The amendment of the committee has been heretofore agreed to.

The bill was reported to the Senate as amended, and the amendment was concurred in.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

SALARIES OF JUDGES IN TERRITORIAL AND INSULAR POSSESSIONS

The bill (H. R. 11463) to fix the salaries of certain judges of the Territories and insular possessions of the United States was announced as next in order.

Mr. BRATTON. Let that go over.

Mr. BINGHAM. Mr. President, will the Senator who objected withhold his objection for a moment?

Mr. BRATTON. Yes.

Mr. BINGHAM. That bill was objected to the last time it came up by the leader of the minority [Mr. ROBINSON of Arkansas] who has since withdrawn his objection. His objection was based on the fact that when asked whether the legislatures had taken any action I was unable to inform him. Since then I have learned that the Legislature of Porto Rico has passed a resolution asking for the passage of this bill, and the Legislature of Hawaii has done a similar act.

Mr. BRATTON. Mr. President, let me ask the Senator what are the present salaries?

Mr. BINGHAM. The present salaries, as shown in the report, range from $5,000 in the Virgin Islands, to $8,000 for the chief justice of the Supreme Court of the Philippine Islands.

Mr. BRATTON. And what are the several raises authorized in the bill?

Mr. BINGHAM. The raises are, for the chief justice of the Supreme Court of Porto Rico, to $10,500, the same as Hawaii; the associate justices, the same as Hawaii, $10,000; the judges of the District Court of the Virgin Islands, to $7,500; the chief justice of the Supreme Court of the Philippine Islands, to the same salary as the chief justices of the other courts, $10,500; and the associate justices of the Philippines, $10,000.

All the delegates from these various possessions and Territories have appeared before the committee and urged the passage of the bill, and in most cases their legislatures have acted upon them. I hope the Senator will withdraw his objection.

The PRESIDENT pro tempore. Does the Senator from New Mexico withdraw his objection?

Mr. BRATTON. I withdraw my objection.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill.

Mr. WALSH of Montana. Mr. President, I want to make some inquiry with reference to the justices of the Supreme Court of the Philippine Islands. Is that provision of the bill recommended by the legislature

Mr. BINGHAM. The Delegate appeared before the committee. I have the hearings here, but I understand that the legislature has not acted; but the legislatures of the other two have acted. The Delegate, who usually opposes increases in salaries, has asked particularly for these increases in salaries. Of the supreme court justices, about half are Filipinos and about half are Americans.

Mr. BORAH. Mr. President, it would mar the record of this Congress for raising salaries and increasing expenditures if we did not pass this bill. [Laughter.]

The PRESIDENT pro tempore. The objection is withdrawn. The amendment of the committee will be stated.

The amendment was, on page 1, after line 7, to insert:

To each of the justices of the circuit court for the first circuit of the Territory of Hawaii the sum of $7,500 and to each of the justices of the circuit courts for the second, third, fourth, and fifth circuits of the Territory of Hawaii the sum of $7,000.

So as to make the bill read:

Be it enacted, etc., That the following salaries shall be paid to the several judges hereinafter mentioned, namely:

To the chief justice of the Supreme Court of the Territory of Hawaii, $10,500 per year, and to each of the associate justices thereof the sum of $10,000 per year.

To each of the justices of the circuit court for the first circuit of the Territory of Hawaii the sum of $7,500 and to each of the justices of the circuit courts for the second, third, fourth, and fifth circuits of the Territory of Hawaii the sum of $7,000.

To the chief justice of the Supreme Court of the Territory of Porto Rico, $10,500 per year, and to each of the associate justices thereof the sum of $10,000 per year.

To the judge of the District Court of the Virgin Islands of the United States, $7,500 per year.

To the chief justice of the Supreme Court of the Philippine Islands, $10,500 per year, and to each of the associate justices thereof the sum of $10,000 per year.

To the judge of the United States Court of China, $10,000 per year.

SEC. 2. That all of said salaries shall be paid in equal monthly installments.

SEC. 3. This act shall take effect on the first day of the first month next following its approval.

The amendment was agreed to.

The bill was reported to the Senate as amended, and the amendment was concurred in.

The amendment was ordered to be engrossed and the bill to be read a third time.

The bill was read the third time and passed.

DUTY ON CARILLONS OF BELLS

The bill (S. 2355) to remit the duty on a carillon of bells to be imported for Princeton University, Princeton, N. J., was announced as next in order.

Mr. REED of Pennsylvania. Mr. President, I move that Senate bill 2355, Senate bill 2907, and Senate bill 793 be recommitted to the Committee on Finance.

Mr. GLASS. Mr. President, I was just about to ask about those three bills. It is the most extraordinary thing I ever heard of in my life when people in Rhode Island and Pennsylvania are even willing to remit duties on church bells.

The PRESIDENT pro tempore. The question is on the motion of the Senator from Pennsylvania.

The motion was agreed to.

Mr. COPELAND. Mr. President, I have here a letter from the Meneely Bell Co., of Troy, N. Y., saying that all these people applied to them with a view to purchasing bells, and went to Europe and got them cheaper. I ask that the letter be printed at this point in the RECORD.

The PRESIDENT pro tempore. Without objection, it is so ordered.

MENEELY BELL CO.,
New York, May 24, 1928.

Hon. ROYAL S. COPELAND,
United States Senate, Washington, D. C.

MY DEAR SENATOR COPELAND: Senate Calendar Nos. 1298, 1299, and 1300 have been referred to the Senate for action.

These relate to sets of two bells, and others of larger number of bells, at, respectively, Providence, R. I., Plainfield, N. J., and Princeton, N. J.

Some of the world's leading bell founders are located in the State of New York, and bell making is one of the oldest of American industries. The best bells procurable anywhere are made in America.

The only reason for American users of bells to place their orders in Europe is that the low price of European labor enables European founders to undersell American makers of bells.

Both the Plainfield and Princeton authorities sought our estimate before buying cheaper-priced bells in Europe. We knew nothing about the Providence order for two bells.

The inclosed illustration shows a carillon (French for "chime") that we have in Grace Church with which you may be familiar. Our foundry is equipped to supply combinations of bells of such weight and number as the purchasers may desire.

We had no opportunity of appearing before the Finance Committee when these measures were being considered, for when we asked for a hearing Senator SMOOT wrote us that the measures did not have his approval and would not be reported unless the majority of the committee insisted upon doing so.

I hope that you will investigate this subject and use your influence to defeat such special legislation. While you may or may not favor having any duty on bells, I doubt if you will find any justice or reason for breaking the existing regulations for the advantage of a few importers of bells who ask special consideration of Congress.

Owing to the early adjournment of Congress, I trust you may find it convenient to give this subject your consideration to-morrow.

Yours very truly,

W. R. MENEELY, *President.*

OFFICERS OF THE MEDICAL CORPS

The bill (H. R. 11981) to authorize officers of the Medical Corps to account certain service in computing their rights for retirement, and for other purposes, was considered as in Committee of the Whole.

Mr. SMOOT. Mr. President, I should like some explanation of that bill.

Mr. REED of Pennsylvania. I can explain it, Mr. President. At present the officers of the Medical Corps receive no credit in the calculation of the length of their service for the periods that they spent as contract surgeons or contract physicians, although the fact was that while that system was in effect it was customary to give them the hardest assignments in the whole medical service. This bill will affect about 90 officers of the Regular Army, including Colonel Keller out here at Walter Reed Hospital. It gives a very slight pay advantage and merely recognizes the fact that they served in the Army under these contracts before they got their commissions.

Mr. SMOOT. There is nothing in this bill, is there, to give them an additional retirement privilege because of the fact that they were sent somewhere where they did not want to go?

Mr. REED of Pennsylvania. Oh, no, sir; nothing of that sort. An officer of the Army has a right to retire on his own request after he has served 40 years. This allows them to count their contract service as if it were commissioned service. There never was any real difference between the contract called a commission and the contract that these men had, and they ought to be considered the same.

Mr. COPELAND. They served in the same way, and this bill is recommended by the War Department as a meritorious proposition, and ought to pass.

Mr. REED of Pennsylvania. The bill is recommended by the Surgeon General.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

MEMORIAL BUILDING TO COMMEMORATE WINNING OF OREGON COUNTRY

The joint resolution (S. J. Res. 102) authorizing the erection of a memorial building to commemorate the winning of the Oregon country for the United States was considered as in Committee of the Whole.

The joint resolution had been reported from the Committee on the Library with amendments, on page 2, line 13, after the word "adequate," to insert "nor until the sum of $125,000 has been made available by the State of Oregon and/or any political subdivision thereof and/or from any other source, to be used by the Secretary of War in the construction of such building: *Provided, however*, That from this contribution the State shall be credited with such sums as it has heretofore expended in the acquisition of lands and the construction of improvements"; on page 3, line 3, after the word "hereby," to insert "authorized to be"; and in line 5, after the words "sum of," to strike out "$250,000" and insert "$125,000"; so as to make the joint resolution read:

Whereas the region west of the Rocky Mountains known as the Oregon country, including the territory of the States of Oregon, Washington, Idaho, Montana, and part of the State of Wyoming, was settled principally by English fur traders, who laid claim to the whole of this vast territory of nearly 300,000 square miles as a part of the British Empire; and

Whereas after much controversy this great empire was held in joint occupancy by the United States and England; and

Whereas in 1843 102 men assembled at Champoeg, in what is now Marion County, Oreg., and after deliberation decided by the narrow margin of 2 votes that the Oregon country should become a part of the United States; and

Whereas James K. Polk was elected President in 1844 on a platform demanding the recognition of the title of the United States to this territory; and

Whereas after a long controversy and contention this vast territory was ceded to the United States by England, without war or bloodshed, under a treaty signed in June, 1846: Therefore be it

Resolved, etc., That the Secretary of War is authorized and directed (1) with the approval of the board of control of the State of Oregon, to select a site on lands owned by the State of Oregon, in Campoeg, Oreg., and (2) to construct thereon a permanent memorial building to commemorate the deeds and achievements of the early patriots whose efforts were responsible for the establishment of the title of the United States to the Oregon country; but such memorial building shall not be constructed until the State of Oregon shall have made such provision for its care and maintenance as the Secretary of War deems adequate nor until the sum of $125,000 has been made available by the State of Oregon and/or any political subdivision thereof and/or from any other source, to be used by the Secretary of War in the construction of such building: *Provided, however*, That from this contribution the State shall be credited with such sums it has heretofore expended in the acquisition of lands and the construction of improvements.

SEC. 2. The plans for such building shall be subject to the approval of the National Commission of Fine Arts.

SEC. 3. There is hereby authorized to be appropriated, out of any money in the Treasury not otherwise appropriated, the sum of $125,000, or so much thereof as may be necessary, to carry out the provisions of this act.

The amendments were agreed to.

The joint resolution was reported to the Senate as amended, and the amendments were concurred in.

The joint resolution was ordered to be engrossed for a third reading, read the third time, and passed.

AMENDMENT OF THE FOREIGN SERVICE BUILDINGS ACT, 1926

The bill (H. R. 10166) to amend the foreign service buildings act, 1926, was considered as in Committee of the Whole.

Mr. KING. Mr. President, in what respect does this bill change existing law?

Mr. BORAH. Mr. President, the object of this bill is to enlarge the foreign service buildings act of 1926 so as to enable us to exchange properties as well as to purchase properties. We have one instance that I know of—and I think two—where, if we desire, we can exchange properties. The object of this

bill is to increase the authority of the commission so as to permit exchanges as well as purchases.

Mr. KING. The bill makes no further appropriation?

Mr. BORAH. It makes no additional appropriation.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

SUITS BY SENATE COMMITTEES

Mr. REED of Missouri. Mr. President, I ask unanimous consent, out of order, to introduce a resolution, and when it is read I shall ask for its present consideration.

The PRESIDENT pro tempore. Without objection, the resolution will be received and read for the information of the Senate.

The Chief Clerk read the resolution (S. Res. 262), as follows:

Resolved, That hereafter any committee of the Senate is hereby authorized to bring suit on behalf of and in the name of the United States in any court of competent jurisdiction if the committee is of the opinion that the suit is necessary to the adequate performance of the powers vested in it or the duties imposed upon it by the Constitution, resolution of the Senate, or other law. Such suit may be brought and prosecuted to final determination irrespective of whether or not the Senate is in session at the time the suit is brought or thereafter. The committee may be represented in the suit either by such attorneys as it may designate or by such officers of the Department of Justice as the Attorney General may designate upon the request of the committee. No expenditures shall be made in connection with any such suit in excess of the amount of funds available to the said committee. As used in this resolution, the term "committee" means any standing or special committee of the Senate, or any duly authorized subcommittee thereof, or the Senate members of any joint committee.

The PRESIDENT pro tempore. The Senator from Missouri asks unanimous consent for the present consideration of the resolution. Is there objection?

Mr. SMOOT. Mr. President, it is my opinion that that would have to be an act of Congress, and not merely a resolution of one body.

Mr. REED of Missouri. I have examined the opinion of the Supreme Court recently rendered, and I am satisfied that this resolution will meet the requirements of the decision.

Mr. SMOOT. Does not this apply to committees of the House?

Mr. REED of Missouri. No; a committee of the Senate.

Mr. SMOOT. I may be mistaken, but I thought it referred to committees of the House.

Mr. REED of Missouri. No; a committee of the Senate.

The PRESIDENT pro tempore. Does the Chair understand objection to be interposed to the present consideration of the resolution?

Mr. SMOOT. Let it go over for a few minutes.

Mr. REED of Pennsylvania. I think this is of such importance that it had better go over under the rule.

The PRESIDENT pro tempore. Objection is made.

Mr. REED of Missouri subsequently said:

Mr. President, a while ago I called up a Senate resolution, and there was a request that it be laid aside on the part of the Senator from Pennsylvania [Mr. REED]. As I understand, he now has no objection to make to it.

Mr. REED of Pennsylvania. I have looked over it, and I see no objection.

The resolution was agreed to.

Mr. REED of Missouri. In context with the resolution, I ask to have printed the opinion of the Supreme Court in the case of the committee, JAMES A. REED, CHARLES E. MCNARY, and WILLIAM H. KING, commissioners, against the County Commissioners of the County of Delaware, Pa.

The VICE PRESIDENT. Is there objection?

There being no objection, the opinion was ordered to be printed in the RECORD, as follows:

Supreme Court of the United States

(No. 744, October term, 1927)

JAMES A. REED, CHARLES L. MCNARY, WILLIAM H. KING et al., petitioners, *v.* The County Commissioners of Delaware County, Pa., et al. On writ of certiorari to the United States Circuit Court of Appeals for the Third Circuit

Mr. Justice Butler delivered the opinion of the court.

The petitioners brought this suit in the United States Court for the Eastern District of Pennsylvania. The court held it was without jurisdiction and dismissed the case. (21 F. (2d) 144.) The circuit court of appeals adopted its opinion and affirmed the decree. (21 F. (2d) 1018.)

Petitioners maintain that the district court had jurisdiction under the first paragraph of section 24 of the Judicial Code (U. S. C., title 28, sec. 41), which provides that the district courts shall have original jurisdiction "of all suits of a civil nature, at common law or in equity, brought by the United States, or by any officer thereof authorized by law to sue * * *."

Petitioners, other than South, are United States Senators and constitute a special committee created by Senate Resolution 195 passed May 19, 1926, to make investigation of means used to influence the nomination of candidates for the Senate. The resolution empowered the committee "to require by subpœna or otherwise the attendance of witnesses, the production of books, papers, and documents, and to do such other acts as may be necessary in the matter of said investigation."

At a general election held in Pennsylvania November 2, 1926, WILLIAM S. VARE and William B. Wilson were opposing candidates for the United States Senate. VARE was given the certificate of election and Wilson initiated a contest. Thereafter, January 11, 1927, the Senate passed Resolution 324. It recites that Wilson charges fraudulent and unlawful practices in connection with VARE's nomination and the election and declares that, unless preserved for the use of the Senate, evidence relating to the election will be lost or destroyed. The resolution empowers the special committee "to take * * * and preserve all ballot boxes, * * * ballots, return sheets, * * * and other records, books, and documents used in said senatorial election. * * *." It confers on the committee "all powers of procedure with respect to the subject matter of this resolution that said committee possesses under resolution No. 195 * * * with respect to the subject matter of that resolution." And it requires the Sergeant at Arms of the Senate to attend and execute the directions of the committee.

The chairman of the Committee on Audit and Control of Contingent Expenditures having refused to approve the special committee's vouchers for expenses after the expiration of that Congress, the Sergeant at Arms refused to execute its orders. Thereupon the special committee directed the petitioner South, as its representative, to take possession of the boxes, ballots, and other things referred to in Resolution 324.

Respondents are the commissioners, the prothonotary and a justice of the peace of Delaware County, Pa. They are authorized custodians of boxes, ballots, and other things used in connection with the election. These were demanded by South in behalf of the committee. Respondents declined to give them up, and this suit was brought to obtain possession of them.

Petitioners do not claim that any act of Congress authorizes the committee or its members, collectively or separately, to sue. Of course, South's authority is no greater than that of the committee which he represents. The suit can not be maintained unless the committee or its members were authorized to sue by Resolutions 195 and 324, even if it be assumed that the Senate alone may give that authority. The power is not specifically granted by either resolution. Petitioners rely on the general language in Resolution 195, which follows the express authorization of the committee to use its own process to require the production of evidence. The words are "and to do such other acts as may be necessary in the matter of said investigation." The resolutions are to be construed having regard to the power possessed and customarily exerted by the Senate. It is the judge of the elections, returns, and qualifications of its members (Art. I, sec. 5). It is fully empowered, and may determine such matters without the aid of the House of Representatives or the executive or judicial department. That power carries with it authority to take such steps as may be appropriate and necessary to secure information upon which to decide concerning elections. It has been customary for the Senate—and the House as well—to rely on its own power to compel attendance of witnesses and production of evidence in investigations made by it or through its committees. By means of its own process or that of its committee the Senate is empowered to obtain evidence relating to the matters committed to it by the Constitution. McGrain *v.* Daugherty (273 U. S. 135, 160, 161, 167, 174). And Congress has passed laws calculated to facilitate such investigations. (R. S. secs. 101–104. U. S. C. title 2, secs. 191–194.) Petitioners have not called attention to any action of the Senate, and we know of none, that supports the construction for which they contend.

In the absence of some definite indication of that purpose, the Senate may not reasonably be held to have intended to depart from its established usage. Authority to exert the powers of the Senate to compel production of evidence differs widely from authority to invoke judicial power for that purpose. The phrase "such other acts as may be necessary" may not be taken to include everything that under any circumstances might be covered by its words. The meaning of the general language employed is to be confined to acts belonging to the same general class as those specifically authorized. (Oates *v.* National Bank (100 U. S. 239, 244); Barrett *v.* Van Pelt (268 U. S. 85, 90); Baltimore & Ohio Railroad Co. *v.* United States (— U. S. —).) The context, the established practice of the Senate to rely on its own powers, and the attending circumstances oppose the construction for which petitioners contend and show that the Senate did not intend to authorize the committee, or anticipate that there might be need, to invoke the power of the judicial department. Petitioners are not "authorized by law to sue."

Decree affirmed.

COTTON FUTURES ACT

The bill (S. 4411) to amend the United States cotton futures act, approved August 11, 1916, as amended, by providing for the delivery of cotton tendered on futures contracts at certain designated spot-cotton markets, by defining and prohibiting maniplation, by providing for the designation of cotton-futures exchanges, and for other purposes, was announced as next in order.

SEVERAL SENATORS. Over.

The PRESIDENT pro tempore. The bill will be passed over.

JAMES E. MOYER

The bill (H. R. 6432) for the relief of James E. Moyer was considered as in Committee of the Whole.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

FERTILIZER PRICES IN TENNESSEE

Mr. McKELLAR. Mr. President, I have before me a letter from the Gate City Mill dealing with the fertilizer situation as it exists in Tennessee. I ask unanimous consent that the letter may be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE GATE CITY MILLS,
Livingston, Tenn, May 16, 1928.

Hon. K. D. MCKELLAR,
United States Senate, Washington, D. C.

DEAR SENATOR: We desire to call your attention to a matter that is in connection with prices of fertilizer that are in effect now as compared with the former price under the old freight rate that was much higher than the present rate.

Last spring the opening price on 16 per cent acid phosphate was $21.10 per ton delivered to Livingston, Tenn. We handle four different brands from four different companies, and they all opened at the same price, but later got into a fight and got the price down to $16 per ton on 16 per cent acid phosphate. In the fall they had gotten together again and put the price back to $21.10. Some time during the summer—about July 1, if we remember correctly—the freight rate went into effect which reduced the freight to this point, as follows:

From Mount Pleasant, $3.45 as against $6.98 old rate.

From Atlanta, $4.60 as against $7.78 old rate.

From Nashville, $2.95 as against $5.40 old rate.

We did not ship any from Florence last year, so we do not know what the old rate was from that point.

Presumably this reduction in freight rates was for the benefit of the consumer, but it has failed to operate to their advantage, as you can see by the foregoing. When the freight was $6.98, $7.78, and $5.40 from the points named our delivered price on 16 per cent was $21.10, except for the time the fight was on, and after the reduction in freight as above, our price was still $21.10 here.

Our price this season up to the present time is $21.55 per ton.

We have had this matter up with one of our public utilities commissioners, and he is of the opinion that their commission can not do anything, in so far as it is not a matter of rates but of price. Can you suggest anything that would help to get this situation worked out so that the farmers may benefit by the present rate schedule?

We feel like other dealers would be glad to have these things worked out so that the reductions would go to the consumer instead of the manufacturer.

We heartily commend your activities in this connection and in bringing out the comparison in price of fertilizer in Alabama and Tennessee, and trust that this letter will be of some assistance to you in getting a fair deal for the farmers of our State.

Respectfully yours,

THE GATE CITY MILLS,
By J. T. STONECIPHER, *Manager.*

JACOB D. HANSON

Mr. WAGNER. Mr. President, I present a resolution passed by a mass meeting at Niagara Falls, N. Y., protesting against the reckless use of arms by the prohibition agents resulting in the probably fatal injury to an innocent citizen, Mr. Hanson. I ask that the resolutions may be printed in the RECORD and referred to the Committee on Commerce.

There being no objection, the resolutions were referred to the Committee on Commerce and ordered to be printed in the RECORD as follows:

Whereas over a period of time there has been evidenced an increasing disregard for the rights and privileges of free-born citizens of the United States by those charged with the enforcement of statutory laws of the country, such disregard reaching almost to the point of intolerance; and

Whereas in illustration of this disposition on the part of law-enforcement officers of the Federal Government there was enacted on the morning of Sunday, May 6, 1928, a tragedy that aroused the people of the entire country, when Jacob D. Hanson, a reputable, law-abiding, and respected citizen of Niagara Falls, was ruthlessly shot down by two members of the United States Coast Guard service while he was lawfully and peacefully driving his automobile upon a public highway; and

Whereas this murderous and unjustifiable assault, which if not resulting in the death of the victim, who lies in a most precarious condition in a hospital bed, will, in the belief of physicians, leave him crippled and hopelessly blind for the remainder of his days, an affliction most horrible to contemplate: Now therefore be it

Resolved, That we, as citizens of the United States, interested in the maintenance of law and order at all times, protest most vigorously and indignantly against the assignment of irresponsible persons to tasks of this nature and against the reckless use of firearms and the generally impudent and insulting attitude which too often characterizes the agents of Government in the enforcement of Federal rules and regulations, particularly along our frontiers.

He hereby characterize the shooting of Jacob D. Hanson as a most cruel and wanton act, without a single mitigating circumstance to excuse the conduct of the two Coast Guard men, who, clad in nondescript uniforms, accosted him on the highway, even as bandits might have done, and who recklessly fired into his automobile when he failed to stop. It was an act that could have been committed only by persons unfit to be intrusted with so important a duty as representing the United States Government in the enforcement of law and order.

In view of this most deplorable affair and for the sake of protection of citizens in general who have occasion to use the highways both by day and by night, we bring this incident to the attention of the properly constituted authorities at Washington with an appeal to them to cause prompt investigation of all circumstances surrounding this tragedy, that the guilty persons, not alone those who actually fired upon Jacob D. Hanson but those of their superiors who may have ordered or condoned such practices, may be justly and adequately punished, and to institute reforms that shall make impossible the repetition of this and other similar outrages which have been perpetrated upon the American public in recent years through overzealous and misdirected minions of the law who seemed to feel they have authority in the exercise of their duty to violate the rights of citizens and to jeopardize their lives, persons, and property; and be it further

Resolved, That while as citizens of the United States we desire that its laws and the mode of their enforcement shall be such as to insure the respect and devotion of all righteous citizens, we also as citizens of the State of New York stand solidly with the district attorney of Niagaga County and other officers of our sovereign State in their endeavor to win from the Federal courts the acknowledgment that the State of New York is indeed a sovereign State, capable not alone of determining in its criminal law what it shall consider as crime against the persons and property of its citizens but capable also of apprehending and trying in its own courts the one charged of crime, whether or not he be in the Federal service.

Resolved, That this expression of sentiment of this great gathering of citizens of Niagara Falls and of the Niagara frontier be duly attested and conveyed to the proper authorities in Washington, including the Secretary of the Treasury of the United States, Senators ROYAL S. COPELAND and ROBERT F. WAGNER, and Representative S. WALLACE DEMPSEY, and to the district attorney of Niagara County, State of New York.

Dated at Niagara Falls, N. Y., the 15th day of May, 1928.

RESOLUTION OF PROTEST OF WANTON SHOOTING OF HANSON BY EXEMPT FIREMEN MAY 10, 1928

John J. Daw, secretary of the Niagara Falls Exempt Firemen's Association, announced to-day that the association at its meeting went on record as condemning the shooting of innocent citizens on the highways in an effort to enforce laws. The resolution, called forth by the shooting of Hanson, is as follows:

"Whereas a reputable citizen of this city has been shot down on the highway by two armed United States Coast Guards because the said citizen was suspected, without reason, of being a rumrunner; and

"Whereas the highways of these United States are not safe to traffic at night by any citizen or visitor to the United States because of the danger to life and limb on account of said armed patrol with the alleged authority to shoot promiscuously any and every one who refuses to obey their command to halt; and

"Whereas said United States Coast Guards are not compelled to wear uniforms known to the general public so that they can be recognized as Federal officers instead of bandits: Therefore be it

"*Resolved,* That the Niagara Falls Exempt Firemen's Association, in meeting assembled this 8th day of May, 1928, call upon all civil authorities to assist in taking such action as will eliminate for all time the endangerment of life of any respectable citizen who cares to use our highways day or night."

Resolution of protest by National Bank of Niagara & Trust Co. on wanton shooting of Hanson

Whereas one Jacob D. Hanson, secretary of Lodge No. 346, B. P. O. E., a reputable, law-abiding, and respected citizen of the city of Niagara Falls, was, on the morning of May 6, last, the victim of an unjustifiable and murderous assault committed upon his person by two members of the United States Coast Guard Service stationed at or near Youngstown, N. Y., while he, the said Jacob D. Hanson, was lawfully and peacefully driving his automobile upon a public highway known as the Lewiston Road in the county of Niagara; and

Whereas our said citizen, Jacob D. Hanson, now lies at the point of death as the result of said assault with a bullet through his temple; and

Whereas warrants for the arrest of the perpetrators of said assault have been issued by the proper authorities of the State of New York; and

Whereas the commander of the unit of said United States Coast Guard Service at Youngstown, N. Y., refuses to allow said warrants to be executed: Now therefore be it

Resolved, That we, the board of directors of the National Bank of Niagara & Trust Co. of Niagara Falls, N. Y., hereby indignantly protest against the reckless use of firearms against the persons and automobiles of law-abiding citizens of this community by apparently irresponsible persons of the United States Coast Guard Service, or any other service; and we hereby resolve that every effort should be made to bring said members of the United States Coast Guard to answer in the courts for their assault upon said Jacob D. Hanson to the fullest extent of the law; that copies of this resolution, duly certified, be sent to the Secretary of the Treasury of the United States, Senators COPELAND and WAGNER and Congressman S. WALLACE DEMPSEY, at Washington, and to the district attorney of Niagara County.

Resolutions drawn up at the meeting of the South End Business Men's Association on May 9, 1928

Whereas Jacob D. Hanson, a peaceable and law-abiding citizen, driving upon a much-traveled highway, almost within the boundaries of the city of Niagara Falls, was fired upon and possibly fatally injured by members of the United States Coast Guard; and

Whereas incidents of this type are reported to be of frequent occurrence, constituting a serious menace to the lives and property of the traveling public and placing them in constant danger; and

Whereas such actions on the part of officers of the law indicate either or both that officers of the law are ignorant, reckless, and vicious or that their instructions violate the rights of all persons to the unquestioned security of their lives, persons, and property: Therefore be it

Resolved, That the South End Business Men's Association of the city of Niagara Falls at its regular meeting held on the 9th day of May, 1928, expresses its abhorrence of the practice now in force and urges that immediate and forceful steps be taken to remedy this deplorable condition and remove this menace to the peace and security of all people.

SOUTH END BUSINESS MEN'S ASSOCIATION,
MAX H. ELLEE, *President*.

Certified by—
A. C. HAYMAN, *Secretary*.

NIAGARA LODGE, No. 383, KNIGHTS OF PYTHIAS,
Niagara Falls, N. Y., May 15, 1928.

Mr. PETER A. PORTER,
Chairman Citizens' Mass Meeting, Niagara Falls, N. Y.

DEAR SIR: Niagara Lodge, No. 383, Knights of Pythias, desire to go on record as condemning the recent assault of Jacob Hanson by the Coast Guards, and that a copy of this letter be sent to United States Senator COPELAND as a protest against such actions by Government men.

Respectfully,
NIAGARA LODGE, NO. 383, KNIGHTS OF PYTHIAS,
OWEN F. RAZEY, *K. R. & S.*

BRICKLAYERS, MASONS, MARBLE-MASONS, AND TILE LAYERS INTERNATIONAL UNION, NO. 2, NEW YORK,
Niagara Falls, N. Y., May 12, 1928.

At a special meeting of the Bricklayers, Masons, Marble-Masons, and Tile Layers Union, No. 2, New York, held May 11, 1928, the following resolution was adopted by a unanimous vote:

"Whereas our attention has been called to the unlawful and murderous assault made upon Jacob D. Hanson by United States Coast Guard officers on the Niagara Falls-Lewiston Highway May 6, 1928; and

"Whereas we are informed through the press that similar outrages have been made upon innocent law-abiding citizens through an overzealous effort to enforce the prohibition laws of the United States; and

"Whereas we believe that the enforcement of any law should be accomplished only through and by means of legal process and within the bounds of the United States Constitution: Now therefore be it

"*Resolved*, That the Bricklayers, Masons, Marble-Masons, and Tile Layers Local Union, No. 2, New York, register our condemnation of the unlawful methods and practices employed by officials charged with law enforcement; that we extend our sincere sympathy to Mr. Hanson; and that a copy of this resolution be spread upon our minutes and copies forwarded to the press and to our Senators and Representatives in Congress; and be it further

"*Resolved*, That our legislative representatives be urged to bring about a modification of any rules or orders by which other law-abiding citizens may be subjected to the fate of Mr. Hanson.

DIVISION 1, NIAGARA CO.,
ANCIENT ORDER OF HIBERNIANS IN AMERICA,
Niagara Falls, N. Y.

Preamble and resolutions condemning the shooting of Jacob D. Hanson adopted by the Ancient Order of Hibernians, of Niagara Falls, N. Y., at their meeting of May 17, 1928

Whereas we the members of the Ancient Order of Hibernians, in common with all decent law-abiding citizens of this community, have been indescribably shocked and horrified at the ruthless and murderous shooting and possibly fatal wounding of Jacob D. Hanson of this city on the morning of May 6, in the town of Lewiston, N. Y., while about his lawful business by members of the United States Coast Guard presumably under unwarranted and illegal orders of their superior officers, probably dominated by some fanatical higher-ups; and

Whereas numerous shootings, assaults, bullying, and unlawful search and seizures seem to be common practice of prohibition enforcement officers and agents in this district, which practice is an arrogant disregard for and an abridgement of the rights and liberties of the American people, and a disgrace to the authorities that orders or permits such despicably illegal and un-American methods in the enforcement of prohibition or any other laws: Therefore be it

Resolved, That we, the members of the Ancient Order of Hibernians, most indignantly protest and emphatically condemn the shooting of the said Jacob D. Hanson and the shamelessly reckless use of firearms, the unlawful, unjust, and despotic interference with law-abiding citizens, either on the highways, in the streets, their homes, or places of business; and the wanton disregard for life, limb, and property which has been repeatedly shown by overzealous, irresponsible prohibition-enforcement agents, both of the Coast Guard and other governmental service, and we especially condemn the atrocious practice of officers and higher-ups in the prohibition-enforcement service of giving orders illegally to their servile and irresponsible tools "to shoot," smash, and bully, irrespective of consequences, under the pretense of enforcing the law; and we urgently hereby request that all such illegal, cowardly, and dishonorable practice be immediately stopped, and that the guilty perpetrators of this dastardly shooting outrage and all other violations of the rights and liberties of the people be immediately punished to the full extent of the law; this to include the officers and higher-ups who gave the illegal orders "to shoot," and who by their countenancing and encouragement of such unwarranted methods are trampling on the rights of the people; and to this end we suggest that all possible efforts be made to bring both the shooters and others responsible under the immediate jurisdiction of the courts of the State of New York, so that full justice may be done and that no condoning or whitewashing the guilty be permitted, as is apparently the practice of the Federal authorities where prohibition-enforcement officers violate the rights of the people, which practice we emphatically condemn as giving encouragement to criminally minded enforcement officials to overstep the bounds of their legal duties, and as a remedy for this intolerable state of affairs we also hereby request that a thorough investigation of the whole prohibition-enforcement methods be made with a view to amend or rescind the Volstead monstrosity, which is undermining the moral, physical, and mental abilities of a large proportion of the people and making grafters and bullies of another large portion, and is a tyrannically useless burden of taxation on the people: be it further

Resolved, That copies of this be sent to the press for publication and to Senators COPELAND and WAGNER and Congressmen DEMPSEY, MEAD, and MACGREGOR for the most vigorous action within their power.

FRANCIS T. KITCHEN, *President.*
AMBRISE LOMBARD, *Recording Secretary.*

REAPPORTIONMENT

Mr. VANDENBERG. Mr. President, I ask unanimous consent to have printed in the RECORD an explanatory statement regarding Senate bill 4554 dealing with the concurrent constitutional responsibility of the Senate for reapportionment. This

bill will be stressed in the December session in justice to constitutionalism, in justice to fair representation, and in justice particularly to my own State of Michigan which in 1930 will deserve four more Representatives even with a maximum membership held at 435.

I also ask leave to have printed in the RECORD an editorial from the Detroit News on this vital subject.

The VICE PRESIDENT. Without objection, it is so ordered.

The statement and editorial are as follows:

Mr. VANDENBERG. I have introduced into the Senate a bill calling for the reapportionment of the House of Representatives pursuant to the census of 1920, and pursuant also to Article I of the Constitution of the United States.

It is perfectly obvious, of course, that this bill can not pass the present session of the Seventieth Congress. But it is equally obvious that the second session of this same Congress next December can not avoid facing the issue thus raised. It is for this purpose that the bill is introduced.

The issue raised is a simple one, although it is here raised for the first time. The House has just refused once more to reapportion itself. This completes eight years of constitutional defiance. This is the issue: When the House of Representatives fails to reapportion itself pursuant to constitutional mandate is it not the concurrent duty of the Senate to discharge its own share of this constitutional function by initiating the legislation?

I am entirely agreeable to the normal theory that the initiation of reapportionment, being exclusively pertinent to the membership of the House, normally should be recognized as a primary prerogative of the House itself. But I am not agreeable to the expedient theory that the Senate can thus entirely sublet its own concurrent constitutional responsibility and thus whitewash its own turpitude. Courtesy and comity can not immunize the Senate's negligence.

The Constitution does not put this decennial reapportionment duty upon any one branch of the National Legislature alone, even though habit does. It puts the duty upon Congress as a whole. Therefore the Senate is tied into these responsibilities. It is held jointly liable by a public opinion which rightly is becoming exceedingly harsh in the presence of long-time nullification. We can neither dodge nor divert our own obligations along this score.

In May, 1842, Mr. Buchanan, then a Senator and afterwards President of the United States, emphatically declared that the Senate is bound to discharge its duty independently upon this as upon any other question which may come before Congress. Indeed, he spoke prophetically of the possibility that the judgment of the Senate in this instance might be better than that of the House because "though Members of the House are all honorable men yet it can not be denied that they have been engaged in a question in which they are directly interested and even the purest and wisest of men are not the best judges in their own cause."

The minority report of the Senate Committee on the Census in 1911 similarly declared that "the question is one of great importance to the whole country and the responsibility of the Senate relating thereto is equal to that of the House."

Despite these precedents, the Senate has never acted independently. Perhaps the answer is that heretofore there has been no necessity of it. From 1790 to 1910 Congress never once failed decennially to reapportion the House and on the initiative of the House. It faithfully validated the spirit of the Constitutional Convention of 1787 in which it was repeatedly declared that the Congress must not be left at liberty to shirk this basic duty. But from 1920 to 1928 Congress has persistently and perversely declined to obey the Constitution.

It is an important consideration that this nullification violates equality of representative rights not only in the House of Representatives, but also in the Electoral College from whence springs the Chief Executive. In the present situation, in which 23 Electoral College votes ought to be reassigned, we see the extent of the vital challenge. Three times within the last half century a change in 23 electoral votes could have changed the final result of a presidential canvass as recorded in the ultimate occupancy of the White House.

It is possible to cure the Electoral College situation by the passage of a bill drawn by Congressman MCLEOD, which I heartily support. But there seems to be no present or prospective cure for discrimination in the apportionment of the House unless some new impulse enters the equation. I submit the proposition that the Senate should provide this impulse. It has concurrent constitutional responsibility under the Constitution for this situation and it should act accordingly. The bill which I have introduced is the same bill which passed the House in 1921, and which recognizes the census of 1920 as a base. It failed of action in the Senate. This latter fact emphasizes the Senate's responsibility in connection with this present insufferable discrimination. After the census of 1930 the bill should, of course, be again rewritten. But the present measure at least raises the general question in the forum of the Senate. It virtually asks this question: How much longer shall a surrender to the undisturbed routine of the years substitute for the scrupulous regard which the Senators owe to the integrity of their oaths?

No straight-thinking loyalist tries to retain a self-serving option as to which sectors of the Constitution he shall honor and which sectors he shall scorn. Congress itself has no such expedient option. The chain of the Constitution is no stronger than its weakest link. Streams rise no higher than their source. The source of law is Congress. Here the Constitution must be in the home of its uncompromising friends. A quorum of mere words no longer will suffice. The integrity of the American theory that all States shall have equal representation in the upper House of Congress regardless of population involves an equal insistence that population alone shall be the governing factor in determining representation in the lower House of Congress.

The present disability is particularly violent in the case of Michigan. Here is the fourth largest State in point of contribution to the Federal revenues and the sixth in point of population persistently penalized in a fashion which a committee of the House has itself declared would "amaze the founders of our Government." They would here find the lengthened shadow of that tyranny which found expression in the battle cry that "taxation without representation is unjust."

No mode of computation can be embraced which would not arrive at the conclusion that Michigan is constitutionally entitled to 15 per cent greater representation in the House than it has to-day and proportionally entitled to greater representation in the Electoral College. For example, three Michigan districts had a total population of 1,500,000 under the 1920 census as compared with 560,000 population in three districts in another State. These three Michigan districts to-day embrace 2,000,000 people though still represented by only three Congressmen and only three presidential electors. A Detroit Congressman to-day represents twice the ratio quota. Put differently, one-half the voters of Detroit are disfranchised in one branch of Congress.

Such a situation is indefensible. Nor is it a Michigan problem alone. It specifically involves at least 10 other States which suffer kindred discriminations. Under the 1920 census 13,000,000 people lacked fair and equitable representation. By 1930, unless this dangerous precedent is cured, approximately 31,000,000 people will be legislated for without fair and equitable representation in one branch of Congress and in the Electoral College. If more expediency is to be the continuing governing motive, then we have had our last reapportionment and the Constitution is breached for keeps.

If the Senate values its own constitutional reputation and if it respects its own constitutional oath, it dare not permit another session to pass into history without affirmative action which validates its own share of concurrent constitutional responsibility for the reapportionment of the House of Representatives. The bill which I have introduced puts this challenge on the Senate's calendar at the first possible moment it can be reached. In fairness to Michigan's Members of the House, it should be said that I believe this action will meet with their unanimous approval. Indeed, I seek only to uphold their hands.

[Editorial from the Detroit News]

IMPORTANCE OF CHALLENGE SUBMITTED TO THE SENATE

Senator VANDENBERG has performed a national service by introducing in the Senate a reapportionment bill. Such a bill could have been introduced by a Michigan Senator in any session of Congress in the past six years, but nothing was done. Mr. VANDENBERG, a Senator new on the job, has put to shame Members of far longer standing by insisting that Congress respect the Constitution.

His argument is absolutely correct. There is nothing in the Constitution which says the House must make the first move to reapportion. The only priority given to the House in that document is in revenue bills and impeachment proceedings. These must originate in the House. The power to reapportion is not exclusive to the House, and although heretofore the House has originated reapportionment bills and the Senate has concurred in them, it must be evident to every good citizen that failure of the House to obey the Constitution in this respect does not absolve the Senate from its manifest duty in such a case.

For six years, however, the Senate has waited for the House to act, regardless of the House's notorious and disgraceful refusal to conform to the plain instruction of the Constitution. It has remained for a new Senator, with a clear comprehension of public opinion on this fundamental issue, to call the Senate's attention to its duty. What a reflec-

tion this is on Members of long standing who have been popgunning for small game when all this time an attack on the Constitution has been demanding their heavy artillery.

The Senate can not afford to dismiss Mr. VANDENBERG'S bill as unimportant. To be sure, it can not be passed before next winter, by the Senator's own admission; and then, if adopted by the House, it will apply not to the Congress chosen next November, but to the one elected in 1930, in May of which year a new census will be taken. If Congress does its duty it will reapportion again in the session of 1930–31. But it may not do so; the House may refuse, and the Senate may again sit back and wait. In that case it would be better to have representation on the basis of 1920 than on that of 1910.

Long before 1930, however, the people of the United States ought to register their opinion of Members of Congress who have refused allegiance to the Constitution and violated their oaths to protect it. That question should be one of the chief issues of the 1928 campaign, and will be, unless the people of America have lost that political sense and that regard for fundamental law which their fathers possessed.

STATISTICS OF TOBACCO

The bill (H. R. 53) to provide for the collection and publication of statistics of tobacco by the Department of Agriculture was announced as next in order.

SEVERAL SENATORS. Over.

The PRESIDENT pro tempore. The bill will be passed over.

Mr. BARKLEY. Mr. President, I hope the Senator making the objection will relent. This is a very important measure, that has been before Congress for a number of years, providing for the collecting of statistics of tobacco by the Department of Agriculture. Is is a very important measure, and I hope it may be considered.

The PRESIDENT pro tempore. Is the objection maintained?

Mr. SMITH. Mr. President, in justice to myself and other parties interested I have made a promise that this bill shall be considered and have a hearing other than it did have. Through some misunderstanding both of the chairmen of the committee and members of the committee the bill was taken up, as I understand, and without the understanding that I had had in reference thereto being either recollected or brought to the attention of the committee it was reported out.

Mr. GLASS. Regular order!

SEVERAL SENATORS. Over.

The PRESIDENT pro tempore. The bill will go over.

Mr. SMITH subsequently said: Mr. President, I just wish to make this statement. This is the bill which resulted from the investigation by the Committee on Agriculture in reference to the cotton situation.

The bill was introduced at a time when necessarily its consideration was very hurried, on account of the length of time that was devoted to the investigation by the subcommittee, which investigation has not yet been completed. We are offering today a preliminary report, but the proceedings of the investigations so far as we have gone have been printed, and I ask that all Senators who are interested in this legislation avail themselves of copies of this report, so that when we reconvene in December we can be in such a position as to intelligently take up and discuss the proposed bill which I have introduced. I did not make an attempt at this session to pass the bill in the Senate, because of the action that was taken in another body.

Mr. COPELAND. Mr. President, will the Senator yield?

Mr. SMITH. I yield.

Mr. COPELAND. I find considerable complaint in New York with the provisions of the bill, and I presume during the summer we can iron the differences out.

Mr. SMITH. I would like to state to the Senator from New York that this matter is of such importance to the entire cotton trade that certain amendments to the present cotton futures act are imperative if the business is to be done legally and in accordance with even decency. Therefore I think it would be possible for us to get the bill in such shape as to proceed with it at the next session.

Mr. GLASS. Regular order!

Mr. SMITH. Of course, we will have the regular order when I get through, and I propose to take the time allotted, the five minutes to which I am entitled. If the Senator does not want to hear what is said, he can retire from the Chamber.

I did not ask during the present session for consideration of the bill, but when we are through with the consideration of unobjected bills on the calendar, I want to make a report from the subcommittee to the full committee as to the work done up to the present time.

RAILROAD AVENUE, DISTRICT OF COLUMBIA

The bill (H. R. 10073) to change the name of Railroad Avenue between Nichols Avenue and Massachusets Avenue, was considered as in Committee of the Whole.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

OIL AND GAS PERMITS

The bill (S. 1512) to provide for contests of certain oil and gas permits, was considered as in Committee of the Whole, and was read, as follows:

Be it enacted, etc., That if any person qualified to receive an oil and gas prospecting permit under the act entitled "An act to promote the mining of coal, phosphate, oil, oil shale, gas, and sodium on the public domain," approved February 25, 1920, as amended and extended, contests an oil and gas prospecting permit and procures a cancellation of such permit, the contestant shall be notified of such cancellation by the Secretary of the Interior and shall, during the period of 30 days from the date of such notice, be entitled to a preference right over others to an oil and gas prospecting permit for the lands included in such canceled permit.

SEC. 2. If any person who has initiated a contest dies before the termination thereof, such contest shall not abate, but the heirs of such person who are citizens of the United States may continue the prosecution of such contest under such rules and regulations as the Secretary of the Interior may prescribe, and such heirs shall be entitled to the same rights under this act that the contestant would have been entitled to if his death had not occurred.

SEC. 3. The Secretary of the Interior is authorized to make such rules and regulations as he may deem necessary to carry out the provisions of this act, and to prescribe fees and commissions to be paid registers and receivers of United States land offices on account of the business transacted under the provisions of this act.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

IOWA TRIBE OF INDIANS

The joint resolution (S. J. Res. 139) for the relief of the Iowa Tribe of Indians was considered as in Committee of the Whole, and was read, as follows:

Resolved, etc., That jurisdiction be conferred upon the Court of Claims to hear, determine, adjudicate, and render judgment, in the cause now pending in the Court of Claims, docket No. 34677, entitled, "The Iowa Tribe of Indians *v.* the United States of America," referred to said court by the act of Congress, approved April 28, 1920 (41 Stat. L. 585), in the claim of the Iowa Tribe set forth in paragraph 6 of amended petition filed in said court February 17, 1925, regardless of the limitation as to time for filing claims made in said act approved April 28, 1920.

The joint resolution was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

POSTON BRICK CO.

The bill (S. 3219) for the relief of the Poston Brick Co. was announced as next in order.

Mr. HOWELL. Let that go over.

The PRESIDENT pro tempore. The bill will be passed over.

NATIONAL INSTITUTE OF HEALTH

The bill (S. 4518) to establish and operate a national institute of health, to create a system of fellowship in said institute, and to authorize the Government to accept donations for use in ascertaining the cause, prevention, and cure of disease affecting human beings, and for other purposes was announced as next in order.

Mr. KING. Let that go over.

Mr. RANSDELL. Mr. President, I hope the Senator will withhold his objection for just a moment.

Mr. KING. I do.

Mr. RANSDELL. This is one of the most important bills we have had before us since I entered Congress many years ago. It is to create a national institute of health, and to create a system of fellowships in said institute for the ascertainment of the cause, prevention, and cure of diseases affecting human beings.

The measure does not make any specific appropriation, but it does authorize an appropriation sufficiently great to carry out the purposes of the bill. It is of very great importance to humanity. The hope is that we can create here in Washington a national clearing house of health for all the world. I hope the bill can be passed at this session, so that at the next session we can get it before the House and write it into the law.

Mr. SACKETT. The bill does not carry any appropriation at all, does it?

Mr. RANSDELL. Not at all.

Mr. SACKETT. I see no reason why it should not be passed.

Mr. KING. It carries an authorization for $500,000.

Mr. RANSDELL. It does not carry a cent. It authorizes to be appropriated out of any money in the Treasury not other-

wise appropriated such sums as may be adequate, but it does not authorize a single dollar in amount.

Mr. KING. Mr. President, this is a very important measure, as the Senator has said, and it would be the basis of the establishment of another department, and call for an enormous appropriation in the future. I think, before we embark upon this policy, we had better consider it.

Mr. SACKETT. It is an enlargement of the present Hygienic Laboratory. That is the purpose, not the creation of a new department. It is to give them an opportunity to study human diseases, as we have as to all animals.

Mr. KING. It would lead to an enormous appropriation. I think it had better go over.

Mr. COPELAND. May I ask the Senator to withhold his objection just a moment?

Mr. GEORGE. Regular order!

Mr. COPELAND. We are in the regular order, I think, when the bill is still before us.

Mr. KING. I am objecting.

Mr. COPELAND. Very well.

The PRESIDENT pro tempore. Under objection, the bill will be passed over.

STANDARDIZED BALES OF COTTON

The bill (S. 872) to standardize bales of cotton and requiring sale of cotton by the true net weight of bale was announced as next in order.

Mr. COPELAND. Mr. President, reserving the right to object, as I see it, the bill of the Senator from Louisiana is to permit the Government to receive money to be expended for the benefit of human beings and the extension of human life. There are many contributions being made now to private institutions of money which would come here to enlarge this great establishment if we were organized to receive it. I may say, in regard to the bill presented by the Senator from Louisiana, after hearings which were attended by the Senator from Maine [Mr. GOULD], the Senator from Kentucky [Mr. SACKETT], and myself, we listened to witnesses from every part of the country who had tremendous enthusiasm in the bill, and even institutions which might be considered rivals were glad to support the enterprise.

Mr. RANSDELL. May we pass it by for the present? The Senator from Utah says that in about 10 minutes he will let us take it up. I thank the Senator from Utah.

Mr. SMOOT. If the junior Senator from Utah withdraws his objection, the senior Senator will object.

COMMITTEE ASSIGNMENTS

Mr. ROBINSON of Arkansas. Mr. President, out of order, I ask that the senior Senator from Arkansas [Mr. ROBINSON] be excused from further service upon the Committee on Rules, and that the senior Senator from New York [Mr. COPELAND] be assigned to service on that committee.

I want to make just a brief explanation. The Senator from New York has been interested in the improvement of the Senate Chamber, and I desire to have him serve on that committee in my place for the immediate future.

The PRESIDENT pro tempore. Without objection, it is so ordered.

SENATOR BURTON K. WHEELER

Mr. HARRISON. Mr. President, I ask unanimous consent to have printed in the RECORD a newspaper story written by Leo R. Sacks, Washington correspondent of the Scripps-Howard newspapers, on the junior Senator from Montana [Mr. WHEELER].

The PRESIDENT pro tempore. Is there objection? There being no objection, the article was ordered to be printed in the RECORD, as follows:

WASHINGTON, May 29.—Senator BURTON K. WHEELER, of Montana, is engaged in a bitter struggle with his old enemies in seeking reelection.

Fighting is not a new experience for him. He has contended against odds ever since he entered public life.

WHEELER is concluding his first term in the Senate. It has been one marked by spectacular fighting.

But the present fight against him is not being conducted by those whom he has opposed in Washington but by those he fought back in Montana when he successfully stopped a movement to drive Senator THOMAS J. WALSH from public life. Had WALSH been defeated, the Teapot Dome scandal might never have been exposed.

The Anaconda Copper Co., one of the Nation's industrial giants, dominates Montana politics. In 1910 it sought to prevent the Montana Legislature from electing WALSH as Senator. WHEELER had been elected to the legislature from Silver Bow County, where the Anaconda's chief interests are located. Despite this, he defied the wishes of the company and voted for WALSH. WALSH was defeated then, but with WHEELER's assistance he was elected two years later.

WHEELER has been a "marked man" ever since.

In 1912 he ran for attorney general of Montana and was defeated, but WALSH came to the Senate and Woodrow Wilson went to the White House.

WALSH, knowing that a fighter was needed as United States district attorney for Montana, recommended his young friend. President Wilson agreed and WHEELER was appointed.

As Federal attorney he prosecuted several cases involving men of great wealth who had defrauded the Government out of large tracts of public land. He likewise prosecuted the Northwest Trustee Co., involving prominent Democratic officials.

WHEELER played no favorites as district attorney. He prosecuted and convicted a former Republican and a former Democratic attorney general for jury frauds. One of the convicted lawyers was attorney for the copper interests.

When President Wilson was considering his reappointment the copper interests sought to prove that he was a "radical" and pro-German, although his ancestors settled in Massachusetts before the Revolution.

In 1918 WHEELER resigned and was offered an appointment as Federal judge, which he declined. In 1920, over the vigorous objection of the copper companies, he was nominated Democratic candidate for governor.

The Harding landslide and the opposition of the copper companies prevented his election in a campaign in which it was charged hired thugs consistently broke up his meetings.

Two years later he was a candidate for the United States Senate and despite the usual opposition he was nominated and elected.

Now he is seeking reelection and the copper and allied business interests are backing a formidable candidate against him in the primaries. If he wins the nomination, he will have another real fight for the election.

But WHEELER is not worrying. He has licked his opponents before when he had only a State reputation to help. Now that he has acquired a national reputation he believes his task should be easier.

WHEELER's career in the Senate has been spectacular. He had hardly been installed when he opposed continuation of the late Senator Albert C. Cummins as chairman of the Senate Committee on Interstate Commerce. He charged that Cummins, a former liberal, permitted the railroads to dominate the committee. Cummins was retired as chairman.

WHEELER then tackled Attorney General Harry M. Daugherty and the Department of Justice. He persuaded the Senate to authorize his famous investigation of the department. After the inquiry was launched he found himself in a blind alley. Boarding a train for Columbus, Ohio, one afternoon, he returned two days later with a mysterious witness, Miss Roxie Stinson, former wife of Jesse Smith, Daugherty's right-hand man. Miss Stinson's testimony provided the key to the situation.

So much evidence of improper conduct was revealed that President Coolidge was forced to request Daugherty's resignation. William J. Burns was forced to resign as chief of the bureau of investigation. "The little green house on K Street," rendezvous of the Ohio gang, was exposed.

From the Wheeler inquiry came the first wholesale house cleaning in Washington following the Harding administration. WHEELER also directed attention to frauds at the Atlanta Penitentiary which resulted in the prosecution of the warden, and to irregularities in the Alien Property Custodian's office.

WHEELER fought the Department of Justice so hard that members of the Republican National Committee, working with Attorney General Daugherty, tried to "frame" him back home. A representative of the committee went to Montana and WHEELER was indicted on a charge of accepting a fee from an oil operator to use his influence in Washington to obtain permits.

WHEELER was exonerated at home, and later in Washington when he was reindicted. But of most importance he was given a clean bill of health by Senator WILLIAM E. BORAH, who headed a special committee to investigate for the Senate. BORAH denounced the prosecution of WHEELER as a cowardly attempt to silence a courageous public servant.

So great had become Senator WHEELER's reputation that in 1924 he was invited by the late Senator La Follette to become his running mate on a third-party ticket.

WHEELER does not believe the United States marines should be in Nicaragua, and he has not hesitated to tell the Senate and the country his views.

He feels equally certain that in the soft-coal strike in Pennsylvania, Ohio, West Virginia, and other bituminous-producing States the public has not been getting a fair deal. He believes the coal operators have beaten down the miners' wage to such a point that the entire coal industry is operated on an uneconomic and destructive basis. WHEELER was a member of the special committee of the Senate which investigated the coal strike.

WHEELER, because of his industry in this inquiry, was made a member of the special committee to write a law placing the coal industry under Federal supervision.

He has fought against railroad domination of the railroad regulatory boards. WHEELER feels that the West has been discriminated against in favor of the East economically. As a result he is an ardent champion of the long and short haul bill, of the McNary-Haugen bill, and he opposed the McFadden-Pepper banking bill.

WHEELER is married, has six children, and financially is one of the poorest Members of the Senate. A native of Massachusetts, he was graduated from the law school of the University of Michigan and then went to Montana to practice law.

Although elected as a Democrat, WHEELER refuses to recognize the party labels if he believes his party is wrong.

UNITED STATES CODE

Mr. WALSH of Montana. Mr. President, on last Saturday the Senate passed House bill 13622, to amend and supplement the Code of Laws of the United States of America. It contained section 2, as follows:

SEC. 2. That the code as thus amended and supplemented shall establish prima facie the general and permanent laws of the United States in force December 5, 1927.

To that the attention of the Senate was called at that time. After the passage of the bill by the Senate attention was called to the fact that when the original Code of Laws came before the Senate it contained a similar provision, but some doubts were expressed as to whether that was sufficient, and having been advised that the House has returned the original bill, I desire to offer an amendment so that the same provision shall be in both documents. Accordingly, for the purpose of correcting it, I ask unanimous consent that the votes by which the bill was ordered to be read the third time and passed be reconsidered.

The VICE PRESIDENT. Is there objection? The Chair hears none, and the votes by which the bill was ordered to a third reading and passed are reconsidered.

Mr. WALSH of Montana. I ask for immediate consideration of the bill.

The VICE PRESIDENT. Is there objection?

There being no objection, the Senate proceeded to consider the bill.

Mr. WALSH of Montana. I now move that section 2 of the bill be amended by adding thereto the language which I send to the desk.

The VICE PRESIDENT. The clerk will state the amendment.

The CHIEF CLERK. On page 1, line 11, after the numerals "1927," insert a comma and the words "but nothing in this act shall be construed as repealing or amending any such law, or as enacting as new law any matter contained in the code as thus amended and supplemented. In case of any inconsistency arising through omission or otherwise between the provisions of any section of this act and the corresponding portion of legislation heretofore enacted effect shall be given for all purposes whatsoever to such enactments."

Mr. KING. Mr. President, I ask the Senator's pardon; I was occupied in another matter. Will the Senator briefly explain the purpose of the amendment?

Mr. WALSH of Montana. The purpose is to make it perfectly clear that this measure changes no present act. It is simply for the purpose of a compilation, the compilation being prima facie evidence of what the law is, and it elucidates that by saying that it shall not be construed to amend or repeal any existing law.

Mr. LA FOLLETTE. Mr. President, if I understand the Senator's statement correctly, it merely incorporates in this amendment to the code the same language that was in the original act.

Mr. WALSH of Montana. In the original code.

Mr. KING. I think that is very wise. I am very glad the Senator is pursuing that course.

The amendment was agreed to.

The amendment was ordered to be engrossed and the bill to be read a third time.

The bill was read the third time and passed.

POSTON BRICK CO.

Mr. HOWELL. Mr. President, I ask unanimous consent to return to Calendar 1321, Senate bill 3219, for the relief of the Poston Brick Co., to which I objected through a misapprehension.

The VICE PRESIDENT. Is there objection?

There being no objection, the Senate as in Committee of the Whole proceeded to consider the bill, which was read, as follows:

Be it enacted, etc., That, notwithstanding the lapse of time or any statute of limitations, the Court of Claims is hereby authorized to hear, determine, and render judgment upon the claim of the Poston Brick Co. for the recovery of income, war-profits, and excess-profits taxes paid by such company for the calendar years 1917, 1918, 1919, and 1920 in excess of the amount of its liability therefor.

SEC. 2. Suit upon such claim may be instituted in the Court of Claims at any time within two years after the approval of this act and irrespective of prior filing of claim for refund. Proceedings before the Court of Claims in such suit, and appeals and payment of any judgment therein, shall be had as in the case of claims over which such court has jurisdiction under section 145 of the Judicial Code, as amended.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

CERTIFICATE OF PUBLIC CONVENIENCE

The bill (S. 2309) to amend the interstate commerce act in respect of certificates of public convenience and necessity, was announced as next in order.

Mr. BLEASE. Let that go over.

The VICE PRESIDENT. The bill will be passed over.

THOMAS A. EDISON

The joint resolution (H. J. Res. 243) to provide for the striking of a medal commemorative of the achievements of Thomas A. Edison in illumining the path of progress through the development and application of inventions that have revolutionized civilization in the last century, was announced as next in order.

Mr. LA FOLLETTE. Let that go over.

Mr. RANSDELL. I did not hear what was done with Senate bill 872.

The VICE PRESIDENT. It went over under objection.

Mr. RANSDELL. I was listening very attentively. Did somebody object to it?

The VICE PRESIDENT. It went over under objection.

Mr. RANSDELL. It is a bill to standardize bales of cotton, and requiring the sale of cotton by the true net weight of bale.

The VICE PRESIDENT. The bill went over under objection.

Mr. RANSDELL. Of course, if it was objected to, that settles it; but I did not hear the objection. I ask unanimous consent that the Senate return to the consideration of that bill.

Mr. TYSON. I object.

The VICE PRESIDENT. Objection is made.

Mr. TYSON. I have not had time to examine it.

Mr. EDGE. Mr. President, did some one object to the consideration of the joint resolution referring to Mr. Edison?

Mr. LA FOLLETTE. I objected to it.

Mr. EDGE. If the Senator will give me just one moment, I hope the Senate will endeavor to be consistent. Within five minutes we have concurred in a joint resolution granting medals to Ellsworth and Adamson and Nobile, and surely, I contend, the services of Thomas A. Edison, in his contributions to the scientific development in this country as an American citizen, certainly deserve the consistent support of the Senate, when we are giving medals to aviators and other men without the slightest objection. I do hope the Senator from Wisconsin will withdraw his objection. The joint resolution passed the House unanimously.

Mr. ROBINSON of Arkansas. If I may be permitted to say just a word, I can not conceive of any scientific medal to which Thomas A. Edison is not entitled.

Mr. EDGE. I thank the Senator. I trust the Senator from Wisconsin will withdraw his objection. The joint resolution passed the House unanimously, as I have said. I am quite sure the Senate does not want to take an inconsistent position. I have a report here showing that in the last few years we have struck 93 medals, and I must admit that many of the names I can hardly recall in history. Within the last few days, in addition to the three I have named, we granted specially struck medals to Chamberlin and Levine and other aviators, who, no doubt, deserve them, but certainly, in the midst of this granting of favors, a man who has contributed what Thomas A. Edison has to the United States and to all her citizens, both from the standpoint of pleasure and health and development, certainly deserves unanimous consideration.

Mr. LA FOLLETTE. I ask that the resolution be passed over without prejudice.

Mr. REED of Missouri. Mr. President, I want to ask the Senator from New Jersey a question. Did the Senator say we have given a medal to Levine?

Mr. EDGE. We gave a medal the other day, my information is, to Chamberlin, Levine, and some other aviators whose names I can not recall.

Mr. REED of Missouri. Well, Mr. President, I think medals will very soon cease to be of any value.

Mr. EDGE. I will say, if the Senator will bear with me for another moment, that only this week the combined scientific societies of the United States met, through their delegates in New York, representing 43 States, and presented Mr. Edison a medal.

Mr. LA FOLLETTE. Mr. President, I withdrew my objection to let the resolution pass over without prejudice in order that the Senator from New Jersey and I might confer about it. If he insists on making a speech, I shall have to insist on my objection.

The PRESIDING OFFICER. The resolution will be passed over without prejudice.

FEDERAL LAND BANK, COLUMBIA, S. C.

Mr. BRUCE. Mr. President, I desire to withdraw my objection to Order of Business No. 1165. If the Senator from South Carolina [Mr. BLEASE] desires to bring it up, I have no objection.

The VICE PRESIDENT. Is there objection to the present consideration of Calendar No. 1165, the resolution (S. Res. 159) to investigate the affairs and management of the Federal Land and Intermediate Credit Bank of Columbia, S. C.?

Mr. PHIPPS (and others). Over.

The VICE PRESIDENT. The resolution will be passed over.

Mr. BLEASE. Mr. President, I would like to know who made the objection.

Mr. PHIPPS. I was one who made objection.

Mr. FESS. Others objected also.

Mr. BLEASE. I merely wanted to have the RECORD show that the objection came from the Republican side of the Chamber.

The VICE PRESIDENT. On objection, the resolution will be passed over.

JOINT RESOLUTION PASSED OVER

The joint resolution (S. J. Res. 144) relating to the manufacture of stamped envelopes was announced as next in order.

Mr. WARREN. Over.

Mr. LA FOLLETTE. I hope the Senator from Wyoming will not object.

Mr. FESS. Over.

The VICE PRESIDENT. The bill will be passed over.

WILLIAM J. TILSON

The bill (H. R. 12311) to provide for payment of compensation to William J. Tilson was considered as in Committee of the Whole and was read, as follows:

Be it enacted, etc., That notwithstanding the provisions of section 1761 of the Revised Statutes, as amended, William J. Tilson shall be paid the sum of $15,701.38 as compensation for services for the period from July 10, 1926, to March 17, 1928, during which time he held the office of United States district judge for the middle district of Georgia. There is authorized to be appropriated such sums as may be necessary to carry out the provisions of this act.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

RICHINGS J. SHAND

The bill (S. 2949) to credit the accounts of Richings J. Shand, United States property and disbursing officer, Illinois National Guard, was announced as next in order.

Mr. REED of Pennsylvania. Mr. President, I move that House bill 10244, which has been passed by the House and messaged to us, be substituted for the bill now on the calendar.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill (H. R. 10244) to credit the accounts of Richings J. Shand, United States property and disbursing officer, Illinois National Guard, and it was read the first time by its title and the second time at length, as follows:

Be it enacted, etc., That the Comptroller General is authorized and directed to allow credit in the accounts of Col. Richings J. Shand, United States property and disbursing officer, Illinois National Guard, in the sum of $330 now standing as disallowance in said accounts on the books of the General Accounting Office, representing payments made by him in good faith for the rental of two automobiles with drivers for the use of the National Guard of Illinois during their annual encampment from July 30 to August 15, 1926, which rental and payments therefor had been previously authorized by the War Department, but which were held by the Comptroller General to be prohibited as coming within the provisions of act of July 16, 1914 (38 Stat. 508).

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

The VICE PRESIDENT. Without objection, Senate bill 2949 is indefinitely postponed.

NOTIFICATION TO THE PRESIDENT

Mr. CURTIS submitted the following resolution (S. Res. 260), which was considered by unanimous consent and agreed to:

Resolved, That a committee of two Senators be appointed by the Presiding Officer of the Senate to join a similar committee appointed by the House of Representatives to wait upon the President of the United States and inform him that the two Houses, having completed the business of the present session, are ready to adjourn unless the President has some other communication to make to them.

The VICE PRESIDENT appointed Mr. CURTIS and Mr. ROBINSON of Arkansas as the committee on the part of the Senate under the resolution.

MESSAGE FROM THE HOUSE—ENROLLED BILLS SIGNED

A message from the House of Representatives, by Mr. Chaffee, one of its clerks, announced that the Speaker had affixed his signature to the following enrolled bills, and they were signed by the Vice President:

S. 652. An act for the relief of Edgar Travis, sr.;

S. 1297. An act for the relief of Alice E. Moore;

S. 1541. An act for the relief of George A. Robertson;

S. 1769. An act for the relief of the legal representatives of the estate of Haller Nutt, deceased;

S. 3314. An act for the relief of John J. Fitzgerald;

S. 3931. An act for the relief of Augusta Cornog; and

S. 3991. An act declaring certain designated purposes with respect to certain parts of Santa Rosa Island in Florida to be "public purposes" within the meaning of the proviso in section 7 of the act approved March 12, 1926, entitled "An act authorizing the use for permanent construction at military posts of the proceeds from the sale of surplus War Department real property, and authorizing the sale of certain military reservations, and for other purposes.

ESTATE OF HALLER NUTT, DECEASED

Mr. STEPHENS submitted the following report:

The committee of conference on the disagreeing votes of the two Houses on the amendments of the House to the bill (S. 1769) for the relief of the legal representative of the estate of Haller Nutt, deceased, having met, after full and free conference have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its disagreement to the amendments of the House numbered 1 and agree to the same.

Amendment numbered 2: That the Senate recede from its disagreement to the amendment of the House numbered 2, and agree to the same with an amendment as follows: In lieu of the amount inserted by the House amendment insert the following: "$75,000"; and the House agree to the same.

GERALD P. NYE,
W. H. MCMASTER,
H. D. STEPHENS,
Managers on the part of the Senate.

JAMES G. STRONG,
JOSEPH L. HOOPER,
B. G. LOWREY,
Managers on the part of the House.

The report was agreed to.

OPINION OF ATTORNEY GENERAL ON FARM RELIEF BILL

Mr. MCNARY. Mr. President, by mistake the opinion of the Attorney General which was made a part of the President's veto on the farm relief bill was not included in the request to have the veto message printed, and I ask unanimous consent that in connection with the veto message the opinion of the Attorney General be published in the RECORD, and also as a Senate document.

The VICE PRESIDENT. Without objection, it will be so ordered.

REPORT OF COLLECTOR GENERAL OF CUSTOMS FOR NICARAGUA (S. DOC. 164)

Mr. BINGHAM. Mr. President, I ask unanimous consent that the report of the Collector General of Customs for Nicaragua for the period of January 1, 1927, to December 31, 1927, and the statistics of the commerce of 1927 may be printed as a Senate document.

The VICE PRESIDENT. Without objection, it is so ordered.

FEDERAL MATERNITY AND INFANCY ACT

Mr. SHEPPARD. Mr. President, on June 30, 1929, the Federal maternity and infancy act will terminate after an operation of seven years. That the act has proved to be of immense

benefit is shown by a report on its workings by the American Child Health Association and the Maternity Center Association to the National League of Women Voters. It has given a national extent to maternal and infant hygiene work. Nearly all the States are cooperating effectively with the National Government under the act, whereas but few of the States gave any substantial attention to maternity and infancy welfare before its adoption. In many sections of the country, especially in remote rural districts, the lives of mothers and children are being saved and safeguarded on a gratifying and heartening scale. The distribution of information on the subject of maternal and infant hygiene is being placed upon a basis both permanent and nation-wide. I ask permission to insert in the record, following these remarks, a letter to me from Miss Belle Sherwin, president of the National League of Women Voters, and the summary accompanying her letter of the report to the league mentioned above.

A review of this summary will show it to be the judgment of careful and competent investigators that the maternity and infancy act has shown that the death rate of mothers and infants can be permanently and materially reduced, that it has already caused reductions in certain sections, that it is still needlessly high in the United States as a whole due to the lack of knowledge as to proper methods of maternal and infant hygiene; that an information and instruction service of broader scope, of a different and more adaptable structure should follow the existing act if the benefits of the existing legislation are to be properly preserved, and if the women and children of our country are to be shielded from needless suffering, disease, and death.

The VICE PRESIDENT. Without objection, the request of the Senator from Texas is granted.

The letter and summary referred to are as follows:

NATIONAL LEAGUE OF WOMEN VOTERS,
Washington, D. C., April 10, 1928.

Hon. MORRIS SHEPPARD,
United States Senate, Washington, D. C.

MY DEAR SENATOR SHEPPARD: It is a very great pleasure to send you this brief summary of reports on the maternal and infant hygiene work which has been carried on in the States under the legislation which bears your name. The reports were made to the League of Women Voters by the American Child Health Association and the Maternity Center Association.

At the same time I wish I might send you the records we have in our office of the careful examination which has been made by State and local leagues in an effort to evaluate the activities carried on under the act in every community. I regret that the reports cover too many pages to make that feasible. They record intelligent appreciation of the work which has been begun and no less intelligent conviction that it should continue.

The accumulation of such evidence increases the gratitude of the League of Women Voters for your advocacy of the original act and your support of the measure which extended the period for which the appropriation was authorized.

When the Federal assistance available under the act is withdrawn and a new situation with familiar needs must be met, I trust that new legislation may be proposed which will offer the same hope of widespread usefulness which the Sheppard-Towner Act has demonstrated.

Sincerely yours,

BELLE SHERWIN, *President.*

APRIL 7, 1928.

A brief summary of reports made to the National League of Women Voters by the American Child Health Association and the Maternity Center Association on the subject of the work carried on under the maternal and infant hygiene (Sheppard-Towner) act

A FOREWORD

When, by the action of the Senate on January 13, 1927, the maternity and infancy act was repealed to take effect June 30, 1929, the League of Women Voters considered it important to review the work which had been undertaken in the States in order to evaluate its accomplishments and to survey the situation with particular regard to needs remaining to be met. The annual reports of the administration of the act had given testimony to the excellence of the programs under way in the States. A striking record of accomplishment was embodied in the evidence presented to the Committee on Interstate and Foreign Commerce of the House of Representatives when it was considering the bill to extend the appropriations for two years beyond the period of the original measure. Indeed, general public opinion in all the 45 States and in Hawaii, which had accepted the benefits of the act indicated that great good was being accomplished and that the purposes of the law were being fulfilled. However, the league wished an appraisal by trained and impartial observers, free from any bias that might be attributed to those officially connected with the administration either in the States or in the Federal Government and adequately equipped to judge the work according to professional standards.

Two organizations agreed to undertake the inquiry—the American Child Health Association and the Maternity Center Association—private agencies of distinguished reputation with experience in the special field of public health covered by the maternity and infancy act.

After a careful and critical examination of the published reports of the administration of the act the observers selected for special study 14 States which represented different sections of the country and presented variation in the kind of problems offered in organization and in public health. These States were visited by qualified representatives of the organizations named, and from their detailed reports the following review is compiled.

At the beginning it should be understood that much of the material in the reports can not be included in this brief summary. Almost every State's report is accompanied by tabulations giving in detail an analysis of the activities for which the available appropriations have been spent, the number of mothers and children known to have been reached, and the extent to which the territory has been covered.

Comparative statistics are given which show the reduction in the maternal and infant mortality rates for the five-year period during which funds under the act have been available from the rates recorded for the five years preceding.

Actual reports from nurses in the field are attached, letters from beneficiaries of the act, and from interested citizens.

From the mass of material collected the reviewer finds certain characteristics and conclusions outstanding. Only a few typical activities and results can be cited.

THE REVIEW

No investigator can attempt to appraise the work carried on in the States under the maternity and infancy act without comparing the present situation with that which existed before the Sheppard-Towner law was passed. The original problem remains with us. We still have in this country, as we did in 1922, a need for such service as the act affords and an opportunity to use it unequalled anywhere else in the world. As one of the agents stated:

"In the United States there are 3,026,789 square miles of territory. In some of this territory there are whole communities in which there is not one made road, and many homes are well nigh inaccessible.

"There are wide stretches of territory where there are no doctors.

"There are 1,800 counties in which there is no public-health nurse.

"At any given time there are 2,500,000 expectant mothers distributed over this vast territory. These women are of all races of the globe, many of them living in a climate and under conditions that are new and strange.

"Thousands of these women are forced to depend upon untrained midwives, their husbands, or neighbors for care when their babies are born."

In these conditions may be found an explanation of the unnecessarily high maternal and infant death rate in this country.

It is still true, as the same observer reported, that all that can be done by private and public agencies, State and national alike, is only a drop in the bucket compared to the possibilities of helpfulness if education could be made available to all the mothers of this country.

The real difference between the situation to-day and that one which existed before the act is that the conditions, tragic as they are, have been acknowledged. For a little more than five years, efforts have been made on a nation-wide scale to remedy them. It is fair to inquire whether the experience of those years gives any hope of a changed situation in the future.

The time has been exceedingly short. In only a few States had both maternal and infant hygiene work preceded national action. In the great majority work was initiated after receiving the encouragement of Federal approval and the assurance of Federal funds. Even in the States where some previous activities had existed greater development was immediately possible and is recorded. The States selected for study are of both types. For example, South Dakota had no child-hygiene work before the Sheppard-Towner Act was passed, and Pennsylvania had undertaken a State program in 1918, which was greatly increased and developed when Federal action came.

In South Dakota the legislature has appropriated more than $24,000 annually since the act was accepted, and every part of the State has been reached, all but two counties having held children's clinics, some of them annually.

To quote the report of that State's work: "Two full-time county health departments were established after the Sheppard-Towner Act was accepted and in return for the funds received carried a definite program of maternity and infancy work the year round with special county wide schedules of clinics during the summer. Permanent health centers were estabilshed at the county seats where regular clinics were held * * *."

This admirable tendency to encourage the administration in local units seems to be characteristic of all of the States visited. In Utah, for example, the observer reports that permanent health centers have been widely organized, and that there are six full-time

county departments carrying on maternal and infant hygiene work in cooperation with the State Board of Health through its division of child hygiene. In Pennsylvania the development of local child health centers is most marked. Of these more than 240 are now entirely self supporting but continue to report to the Division of Child Health of the State Department of Health, and are aided by printed regulations, advice, the distribution of literature, and other services from that source. The State staff often assists in organizing the local centers. In addition to these purely local centers there are in Pennsylvania almost 200 centers maintained wholly or in part by State and Sheppard-Towner funds with State nurses in charge and local physicians making examinations. The report states that last year 37 new permanent centers were organized on request from localities. The assumption of responsibility by local communities is evidence that Federal action has not discouraged or inhibited local action, but rather has increased it.

This common feature of all the reports is heartening. There are other features which are mentioned in practically every one. Naturally many of the types of work are alike. Apparently every State sends out, on request, a regular series of prenatal letters to expectant mothers, as well as letters and pamphlets on the subject of infant care. When births are registered it is apparently a general custom for some State publication on infant care to go to the mother. All the States studied have held conferences in isolated communities, and conducted clinics much alike in organization and method. Of these clinics, one observer writes:

"Most of the clinics were conducted in communities where there were no doctors and in counties where public-health nurses were unknown * * *. When the clinics were first held in the more isolated rural districts the interest and eagerness of the mothers were pathetic. Most of the children had never been examined by a doctor, and the mothers had had no instruction whatever in child care or any other health measures. The large number of children suffering from conditions resulting purely from lack of knowledge, and wholly preventable, was pitiful indeed. The publications on child care offered at the clinics were eagerly accepted * * *."

There are dramatic differences in the work—sharply reminding the reviewer that after all this is still a country of pioneers, whether those pioneers are found in the isolated ranches of the West or in the factory towns of the industrial East. Their special needs have been met with ingenuity.

From Minnesota, for example, comes a record of work undertaken with the Indians there.

"Perhaps the most significant work carried on by the division is that among the Chippewa Indians of Minnesota in the shape of a nursing service by trained Indian nurses. This service was established in the fall of 1923 and only made possible through the use of Sheppard-Towner funds and a grant made by the American Child Health Association, the latter appropriation covering a period of one year and three months.

"The experiment of using Indian nurses to serve their own people has been exceedingly successful. The handicaps of customs and language and ignorance in matters of health are no longer barriers in approaching health problems among the Indians. The confidence of Indian parents in the nursing service is expressed by the Indian agent, who declared that the Indian parents were sending for the nurses and eagerly carrying out their instructions.

"An immediate demand for more Indian nurses followed the inauguration of the Indian public-health nursing service. This demand has resulted in the establishment of a prenursing course in Haskell Institute, the great Indian college in Lawrence, Kans. More than a score of Indian girls are now taking this course, and provision has been made for nurses' training in Anchor Hospital at St. Paul, Minn., where 12 Indian girls are now in training.

"The demonstration of the utility and effectiveness of this service has carried across the borders of the State, and now the great State of Wisconsin has made similar provision for health of its Indian population.

"This grant of money was wisely made for the Chippewas and wisely spent by the Minnesota State Department of Health, and the accumulating results are of vast significance to the people formerly spoken of as a vanishing race."

In the year ending June 30, 1926, 11 child-health conferences for Indian children were conducted by physicians. That is only one of the activities carried on under the Minnesota program. It stands out as a distinguished piece of work in the opinion of the physician who visited the reservation, and who said:

"It is my deliberate judgment that the Minnesota Indian nursing experiment has justified the expenditure of all the Federal aid that has been given to Minnesota."

From the problems presented by those "first Americans," the reviewer of these State reports has his attention sharply drawn to the needs of those who are still very new Americans. A different kind of service is developed, and Sheppard-Towner aid is adjusted to give the help so greatly needed.

In some communities in Pennsylvania a peculiar problem is presented by the foreign-born women who refuse to have their babies delivered by men; consequently midwives are numerous in certain districts. To quote the report:

"Little was done toward the control of midwives before Sheppard-Towner funds were available, but the division of child health was permitted to start its work in a limited area with them in June, 1922, immediately afterward.

"Four counties with a total population of 1,134,750 and large foreign groups were selected for the initial work. * * * Two women physicians serving full time were assigned to the midwifery work in these four counties. An accurate census of licensed midwives and of those who were illegally practising without license was procured and by the successful prosecution of a few of the latter the entire number of the unlicensed was gradually put out of business.

"Regulations for midwives had been adopted by the State board of medical education and licensure but little or no real supervision except in a few counties. Even the licensed midwives were not following the regulations and many unlicensed women were practising. Their equipment was inadequate; they were not registering all births; they were not clean about their own persons and had not been taught proper technique.

"Courses of monthly instruction during nine months of the year were started and attendance was made compulsory in the special counties under the new supervision instituted under the Sheppard-Towner work. By providing many interesting demonstrations for class work it was easy to get much more regular attendance. The routine was established whereby all patients confined by midwives were visited by public-health nurses as nearly as possible within 24 hours after confinement. The Sheppard-Towner doctors have direct and continued oversight of local midwives with the help of the nurses, and of the condition of their persons, homes, and confinement equipment.

"Four counties were originally selected in 1922 for midwife supervision and in 1925 five others were added.

"It is estimated by the chief of the preschool division that there are probably 1,500 midwives in the entire State, but only those of nine counties are under well-defined supervision.

"The work with midwives has been of immense value and, although only a comparatively small part of the State's area has been covered, the majority of midwives are to be found in that area under supervision."

A milk survey in four cities of one State, resulting in a new and adequate milk ordinance in two of the cities is mentioned, a diphtheria-immunization campaign in another. A picture is given of varying needs, the great difference in standards of public health, and the wisdom which States have shown in differentiating their work to meet local conditions.

From one State a report is made of a traveling health car:

"With the help of the Sheppard-Towner funds the preschool division during the summer of 1925 operated a health car, an auto truck comfortably fitted out for traveling and fully equipped to do the child-health conferences. The staff of the car consisted of two doctors, two nurses, two oral hygienists, and a chauffeur. In 1927 a second car was procured. These cars, virtually traveling health units, visit the large sparsely populated areas of the State where conditions make the establishment of centers impracticable.

"During 1925 and 1926 the health car visited eight counties and the staff examined 8,611 preschool children."

In Wisconsin a similar plan is reported:

"In 1921 the child-welfare special, a motorized truck manned by a pediatrist, a trained public-health nurse, and a driver, was placed in the rural sections for the purpose of holding conferences for the expectant mother and children up to six years of age. The work was undertaken as an educative measure only and is still being so carried on under conjoint use of State and Federal funds. It has been in the field every summer since that time, covering each county in the State, visiting crossroads and small towns with stops of from one to two days, and spending more than a week in each county.

"Twenty-one thousand eight hundred and forty-one preschool children and infants have been examined to date, and 292 prenatal cases have been seen. In the return visits being made this year, the cases seen previously show from 50 to 75 per cent of improvements, either in hygienic living, better diets, care of decayed teeth, or removal of diseased tonsils.

"As an immediate result of this work, permanent conferences were established in four groups of four counties each * * *. Of these original 16 counties 13 are now carrying on some type of permanent health work."

To the record, then, of lectures, demonstrations, clinics, letters, and bulletins is added this final and dramatic effort to bring to the most isolated mother and her baby information and advice which may mean saving their lives. And while the statistics of the work accomplished are impressive, the reviewer of these reports is constantly reminded that this "rate" of which we speak is no impersonal percentage. It means mothers and babies dying—and needlessly—all too often.

In addition to the direct results of the program mention is made in every State of certain by-products, sometimes intangible, sometimes quite specific.

Increased public interest in the subject of maternal and infant welfare is mentioned in every report, evidenced by increasing demand for speeches and services, a larger number of private agencies in the field, and better general understanding of the work.

In Texas the establishment of a nursery school at the University of Texas is cited as a direct result of interest aroused by the Sheppard-Towner Act. The establishment of a prenursing course in Haskell Institute, the great Indian school in Kansas, as a result of Sheppard-Towner work in Minnesota has already been mentioned.

These are only cited as examples. But they are important.

In general, it is significant that every State shows a much greater service in child health work than in maternal health work. It is the easier problem to deal with. Public opinion has been educated to recognize the fact that many infant deaths are preventable and the anxious mother seeks the best information when she knows it is available.

Expectant mothers write for advice about their own condition, too, and thousands of letters and printed instructions have gone to them. That is the service which reaches the greatest number of these mothers.

Physicians, especially in country districts, have added their requests as the following letter from a Wisconsin doctor shows:

"I would appreciate receiving a supply of your prenatal literature as I have a number of obstetrical cases scheduled and know these pamphlets would be greatly appreciated."

States and communities that have learned that babies need not die, must learn that mothers need not. To quote again from the conclusions appended to the Maternity Center report—

"We know from individual hospital reports, from the private work of obstetricians, and from the work of the Maternity Center Association (2,000 live babies born with no maternal death) that adequate maternity care reduces the maternal death rate and improves the health of the mothers who do not die.

"We know that we can not have adequate care for every mother until we teach the mothers and fathers what adequate maternity care is and why it is necessary. To do this, two half truths must be uprooted from the minds of the people. First, that the suffering and death attendant upon child bearing are the will of God and to be expected. This idea must give place to the realization of how much of this suffering and death is preventable by adequate care and of how much less suffering and death occur in the practice of our good obstetricians than in the country at large. * * * Whether or not the public will continue to be satisfied with inadequate care depends entirely upon whether public opinion recognizes adequate care and understands why it is necessary."

Much has been done—many mothers have been reached. In Indiana alone a total of 800 classes for expectant mothers had been held up to June 30, 1927, and every county in the State had been reached. But letters, pamphlets, lectures, clinics, and conferences must be multiplied many times before this country will have made a beginning toward reaching those more than 2,000,000 expectant mothers and giving them all the information and advice that is available to only a small group now. The reports from each State indicate that the work has only begun.

In appraising the work, therefore, the emphasis should be placed on the methods established and their efficiency in meeting local conditions. The time is yet too short to see any appreciable effect on the national death rate concern for which prompted national action. Sadly enough, even the most earnest efforts can not materially affect the national death rate in five years' time.

Yet it is fair to inquire whether there is a lower trend. There will always be fluctuations in maternal and infant death rates. The object of maternal and infant hygiene work should be to make them fluctuate around a new and lower level. That much seems to have been accomplished. In 1922 the records show that for every 1,000 live births 76 babies died before reaching the age of 1 year. In 1926 only 73 babies died out of every 1,000. Provisional figures for 1927 indicate that a still lower rate may be expected.

For example, Indiana's provisional figures now available show a rate of 59 for 1927 as compared with a rate of 72.4 in 1926. Michigan's provisional figures show a rate of 69 for 1927 as compared with a rate of 77.2 in 1926. New York City has the lowest infant mortality rate in its history. Preliminary State figures from South Carolina and Montana indicate substantially lower infant and maternal mortality rates.

These figures indicate that the baby-saving campaign is actually saving babies.

Figures from the whole birth registration area show that the maternal death rate for the whole country was in 1926 (the last official record) about the same as the rate in 1922, when Sheppard-Towner funds were first available. In the same period, however, the rate of deaths for mothers in rural sections has gone down. The fact that there is no general reduction is due to a corresponding increase in the death rate of mothers in cities. In view of the fact that practically all of the work carried on under Sheppard-Towner funds has been in country districts, it is fair to assume that some of that reduction may be due to this campaign. In the States whose work is reported in these studies it was undoubtedly a factor. Every one shows a lowered rate. The conferences in those isolated counties, the traveling health cars, and the thousands of letters reaching the most remote communities—all these have helped.

But it is not enough. More communities must be shown by demonstration what a reasonable standard of care for mothers and their babies should be. The simple and effective methods of education which experience has shown to be sound must be made available through a far greater number of centers and conferences. The death rate of women in child birth can be lowered. The death rate of infants can be reduced. That much the Sheppard-Towner Act has shown. It has proven that we know the methods by which it can be accomplished. That this country should fail to respond to the need and the opportunity is unthinkable.

Therefore the reviewer's question is—what next? What new kind of legislation will best meet the present need? A reader of these reports would be content to leave the answer to those whose courage and wisdom sponsored the present act. If the challenge of the new situation is met with the same intelligence and vision the year 1929 will see the termination of a triumphant experiment and the inauguration of new efforts to carry out the determination of this Nation that mothers and babies shall not needlessly die.

ROADWAY THROUGH WEST POINT, N. Y.

Mr. COPELAND. Mr. President, during the summer a good many Senators will go through West Point, N. Y. I hope they will take note of the fact that in order to drive through that place it is necessary to go a very roundabout route, due to the fact that the road through the reservation is closed. I speak of it because of the protest of many citizens of my State who feel that a highway which has been there since the beginning of American time should not be closed. I hope that the Committee on Military Affairs will take note of the situation and help the citizens of New York to arrange with the military authorities so that there may be built there through that reservation a highway. The State of New York stands ready to furnish all the money and bear all the expense of such a highway, and for the convenience of the citizens of the country it should be accomplished.

IOWA TRIBE OF INDIANS

Mr. LA FOLLETTE. Mr. President, I am advised that the Senator from Wyoming [Mr. WARREN] withdraws his objection to Calender 1320. I ask unanimous consent to revert to that number.

Mr. FESS. Mr. President, I regret that I can not consent.

Mr. LA FOLLETTE. Very well.

COMMUNITY MAIL BOXES

The bill (H. R. 12605) to enable the Postmaster General to purchase and erect community mail boxes on rural routes and to rent compartments of such boxes to patrons of rural delivery, was announced as next in order.

Mr. KING. Mr. President, I would like an explanation.

Mr. MOSES. Mr. President, this is merely an authorization to the Postmaster General to provide uniform boxes where there are a great number of patrons on rural routes who receive their mail at a given point, in order to avoid the unsightly spectacle which we now have of many boxes of different types and sizes on several posts which clutter up the landscape by the roadside. The bill provides for compartment boxes in which space will be rented, but only for those who wish to make use of it.

Mr. KING. Mr. President, I want to ask the Senator whether, under the present rule, as I understand it, those living in the country provide their own receptacles for mail?

Mr. MOSES. Yes.

Mr. KING. Is it intended that the Federal Government shall provide receptacles for them?

Mr. MOSES. Oh, no. It provided that they shall be compartment boxes where a great number of patrons receive their mail at the same point along the route, and those compartments will be rented just as boxes in post offices are now rented.

Mr. KING. Erected by the Government?

Mr. MOSES. Oh, yes; set up by the Government just as post-office boxes in post offices now are.

Mr. KING. Does not entering upon this policy mean an enormous expense on the part of the Government?

Mr. MOSES. No. The feeling of the Post Office Department is that it will be quite as profitable as post-office boxes in post offices now are.

Mr. KING. If it is supported by the committee, I shall not object.

Mr. BAYARD. Mr. President, what right will the Post Office Department have to set up its poles and boxes on the public highway, over which it has no jurisdiction?

Mr. MOSES. Because the patrons are the abutting owners who wish to use the boxes and will grant the easement of whatever is necessary.

Mr. BAYARD. That has all been arranged for?

Mr. MOSES. Oh, yes.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill and it was read, as follows:

Be it enacted, etc., That under such regulations as he may provide the Postmaster General be, and he is hereby, authorized to purchase community boxes with separate compartments for incoming and outgoing mail and to erect and maintain such community boxes and suitable sheltered racks or stands for rural mail boxes, in such selected localities as he may determine. The units of said boxes and space in said racks or stands shall be rented at their option to patrons of the Rural Delivery Service at such monthly or annual rates as the Postmaster General shall determine, based on the cost of installation and maintenance. The cost of such installation and maintenance of said community boxes and sheltered stands, not exceeding $2,000 per annum, shall hereafter be paid from the appropriation for rural delivery.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

EXPENSES CONNECTED WITH INVESTIGATION OF SUGAR PURCHASES

Mr. BRATTON submitted the following resolution (S. Res. 261), which was read:

Resolved, That the special committee of the Senate appointed pursuant to Senate Resolution 214 be, and it hereby is, authorized to use and expend so much as said committee may deem necessay of the money appropriated from the contingent fund of the Senate by Senate Resolution 214 and by Senate Resolution 234 to carry out the provisions of Senate Resolution 255, said expenditures to be made in conformity with the terms of said Senate Resolutions 214 and 234.

Mr. SMOOT. Mr. President, I would like to have the Senator advise the Senate what the resolution refers to.

Mr. BRATTON. I shall be glad to do that. The resolution, S. Res. 214, was introduced by the Senator from Arkansas [Mr. CARAWAY] to appoint a committee of five Members of the Senate to investigate presidential campaign expenditures. Soon afterwards some question arose as to the sufficiency of that resolution and the Senator from Arkansas introduced a supplemental resolution. An appropriation was authorized.

On yesterday the Senate adopted a resolution offered by the Senator from South Carolina [Mr. BLEASE] directing the same committee to conduct an additional investigation, but that resolution appropriated no money with which the committee would be able to carry on the additional inquiry. The resolution now submitted simply authorizes the committee to use such part of the money already appropriated as the committee may deem necessary to carry out the additional resolution adopted yesterday.

Mr. SMOOT. No additional appropriation is asked, but an authorization is made providing that money heretofore appropriated may be used for another purpose?

Mr. BRATTON. That is correct.

Mr. SMOOT. I have no objection.

The resolution was agreed to.

PAYMENT OF MOTOR VEHICLE SERVICE EMPLOYEES

The bill (H. R. 8728) to authorize the Postmaster General to give motor-vehicle service employees credit for actual time served on a basis of 1 year for each 306 days of 8 hours served as substitute was considered as in Committee of the Whole and was read, as follows:

Be it enacted, etc., That section 11 of the act entitled "An act reclassifying the salaries of postmasters and employees of the Postal Service, readjusting their salaries and compensation on an equitable basis, increasing postal rates to provide for such readjustment, and for other purposes," approved February 28, 1925 (43 Stat. L. 1064, U. S. C., title 39, sec. 104), is amended by adding thereto the following:

"Substitute clerks, substitute garage-men drivers, substitute driver-mechanics, and substitute general mechanics, when appointed regular clerks, garage-men drivers, driver-mechanics, or general mechanics in the motor-vehicle service, shall be given credit for the actual time served as a substitute on the basis of one year for each 306 days of 8 hours, and shall be appointed to the grade to which such clerk, garage-man driver, driver-mechanic, or general mechanic, would have progressed had his original appointment as a substitute been made to grade one. Substitute service shall be computed from the date of original appointment as a regular classified substitute, and the salaries of the employees shall be fixed accordingly upon the date of their advancement to a regular position under the act of February 28, 1925, and thereafter."

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

CLAIMS OF POSTMASTERS

The bill (H. R. 325) repealing existing law requiring the Postmaster General to report action taken on claims of postmasters was considered as in Committee of the Whole, and was read, as follows:

Be it enacted, etc., That section 2 of the "act to amend the act approved May 9, 1888, as amended by the act of June 11, 1896," approved January 21, 1914, which requires the Postmaster General to make an annual report to Congress of his action on claims of postmasters for loss by burglary, fire, or other unavoidable casualty, is hereby repealed.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

PROMOTION OF MECHANICS' HELPERS

The bill (H. R. 7354) to allow the Postmaster General to promote mechanics' helpers to the first grade of special mechanics was considered as in Committee of the Whole and was read, as follows:

Be is enacted, etc., That the third paragraph of section 6 of the act entitled "An act reclassifying the salaries of postmasters and employees of the Postal Service, readjusting their salaries and compensation on an equitable basis, increasing postal rates to provide for such readjustment, and for other purposes," approved February 28, 1925 (43 Stat. L. 1060, U. S. Code, title 39, sec. 116, par. 2), is amended to read as follows:

"Mechanics' helpers employed in the motor-vehicle service shall receive a salary of $1,600 per annum: *Provided*, That on and after the passage of the salary reclassification act of February 28, 1925, and upon the presentation of satisfactory evidence of their qualifications after one year's service, mechanics' helpers may be promoted to the first grade of general mechanics or special mechanics, as vacancies occur."

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

EASEMENT TO CITY OF LEOMINSTER, MASS.

The bill (H. R. 12354) to grant to the city of Leominster, Mass., an easement over certain Government property was considered as in Committee of the Whole and was read, as follows:

Be it enacted, etc., That the Secretary of the Treasury is authorized and directed to grant to the city of Leominster, Mass., for the purpose of widening the street in front of the Federal building in such city, an easement over the tract of land situated at the northerly corner of Merriam Avenue and Main Street, bounded and described as follows: Beginning at the intersection of the northwesterly line of Main Street and the northeasterly line of Merriam Avenue; thence by the northwesterly line of said Main Street north 44° east 192.07 feet to granite monument at the land now or formerly of the heirs of Andrew Whitney; thence by land of said heirs of Andrew Whitney, making an included angle of 90° and bearing north 46° west 4.25 feet to land of grantee; thence by land of said grantee, making an included angle of 90° and bearing south 45° west 162.48 feet; thence tangent to the last-described line on a curve to the right with a radius of 33.07 feet a distance of 48.73 feet to a point in the northeasterly line of said Merriam Avenue; the tangent distance of this last-described curve is 30 feet and the central angle of the curve is 84° 26′; thence by said northeasterly line of Merriam Avenue tangent to the last-described curve and bearing south 51° 34′ east 34.27 feet to the point of beginning. This last-described line makes an included angle with the first-described line of 95° 34′. Such easement shall continue so long as the land shall be used exclusively for street purposes.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

MUSCLE SHOALS—PROHIBITION

Mr. BLEASE. Mr. President, I ask unanimous consent to have printed in the RECORD an article from the Nashville Banner relating to the Tennessee robbery and an article entitled "Some factors in the prohibition conflict," by Bishop James Cannon, jr.

The VICE PRESIDENT. Without objection, it is so ordered.

The articles are as follows:

[From the Nashville Banner, May 26, 1928]

M'KELLAR FIGHTS TENNESSEE ROBBERY

No more gallant, courageous, able fight was ever made on the floor of the United States Senate in defense of the rights of the several States than that led by Senator MCKELLAR on Friday, when over his almost prostrate form the Senate, confirming what had been done in

the House, ruthlessly robbed and plundered Tennessee of natural resources having an undoubted value in excess of $100,000,000. Throughout most of the day Thursday and throughout the whole of the long hours of Thursday night, and in a four-hour speech Friday, McKELLAR battled as bravely for the sovereign and property rights of Tennessee as Andrew Jackson fought for the preservation of the rights of the whole United States at New Orleans.

Tennessee's senior Senator earned for himself by his courage and by his loyalty to Tennessee and its rights the gratitude of the great people he so well served. He was ably supported by his colleague, Senator TYSON, who likewise deserves the unqualified commendation of his people. HULL, BYRNS, GARRETT, DAVIS, BROWNING, ESLICK, and other Members of the House delegation fought with equal determination and faithfulness in the House of Representatives against the outrageous robbery which Congress has perpetrated upon this State and its people. Our Senators and Representatives "fought a good fight; they have kept the faith."

A combination between a group of national lawmakers who were determined to trample the rights of this State under their feet, and a corrupt Fertilizer Trust, which was equally determined to continue its robbery of the farmers of the Southern States, inflicted on Tennessee a grievous wrong, and deliberately stole under the fraudulent guise of law, more than $100,000,000 worth of property which belongs to Tennesseeans. Te constitutional rights of this State were treated with disdain and contempt. The pleadings of our Senators were spurned and ignored. The authority of our State government was invaded and violated. The property of our people was deliberately stolen.

In addition to these wrongs done to Tennessee and Tennesseeans, the Fertilizer Trust was powerful enough, when acting in cooperation with the Federal usurpationists in Congress, to strike from the Morin bill the provision for the manufacture of cheap fertilizer for the farmers of this and other Southern States, but to retain in the bill a provision for the manufacture of cheap ingredients, the result of which is to increase tremendously the exorbitant profits which this merciless, selfish combination of wealth was already exacting from the farmers of the South. In plain English, two robbers joined hands and by their united efforts were strong enough to plunder Tennessee and rob the agricultural interests of the South at the same time.

In an effort to legalize this robbery, a deliberate falsehood was written into the face of the statute for the specific purpose of preventing the State of Tennessee from showing the real facts in a judicial proceeding. When the sponsors of the Morin bill wrote into the face of that vicious piece of legislation the statement that its purpose was the improvement of navigation and the control of floods, they knew and Tennesseeans knew that such a statement was deliberately false. They knew then that the purpose of the bill was to seize arbitrarily and without warrant of moral or legal right a hundred million dollars' worth of Tennessee property.

If United States Senators and Representatives in Congress are willing to practice legislative perjury and thereby commit wholesale governmental robbery, they should stop the investigation of other thieves. If the great Federal Government is going into the business of stealing from States, it can not, in good conscience, complain when individuals like Fall and Sinclair and Doheny steal from the Federal Government. It is no worse for Sinclair and Doheny to defraud the Federal Government and steal from it Teapot Dome oil resources worth $100,000,000 than it is for the Federal Government to defraud and steal from Tennessee Cove Creek water-power resources worth the same amount.

Stealing is stealing, whether perpetrated by the Federal Government against a State or perpetrated by an individual against the Government, and whether the subject matter of the theft consists of the oil resources of the Federal Government or the water-power resources of Tennessee. This is putting it no stronger than a southern Senator expressed it on the floor of the United States Senate, in the presence of Senators, when he characterized the provisions in the Morin bill which would plunder Tennessee of Cove Creek water-power site as "plain common stealing."

Another fraud in the Morin bill is the false pretense that it was necessary to rob Tennessee of Cove Creek in order to produce sufficient water power at Muscle Shoals for the manufacture of fertilizer. This fraud was completely revealed when, in the closing days of the consideration of the bill, the provision for the manufacture of fertilizer was eliminated as a result of the corrupt combination between Federal usurpationists and the Fertilizer Trust, and yet, at the same time, the Cove Creek provision was left in the bill, although it had been put in the bill in the first instance on the grounds that it was necessary to increase the water power at Muscle Shoals for the manufacture of fertilizer.

Farmers of the South have been woefully deceived in the operation of Muscle Shoals finally provided for in the Morin bill. For years they have been told that this great natural resource belonging to the people would be used for the manufacture of cheap fertilizer to help relieve the distressing condition of the agricultural interests of the South. When the time for final action came, the Morin bill was framed and formed so as to protect the Fertilizer Trust and increase its profits instead of protecting the farmers and reducing the cost of fertilizer.

Tennesseeans have done all that could be done to prevent the outrage which Congress has perpetuated. The bill now goes to the President of the United States. It is believed, and certainly is devoutly hoped, that President Coolidge will veto this iniquitous steal from Tennessee, this unwarranted invasion of the sovereignty of this State. The people of the United States have been greatly heartened in the past by strong, clear utterances of the President advocating the scrupulous preservation of the rights of the several States of the Union. The people of Tennessee and the South, as well as the people of other sections, applauded the utterances of the Chief Executive when he solemnly warned against the tendency to centralize all authority in the Federal Government at Washington. We believe now that he will come to the rescue of this State when its rights, resources, and revenues have been violated, plundered, and confiscated, and that by the use of the Executive veto he will prevent this monumental wrong, this piece of legalized larceny.

Tennessee is asking nothing for this State which it does not grant to every other State in the Union. In fact, if the Morin bill had attempted to do to each State in the Union what it does to Tennessee it would have been fought by practically the solid delegation from every State in the Union, just as it has been fought by the delegation from Tennessee. Representative MORIN, who was willing to rob Tennessee and invade our constitutional domain, would have felt his State outraged and would have bitterly resented and strongly resisted a similar attempt to rob Pennsylvania of its resources, plunder it of its property, confiscate its revenues, and violate its sovereignty.

The Banner very earnestly hopes and believes that the Morin bill will be vetoed by President Coolidge. It does not believe that the President of the United States will permit Congress to rob the State over the protest of its Representatives and its people when that same Congress would not perpetrate this plundering if it applied to the States represented by all the Members. The Banner believes that the President of the United States will regard Tennessee's rights as being as sacred and as certain as the rights of any other State, or all other States, and that he will not permit a thing to be done to this State which Congress itself would not attempt to do to all States, and which the President would not want done to his State.

Regardless of what the final outcome may be, Tennesseeans are ready to say to our Senators and Representatives in Congress who made this great fight for their State, "Well done, thou good and faithful servants."

SOME FACTORS IN THE PROHIBITION CONFLICT

By Bishop James Cannon, jr.

An address delivered at the anniversary of the Board of Temperance, Prohibition, and Public Morals, in Convention Hall, Kansas City, Mo., on Monday evening, May 14

In the time allotted to me may I say that at this critical hour, when there are many jangling voices and unusual efforts by politicians to becloud the issue, it is vital that all true friends of prohibition should think clearly and speak to each other with entire frankness for the good of the common cause. In this spirit I shall mention four factors in the prohibition contest.

First. The first fact of which I will speak briefly but plainly—and I believe without prejudice or sectarian bias—is that there was published in the secular press on January 2, 1928, a quotation which has not been denied from the Osservatore Romano, the official organ of the Vatican, an editorial stating that "The attempt to enforce prohibition in America had become so useless, not to say dangerous, that it would be better to abolish it, especially since unbridled passion is always more rampant as soon as there is an attempt to enforce complete abstinence."

This attack upon the national prohibition law of the United States by the Vatican organ is in full agreement with the drastic, open criticisms of the law by the cardinal archbishops of Boston and New York and other Roman Catholic dignitaries.

While I rejoice to know personally Roman Catholic priests and laymen who are genuine, earnest advocates of prohibition, yet we must in this conflict fairly face the indisputable fact that the highest officials of the Roman Church who have spoken have placed themselves on record as opposed to the prohibition law.

I concede the right of the Pope, of cardinals, of archbishops, and other Roman Catholics to declare their attitude as freely and as fully as Methodist general or annual conferences, bishops, ministers, or laymen upon this, the greatest economic, social, and moral question before the United States, indeed, before the world to-day. Nor would I even intimate that these Roman Catholic leaders are not entirely sincere in their opposition to the prohibition law. But it is of great importance that we clearly recognize that these outstanding leaders of Romanism are directly opposed to the attitude, not only of Methodism but to the overwhelming majority of Protestant leadership in the United States on this question of prohibition, and that these Roman Catholic leaders do favor the abolition of what we hold firmly to be a salutary, beneficent law.

It is not surprising therefore, indeed it is to be expected that this position of high dignitaries of the Roman Church will be reflected in the attitude of many loyal sons of Romanism who are members of legislatures, Members of Congress (it is a fact that the attacks upon the prohibition law come principally from men who are Roman Catholics

or who represent Roman Catholic centers like Boston, Baltimore, New Orleans, and New York, including eastern New Jersey), and who hold other official positions high and low, and certainly it is only to be expected that this same opposition to prohibition will continue to be reflected by many loyal sons of Romanism who might be elected to public office this year or later on. Certainly Gov. Alfred E. Smith, who is prominently spoken of for President, is likely to be tremendously influenced by the views of the Pope and the Romish cardinals on the subject of prohibition, for when he gave an official reception to Cardinal Hayes and visiting cardinals he knelt and, as Governor of New York, kissed the rings of the cardinals, thus emphasizing the idea of the subordination of the state to the Romish Church.

This fact of the attitude of these Roman Catholic leaders is emphasized by me to-night that we may clearly recognize and properly estimate the strength of all the forces opposed to the prohibition law, so that we may not be surprised or discouraged but that we may press steadily, unwaveringly, unitedly the conflict for the complete abolition of the beverage-liquor traffic as Methodism has done from her earliest history.

SHALL AMERICA ELECT A WET, COCKTAIL PRESIDENT?

Second. I am frank to admit that a man's attitude toward the prohibition amendment, toward the personal use of intoxicants, are not the only important questions to be asked concerning his fitness for the office of President of the United States. But I positively insist that the prohibition question can not be considered apart from the broader question of loyalty, not only to the letter but to the spirit of the Constitution, as long as the prohibition amendment is a part of that Constitution.

How can those under the law be expected to respect the law if they know that those who are charged by a solemn oath of office, with its administration, by their own personal actions show disrespect for that law?

It is true that the prohibition amendment does not prohibit the use of intoxicating liquors for beverage purposes, but it is the natural, logical, necessary consequence of the prohibition law that within a comparatively short time the legal use of intoxicants will be absolutely eliminated, for as the manufacture is forbidden and the importation is forbidden there can not be any lawful increase in the amount of intoxicants which are legally in the possession of various and sundry persons throughout the country. It is generally believed that there are comparatively few persons who laid in such large supplies of intoxicants before the prohibition law became effective as to enable them to gratify their own appetites and the appetites of their friends for many years. There doubtless are some law-abiding citizens who to-day still use no intoxicants except those which are legally possessed by themselves or their friends, but that number is so exceedingly small that it is declared by the newspapers that nearly all the social drinking is accompanied by the pertinent query: "Who is your bootlegger?"

Can any law-abiding American citizen to-day want any man to be elected as President who not only does not believe in the principle of prohibition which has been written into the Constitution, but who, although he will be compelled in taking the oath of office as President to swear to uphold the Constitution of the United States, yet will continue to indulge his appetite for strong drink, and in the indulgence of that appetite would of necessity be compelled to transport a stock of intoxicants from his private residence to the White House, or be compelled to indulge his appetite by visiting regularly his friends in Washington who might possibly have stocked their cellars with intoxicants before the prohibition amendment became effective, or would be obliged to purchase such intoxicants from persons whom he would know to be violating the Constitution which he as President has solemnly sworn to uphold?

What an interesting public document for future generations to read would be the application of the President of the United States for a permit from the Prohibition Department to move from his residence to the White House, the Executive Mansion of the United States Government, an itemized list of the number of bottles, casks, barrels, and containers of every kind or description of intoxicating liquors, the manufacture, sale, and transportation of which are prohibited by the Constitution of the country said applicant has sworn to uphold!

Would not any nation which should elect such a cocktail President to uphold the Constitution, to uphold the laws pertaining to prohibition, be properly the amazement, the ridicule, indeed the contempt of the other nations of the world? What justification could be offered for such a course? On what ground could it be successfully contended that a coocktail President should be elected for dry America? The only basis for such a contention would be that political party loyalty, the desire for partisan victory, is more important than moral, conscientious conviction. It has been printed in reputable journals and has not been denied that one of the most prominent candidates for the Presidency drinks from four to eight highballs or cocktails daily.

Are there other candidates who do likewise?

Third. Up to the present time we have been able to keep the prohibition question out of the realm of purely partisan politics. Both wet and dry leaders have been found in both political parties. The Republican Party has its Nicholas Murray Butler, Edge, Wadsworth, Longworth, Tinkham, etc., and also its Volstead, Cramton, Kenyon, Curtis, Borah, etc.

The Democratic Party has its Pomerene, Bruce, Reed, Ritchie, Smith, etc., and it also has its Webb, Sheppard, Walsh, Glass, Barkley, Daniels, etc. Neither party up to this present hour can be justly or truthfully branded as either wet or dry, but to-day strenuous efforts are being openly made by groups in both political parties to force the adoption of evasive, meaningless, or positively wet planks in the party platform, or to nominate candidates whose utterances, acts, and record brand him as unsympathetic with or openly hostile to the prohibition law.

It is clear that it is the duty of all advocates of prohibition, Republicans and Democrats, to do everything possible and honorable to secure the adoption of clear-cut, unequivocal enforcement planks and the nomination of dry candidates by the convention of both parties. If such action shall be taken, the prohibition question will be entirely eliminated as a partisan political issue, the campaign of 1928 will be fought out on other issues, and as loyal Republicans and Democrats we would honestly divide and work and vote for our own party nominees.

I will illustrate this matter by reference to the situation in my own Democratic Party, to which my family have belonged since the days of Thomas Jefferson. Hon. Josephus Daniels, a brother Methodist and a friend of many years, whose advocacy of prohibition has been sincere and very effective, gave a statement to the press on May 4, as follows:

"The biggest issue in America to-day is to wrest the Government from the hands of privilege and corruption. The only hope for that end is in a victory for the Democratic Party. I therefore expect to support the nominee of the Houston convention. I expect that convention to declare without equivocation for the sacred enforcement of prohibition and all other laws, and do not believe any man that they nominate can be as indifferent and inefficient in enforcement as Mellon has been under the Harding and Coolidge administrations."

As a Democrat, honestly and earnestly desiring the honorable success of the Democratic Party, I shall be exceedingly glad if the Houston Democratic convention shall take such action as will make it possible to fight the approaching campaign on the issue of "privilege and corruption." This can be made the issue by the Houston convention, and the battle be fought fairly, and as a good Democrat I would hope successfully for the Democratic Party on that issue. But to do this there must be not only a clear-cut platform declaration, pledging the nominees of the party to vigorous, efficient enforcement of the prohibition laws, as Mr. Daniels expects, but this must be followed by the nomination of a candidate to stand on that platform whose utterances, acts, and records shall be as dry as the plank adopted. If, however, the Houston convention should nominate to stand on that dry plank any man whose utterances, acts, or record have branded him as unsympathetic with or as hostile to the prohibition law, any man whose only hope of election is based on the fact that owing to his wet record he will receive votes of enough wet Republicans to secure the electoral votes of enough Northern and Eastern States, which, if combined with the votes of dry Southern States, would elect him to the Presidency, if such dry platform and such wet candidate should be the product of the Houston convention, then the greatest issue of the campaign would not, could not, be "privilege and corruption," as Mr. Daniels and other Democrats, including myself, might desire, but despite all that could be done or said the issue would be, not simply "prohibition," not simply "wet" or "dry," but it would be the maintenance of moral conviction and principle as against desire for partisan, political victory and the spoils of office.

How could the Democratic Party make "privilege and corruption" the great issue in a campaign in which the dry element in the party would be called upon to sell its very soul by agreeing to support and help elect any man whose only hope for election would be that his personal as well as his official record would be so wet that it would secure the votes of wet Republicans in doubtful States. The Scriptures positively forbid the working together of an ox and an ass.

If Mr. Daniels really wants the greatest issue of the campaign to be "privilege and corruption," I beg of him to join in a persistent, unwavering, victorious effort for the adoption of a dry plank and the nomination of a dry candidate to stand on that plank at the Houston Democratic convention.

Such action, if taken by both the Kansas City Republican convention and the Houston Democratic convention, will eliminate absolutely the prohibition question from the campaign, which all friends of prohibition most earnestly desire.

Fourth, and finally, on May 4 this general conference adopted a paper, copy of which was sent me to Nashville by Doctor Cherrington. On May 9 the board of missions of our church, which administers both home and foreign missions with over 70 members, the most representative body of our church except the general conference, adopted the following statement which it was my privilege to present, which was signed also by Bishops DuBoise, Moore, Mouzon, and Boaz.

ACTION OF THE BOARD OF MISSIONS OF THE METHODIST EPISCOPAL CHURCH, SOUTH, ON PROHIBITION

The episcopal address of 1926 declares:

"The industrial, social, educational, moral, and religious forces of the Nation which overthrew the legalized liquor traffic and secured national prohibition must unite in the fight with equal vigor and persistence against the outlawed criminal traffic and the would-be nullifiers of the law.

"This board of missions, representing the work of the Methodist Episcopal Church, South, for the regeneration of the individual and of the entire social order, not only in our country but on every continent, would emphasize to-day this utterance of the Episcopal address. We are not met here to-day as Republicans or Democrats, or in any way as partisans of any political party. We are here as representatives of a part of the moral and religious forces of our country. From the beginning of its history Methodism has recognized the inherent evil of the traffic in intoxicants, and for nearly half a century our own great church has been in the forefront of the battle against the liquor traffic, and there has been no more potent force than Methodism in the adoption of those salutary laws which abolished the crossroads and village barroom, the city saloon, the breweries, and distilleries and branded future traffickers in intoxicating liquors as criminals and outlaws, and also destroyed the strangle hold of the liquor traffic upon town and city councils, State legislature, and other Government officials. It is difficult for our children to realize the strength, the resourcefulness, and the desperation of the defenders of the outlawed traffic, or the intensity of the struggle through the succeeding years.

"This, the largest and most representative of our church boards, faces to-day a situation which demands that it take action, clear unmistakable, as Methodism has always taken at every stage of this great conflict, for before its next meeting that will have occurred, which will greatly affect for good or ill the future effectiveness of the national prohibition law. To be specific, whether we like it or not, the future effectiveness of that law will be tremendously affected by the results of the approaching presidential and congressional campaign. It is a fact patent to every well-informed man that a critical time has been reached in the conflict of the forces of sobriety, temperance, righteousness, and human betterment with the organized, world-wide, debasing, soul-destroying liquor traffic, and the question of the maintenance of the national prohibition law is in our judgment a paramount issue in the presidential and congressional campaign in 1928: Therefore

"*Resolved*, That we urge all friends of sobriety, social betterment, and good government actively to oppose the nomination or election to public office of any candidate who is not positively and openly committed to a policy of vigorous, effective enforcement of the prohibition law by his utterances, acts, and record. The strongest prohibition law enforcement plank would be neutralized, indeed would be practically worthless, if its adoption by any convention should be followed by the nomination by that same convention of candidates whose utterances, acts, or records have branded them as personally hostile to prohibition, or as unwilling to cooperate actively to secure effective law enforcement, or as unappreciative of the comparative importance of this unprecedented effort to promote the general welfare of all the people by the restriction of the hurtful activities of the individual. We believe that the election of such a candidate, with such a record, at this critical stage of prohibition law enforcement would be a staggering blow to the cause of temperance and prohibition, not only in the United States but in every mission field of our church; indeed, throughout the world. It would be claimed and declared to be a repudiation of the eighteenth amendment; it would inevitably be followed by persistent efforts to increase the alcoholic content of beverage liquors and to weaken the enforcement provisions of the prohibition law; it would place in the hands of an unsympathetic and hostile President the appointment of the heads of all departments of the Federal Government, United States district attorneys and marshals, judges of the United States district and circuit courts, and of the United States Supreme Court itself; all ministers, envoys, consuls, and special representatives of our Nation to all the countries of the world. In short, it would immeasurably strengthen the advocates of the age-long common enemy, the liquor traffic, and weaken the hands of the friends of temperance throughout the world, and make far more difficult the work of all those who are trying to bring in the kingdom of our Lord Jesus Christ.

"*Resolved II*, That we regret the attitude of certain elements of society toward the observance of the prohibition law. Their refusal to place the promotion of the general welfare and loyalty to the Constitution and laws of the country above personal desires and appetite has been productive of much law violation and has in some sections of the country taken the form of open defiance and nullification of the prohibition law. Notwithstanding their opposition, the salutary effects of the prohibition law have been demonstrated; by it labor has been increased, social conditions improved, public health benefited, and general morality promoted. The value of the law has been directly in proportion to the effectiveness of the enforcement of the law. Even at its worst, however, prohibition has proved immeasurably better than the former legalized liquor traffic, for that legalized traffic was almost universally lawless and besmirched the social and political life of the country. We regret the inefficient enforcement which for several years characterized the Federal prohibition department and are gratified to note the steady improvement under Dr. J. M. Doran. We heartily approve the passing of the bill to promote more efficient enforcement which is now before Congress with the indorsement of the Government enforcement officials and the leading prohibition organizations. We condemn the effort now being made to return the whole matter of law enforcement to the State government. The liquor traffic is a national evil, and its persistent refusal to respect either State or interstate prohibition laws has proven that it can be controlled only by the full cooperation of both National and State Governments.

"JAMES CANNON, Jr.
"H. M. DUBOSE.
"JOHN M. MOORE.
"E. D. MOUZON.
"H. A. BOAZ."

Mr. Chairman and brethren, our churches may not agree on some minor matters, but in the open warfare against the earthly, the sensual, the devilish, the world, the flesh, and the devil, please God we shall be found whole-heartedly united both to-day and to-morrow to the utter confusion and defeat of the advocates of the liquor traffic, the common enemy of mankind. I shall rejoice to have this evidence of unity of purpose printed in your Daily Christian Advocate, in which has been printed your action of May 4 on the same vital subject.

COLLECTION OF COTTON STATISTICS

The bill (S. 4206) authorizing the Director of the Census to collect and publish certain additional cotton statistics was considered as in Committee of the Whole. The bill had been reported from the Committee on Agriculture and Forestry with an amendment, on page 1, line 7, to strike out "undeveloped or unmatured," so as to make the bill read:

Be it enacted, etc., That in addition to other cotton statistics collected and published by the Director of the Census, the Director of the Census is authorized and directed to collect and publish statistics of (1) the quantity of linters ginned and (2) the quantity of cotton known as "snaps and bollies" ginned, and the amount of each shall be stated under the names of each as designated in (1) and (2) of section 1.

SEC. 2. The Director of the Census shall publish or cause to be published the statistics herein authorized to be collected in such manner and at such times as he may by regulation prescribe; except that the reports containing the statistics specified in (1) and (2) of section 1 of this act shall be separate and distinct from each other and from the reports containing other cotton statistics.

The amendment was agreed to.

The bill was reported to the Senate as amended, and the amendment was concurred in.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

AMOS DAHUFF

The bill (H. R. 8628) for the relief of Amos Dahuff was considered as in Committee of the Whole, and was read, as follows:

Be it enacted, etc., That in the administration of any laws conferring rights, privileges, or benefits upon honorably discharged soldiers, Amos Dahuff, who was captain of Company H, Twelfth Regiment Indiana Volunteer Cavalry, shall hereafter be held and considered to have been discharged honorably from the military service of the United States as of said organization on the 19th day of February, 1865: *Provided*, That no back pay, bounty, pension, or other emolument shall accrue prior to the approval of this act.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

CHALMETTE NATIONAL CEMETERY

The bill (H. R. 11758) authorizing the Secretary of War to grant a right of way for a levee through the Chalmette National Cemetery was considered as in Committee of the Whole and was read, as follows:

Be it enacted, etc., That the Secretary of War is hereby authorized to grant the Lake Borgne Basin levee board, an agency of the State of Louisiana, a right of way through the Chalmette National Cemetery Reservation, St. Bernard Parish, La., in such location as may be designated by him, for the purpose of constructing and maintaining a new levee to replace the existing levee in front of said reservation.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

EASTERN BAND OF CHEROKEE INDIANS

The bill (S. 4488) declaring the purpose of Congress in passing the act of June 2, 1924 (43 Stat. 253), to confer full citizenship upon the Eastern Band of Cherokee Indians, and further declaring that it was not the purpose of Congress in passing the act of June 4, 1924 (43 Stat. 376), to repeal, abridge, or modify the provisions of the former act as to the

citizenship of said Indians, was considered as in Committee of the Whole, and was read, as follows:

Be it enacted, etc., That it was not the purpose of Congress when passing the act of June 4, 1924 (43 Stat. 376), to repeal, amend, modify, or abridge the provisions of the act of June 2, 1924 (43 Stat. 253), entitled "An act to authorize the Secretary of the Interior to issue certificates of citizenship to Indians," which conferred full citizenship upon the Indians composing the Eastern Band of Cherokee Indians, located in the State of North Carolina, and that the citizenship of said Indians be and is hereby confirmed.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

JOINT RESOLUTION AND BILLS PASSED OVER

The joint resolution (S. J. Res. 35) to amend section 3 of the joint resolution entitled "Joint resolution for the purpose of promoting efficiency, for the utilization of the resources and industries of the United States, etc.," approved February 8, 1918, was announced as next in order.

Mr. REED of Pennsylvania. Over.

The VICE PRESIDENT. The joint resolution will be passed over.

The bill (H. R. 10435) providing for the extension of the time limitations under which patents were issued in the case of persons who served in the military or naval forces of the United States during the World War was announced as next in order.

Mr. SMOOT. Over.

The VICE PRESIDENT. The bill will be passed over.

The resolution (H. Con. Res. 41) authorizing the President of the Senate and the Speaker of the House to close the present session of Congress at 5 o'clock p. m. May 29, 1928, was announced as next in order.

Mr. SACKETT. Mr. President, I move that the concurrent resolution be indefinitely postponed.

The VICE PRESIDENT. Without objection, it is so ordered.

The bill (H. R. 9049) to amend section 227 of the Judicial Code was announced as next in order.

Mr. WARREN. Over.

The VICE PRESIDENT. The bill will be passed over.

REGULATION OF FEES AND COSTS

A bill (H. R. 9051) to amend section 1 of the act of February 22, 1875, entitled "An act regulating fees and costs, and for other purposes," was considered as in Committee of the Whole and was read as follows:

Be it enacted, etc., That section 1 of the act of February 22, 1875, entitled "An act regulating fees and costs, and for other purposes," be, and the same hereby is, amended to read as follows:

"That the accounts of United States marshals, except the marshals of the United States courts in China and the Canal Zone, shall be rendered quarterly, under such regulations as may be prescribed by the Attorney General, and transmitted to the Attorney General within 20 days after the close of each quarter. The said account shall be rendered in duplicate, but no signature shall be required on the duplicate vouchers. It shall be the duty of the marshal to retain in his office the duplicate accounts, where they shall be open to public inspection at all times. The accounts of United States commissioners shall be rendered quarterly, in duplicate, under such regulations as may be prescribed by the Attorney General, and transmitted to the clerk of the United States district court for the district in which the commissioner resides, who shall file the duplicate in his office and transmit the original to the Attorney General. The approval of the court as to the accounts of marshals and commissioners shall not be required."

SEC. 2. This act shall take effect on July 1, 1928.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

FRANKLIN B. MORSE

The bill (H. R. 3170) for the relief of Franklin B. Morse was considered as in Committee of the Whole and was read as follows:

Be it enacted, etc., That in the administration of the pension laws or any other laws conferring rights, privileges, or benefits upon persons honorably discharged from the United States Army, Franklin B. Morse shall be held and considered to have been honorably discharged as a private, Troop A, New York Volunteer Cavalry, United States Army, on November 28, 1898: *Provided*, That no bounty, back pay, pension, or allowance shall be held to have accrued prior to the passage of this act.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

THEODORE HERBERT

The bill (H. R. 1533) for the relief of Theodore Herbert was considered as in Committee of the Whole and was read as follows:

Be it enacted, etc., That in the administration of the pension laws, Theodore Herbert shall be held and considered to have been honorably discharged from the military service of the United States in Company B, Ninety-fifth Regiment New York Volunteer Infantry, on the 13th day of July, 1864: *Provided*, That no pension, pay, or bounty shall accrue prior to the passage of this act.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

JOHN M. ANDREWS

The bill (H. R. 3723) for the relief of John M. Andrews was considered as in Committee of the Whole and was read, as follows:

Be it enacted, etc., That in the administration of the compensation laws and laws conferring rights and privileges upon honorably discharged soldiers, sailors, marines, and their widows and dependent relatives, John M. Andrews shall hereafter be held and considered to have been discharged honorably as a private, Company F, Seventh United States Infantry, July 24, 1899; Troop I, Fourth United States Cavalry, August 24, 1906; Three hundred and forty-ninth Infantry, November 15, 1917: *Provided*, That no back pay or allowance of any kind shall be held to have accrued because of the passage of this act.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

LULU LEWIS

The bill (H. R. 12280) for the relief of Lulu Lewis was considered as in Committee of the Whole and was read, as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, and in full settlement against the Government, the sum of $320 to Lulu Lewis (colored), of Cartersville, Ga., for allotments made to her during the World War by her son, Richard Lewis, a soldier of the United States, the checks for which allotments were received by another person, without the knowledge of the said Lula Lewis and cashed by such other person, who received the money paid thereon.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

BOOTH & CO.

The bill (S. 4337) for the relief of Booth & Co. (Inc.), a Delaware corporation, was considered as in Committee of the Whole and was read, as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he hereby is, authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, and in full settlement against the Government to Booth & Co. (Inc.) a Delaware corporation, the sum of $42,856.10 on account of the requisitioning from the said corporation by the United States of section D of Pier 4, Bush Terminal, in New York Harbor, and of the possession and control thereof from May 19, 1918, to and including April 30, 1919.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

LIVESTOCK EXPERIMENT STATION, LEWISBURG, TENN.

The bill (S. 4470) authorizing and directing the Secretary of Agriculture to establish and maintain a dairy and livestock experiment and demonstration station for the South, at or near Lewisburg, Tenn., was announced as next in order.

Mr. McKELLAR. Mr. President, the House has passed an identical bill and it came over to the Senate last night and was referred to the Committee on Agriculture and Forestry. I desire to move that that committee be discharged from the further consideration of the bill and that the House bill be substituted for the Senate bill.

There being no objection, the Senate as in Committee of the Whole proceeded to consider the House bill authorizing and directing the Secretary of Agriculture to establish and maintain a dairy and livestock experiment and demonstration station for the South at or near Lewisburg, Tenn., which was read, as follows:

Be it enacted, etc., That the Secretary of Agriculture is authorized and directed to establish at or near Lewisburg, Tenn., a dairying station for investigations, experiments, and demonstrations in the dairy industry, and the problems pertaining to the development of such industry in the South, and for investigations, demonstrations,

assistance, and service in dairy livestock breeding, growing, and feeding, and dairy products manufacture.

SEC. 2. That there is hereby authorized to be appropriated, out of any money in the Treasury not otherwise appropriated, the sum of $50,000, to carry out the provisions of this act, including the construction of buildings, the acquirement of equipment and apparatus, the purchase of livestock, and the employment of necessary persons; and each fiscal year thereafter necessary appropriations for the maintenance of said station as contemplated by this act: *Provided*, That suitable lands are furnished by the State or other interests.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

The VICE PRESIDENT. Without objection, Senate bill 4470 is indefinitely postponed.

VESSELS OF STANDARD OIL CO. OF NEW JERSEY

The bill (H. R. 8529) authorizing the Court of Claims to hear and determine questions of law involved in the alleged erroneous collection of tonnage taxes in 1920 and 1921 on three vessels operated by the Standard Oil Co. of New Jersey under bare-boat charter from a Danzig corporation was considered as in Committee of the Whole and was read, as follows:

Be it enacted, etc., That the Court of Claims be, and it is hereby, authorized and directed to hear and determine the claim of the Standard Oil Co. of New Jersey, a corporation organized under the laws of the State of New Jersey, for refund of $60,283 alleged to have been erroneously collected in 1920 and 1921 on three vessels belonging to the claimant, being the *Zoppot*, 5,915 tons; the *Gedania*, 5,107 tons; and the *Baltic*, 5,173 tons, under Danzig charter; it being contended by the claimant that the tonnage taxes assessed and collected on the vessels named were not authorized by law.

SEC. 2. The Court of Claims is authorized to make proper order on its conclusions on the questions presented in section 1 of this act: *Provided further*, That such notices of the suits shall be given to the Attorney General of the United States as may be provided by orders of the said court, and it shall be the duty of the Attorney General to cause one of his assistants to appear and defend for the United States.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

GLENS FALLS INSURANCE CO.

The bill (H. R. 9319) for the relief of the Glens Falls Insurance Co., of Glens Falls, N. Y., was considered as in Committee of the Whole, and was read, as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to redeem in favor of the Glens Falls Insurance Co., of Glens Falls, N. Y., three United States certificates of indebtedness, series TJ–1922, issued June 15, 1921, and matured June 15, 1922, serially numbered 5860, 5861, and 2082, of the denomination of $1,000 each, with interest at the rate of 5½ per cent per annum from June 15, 1921, to June 15, 1922, without presentation of the said certificates or the coupons representing interest thereon from June 15, 1921, to June 15, 1922, the certificates having been stolen in a mail robbery: *Provided*, That the said certificates shall not have been previously presented for payment and that no payment shall be made hereunder for any coupons which shall have been previously presented and paid: *Provided further*, That the said Glens Falls Insurance Co. shall first file in the Treasury Department a bond in the penal sum of double the amount of the certificates and the interest payable thereon in such form and with such surety or sureties as may be acceptable to the Secretary of the Treasury, to indemnify and save harmless the United States from any loss on account of the stolen certificates of indebtedness herein described or the coupons belonging thereto.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

HOME INSURANCE CO.

The bill (H. R. 9320) for the relief of the Home Insurance Co., of New York, N. Y., was considered as in Committee of the Whole and was read, as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to redeem in favor of the Home Insurance Co., of New York, N. Y., United States Treasury note, series B–1924, issued September 15, 1921, and matured September 15, 1924, serial No. 17153, in the denomination of $100, with interest at the rate of 5½ per cent per annum from September 15, 1921, to September 15, 1924, with presentation of the said note or the coupons representing interest thereon from September 15, 1921, to September 15, 1924, the note having been stolen in a mail robbery: *Provided*, That the said note shall not have been previously presented for payment and that no payment shall be made hereunder for any coupons which have been previously presented and paid: *Provided further*, That the said Home Insurance Co. shall first file in the Treasury Department a bond in the penal sum of double the amount of the note and the interest payable thereon, in such form and with such surety or sureties as may be acceptable to the Secretary of the Treasury, to indemnify and save harmless the United States from any loss on account of the stolen Treasury note herein described or the coupons belonging thereto.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

PAYMENT TO STATE OF SOUTH CAROLINA

The bill (H. R. 9710) for the relief of the State of South Carolina was considered as in Committee of the Whole, and was read, as follows:

Be it enacted, etc., That notwithstanding the provisions of section 3646, as amended, of the Revised Statutes of the United States, the disbursing clerk of the Department of Agriculture is authorized and directed to issue, without the requirement of an indemnity bond, a duplicate of original check No. 1369652, drawn May 10, 1927, in favor of "State treasurer of South Carolina, Columbia, S. C.," for $2,152.07 and lost, stolen, or miscarried in the mails.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

WALTER D. LOVELL

The bill (H. R. 5944) for the relief of Walter D. Lovell was announced as next in order.

Mr. KING. Over.

Mr. SHIPSTEAD. Mr. President, may I ask who objected to the bill?

The VICE PRESIDENT. The Senator from Utah asked that it go over.

Mr. SHIPSTEAD. I ask the Senator to withhold his objection for a moment.

Mr. KING. Very well.

Mr. SHIPSTEAD. This is to give a contractor certain compensation estimated by the War Industries Board for work that was done under the stress of the war and during the war. The War Industries Board rendered a decision in which they said that in their opinion the contractor was entitled to $3,000. It was, I understand, unanimously reported by the Committee on Claims, whose chairman is here. It also passed the Committee on Claims of the House of Representatives, which, I understand, is a very earnest and conscientious committee, and, I understand, there has been no objection to this sum.

Mr. KING. Mr. President, I perceive by the bill that the claim is based upon the theory that after the contract was entered into there was an increase in the cost of labor. It seems to me that if the Government of the United States is to be held amenable for any changes in the economic and industrial conditions of the country which increase prices or costs, contracts are practically valueless, and every person who makes a contract may come to Congress and ask relief upon the theory that he had to pay more for wages or more for material than he anticipated at the time he entered into the contract.

Mr. LA FOLLETTE. Mr. President, will the Senator from Minnesota yield?

Mr. SHIPSTEAD. I yield.

Mr. LA FOLLETTE. It is constantly iterated and reiterated in the Committee on Commerce that such relief has been given to contractors. I have no information concerning this particular case, but I know there was a bill before that committee recently, sponsored by the Senator from Florida, that involved the same principle. I think he had a statement showing that a great number of contractors have been relieved because of the unusual appreciation, as a result of the World War, in the cost of construction, labor, and other items which went into the contracts.

Mr. KING. My recollection of the matter is that immediately following the war, at a time when there were many contracts not closed and settlements not made, when there were reciprocal claims, the Government claiming something from contractors and contractors claiming from the Government, boards were set up for the purpose of adjudicating those controversies. In those adjudications or adjustments, perhaps, they did take into account conditions somewhat analogous to those which are involved in this case; but to take such action at this late day, it seems to me, would open up every contract entered into by the Government with private parties and subject the Government to demands that might be very unfair.

Mr. SHIPSTEAD. The effect of this bill, if passed, would be only to carry out an adjudication or decision of the War Industries Board.

Mr. FLETCHER. Mr. President, if I may interrupt the Senator from Minnesota, I desire to say that we have passed various acts for the relief of contractors who have had to pay higher costs for material and higher costs for labor on account of war conditions, when the Government changed the rates of transportation and they could not get the material and could

not get the labor and they had to suffer loss or be relieved of their contract, when in some cases they had given bond. We acted in a number of such cases.

Mr. SHIPSTEAD. Mr. President, will the Senator from Utah withdraw his objection to the consideration of the bill?

Mr. KING. In the light of the statement the Senator has made, I withdraw my objection.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill (H. R. 5944) for the relief of Walter D. Lovell, which had been reported from the Committee on Claims with an amendment on page 1, line 6, after the words "sum of," to strike out "$5,048.17" and to insert "$3,548.17," so as to make the bill read:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay to Walter D. Lovell, of Minneapolis, Minn., out of any money in the Treasury not otherwise appropriated, the sum of $3,548.17, in full settlement for extra work, for which the Government has received the benefit and for which no payment has been made, and for losses suffered by reason of action of governmental agencies, by reason of increased cost of labor and materials, and other causes brought about by the late war with Germany, incurred by Walter D. Lovell, under contract for construction work at Rock Island Arsenal, Ill., dated January 19, 1917, with the Chief of Ordnance, War Department, prior to the entrance of the United States into the late war with Germany, and thereafter completed.

The amendment was agreed to.

The bill was reported to the Senate as amended, and the amendment was concurred in.

The amendment was ordered to be engrossed, and the bill to be read a third time.

The bill was read the third time, and passed.

B. C. MILLER

Mr. FESS. I ask unanimous consent that the Committee on the Judiciary be discharged from the further consideration of the bill (H. R. 11859) for the relief of B. C. Miller.

Mr. ROBINSON of Arkansas. Has the bill been considered by the committee?

Mr. FESS. No.

Mr. ROBINSON of Arkansas. I do not think to discharge a committee from the consideration of a bill in this manner is a good practice.

Mr. WARREN. Mr. President, let us have the remainder of the bills on the calendar called.

Mr. FESS. I withdraw the request.

MYRA MADRY

The Senate, as in Committee of the Whole, proceeded to consider the bill (H R 3844) for the relief of Myra Madry, which was read, as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, and in full settlement against the Government, the sum of $500, to compensate Myra Madry, of Florence, Ala., for injuries received and caused by the stamp window of the Federal building in the city of Florence, Ala., falling upon her finger through no fault or negligence of her own.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

STATE OF OHIO

The Senate, as in Committee of the Whole, proceeded to consider the bill (H. R. 12938) for the relief of the State of Ohio, which was read, as follows:

Be it enacted, etc., That the State of Ohio be, and it is hereby, relieved from all responsibility and accountability for certain quartermaster property, to the approximate value of $8,830.64, the property of the War Department, which was lost or destroyed incident to the tornado at Lorain, Ohio, on June 28, 1924, while in the possession of troops of the National Guard, State of Ohio, and the Secretary of War is hereby authorized and directed to terminate all further accountability for said property.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

BILLS PASSED OVER

The bill (S. 4570) to authorize alterations and repairs to certain naval vessels was announced as next in order.

Mr. LA FOLLETTE. I should like an explanation of the bill.

Mr. MOSES. I think that bill was indefinitely postponed.

Mr. HALE. No; Senate bill 4571, being Order of Business 1357, was indefinitely postponed, a similar House bill having passed the two Houses.

Mr. LA FOLLETTE. The Senator from Maine informs me that he has no objection to Senate bill 4570 being passed over.

Mr. HALE. That bill and the next bill now on the calendar, being Order of Business 1358, Senate bill 4572, may be passed over.

The VICE PRESIDENT. The bills will be passed over.

Mr. KING. I desire to make a parliamentary inquiry. What disposition was made of Order of Business 1358, being Senate bill 4572?

Mr. LA FOLLETTE. That bill has been passed over.

FRANK MURRAY

Mr. EDGE. A parliamentary inquiry, Mr. President. What became of Order of Business 1359, being Senate bill 2441, for the relief of Frank Murray?

The VICE PRESIDENT. The Chair is informed that that bill was disposed of earlier in the day.

Mr. LA FOLLETTE. It was indefinitely postponed, being similar to a House bill on the same subject which had been passed in its stead.

The VICE PRESIDENT. The Senator is correct.

THE GREAT FALLS OF THE POTOMAC RIVER

The Senate, as in Committee of the Whole, proceeded to consider the joint resolution (H. J. Res. 307) to preserve for development the potential water power and park facilities of the gorge and Great Falls of the Potomac River which was read, as follows:

Resolved, etc., That, in order to preserve for development, in whatever manner Congress may ultimately find most desirable, the natural resources in water, potential water power, and park and recreational facilities afforded by the falls and gorge of the Potomac River near the National Capital, the Federal Power Commission be and hereby is directed not to issue any permit, preliminary or final, to any private interest for the development of water power in the Potomac River between the mouth of Rock Creek and a point 4 miles upstream from the present intake for the water supply of Washington, until further action of Congress, after consideration of such joint report or separate reports as may be made by the National Capital Park and Planning Commission and the Federal Power Commission as to the best utilization of the said area for the public benefit.

The joint resolution was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

DISCONTINUANCE OF CERTAIN GOVERNMENTAL REPORTS

The bill (H. R. 12064) to discontinue certain reports now required by law to be made to Congress was announced as next in order.

Mr. ROBINSON of Arkansas. Mr. President, I inquire what are the reports to be discontinued?

Mr. SACKETT. There are quite a number of them.

Mr. ROBINSON of Arkansas. This bill is not on the calendar; we have no information regarding it.

Mr. SACKETT. Mr. President, this is a bill that was prepared by the committee of the House on Expenditures of the Executive Departments, due to the fact that there are a large number of reports prepared by the department that are no longer useful and the printing of which is extremely expensive. The bill was carefully prepared and gone over by the Bureau of Efficiency. Every report proposed to be discontinued was referred to the proper department and the department was asked if they had any use for it.

There is also a section under which the committee could reinstate any report that was found to be needed. It is said that the bill will save about $50,000 a year in the printing of reports that are never used and have never been called for.

Mr. ROBINSON of Arkansas. Mr. President, will the Senator yield?

Mr. SACKETT. With pleasure.

Mr. ROBINSON of Arkansas. I observe that the bill has 29 pages. Has the Senator personally investigated the provisions of the bill and checked them to see whether or not the reports to be discontinued are no longer needed?

Mr. SACKETT. Every one of those reports was gone over by the House committee.

Mr. ROBINSON of Arkansas. How does the Senator know what the House committee did?

Mr. SACKETT. Because we have their printed confidential report which was given to us.

Mr. LA FOLLETTE. What is there confidential about it?

Mr. WARREN. Mr. President, it is a bill that originated with the late Representative Madden.

Mr. SMOOT. It is known as the Martin-Madden bill.

Mr. ROBINSON of Arkansas. I have no objection to its consideration.

Mr. SACKETT. It is a very good bill.

Mr. LA FOLLETTE. Mr. President, I am not satisfied. The Senator from Kentucky informs us that the report of the House committee is confidential and it is proposed to do away with the printing of a considerable number of reports. I should like to have some explanation of what is being done.

Mr. ROBINSON of Arkansas. Why was it "confidential" in the first instance?

Mr. SACKETT. It was simply marked "confidential" at the head of the report.

Mr. ROBINSON of Arkansas. I understand that; but why was it confidential?

Mr. SACKETT. There was no reason that I know of, except custom.

Mr. LA FOLLETTE. Mr. President, I object to the consideration of the bill. I do not think any harm will be done if it shall go over until the next session.

The VICE PRESIDENT. Objection is made, and the bill will go over.

THOMAS A. EDISON COMMEMORATIVE MEDAL

Mr. EDGE. Mr. President, the Senator from Wisconsin has just informed me that he is prepared to withdraw his objection to House Joint Resolution 243 providing for the striking of a medal commemorative of the achievements of Thomas A. Edison. I ask unanimous consent to revert to that joint resolution and to have it considered at this time.

Mr. LA FOLLETTE. May I ask the Senator from New Jersey a question?

Mr. EDGE. Certainly.

Mr. LA FOLLETTE. While appearing before the Banking and Currency Committee upon another matter, I was there when certain testimony was presented against the report of this joint resolution, and I desire to ask the Senator from New Jersey whether the committee made a thorough investigation of the evidence and the protest against it, and whether the committee was unanimous in its report?

Mr. EDGE. Mr. President, in answer to the question of the Senator from Wisconsin, I desire to say that the committee heard a lady who asked to be heard and whose contention was that some of the many inventions that have been credited to Mr. Edison's brain partially belonged to some other inventor. The committee heard all the testimony and voted unanimously to report the joint resolution favorably.

Mr. LA FOLLETTE. Upon that statement, I withdraw my objection.

The VICE PRESIDENT. Is there objection to the consideration of the joint resolution?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the joint resolution (H. J. Res. 243) to provide for the striking of a medal commemorative of the achievements of Thomas A. Edison illumining the path of progress through the development and application of inventions that have revolutionized civilization in the last century, which was read, as follows:

Resolved, etc., That in recognition of the achievements of Thomas A. Edison, the Secretary of the Treasury is authorized and directed to cause to be struck and presented to Thomas A. Edison a gold medal with suitable emblems, devices, and inscriptions to be determined by the Secretary of the Treasury. For such purpose there is authorized to be appropriated the sum of $1,000.

The joint resolution was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

EXTENSION OF PATENT TIME LIMITATIONS

Mr. DILL. Mr. President, I ask unanimous consent to return to order of business 1339 being the bill (H. R. 10435) providing for the extension of the time limitations under which patents were issued in the case of persons who served in the military and naval forces of the United States during the World War.

Mr. SMOOT. Mr. President, I ask for the regular order. Under the unanimous-consent agreement we are now to consider the calendar under Rule VIII.

Mr. DILL. I wish to say to the Senator from Utah that this bill passed both the House and the Senate last year and was ready to go to the President, but because of certain objections the bill was withdrawn, Those objections have been remedied by amendment.

Mr. WATSON. Mr. President, I hope the Senator from Utah will accede to the request of the Senator from Washington.

Mr. DILL. I hope the Senator will let the bill be passed.

Mr. SMITH. May I ask the Senator from Washington if this is the bill to extend the time limitation in the case of patents held by officers and enlisted men who served the country during the World War?

Mr. DILL. It is, and it is a very desirable and a very fair bill and I think it ought to be passed.

Mr. SMITH. Mr. President——

Mr. WATSON. I can state what the bill is in a minute if I may be allowed to do so.

Mr. SMITH. I merely wish to say that I am a member of the committee which considered the bill; we went over it very carefully, and I think a more meritorious bill never came before this body. It simply extends the limitation as to time on patents of those who served in the military forces during the World War.

Mr. SMOOT. Mr. President, I have not had time carefully to read the bill; but I wish to say that, so far as the Senate is concerned, years ago, long before I became a Member of this body, it was agreed that there should be no extension of patents.

Mr. DILL. The circumstances were different then; there had been no World War.

Mr. SMITH. And the bill relates only to those who served in the war.

Mr. SMOOT. Senator Platt, of Connecticut, as Members of the Senate are aware, was for many years chairman of the Senate Committee on Patents. I followed him as chairman of that committee, and the one thing that he impressed upon me at the time was never to favor measures seeking to extend the time of duration for patents. I understand that this bill does not seek to accomplish what I thought it did when I objected. This bill, as I understand, extends the time only for the period during which the patentee was a soldier and was out of the country or engaged in the war.

Mr. DILL. And it only applies to those who did not receive incomes from their patents or whose incomes were reduced by reason of their service.

Mr. SMOOT. I have no objection to that, but in reading the bill when I objected I thought it provided a general extension of the time limitation as to patents, and, so far as I am concerned, I never will consent to that being done.

Mr. DILL. I have no objection to the Senator's position in that regard, but this bill does not seek to do that.

Mr. SMOOT. No; I so understand.

Mr. WATSON. Mr. President, this bill merely provides that where the holder of a patent was a soldier and went abroad and had begun the development of his patent or had no opportunity to begin its development because of his service the life of the patent shall be extended for the number of years he was away. It does not extend it beyond that, and I hope the Senator will withdraw his objection.

Mr. SMOOT. I have no objection to the bill at all, now that I understand it.

The VICE PRESIDENT. Is there objection to the present consideration of the bill?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill, which was read, as follows:

Be it enacted, etc., That any person who served honorably in the military or naval forces of the United States at any time between April 6, 1917, and November 11, 1918, both dates inclusive, and was subsequently honorably discharged, may within six months after the enactment of this act, upon payment of a fee of $20, make application to the Commissioner of Patents, comprising a verified statement, accompanied by supporting evidence of the following facts:

(A) That he is the inventor or discoverer of an invention or discovery for which a specified patent was granted prior to the 11th day of November, 1918, the original term of which remains unexpired at the time of the filing of the application.

(B) That between April 6, 1917, and November 11, 1918, and also at the time of the passage of this act, he held, by ownership or contract, a right in said invention or under said patent or to income by way of royalty or otherwise therefrom, whereby an extension of the term of said patent would benefit him.

(C) That between April 6, 1917, and July 2, 1921, he was not receiving from said patent an income, or that his income therefrom was reduced by his said service.

(D) That at the time of his induction into the service he was making diligent effort to exploit the invention covered by his patent.

(E) The names of all persons, firms, or corporations, if any, holding at the time of the passage of this act, by grant, transfer, license, or contract from him, any right or interest in the invention or discovery or under the patent, and their consent to the extension for which application is made, which shall be supported by an instrument or instruments, executed by all such persons, firms, and corporations, evidencing their consent to such extension,

(F) The period of extension of the patent from the expiration of the original term thereof, for which he applies, which shall in no case exceed a further term of three times the length of his said service in the military or naval forces of the United States between the dates of April 6, 1917, and July 2, 1921, but exclusive of any reenlistment subsequent to November 11, 1918.

(G) That the licensee of a patent affected by this act shall automatically be granted an extension of said license for the period of the extension on the same terms and conditions as contained in said existing license, thereby creating an equitable adjustment of the benefits of this act.

(H) That such extension shall in no way impair the right of anyone who before the passage of this act was bona fide in possession of any rights in patents or applications for patents conflicting with the rights in any patents extended under this act, nor shall any extension granted under this act impair the right of anyone who was lawfully manufacturing before the passage of this act the invention covered by the extended patent.

SEC. 2. In the case of a veteran, as described in paragraph 1 of this act, who dies, or has died, or who becomes insane or unable to act, which veteran owned an interest as described in this act in said patent at the time of his death or at the time he was declared mentally incompetent or became unable to act before said extension is granted, such application may be filed or proceeded with by his legal representatives substantially as provided in section 4896 of the Revised Statutes of the United States (U. S. C., title 35, sec. 46), as amended, with respect to proceedings in such cases for obtaining a patent.

SEC. 3. On the filing of such application the Commissioner of Patents shall cause an examination thereof to be made, and if, on such examination, it shall appear that such application conforms, or by amendment or supplement is made to conform, to the requirements of section 1 of this act, the commissioner shall cause notice of such application to be published at least once in the Official Gazette. Any person who believes that he would be injured by such extension may within 45 days from such publication oppose the same on the ground that any of the statements of the application for extension required by section 1 of this act is not true in fact, which said notice of opposition shall be verified before an officer authorized by the laws of any State or Territory or the District of Columbia to administer oaths. In all cases where notice of opposition is filed the Commissioner of Patents shall notify the applicant for extension thereof and set a day of hearing. If after such hearing the Commissioner of Patents is of the opinion that such extension should not be granted, he may deny the application therefor, stating in writing his reasons for such denial. Where an extension is refused the applicant therefor shall have the same remedy by appeal from the decision of the commissioner as is now provided by law where an application for patent is refused. If no opposition to the grant of the extension is filed, or if, after opposition is filed, it shall be decided that the applicant is entitled to the extension asked for, the Commissioner of Patents shall issue a certificate that the term of said patent is extended for the additional period for which application has been made as aforesaid, and shall cause notice of such extension to be published in the Official Gazette and marked upon copies of the patent for sale by the Patent Office, in such manner as the commissioner may determine.

SEC. 4. Thereupon said patent shall have the same force and effect in law as though it had been originally granted for 17 years plus the term of such extension: *Provided, however,* That in any action, at law or in equity, for infringement after the expiration of 17 years from the grant of the patent and during the period of such extension, the defendant may plead the general issue, and having given notice in writing to the plaintiff or his attorney 30 days before, may prove on trial that any of the statements of the application for extension required by section 1 of this act is not true in fact; and if any one or more of such statements shall be found untrue in fact, judgment shall be rendered for the defendant, with costs: *Provided further,* That no person whose patent shall be extended under the provisions of this act shall be permitted to make any claim for damages against the United States for the period of the extension, and the rights of the United States shall remain in all respects as if these patents had not been extended.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

STATE BANK & TRUST CO., OF FAYETTEVILLE, TENN.

Mr. McKELLAR. Mr. President, the Senator from Utah [Mr. SMOOT] having withdrawn his objection, I ask unanimous consent to return to Order of Business No. 1086, being House bill 5894.

Mr. SMOOT. Mr. President, I am not going to object to the request of the Senator from Tennessee, but I am going to ask for the regular order under the unanimous-consent agreement in order that we may go through the calendar.

Mr. McKELLAR. We have finished the calendar.

Mr. SMOOT. The unanimous-consent agreement provided for more than that.

Mr. McKELLAR. Will not the Senator let the bill be considered?

Mr. SMOOT. I have told the Senator that I was not going to object to this bill, but I am going to insist hereafter upon the regular order, according to the unanimous-consent agreement. That agreement was that we should go through the calendar and consider the bills to which there was no objection, and after that had been done then we would return to the beginning of the calendar and consider bills under Rule VIII.

The VICE PRESIDENT. The Senator is correct. The regular order before the Senate is the calendar under Rule VIII.

Mr. MOSES. Under the unanimous-consent agreement if a Senator asks for unanimous consent to recur to the consideration of a bill which has been passed over on the calendar, that is in order.

Mr. McKELLAR. I ask unanimous consent to return to House bill 5894, and that is in order.

Mr. PHIPPS. Reserving the right to object, I want to call attention to the fact, as I understand from the report on this bill, that the bank shipped bonds by registered mail and merely paid the registry fee, and now makes a claim for the total worth of the bonds.

Mr. McKELLAR. I hope the Senator will not object to the bill.

Mr. PHIPPS. I am sorry, but I will have to object.

The VICE PRESIDENT. Objection is made. The calendar under Rule VIII is in order.

Mr. BARKLEY. I ask that the Chair lay before the Senate House bill 13406, just messaged over from the House.

Mr. MOSES. That is not in order yet.

Mr. SMOOT. I call for the regular order.

The VICE PRESIDENT. The regular order is demanded.

DISCONTINUANCE OF CERTAIN GOVERNMENTAL REPORTS

Mr. SACKETT. Mr. President, I ask unanimous consent to recur to House bill 12064, which was the last bill called on the calendar.

Mr. SMOOT. I ask for the regular order.

The VICE PRESIDENT. The regular order is demanded. The calendar under Rule VIII is in order.

Mr. PITTMAN. Mr. President, a parliamentary inquiry.

The VICE PRESIDENT. The Senator from Nevada will state it.

Mr. PITTMAN. There have been several references to the terms of the unanimous-consent agreement. Under the unanimous-consent agreement the unfinished business was temporarily laid aside. Do I understand that if a bill is taken up by motion under Rule VIII it is not subject to the agreement that we had?

The VICE PRESIDENT. It does not affect the status of the unfinished business.

Mr. PITTMAN. In other words, calling for the regular order at any time will reinstate the unfinished business?

The VICE PRESIDENT. That is correct.

Mr. MOSES. No; not until the unanimous-consent agreement has been carried out.

Mr. SWANSON. Mr. President, I understood that the unanimous-consent agreement was that we should take up unobjected bills on the calendar, and such bills as were messaged over and on the desk of the Presiding Officer from the House, and that nothing should be considered except by unanimous consent.

Mr. MOSES. That is the calendar under Rule VIII.

Mr. GEORGE. It also included reports of committees.

Mr. SWANSON. Mr. President, as I understand, the Senator from Kentucky has a bill which, under the unanimous-consent agreement, is now on the Presiding Officer's desk. Under the unanimous-consent agreement he is entitled to have it laid before the Senate before we take up other matters.

The VICE PRESIDENT. The Senator is correct.

Mr. MOSES. But, in addition to that, Mr. President, the senior Senator from Kentucky, under the second provision of the unanimous-consent agreement, which was to go through the calendar for unobjected bills, now has the right to recur to the bill referred to by him.

The VICE PRESIDENT. The Chair understood that objection was made.

Mr. MOSES. The objection was withdrawn.

Mr. SACKETT. The objection was made because we had started on the calendar under Rule VIII; but we have not yet called the first bill.

Mr. SWANSON. I insist that what has come over from the House is entitled to be laid before the Senate.

Mr. SMOOT. Yes; that is true.

The VICE PRESIDENT. A request for unanimous consent is in order. What is the request?

Mr. SACKETT. To recur to House bill 12064.

The VICE PRESIDENT. The Senator from Kentucky asks unanimous consent to recur to House bill 12064.

Mr. LA FOLLETTE. Mr. President, I withdraw my objection upon the statement of the Senator from New Hampshire, the chairman of the Joint Committee on Printing, that the reports referred to in this House bill are merely typewritten reports.

The VICE PRESIDENT. The objection is withdrawn.

The Senate, as in Committee of the Whole, proceeded to consider the bill (H. R 12064) to discontinue certain reports now required by law to be made to Congress, which had been reported from the Committee on Expenditures in the Executive Departments, with amendments.

The amendments were, on page 28, line 12, after the word "Departments," to insert "of the House of Representatives," and in line 14, after the word "thereof," to insert "or upon request of the Committee on Expenditures in the Executive Departments of the Senate, or any five members thereof," so as to make the section read:

SEC. 2. Every executive department and independent establishment of the Government shall, upon request of the Committee on Expenditures in the Executive Departments of the House of Representatives, or of any seven members thereof, or upon request of the Committee on Expenditures in the Executive Departments of the Senate, or any five members thereof, furnish any information requested of it relating to any matter within the jurisdiction of said committee.

The amendments were agreed to.

The bill was reported to the Senate as amended, and the amendments were concurred in.

The amendments were ordered to be engrossed, and the bill to be read a third time.

The bill was read the third time, and passed.

FORT THOMAS AVENUE, FORT THOMAS, KY.

The VICE PRESIDENT laid before the Senate a bill from the House of Representatives (H. R. 13406) to authorize the city of Fort Thomas, Ky., to widen, improve, reconstruct, and resurface Fort Thomas Avenue and to assess the cost thereof against the United States according to front feet of military reservation abutting thereon, and authorizing an appropriation therefor, which was read the first time by its title, and the second time at length, as follows:

Be it enacted, etc., That the authorities of the city of Fort Thomas, Ky., are hereby authorized to widen, improve, reconstruct, and resurface Fort Thomas Avenue with concrete curbing and paving, including sidewalks, under the supervision and subject to the approval of the Secretary of War, and are authorized to assess and apportion the cost thereof against the United States according to the number of front and abutting feet of ground of the United States military reservation in the same proportion and to the same extent that the cost is assessed and apportioned against other owners of private property fronting and abutting on said street, and the sum of $11,000 is hereby authorized to be appropriated out of any money in the Treasury not otherwise appropriated to pay for said improvements abutting approximately 1,500 feet on said street when the same are completed, and same to be paid on approval of the Secretary of War.

The VICE PRESIDENT. The Chair calls the attention of the Senator from Kentucky to this bill.

Mr. REED of Pennsylvania. Has the bill been referred to the committee?

Mr. BARKLEY. I will say to the Senator from Pennsylvania that it has just been messaged over.

Mr. SMOOT. Has the Senate passed a similar bill?

Mr. BARKLEY. No, sir. This is a bill that the War Department has asked for. The Secretary recommends it. The Director of the Budget recommends it. They are engaged in improving a street in the city of Fort Thomas, and the street runs by the military reservation, and in order that the improvements may be made, this bill must be passed. Otherwise, the improvement will be delayed another year.

Mr. REED of Pennsylvania. Mr. President, I have looked into this bill; and while it seems to have the approval of the department and the Budget, and to be entirely meritorious in every way, I do not think I ought to fail to say that there have been over a hundred bills referred to the Military Affairs Committee in the last two days, and it is obviously impossible to examine into all of them. I have asked other members of the committee not to attempt to poll the committee on these bills; and I do no feel that we ought to give latitude to one Senator that we have refused to all the others.

Mr. SACKETT. Will not the Senator yield in the present case?

Mr. BARKLEY. This is an emergency measure.

Mr. REED of Pennsylvania. I have not objected; but I do not want to discriminate in favor of one Senator as against my other colleagues.

Mr. FESS. Mr. President, a similar request was made by me just awhile ago, and it was objected to because the committee had not reported.

Mr. GLASS. That is not any reason why the Senator from Ohio should object to this bill simply because he can not get his bill through.

Mr. SACKETT. It merely provides for straightening the roadway in front of the reservation.

The VICE PRESIDENT. Is there objection to the request of the Senator from Kentucky?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

H. P. MILLIGAN

The VICE PRESIDENT laid before the Senate the bill from the House of Representatives (H. R. 13440) for the relief of H. P. Milligan, which was read the first time by its title and the second time at length.

Mr. BLAINE. Mr. President, I ask that House bill 13440 be substituted for Senate bill 3866 and that the bill pass. It is before the Senate already.

Mr. REED of Pennsylvania. Mr. President, I object to that bill.

The VICE PRESIDENT. Objection is made, and under Rule XIV the bill will be placed on the calendar.

CAMP CLARK, NEVADA, MO.

Mr. REED of Missouri. I ask that the Vice President lay before the Senate H. R. 12951, just messaged over from the House.

The VICE PRESIDENT laid before the Senate the bill from the House of Representatives (H. R. 12951) providing for the purchase of 640 acres of land, more or less, immediately adjoining Camp Clark, at Nevada, Mo., and authorizing an appropriation therefor, which was read the first time by its title and the second time at length.

The VICE PRESIDENT. Is there objection to the present consideration of the bill?

Mr. FESS. Mr. President, has that measure been referred to a committee?

Mr. REED of Missouri. It has not. It has just been messaged over; and there is an emergency growing out of the fact that the land which is to be acquired is under an option. The bill is for the purpose of enlarging this military camp; and unless advantage is taken of it the option may expire, and may be lost.

Mr. FESS. I would not object to it, Mr. President——

Mr. REED of Missouri. Please do not.

Mr. FESS (continuing). But a moment ago a similar measure was laid before the Senate that had been messaged over from the House, and it was objected to. If we are going to do it in one case, let us do it in every case.

Mr. REED of Missouri. I did not object to the Senator's bill, and I am not going to. This option will expire.

Mr. FESS. I am not going to object.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

JAMES M. LONG

Mr. GEORGE. Mr. President, there was sent over from the House a few days ago House bill 7236, a claim bill. It was sent to the Claims Committee; and with the knowledge of the chairman and other members of that committee I ask that it be laid before the Senate.

The VICE PRESIDENT laid before the Senate the bill from the House of Representatives (H. R. 7236) for the relief of James M. Long, which was read the first time by its title and the second time at length, as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to James M. Long the sum of $2,500, in full compensation for damages suffered by reason of being unlawfully assaulted and shot, whereby he was seriously and permanently injured and maimed for life by a member or members of a party of law violators when acting as an officer of Hall County and the State of Georgia, and then and there in the legal discharge of his duty as such an officer, in attempting to arrest one Andrew Jackson Hays, who was then and there a deserter of the United States Army.

Mr. FESS. Mr. President, I desire to be heard upon this matter for just a moment.

Mr. Miller, of Cleveland, Ohio, was a clerk in the northern district of the State; and as such he was appointed by the court to act as a special master to take testimony in a disputed case. There was placed in a bank at Cleveland $525 in payment of this service. Two years afterward, before the payment was made, a law was passed forbidding any officer of a court acting in such capacity. The Comptroller General here gave a decision that this man could not, therefore, be paid, although the service had been rendered two years before, and the money is in the bank.

A measure has been presented in the House and unanimously passed, and messaged over here, permitting the money now in the bank to be paid, so that the order is not retroactive; and I ask that that bill be considered.

The VICE PRESIDENT. Is there objection to the consideration of House bill 7236?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

ENROLLED BILLS PRESENTED

Mr. GREENE, from the Committee on Enrolled Bills, reported that to-day they presented to the President of the United States the following enrolled bills:

S. 1191. An act to amend an act of March 3, 1885, entitled "An act providing for allotment of lands in severalty to the Indians residing upon the Umatilla Reservation, in the State of Oregon, and granting patents therefor, and for other purposes";

S. 1989. An act to amend the third paragraph of section 13 of the Federal reserve act;

S. 2660. An act to amend an act entitled "An act to provide for the examination and registration of architects and to regulate the practice of architecture in the District of Columbia," approved December 13, 1924, and for other purposes;

S. 3097. An act for the relief of the State of North Carolina;

S. 3361. An act authorizing the Secretary of the Interior to convey to the city of Hot Springs, Ark., all of lot No. 3 in block No. 115 in the city of Hot Springs, Ark.;

S. 3694. An act regulating juvenile insurance by fraternal beneficial associations in the District of Columbia;

S. 3917. An act for the relief of the State of Florida;

S. 4035. An act authorizing conveyance to the city of Hartford, Conn., of title to site and building of the present Federal building in that city;

S. 4124. An act to provide for notice to owners of land assessed for benefits by the verdict of condemnation juries in the District of Columbia, and for other purposes;

S. 4135. An act to conserve the water resources and to encourage reforestation of the watersheds of Los Angeles County by the withdrawal of certain public lands included within the Angeles National Forest from location and entry under the mining laws;

S. 4148. An act authorizing and directing the Secretary of War to grant certain land to the city of St. Paul, State of Minnesota;

S. 4203. An act authorizing J. H. Haley, his heirs, legal representatives, and assigns, to construct, maintain, and operate a bridge across the Missouri River near a point where Olive Street Road, St. Louis County, Mo., if extended west, would intersect the Missouri River;

S. 4346. An act to authorize an appropriation for the purchase of certain privately owned lands within the Fort Apache Indian Reservation, Ariz.; and

S. 4487. An act authorizing the Uvalda Booster Club, its successors and assigns, to construct, maintain, and operate a bridge across the Altamaha River at or near Towns Bluff Ferry, connecting Montgomery and Jeff Davis Counties, Ga.

UNITED STATES YORKTOWN SESQUICENTENNIAL COMMISSION

The VICE PRESIDENT, under the provisions of House Concurrent Resolution 43, appointed as the committee on the part of the Senate the Senator from Virginia [Mr. SWANSON], the Senator from Pennsylvania [Mr. REED], the Senator from New Jersey [Mr. EDGE], the Senator from Connecticut [Mr. BINGHAM], and the Senator from New York [Mr. WAGNER].

WILLIAM H. CHAMBLISS

Mr. HEFLIN. I ask unanimous consent to put in the RECORD an affidavit from William H. Chambliss, addressed to the chairman of the Shipping Board, and other statements in connection therewith.

The VICE PRESIDENT. Without objection, it will be so ordered.

The matter referred to is as follows:

AFFIDAVIT

Mr. T. V. O'CONNOR,
Chairman (or whosoever may be acting),
United States Shipping Board, Washington, D. C.

SIR: I protest against your board's, and against your own action as chairman, permitting Commissioner W. S. Benson to sever his connections with the Shipping Board until he shall have undone the terrible injustice and injury that he did to me, to the detriment of my good name as an officer, a gentleman, and a father, when he, W. S. Benson, chairman of the Shipping Board, in the year of our Lord 1920, affixed his honored name to that wickedly untrue and unnecessary and malicoous "resolution" of "the board" on the 8th of July, 1920, which said "resolution" as shown by its very wording was written to injure me and at the same time defeat my lawful efforts to punish one Arminius T. Haeberli for insulting the American flag on the American-built and American-owned steamship *Lake Elkwood* in the foreign port of Rio de Janeiro, Brazil, on the 13th day of November, in the year of our Lord 1919, and in the one hundred and forty-fourth year of the independence of the United States. Haeberli or Haberle—whichever is the right way to spell his un-American name—while acting as "consul" at Rio de Janeiro, on the date last written above, sent a squad of armed men in foreign uniforms carrying loaded muskets and side arms such as foreign soldiers and marines used against the United States in the World War, in an armed power boat from a Brazilian wharf to the gangway of the American steamship *Lake Elkwood,* where the foreign armed boat made fast her lines to the side of the American ship, and the squad of armed foreigners marched from their boat upon the deck of our ship, overpowered me, the American commander and master of our unarmed ship, insulted me and humiliated me in the presence of the executive officer and crew of our ship, and marched me in my full uniform of our American officer from under the American flag and down into their foreign boat alongside, and carried me ashore at the muzzles of their weapons and cast me into a vile foreign jail without a warrant of arrest, but with no higher authority than a verbal request from the above-named Arminius T. Heaberli or Haeverle, who cause these foreigners to do the above things to our flag and to me solely for the purpose of intimidating me and silencing my protests which I was at the time making officially to our American ambassador, Edwin W. Morgan, and also to our President, Woodrow Wilson, against the unlawful and fraudulent acts of this Arminius T. Haeberli.

I had some days before the above occurrences refused to sign some documents that Haeberle and some of his alien aides wanted me to sign, to falsely "justify" Haeberle's and his foreign aides' fraudulent manipulations of our ship's cargo, stores, supplies, and funds.

Haeberle, seeing a well-deserved American prison term for his treachery to the President of the United States looking him squarely in the face, committed the above-mentioned acts of arresting and imprisoning me and insulting our flag in so doing in his mad effort to save himself. And

Commissioner W. S. Benson, as chairman of the Shipping Board, upheld Haeberle's acts, and praised Haeberle very highly in his signed resolution of July 8, 1920, now made public by the United States Senate in an official report in booklet form entitled "Calendar No. 899," on April 20, 1928.

In this booklet, United States Senator HUGO L. BLACK and his 12 brother Senators of the Senate Committee on Claims exposed the whole wicked transactions of Consul Haeberle and his aides, and on page 5 of this booklet published officially the wicked resolution of July 8, 1920, that Chairman W. S. Benson signed to whitewash Arminius T. Haeberle, a diplomatically protected criminal in our American Consular Service.

If ever a man committed fraud—and fraud is synonomous with crime—Haeberle at Rio de Janeiro committed it; and if ever an official shielded a criminal, W. S. Benson shielded and reshielded one in Haeberle; and it matters not even if some person in the Department of State did frighten Benson into acquiescence, Benson, and also later A. D. Lasker, whitewashed Arminius T. Haeberle, who is still in our American Consular Service, perhaps in Germany.

WILLIAM HENRY CHAMBLISS.

Subscribed and sworn to before me this 29th day of May, 1928.
[SEAL.] CHAS. E. ALDEN, *Notary Public.*

My commission expires October 13, 1932.

Copies to: W. S. Benson, A. T. Haeberle, the United States Senate, the Navy Department, the State Department, and the Department of Commerce.

UNITED STATES SENATE,
OFFICE OF THE SECRETARY,
Document Room, May 25, 1928.

MY DEAR SENATOR HEFLIN
AND ALL MEMBERS OF THE SENATE:

I hereby charge that in the Department of State of our United States of America there exists a secret system that I have heard called the blacklist system, and which I know has blacklisted me, Capt. William

H. Chambliss, for revenge for the last eight years because I opposed the wrongdoings of a man named Arminius Haeberle, an acting consul in charge of the American consulate at Rio de Janeiro, in October and November, 1919, in connection with the Latin-American Bureau.

Sworn to and subscribed before me this 26th day of May, 1928.

WILLIAM H. CHAMBLISS,
110 East Capitol Street.

[SEAL.] CHARLES F. PACE,
Notary Public, District of Columbia.

My commission expires February 18, 1931.

BOULDER DAM

Mr. LA FOLLETTE. Mr. President, when the unanimous-consent agreement was entered into, the President pro tempore was in the chair, and the Senator from Wisconsin understood the President pro tempore to state that the unfinished business, the so-called Boulder Dam bill, would be temporarily laid aside for the consideration of certain unanimous-consent orders, and that the unfinished business would not lose its status as the unfinished business, and that at the conclusion of the unanimous-consent orders and before the Senate adjourned the unfinished business would be laid before the Senate.

The VICE PRESIDENT. The Senator is correct. The Chair will lay the Boulder Dam bill before the Senate as the unfinished business at 5.29.

RECEIPTS AND EXPENDITURES

Mr. OVERMAN. Mr. President, it is always the custom after the adjournment of Congress for the Committee on Appropriations to file in the RECORD a financial statement. I ask unanimous consent that the minority may be given the same privilege.

The VICE PRESIDENT. Without objection, it is so ordered.

PRESIDENTIAL APPROVALS

A message from the President of the United States, by Mr. Latta, one of his secretaries, announced that on May 29, 1928, the President approved and signed the following acts:

S. 2519. An act for the relief of Robert W. Miller;

S. 3097. An act for the relief of the State of North Carolina;

S. 3361. An act authorizing the Secretary of the Interior to convey to the city of Hot Springs, Ark., all of lot No. 3 in block No. 115 in the city of Hot Springs, Ark.;

S. 3602. An act to quiet title and possession with respect to certain lands in Faulkner County, Ark.;

S. 3917. An act for the relief of the State of Florida;

S. 4035. An act authorizing conveyance to the city of Hartford, Conn., of title to site and building of the present Federal building in that city;

S. 4135. An act to conserve the water resources and to encourage reforestation of the watersheds of Los Angeles County by the withdrawal of certain public lands included within the Angeles National Forest from location and entry under the mining laws;

S. 4148. An act authorizing and directing the Secretary of War to grant certain land to the city of St. Paul, State of Minnesota;

S. 4203. An act authorizing J. H. Haley, his heirs, legal representatives, and assigns, to construct, maintain, and operate a bridge across the Missouri River at or near a point where Olive Street Road, St. Louis County, Mo., if extended west would intersect the Missouri River;

S. 4309. An act to authorize the Secretary of Commerce to dispose of a certain lighthouse reservation and to acquire certain land for lighthouse purposes;

S. 4346. An act to authorize an appropriation for the purchase of certain privately owned lands within the Fort Apache Indian Reservation, Ariz.; and

S. 4487. An act authorizing the Uvalda Booster Club, its successors and assigns, to construct, maintain, and operate a bridge across the Altamaha River at or near Towns Bluff Ferry, connecting Montgomery and Jeff Davis Counties, Ga.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Haltigan, one of its clerks, announced that the House had passed the bill (S. 3581) authorizing the Commissioners of the District of Columbia to settle claims and suits against the District of Columbia, with amendments, in which it requested the concurrence of the Senate.

The message also announced that the House had agreed to the amendment of the Senate to the bill (H. R. 13930) to authorize an appropriation for the American Group of the Interparliamentary Union.

The message further announced that the House had agreed to the amendments of the Senate to each of the following bills of the House:

H. R. 11463. An act to fix the salaries of certain judges of the Territories and insular possessions of the United States; and

H. R. 12064. An act to discontinue certain reports now required by law to be made to Congress.

ENROLLED BILLS AND JOINT RESOLUTIONS SIGNED

The message also announced that the Speaker had affixed his signature to the following enrolled bills and joint resolutions, and they were signed by the Vice President:

S. 1825. An act to amend section 12 of the act approved June 10, 1922, entitled "An act to readjust the pay and allowances of commissioned and enlisted personnel of the Army, Navy, Marine Corps, Coast Guard, Coast and Geodetic Survey, and Public Health Service," as amended by the act of June 1, 1926 (44 Stat. L. 680), so as to authorize an allowance of 3 cents per mile, in lieu of transportation in kind, for persons using privately owned conveyances while traveling under competent orders;

S. 3919. An act awarding a gold medal to Lincoln Ellsworth;

S. 4183. An act authorizing the filling of a vacancy occurring in the office of district judge for the northern district of Illinois created by the act entitled "An act for the appointment of an additional circuit judge for the fourth judicial circuit, for the appointment of additional district judges for certain districts, providing for an annual conference of certain judges, and for other purposes," approved September 14, 1922;

H. R. 6669. An act fixing the salary of the Public Printer and the Deputy Public Printer;

H. R. 7492. An act for the relief of Capt. Louis C. Brinton;

H. R. 12352. An act to require certain contracts entered into by the Secretary of War, or by officers authorized by him to make them, to be in writing, and for other purposes;

H. R. 12952. An act to amend the act entitled "An act for the relief of contractors and subcontractors for the post offices and other buildings and work under the supervision of the Treasury Department, and for other purposes," approved August 25, 1919, as amended by act of March 6, 1920;

H. R. 13108. An act granting the consent of Congress to the State Highway Commission of Arkansas to construct, maintain, and operate a toll bridge across the White River at or near Newport;

H. R. 13248. An act to authorize an increase in the limit of cost of one fleet submarine;

H. R. 13622. An act to amend and supplement the Code of the Laws of the United States of America;

H. R. 13651. An act granting the consent of Congress to the State of Alabama to construct, maintain, and operate a free highway bridge across the Choctawhatchee River in Dale County on the highway now under construction from Dothan to Enterprise;

H. R. 13996. An act granting the consent of Congress to the board of supervisors of Leake County, Miss., to construct, maintain, and operate a free highway bridge across the Pearl River at or near Edinburg, Leake County, Miss.;

S. J. Res. 161. Joint resolution authorizing the President to invite representatives of foreign governments to attend an international aeronautical conference on civil aeronautics in Washington on December 12, 13, and 14, 1928; and

S. J. Res. 164. Joint resolution to appoint a board of engineers to examine and report upon the dam to be constructed under H. R. 5773, the Boulder Dam bill.

GOLD STAR MOTHERS

Mr. McMASTER. Mr. President, I am going to ask the chairman of the Military Affairs Committee, and the other members of that committee, if they will not consent to a unanimous-consent agreement that the Military Affairs Committee be discharged from further consideration of what is known as the gold star mothers' bill, which permits the gold star mothers of America to visit France, and also to be able to see the graves of their boys whom they lost in the war.

I am sure that nearly every Senator here would vote for that bill; it would take only a few minutes to dispose of it, and I am wondering if the chairman of the Military Affairs Committee will not give his consent.

Mr. REED of Pennsylvania. Mr. President, that bill is in the hands of a subcommittee. Some question as to its constitutionality has been raised, and the subcommittee has asked for an opinion on that. I understood and was assured that the opinion would be in their hands before this time, but it has not been received. There have been many requests for amendments. Gold star fathers claim that they are as much entitled to go as are the gold star mothers. Many of the mothers have represented to the subcommittee that they can not go unless their children are authorized to go with them. I had a deputation visit me the other day saying that the mothers of the men permanently

disabled really suffered more than the mothers of those who were killed, and they want to be included. We have representation from a lady living in California whose son is buried here that she ought to be entitled to a trip to Washington, and she wants to have that provided for in the bill. There is also a very important question as to whether the bill is constitutional.

I might also say that I understand the American Legion opposes the measure and wants to be heard on the subject, claiming that the scheme is an unwise one.

I have formed no opinion myself, and I believe the other members of the committee have, most of them, kept their opinions in suspense, because they wanted to hear both sides. I therefore can not consent to have the committee discharged.

PARTY CONVENTION ADDRESSES AND PLATFORMS

Mr. HARRISON. Mr. President, I ask unanimous consent that there be incorporated in the CONGRESSIONAL RECORD the speeches of the temporary and permanent chairmen, as well as the platforms, of the two major parties.

The VICE PRESIDENT. Without objection, it is so ordered.

ADDRESS OF HON. SIMEON D. FESS, OF OHIO, TEMPORARY CHAIRMAN OF THE REPUBLICAN NATIONAL CONVENTION AT KANSAS CITY, MO., JUNE 12, 1928

NEW ADJUSTMENT—WHY NECESSARY

The primary function of the administration of affairs of Government is to keep open the channels of opportunity for the fullest play of the productive energies of the citizen in the promotion of the general welfare.

The major problem of industry is low cost of production of high-grade goods, manufactured by well-paid labor, and sold at a profit. This formula is the foundation principle of great buying power, the real test of genuine prosperity.

The second problem is that stability which insures normal increase and steady employment to avoid the occurrence and consequent suffering of the cycle in business. The operation of this dictum requires an organization of the economic forces of industry and the cooperation of the producers to hold production within the limits of consumption. The success of this principle is one of the most important movements in modern times.

The third problem is to eliminate all unnecessary waste in production as well as in processing and in distribution. This recent effort among industrial leaders is one of the newest and most important movements in modern industry.

The fourth problem is to secure the maximum utilization of all resources, facilities, machinery, and agencies employed in commerce.

The dislocations of the foregoing principles, due to war, were most serious and economic readjustments most difficult. Numerous utilities had been taken over by the Government, with frightful loss to private initiative and responsibility. Industry was generally paralyzed and labor out of employment. Liquidation of war-time contracts suspended operations and rendered peace-time recovery most serious. Banking became difficult. Interest rates rose high above normal and securities fell far below par. Markets were lost and trade deranged. Hundreds of thousands of farmers experienced the inability to meet the interest on high-priced land with low-priced farm products. They suffered heavy freight charges by railroads seriously crippled by Government operation and from lack of capital for needed improvements.

This business derangement extended to all the basic industries of the country—to agriculture, through destructive inflation, followed by too sudden deflation. Markets were lost and mortgages foreclosed. Transportation, through Government operation, was burdened by padded pay rolls and national agreements forced upon it; economies were ignored, properties deteriorated, financing crippled, and necessary improvements suspended. Manufacturing faced abnormal costs in raw material, overstocked inventories from war expansion, and rapidly falling prices with the return of peace, to be further aggravated by labor troubles. Many manufacturers were confronted with a financial structure which prevented the rebuilding of obsolete plants and the installation of new equipment. Mining in many cases was overexpanded, and experienced serious diminution of consumption, followed by sharp breaks in prices, due to uncertainty of inventories and impossibility of forecasting the future, resulting in many cases in a complete closing down, and in all cases a slowing down. Building construction was at a standstill largely for want of credit, absorbed by Government financing. Capital and labor assumed antagonistic rather than cooperative attitudes. Bitterness was engendered, and industrial war was imminent with inevitable suffering among all classes. Capital went into hiding; enterprise discontinued, labor went out of employment, and a crisis was at hand.

PRESSURE FOR UNSOUND REMEDIES

In such confusion, ready-made remedies were forthcoming. One of the first to be suggested in some quarters and demanded in others was Government control of price levels. Unemployment allowances or Government doles were urged as a stimulus to industry by an alleged increase of buying power of the people. Elaborate programs of public improvement, by Government expenditure, extending to subsidize house building, was urged as a proper stimulus. Proposals were made to lower freight rates without reducing the cost of operation, and require the public to pay the bills by Government subsidy. It was freely alleged that desperate situations called for desperate measures.

Confronted by this situation, the people turned to the Republican Party for leadership, and by an overwhelming majority commissioned the party to undertake the task. The manner in which that commission has been respected is fairly well known. Let the record speak for itself as to the wisdom of the course pursued and the success of its accomplishment.

After the return of peace and the dismantling of the war machine, the problems were new adjustments, both financial and economic. Imminent and compelling was our fiscal situation due to an orgy of extravagance in expenditure incident to the convulsion of war. At such times sound financing is abandoned, fundamentals in industry are uprooted, and economic principles are interrupted if not totally ignored.

A public debt of less than a billion dollars mounted to over $26,000,000,000. An annual interest charge of less than $40,000,000 reached beyond a thousand million. An annual expenditure for Government operation of less than a billion reached a sum in excess of $6,000,000,000, with a staggering burden of taxation with which we are still struggling and must continue to struggle for years to come, notwithstanding four reductions of nearly two billions a year lifted from the taxpayer.

EINANCING MUST BE CORRECTED

The most difficult and immediate financial problem was to correct the war financing which had absorbed the liquid assets of the fiscal agencies, made banking difficult, starved industry for want of capital, paralyzed business enterprise, forced labor out on the streets, and produced an unemployment problem that was soon to test our governmental institutions. The banks had been called upon to carry three billion Government obligations of unfunded or floating debt, due on demand. Our Victory notes in excess of $4,000,000,000 were due May, 1923. Our credit as a Government was sorely impaired. Liberty bonds had depreciated to the low point of 84, at 16 per cent discount. Current expenditures had to be met and were inevitably high. Tax burdens were consequently heavy; revenue doubtful, dependent upon prosperous conditions, which were impossible with industry paralyzed, unable to secure capital, absorbed by Government financing. The manner in which the Treasury met this problem is one of the outstanding achievements of this century, and is a most significant comment upon the great buying power of the American public when confidence in our institutions can be restored.

HOW THE PROBLEM WAS MET

By offering to the American public three billion of unfunded debt carried by the banks in short-term certificates bearing reasonable rates and at convenient maturities, the Treasury transferred in a comparatively short time at a progressive lower rate of interest the entire floating debt, and in this way released to the banks assets which, computed in commercial credit, would amount to at least $7,000,000,000 for the immediate needs of industry.

Banking at once became easier, interest rates lowered, industry revived, and unemployment disappeared. The Treasury followed this plan with the $4,000,000,000 Victory notes, and with equal success had in a comparatively short time refunded at lower rates of interest and at convenient maturities, so as to meet them when due either by retirement or refunding the entire amount.

With this signal success so smoothly achieved that business scarcely was aware it was being done, Government credit immediately appreciated, in due time reached par, and later went to a premium, as shown in the quotations on Liberty bonds.

This success opened the way for refunding the second Liberty loan of three billion eight hundred million, due in 1942. By October of last year the last offering in this stupendous operation was taken as low as 3 per cent, at a very substantial saving to the Government in annual interest. This opened the way to handle the third Liberty loan, due October next. Before that date this same success will certainly be realized.

These financial operations since March 4, 1921, reach the staggering sum of nearly $14,000,000,000 of maturities, so managed as to avoid any business interruptions, and at vast amounts of savings in interest. It is an achievement which challenges

the record of all history and displays a financial position never before reached by any people in the history of the world.

This accomplishment was not the result of accident but rather of management. By the observance of rigid economy, made possible by the enactment of a national budget law and the cooperation of all departments, great progress has been made in the payment of the public debt, at the rate of nearly a billion dollars per year. The debt, which in 1919 was twenty-six and a half billion, is now about $18,000,000,000, with a saving of annual interest of over two hundred millions.

PROGRESS IN ADJUSTING FOREIGN LOANS

We have also made progress in the adjustment of the foreign loans, which with interest up to 1922 amounted to over $12,000,000,000. All the countries save France have either already adjusted the terms of payment or are ready to do so. This places the public debt in a more satisfactory situation, and will be paid off at the present rate in about 30 years. Our tax-reduction legislation has been as rapid as the situation would permit. We cut from the tax bill eight hundred and thirty-five million in 1922, an additional four hundred million in 1924, an additional three hundred and eighty-seven million in 1926, and last month another two hundred and twenty-five million, totaling a saving of nearly $2,000,000,000. Through exemptions we have relieved over 2,000,000 citizens from payment of any income taxes whatever. This achievement was made possible only on the sound economic policy of the Government under the present leadership and was not at the expense of efficiency in administration nor at the loss of any needed appropriation.

The financial readjustment from war-time confusion was in part dependent upon economic readjustment. Rich natural resources were here awaiting further development. Abundant capital was here awaiting a chance for investment. Agriculture was here awaiting markets. Labor was here awaiting employment. Transportation facilities were here awaiting traffic. Business management was here awaiting opportunity. The need of better housing with available building materials was here awaiting a constructive building program.

HOW ADMINISTRATION MET THE PROBLEM OF INDUSTRY

The one commanding necessity at the close of the war was an administration with a policy to coordinate all these elements of material value in the production of wealth, a policy that would insure the maximum ability and responsibility in management and the minimum loss of initiative and ambition in labor.

These problems were subjects of conferences soon after Republicans took full control. The best leadership in every branch of industry was enlisted to mobilize and coordinate all America in a campaign of "work and save" to lift the Nation from the mire of economic prostration upon a plane of a standard of living never before experienced in the history of the world. This leadership sought to realize the maximum efficiency in both management and labor as applied to production and to secure a more equitable distribution of the fruits of effort with the wholesome results of the most cordial relationship between labor and capital yet enjoyed in our country. Under that leadership we have reached the highest wage scale known in history, a principle which is maintained as sound economically, in that by increasing the output per unit we decrease the cost without lowering wages and thereby increase the buying power of the public. This principle in practice demonstrates the formula of modern industry—low cost of production of high-grade goods made by well-paid labor and sold at a profit. Under this new law of production 10 per cent less labor produces 25 per cent more product.

To-day we are in the longest period of sustained business prosperity in our history. To continue it free from the cycle of business depression is the prime concern of leadership in industry. In no field is there a better example of that prosperity than in house building conducted under the leadership of the better-homes movement in cooperation with the Commerce Department, which has enlisted the sympathetic efforts of dominant units in every community, resulting in a period of eight years in the construction of at least 3,000,000 homes, entailing an annual investment of $4,000,000,000, or a total of over $30,000,000,000 in residence building alone in city and country. These homes are generally equipped with modern conveniences unknown in the Old World, and only a few years ago would have been luxuries for the few Americans who could afford them. There are over three times the number of home owners among our laboring classes than can be found in all classes of citizens in the next greatest country of the world. In these homes live American citizens who consume 50 per cent more food, use ten times the number of telephones, twelve times as much electricity, thirty times as many automobiles, and in a similar ratio all modern conveniences of life as can be found in the same number of homes in Great Britain. From these homes go one-third more children to school, and nearly ten times as many go to college as in the next greatest nation of the earth.

In addition to this scale of expenditure in maintaining the American standard of living, the savings deposits in savings banks and loan associations amount to seven times the total capital of all the national banks, all the State banks, and trust companies combined. It is this situation that has bewildered the peoples of other lands, as expressed in the reports of various foreign commissions. It is this situation which has caused the millions of the Old World to seek our shores, and made it necessary for us to adopt increasingly restrictive measures on immigration.

With the very best wishes for the welfare of all peoples of all other countries, the time is here when America must maintain rigid control as to who shall and who shall not come to our shores. The recent statutes on that subject will stand as a type of the most constructive legislation of this or any other administration.

The ambition of Republican leadership and policy is the open door to the maximum utilization of all our people of whatever class or race, profession or calling, to promote self-reliance and in the degree humanly possible to banish poverty from our midst.

Industries of quick turnover and fewer units yield more readily to management and regulation than industries of slow turnover and many units, such as agriculture. Price in the former can be stabilized more easily than in the latter. Through regulation of production within the demands of consumption, on the one hand, and organization of labor, on the other, price is stabilized on a high level. If the same principles could be applied to agriculture, the farmer's problem of surplus would not disturb him.

AGRICULTURE—HOW ADMINISTRATION HAS DEALT WITH IT

The problem of agriculture from the producer's standpoint is a more equitable distribution of what the consumer of food has to pay. The farmer's complaint is not that the consumer does not pay enough, but of what he pays the producer does not get his rightful share. The immediate problem is greater producer control over the products of his toil. His need is a seller's market to give him a voice in what he is to receive instead of subjecting him to the whims of an unregulated, and not infrequently, a speculative market where he is left to take whatever the buyer might be willing to give. To be substantial and effective, the machinery of this control must be farmer owned, farmer organized, and farmer operated, rather than operated by a bureau from Washington. Sound relief will avoid artificial stimulus such as Government price fixing or Government buying and selling. Such remedies will but defer the day of reckoning. All relief measures to be of permanent value must be constructive and grounded in economic principles underlying production and consumption. The solution is primarily economic, not political. It is more individual and collective than governmental. Whatever aid the Government may give, the remedy lies most largely with the farmer himself, acting in unison with his associates to control his products. It is a matter of management rather than legal enactment, save in constructive legislation enabling the farmer to better handle his product, to better determine a market.

The vital concern of Republican policy is to establish and maintain a high standard of living among all classes of our population. The ruling ambition of Republican leadership is to insure the maximum prosperity of all our people, and especially of those employed in agriculture and industry.

THE FARMER'S INTEREST IN GENERAL PROSPERITY OF THE COUNTRY

Next to raising his crop, the farmer is most interested in a market for his surplus, out of which he must obtain the needs of modern society. He is definitely interested in the sustained prosperity of nonagricultural industries which make possible the buying power of the public. Far from these industries being an injury to him, his greatest hope lies in their continued prosperity. The nearer his market, the greater his savings from the cost of transportation. While he appreciates the foreign market, it is negligible in contrast with his home market in which he sells 90 per cent of his product, hence his interest in the McKinley policy of protection to American industries. His highest interest demands that policy which enables American capital to invest in American industry at reasonable profit, in the employment of American labor, upon a wage scale that will maintain an American standard of living, which insures a buying power of the public necessary to supply a market for his product. This is the farmer's most important legislation in his own behalf yet undertaken. He also demands an adequate transportation system at the lowest rate consistent with efficient service. He favors such unification in transportation systems as will permit a revision in the rate structure in the

interest of agriculture. A successful transportation system is a condition precedent to his own success, hence his concern over any effort to cripple transportation and his interest in added facilities to reach the market. His problem of the cost of transportation will be partially relieved by the system of inland waterways now under construction, and a lake-to-ocean water route which will afford an outlet for the heart of agricultural America to foreign markets without reshipment.

PROGRAM OF FARM REHABILITATION

While the foregoing are largely governmental, there is no interference by the Government with the independence of the farmer in conducting his business. His chief problem to-day is one of marketing, and is claiming the best talent of America in an effort to turn a buyers' market into a sellers' market, to give the producer the control of his product. To this end this administration has enacted constructive and remedial legislation of no less than 24 separate pieces of legislation covering every phase of the agricultural problem. This program, recommended by the two agricultural commissions, representing the best agricultural talent in America, was pronounced by a nonpartisan judgment as the most ambitious and important program of farm rehabilitation ever presented to any nation at any time. The purpose of this program was to aid the farmer in his solution of his problem. The purpose of the administration in further aid is to avoid the Government taking over from the farmer his own control of the great industry, but to assist him in that control. This aid is justified because of the inherent nature of an industry of slow turnover, unregulated production, and uncertain consumption. Could agricultural production be held within the limits of consumption, the problem would be solved. Or could consumption be indefinitely increased, it would be solved. The former can be tempered, but not fully controlled; while the latter may be increased but within limitation. Where the Government can assist in regulating production and increasing consumption, it should cooperate with the farmer for such purposes. The Government should also aid in insuring an adequate marketing system where it can be done as an industry in the hands of its members rather than as a Government function.

In the light of the attitude toward Agriculture of Republican policy, in maintaining the home market, in insuring the buying power of the American public, in preserving the American standard of living, in securing an adequate transportation system, supplemented by the cheaper water-borne system, in the program of rehabilitation now on the statute books, in its urgency of better marketing control, in its keen conception of the inherent problems of the industry, no one should be in doubt of the purpose of the party to give this greatest of industries every consideration, short of unsound proposals of Government stimulation of artificial remedies which in the end may only add to our problems.

RADIO PROGRESS

The mobilization of productive energies of the American people in the advancement of progress is no better illustrated than in the new fields of radio and aviation. The sales in the radio industry in 1921 amounted to about $3,000,000. To-day they are far in excess of $500,000,000. In 1922, when the first radio conference was held in Washington, it was made up of only a few enthusiasts. That conference of last year brought together the foremost experts of all the world. The radio service has passed from the stage of the curious to that of a great public utility with much of the world "listening in." The limits of usefulness of this new field in science can not be set when measured by the real service to humanity, through edifying entertainment, valuable instruction and the broadening of vision upon problems of national and international import. This modern miracle of science enables the listener, whether in city or country, in the Old or the New World, to follow the proceedings of this convention with greater convenience and equal accuracy as if present within the convention hall. The best service to the world of listeners is and must be the real concern of regulatory legislation, dealing with the complicated problems inevitable in this field as yet largely unknown, even to the scientific world. To properly develop this new industry in the interest of all the people is the purpose of Republican policy.

AVIATION PROGRESS

The constructive policy of this administration is again seen in what has been done in the development of air navigation, first in the air mail, and secondly, in civil aviation. The air mail progress has been outstanding both as to routes established, planes in use, miles covered, amount carried, at lowered costs and increased expedition and safety of delivery. This success induced capital to invest as soon as governmental cooperation was afforded, in securing good airports, powerful beacon lights, air markings, emergency fields, and such facilities as would enable night flying with reasonable safety. Air mail is now an assured reality. The Government is making contracts to carry mail at a much lower rate than was thought possible, and the time is near at hand when all our citizens will be served by this kind of mail service.

There are now over 3,500 airplanes in the hands of civilian owners. Airways properly lighted have already reached about 7,500 miles. Commercial aviation is here. The American Railway Express Co. has entered into a contract for such service over two-thirds of the routes now in operation. Great railway trunk lines are planning to install rapid transit across the continent by joint use of rail and air transportation.

We have thus found another field for the employment of our energies. The limit of this no one can set. This new field was opened when the Columbus of the air electrified the peoples of all civilized countries by removing the ocean as a barrier to making the world but a single neighborhood.

ENFORCEMENT OF LAWS

While material progress will ever be the primary concern of both legislation and administration, the perpetuity of the American system of government and her institutions call for an aroused public opinion to support the respect for law in the interest of the conservation and development of our human resources. This is the fundamental task of national self-preservation, which has been the dominant note of this progressive Nation, if not of every nation, for the past half century. This principle of human conservation has become the essential philosophy of the modern state in its application to the control of every aspect of national life. After the expenditure of billions of money in the improvement of the conditions of existence, in the rearing of childhood, the education of youth for effective and noble living, and in lengthening the span of human life, no backward step can be tolerated upon whatever pretext which would permit a noisy minority to exploit the great mass of our population. All over the earth, led by our own example, there has been burnt into the national consciousness the conviction that this policy and program of human conservation must not be scuttled. It is not a question of tolerance or of liberty, but of life, both individual and national. The Republican Party is ready to call the roll on this false doctrine masquerading under the mask of liberty. It is ready to sound the moral tocsin against the present campaign of a noise-making minority whether in the interest of business profit or mere human indulgence. It stands for respect for law. It condemns the violation of law. Its prosecutions are without respect to rank or party and are conducted by the judicial branch of the Government. Where guilt is disclosed, punishment is meted out without fear or favor in accordance with orderly processes. While moral delinquencies are to be found in all political parties—in fact, among all classes—and while they sometimes reach places of influence, the general rule is a high type of character in our public service, and never more so than at the present time.

OUR DISTURBED FOREIGN RELATIONS

Disturbed foreign relations, both diplomatic and trade, were inevitable results of the Great War. Adjustments, some of them difficult and complicated, have been made with all countries except Russia through not less than 75 treaties entered into and ratified through which understandings have been reached and diplomatic and trade relations resumed.

The immediate task of the Republican administration was peace with honor and without the loss of our independence and sovereignty as a nation. We had poured out our treasure of life and resources in the interest of maintaining national honor. We had experienced the horrors of war. We shared the world's desires to avoid future wars.

The League of Nations was proposed as the method to insure against future wars. This Nation's decision had to be made whether it would pay the price of surrender of national sovereignty for what appeared then and realized now as a fatuous promise of exemption from war. This stupendous issue and final decision are too fresh in all our minds to call for repetition. We still hold to the doctrine of our fathers to avoid alliances. We willingly cooperate with all nations on behalf of public welfare, but refuse to commit ourselves and our resources in advance to unknown controversies. We stand ready to assist, but the time and measure of that assistance is a matter of our own judgment and decision.

The long struggle over what was to be our relation with the League of Nations retarded negotiations for adjustment of our deranged relations with most of the Old World. The task had been aggravated by our associates proceeding to carry out the provisions of a treaty which we had not ratified and which had granted to others American rights without our consent by treaty

or otherwise, such as our rights in the islands in the northern Pacific, and other mandate agreements among our associates. The correction of these wrongs was difficult, but expeditious and complete.

Soon after the inauguration of Warren G. Harding we turned our attention to removing some of the burdens of war. The results of the Washington conference were the tripartite treaty, in lightening the burdens of war taxation, lessening the chances of war, and ending naval rivalry; the nine-power treaty, which secured political and territorial integrity of China and the open door of all nations in that ancient empire; the five-power treaty, which provided for the machinery to insure judicial settlement of disputes arising in the Pacific; and in addition to these treaties we secured a cancellation of the Anglo-Japanese alliance and the return of Shantung to China.

OUR RELATION TO THE ECONOMIC RECOVERY OF EUROPE

Our attention was next turned toward the problem of economic recovery of Europe. The war had left once prosperous countries in what seemed hopeless chaos. On all sides were observed the results and the victims of war; want and suffering everywhere, due to the ravages of war and the failure to get back to work. The uncertainty of reparations, the persistence of national bitterness, and the dislocations of all order, industrial, social, political, and the loss of needed capital, blocked recovery.

The tardiness of necessary steps to make peace adjustments clogged the channels of European credit, which otherwise would tap the reservoir of American credit awaiting safe investment.

After years of floundering of European statesmen in the bog of economic confusion in a vain effort to find relief, with no promise of success, the Republican leadership ventured to suggest a solution which in due time and after consideration was accepted, which placed the problem under the direction of American genius, and at once opened the way to economic recovery.

This effort having succeeded, our attention was next turned to insurance of permanent peace. It has ever been a fundamental principle with this country that complete and permanent prosperity is impossible with any nation that consumes through unproductive sources as much or more than it produces. No nation can permanently prosper if its military establishments consume more than the rest of the nation produces, hence our efforts to induce a limitation of European armies, following our example after the close of the war, when we reduced from 4,000,000 to 137,000 men. This situation explains our anxiety to employ this method of comparative reduction of military forces as the surest plan for world peace and prosperity of individual nations.

WORLD PEACE—OUR EFFORTS TO PROMOTE IT

After failure of at least four conferences to secure treaties of security which had been named as a basis for limitation it was the suggestion of an American citizen to broaden the scope of the treaty to include other European nations, which resulted in the famous Locarno conference, and which opened the way, as it was thought, for further limitation. The President deferred to the League Council to take the initiative to call the conference at Geneva. The world is familiar with our efforts in that conference, only to be blocked by Europe, especially France and Italy, on the program as related to armies, and later as related to naval cruisers, by Britain. France offered a substitute to outlaw war by resolution, and asked us to agree. Our Nation agreed on condition that it was to be broadened to include all nations, making it multilateral instead of bilateral. To this France agreed on condition that it was to be limited to aggressive war. Our Nation insists that it must include all wars to be effective, otherwise war could be resorted to by declaring it to be defensive, the usual claim of every belligerent. The powerful influence of the President was placed squarely behind this movement on Memorial Day, which will undoubtedly compel Europe to make a favorable reply.

The attitude of the military countries of the Old World has been seriously disappointing to this country toward rational proposals for permanent peace. Declarations of peace are ineffective when drowned out by the clatter of armament. Our good faith has been shown in our leadership in the Washington Limitation Conference, which was the boldest stroke for permanent peace in modern history; in the reduction of our armies to the small number of 137,000, a mere national police force, without waiting for agreements with European powers; in our loan adjustments, the terms of which provoked bitter criticism on the part of some of our citizens as unfair to our own people; in our willingness and our actual service to assist in the economic recovery of these nations; as well as in our cooperation in the work of rehabilitation. That leadership has been especially displayed in our consistent efforts to promote world peace, and never with more promise than to-day.

Our concern for world peace is augmented because of our widely expanded interests that carry Americans to all parts of the globe, necessitating not less than 50 diplomatic missions and over 300 consular posts, employing over 3,500 experts, scattered throughout the world, to look after hundreds of thousands of Americans, representing hundreds of millions of dollars of investments. Our foreign commerce is approaching the bewildering figure of $10,000,000,000 per year. These far-flung interests argue powerfully for peace, and should operate as agencies for a better understanding between nations. This expanding influence of America in world markets demands a clear-cut policy toward all nations, both great and small.

PRINCIPLES OF OUR FOREIGN POLICY

Our foreign policy rests upon two famous announcements—that of Washington in 1794, urging the country to remain neutral in Europe's disputes, and that of Monroe in 1823, urging Europe not to interfere in America.

This county under Republican leadership recently announced the following principles as fundamental in our conception of and our relation to other countries:

First. Every nation is entitled to existence and the right of self-defense.

Second. Every nation is entitled to independence as an individual nation.

Third. Every nation is in law equal to every other nation.

Fourth. Every nation has the right to the control of its own territory.

Fifth. Every nation can demand that its rights under international law be respected by every other nation.

THE COSMOPOLITAN PHILANTHROPY OF AMERICA

Our history under Republican administration shows a new standard of cosmopolitan philanthropy never before aspired to by any nation of history. In Cuba we intervened partly on behalf of our peace of mind and partly from humanitarian motives. We set up a government based upon popular will and supervised it until the Cuban people were able and ready to handle it alone. As a result a people who had struggled for 400 years in a stage of continuous rebellion or revolution is to-day one of the most progressive, self-governing nations of the world, and a signal object lesson of the value of stable government to all peoples desiring self-government.

In Santo Domingo, after 40 years of perennial insurrections, we answered the call of duty, reorganized the financial structure, and supervised its operations. We established here organization of safety and security, and in pursuance of treaty agreement continued to supervise them until stability of government was established, when we withdrew. The result is a well-ordered administration of local self-government and wonderful progress of a people which had formerly lived in constant turmoil.

In Haiti we are pursuing the same course in the interest of the welfare of these people, and in pursuance of a treaty. When law and order become well established and assurance of a progressive government is promised, as in the case of Cuba and Santo Domingo, we will withdraw.

No chapter in the history of nation building has ever been written that will show a more unselfish service and greater humanitarian regard than that relating to what we have done for people like the Filipino and the peoples of the West India Islands.

On the American continent, where we have exerted considerable influence if not authority, our main concern is and has been the welfare of the people of all the nations, big and little, with no selfish purpose beyond our interest in national peace. This welfare depends upon the maintenance of peaceful relations between the countries and that stability in government which can and must avoid the habits of revolution so common in the countries of Central America. This is the basis of what we term "our American policy toward all America."

MAINTENANCE OF THE MONROE DOCTRINE

The Republican Party has consistently stood for the principle of the Monroe doctrine as a sound policy for the western continent. It has confidence in the American principle of democratic government of the people, and has not hesitated to lend moral assistance and to extend her good offices to the countries struggling for that principle. To this end it has looked upon the Monroe doctrine as sound in freeing these countries, our neighbors, from complications with foreign nations which might seize upon pretexts of protection of their nationals to violate the doctrine. Its violation is to be averted if possible. Its abandonment is unthinkable. Its maintenance, on the other hand, involves obligations to protect life and property, hence our concern in orderly government, free from insurrection, rebellion, and revolution. To this end we gladly extend our good offices whenever we can render such service.

After years of unfortunate confusion in Mexico, which at times seriously strained our friendly relations over what appeared to be attempted confiscation, the situation has yielded to diplomacy, the rights of American citizens in that Republic have been recognized and the way again opened for the two nations to cooperate in commercial growth and international good will. While our interest in the Caribbean countries is primarily national, it takes on an international aspect. The canals already constructed and to be constructed connecting the two oceans are and must ever be of American interest and control, both from a commercial and national defense point of view. The growth and development of the resources of these countries depend upon orderly government, hence our cooperation to insure stability in their governmental institutions.

The Republican Party has led in efforts through conferences to insure by treaty obligations against insurrections and banditry. The conference of 1907 was far-reaching in that direction, and was reinforced by another held in Washington in 1923, in which treaties were signed by all the Central American countries, including Nicaragua. In line with these treaties, after investigation, we responded to the request of the Constitutional Government of Nicaragua to supervise the election in the interest of a square deal in a fair election. Since 1910 our marines have been in Nicaragua, save a short period after the last conference when they were withdrawn only to be sent back when insurrection again threatened American lives and property. It is to be hoped that our influence in securing a fair election will be the step to real stability so that our marines need not longer remain to protect American citizens doing business in that country. Another conference was recommended by the Habana conference to adopt further plans for adjustment of disputes arising in the New World.

The one undeviating principle for which America will continue to stand is protection of American citizens in their rights of life and property wherever they may be if they have a right to be there, whether on land or sea. As was recently said by the President on the memorable battle field of Gettysburg: "A government that failed in its duty to protect the lives and property of its citizens would be justly condemned at home and covered with derision abroad."

We ask only our rights, we will ask nothing that is wrong. We demand from no one what we would not grant to everyone. We will go out of our way to render a favor without a thought of any return save good will. We have unfailing faith that a policy of unselfish service as displayed in our dealings with all struggling nations in their efforts toward law and order, including China, must meet with the approval of all friends of good government.

When the true history is written of our efforts to promote stable government among the struggling people with which we have been closely connected, it will reveal aspiration upon our part and realizations upon theirs which will challenge the admiration of the world.

REPUBLICAN LEADERSHIP, PAST AND PRESENT

We are met in the nineteenth national convention since the birth of our party. Since that date during a period of 72 years the choice of the convention has been ratified at the ballot box by the American people in every case save Buchanan, Cleveland, and Wilson. Beginning with the election of 1860, the management of our national affairs has been under the control of the Republican Party up to this hour, a period of 68 years, interrupted but twice, 8 years of Cleveland and 8 years of Wilson. During that period our wealth has increased from less than twenty billions to over four hundred billions, with an annual income approaching the total wealth of the next wealthiest country on the globe, with a more general distribution of that wealth permitting the highest standards of living ever reached where the average citizen of this country enjoys more comforts than did the kings of earth 200 years ago.

Called into existence to prevent the further spread of human slavery, the Republican Party successfully resisted organized rebellion, preserved the American Union, and abolished traffic in human beings, under the leadership of our first and greatest President, Abraham Lincoln. It restored the Union within the Constitution, under Ulysses S. Grant, the greatest soldier of the century. It met the arguments of the soft-money agitator, successfully exploded his fallacies, and resumed specie payment, thereby safeguarding our fiscal policy upon a sound money basis, making every dollar worth 100 cents in every corner of the civilized world. This accomplishment was under the administration of Rutherford B. Hayes. It took the necessary steps to curb the dangers of monopoly by the antitrust legislation under Benjamin Harrison. Then came the regrettable experience from the business-destroying policy of Grover Cleveland, with his tariff for revenue only in the long line of soup houses. The wide, general suffering afforded the platform and program of the agitator who came out of the Platte country with his ready-made remedy of determining values by the fiat of the government in free and unlimited coinage of silver at the ratio of 16 to 1. The Republican Party again met the argument, exposed the fallacy, resisted the clamor, ignored the threats, denounced the dishonest proposal of repudiation, and again restored the American system of protective tariff in the interest of American labor and the farmers' home market under the leadership of that greatest of protectionists, William McKinley. The Republican Party constructed the Panama Canal and inaugurated a progressive program to humanize industry in the interest of better conditions of labor, under Theodore Roosevelt. It formulated in the light of the report of the Monetary Commission a plan for the revision of the national bank system under William Howard Taft. Then came Wilson, the Underwood bill, and later the war. The Republican Party took the lead in all the war measures recommended by the Democratic President as necessary to win the war, most of which were opposed by the Democratic leaders of Congress. At its close, the Nation was saved from the fatal consequences of being plunged into the maelstrom of European politics under the guise of world peace through the League of Nations.

A REMARKABLE RECORD

By the greatest majority ever given in the history of elections the Republican Party under the leadership of Warren G. Harding was called to the task of restoration, and at once grappled with the peace problems quite as difficult as those of war. The manner in which the problems have been handled, first so well begun by the administration of our beloved and late lamented Warren G. Harding and then by that of Coolidge, is too well known to call for further comment. All our people have some knowledge of the number and most of them some idea of the complication of these problems. Very few will deny the complete success in the effort of solution. Measured by those tests, the record of history is challenged to present a leadership with superior brilliancy and a higher rank in statesmanship than that of our present eminent leader. In a comparatively short period we are passed from war confusion to peace contentment; from economic disorders to sound principles of progress; from a period of general prostration to one of substantial prosperity, in which all basic industries are on sound economic foundations. This remarkable record in administration reflects a type of political leadership at the head of the Government rarely experienced in his or any other country.

I once said, and I now repeat my statement, few are his words, decisive his judgments. His comprehension of problems is broad, his vision clear, and his action dauntless. His conception of public duty forestalls the employment of mere political expediency. He spurns the arts of the demagogue and strengthens the passion of public rectitude. He is more concerned in directing the public mind in proper channels than in following public clamor based upon propaganda. His sympathy for those in misfortune prevents his yielding to unsound remedies, which in the end must only add to the suffering. He yields not to threats nor is he persuaded by cajolery. He aspires to render personal favors, but never at the expense of public welfare. His evident desire to do justice to all classes stimulates public confidence. He shields no wrong, nor denies no right. His sense of fairness provokes support and disarms attack. After five years and seven months of leadership in our Nation he leaves office by his own fiat, which appears to be final, and is so interpreted by many of his friends, in spite of the fact that his nomination and election would be a foregone conclusion did he not forbid.

This hold upon the confidence of the American people of every name, class, and creed, without regard to partisan feeling, makes Calvin Coolidge the greatest personal and political force in the world to-day.

ADDRESS OF HON. GEORGE H. MOSES, OF NEW HAMPSHIRE, PERMANENT CHAIRMAN OF THE REPUBLICAN NATIONAL CONVENTION AT KANSAS CITY, MO., JUNE 13, 1928

Ladies and gentlemen of the convention, the honor which you have conferred upon me is very great, and I thank you for it. The duties which your generous action lays upon me may prove to be difficult, but I hope to be able to perform them satisfactorily.

We come now to the central and most important tasks for which we are assembled. First, we are to formulate a declaration of principles which will embody the essentials of Republicanism and with which we shall submit our cause to the people.

Inevitably, in a party thoroughly national in its vision and contact as ours is, there will from time to time arise differences of opinion. This is by no means the first occasion when Republicans have found themselves at odds regarding a question of

cardinal consequence as affecting party policy. Heretofore we have succeeded always in settling our difficulties within our own ranks through that wise spirit of accommodation which must characterize a great and far-flung organization like ours, upon which depends so much for the advance and prosperity of our country. So it will be now.

No one can doubt the essential sympathy with which the Republican Party has always looked upon the great and diverse interests which make up the fabric of our national existence. This sympathetic viewpoint has not changed. Agriculture and industry and the social order continue to be the prime objects of our solicitude, and in dealing with them the Republican Party will not shirk its responsibility.

We shall, however, now as always, chart our course within the limits of the Constitution and within the operation of sound economic law.

Half a century ago the Republican Party stood firm against inflation through an unlimited issue of paper money—and the people stood with us then.

A generation ago the Republican Party stood firm against a debasement of our currency through the free coinage of silver—and the people stood with us then.

Less than 10 years ago the Republican Party stood firm against the surrender of our national sovereignty through minority membership in a foreign superstate—and the people then stood with us twice by a majority of more than 7,000,000.

So we shall stand firm again here and now, and in November the American people will again crown our courage and reward our sincerity in a victory as splendidly triumphant as any which we have ever achieved.

Upon the platform which we shall thus here construct we shall place a candidate whose personality fits our principles and the Nation's present necessities. We are not barren of presidential timber. However our choice may fall, we know it will not rest in unworthy hands and that the leadership we shall here set up will assure to the country a Republican ascendancy which will endure for at least eight years more.

There are at least 5,000,000 reasons why this must be so, because there are at least 5,000,000 more Republicans than there are Democrats in this country. These millions united, as we know they will be when this convention has concluded its task, and joined by millions more to whom our candidates and our principles will appeal, will sweep on to an overwhelming victory at the polls.

There is no occasion for the people to distrust our party and there is no occasion for our party to distrust the people. Their sober judgment will rest with us because—

In seeking for a foreign policy for the United States, we know our people will not turn to the party which conceived and nurtured the League of Nations;

In seeking for a fiscal policy for the United States, we know our people will not turn to the party which advocated rag money and free silver;

In seeking for an economic policy for the United States, we know our people will not turn to the party which clings to the fetich of free trade;

In seeking for a policy to make the tariff effective for every interest in the United States, we know our people will not turn to the party whose strength and weakness alike lie in its sectional character;

In seeking for a policy to assure honest administration of the Government of the United States, we know our people will not turn to the party whose most recent and most outstanding achievement in this year of grace is the revealed grafting of $20,000,000 from a single city;

In seeking for a policy of law enforcement in the United States, we know our people will not turn to the party which maintains itself in the places of its power through nullification of two amendments to the Constitution and which openly flouts a third;

In seeking for a policy to assure honest elections everywhere in the United States, we know our people will not turn to the party whose sole title to success has rested upon intimidation and the tissue ballot and which now rests upon the obliterated vote of 4,000,000 American free men;

And in seeking for an agency to carry forward the program of the social order in the United States, we know our people do not intend to throw our country within the tender embrace of Tammany Hall.

We enter this campaign in no posture of defense. We come upon the field aggressively militant. We intend to carry this fight to the enemy. And we challenge them to bring forth their strongest champion. Whether he emerge from another spectacle like the 103-round battle of the Madison Bear Garden, or whether he come from an overpowered convention held spellbound by the glare of the Tammany tiger, we are ready for him. Bring him on and we will bury him. We welcome him with hospitable hands to a bloody grave.

And we care not whether his name be Brown, Jones, Robinson, or Smith.

PLATFORM ADOPTED BY THE REPUBLICAN NATIONAL CONVENTION AT KANSAS CITY, MO., JUNE 13, 1928

The Republican Party in national convention assembled presents to the people of the Nation this platform of its principles, based on a record of its accomplishments, and asks and awaits a new vote of confidence. We reaffirm our devotion to the Constitution of the United States and the principles and institution of the American system of representative government.

THE NATIONAL ADMINISTRATION

We indorse without qualification the record of the Coolidge administration.

The record of the Republican Party is a record of advancement of the Nation. Nominees of Republican National Conventions have for 52 of the 72 years since the creation of our party been the Chief Executives of the United States. Under Republican inspiration and largely under Republican executive direction the continent has been bound with steel rails, the oceans and great rivers have been joined by canals, waterways have been deepened and widened for ocean commerce, and with all a high American standard of wage and living has been established.

By unwavering adherence to sound principles, through the wisdom of Republican policies and the capacity of Republican administrations, the foundations have been laid and the greatness and prosperity of the country firmly established.

Never has the soundness of Republican policies been more amply demonstrated and the Republican genius for administration been better exemplified than during the last five years under the leadership of President Coolidge.

No better guaranty of prosperity and contentment among all our people at home, no more reliable warranty of protection and promotion of American interests abroad, can be given than the pledge to maintain and continue the Coolidge policies. This promise we give and will faithfully perform.

Under this administration the country has been lifted from the depths of a great depression to a level of prosperity. Economy has been raised to the dignity of a principle of government. A standard of character in public service has been established under the Chief Executive which has given to the people of the country a feeling of stability and confidence so all have felt encouraged to proceed on new understakings in trade and commerce. A foreign policy based on the traditional American position and carried on with vision and steadfastness has extended American influence throughout the world and everywhere promoted and protected American interests.

The mighty contribution to general well-being which can be made by a government controlled by men of character and courage whose abilities are equal to their responsibilities is self-evident and should not blind us to the consequences which its loss would entail. Under this administration a high level of wages and living has been established and maintained. The door of opportunity has been opened wide to all. It has given to our people greater comfort and leisure, and the mutual profit has been evident in the increasingly harmonious relations between employers and employees, and the steady rise by promotion of the men in the shops to places at the council tables of the industries. It has also been made evident by the increasing enrollments of our youth in the technical schools and colleges, the increase in savings and life-insurance accounts, and by our ability as a people to lend the hand of succor not only to those overcome by disasters in our own country but in foreign lands. With all there has been a steady decrease in the burden of Federal taxation, releasing to the people the greatest possible portion of the results of their labor from Government exactions.

For the Republican Party we are justified in claiming a major share of the credit for the position which the United States occupies to-day as the most favored nation on the globe, but it is well to remember that the confidence and prosperity which we enjoy can be shattered, if not destroyed, if this belief in the honesty and sincerity of our Government is in any way affected. A continuation of this great public peace of mind now existing, which makes for our material well-being, is only possible by holding fast to the plans and principles which have marked Republican control.

The record of the present administration is a guaranty of what may be expected of the next. Our words have been made deeds. We offer not promises but accomplishments.

PUBLIC ECONOMY

The citizen and taxpayer has a natural right to be protected from unnecessary and wasteful expenditures. This is a rich

but also a growing nation, with constantly increasing legitimate demands for public funds. If we are to be able to spend wisely and meet these requirements, it is first necessary that we save wisely. Spending extravagantly not only deprives men through taxation of the fruits of their labor, but oftentimes means the postponement of vitally important public works. We commend President Coolidge for his establishment of this fundamental principle of sound administration and pledge ourselves to live up to the high standard he has set.

FINANCE AND TAXATION

The record of the United States Treasury under Secretary Mellon stands unrivaled and unsurpassed. The finances of the Nation have been managed with sound judgment. The financial policies have yielded immediate and substantial results.

In 1921 the credit of our Government was at a low ebb. We were burdened with a huge public debt, a load of war taxes, which in variety and weight exceeded anything in our national life, while vast unfunded intergovernmental debts disorganized the economic life of the debtor nations and seriously affected our own by reason of the serious obstacles which they presented to commercial intercourse. This critical situation was evidenced by a serious disturbance in our own life which made for unemployment.

To-day all these major financial problems have been solved.

THE PUBLIC DEBT

In seven years the public debt has been reduced by $6,411,000,000. From March, 1921, to September, 1928, over $11,000,000,000 of securities, bearing high rates of interest, will have been retired or refunded into securities bearing a low rate of interest, while Liberty bonds, which were selling below par, now command a premium. These operations have resulted in an annual saving in interest charges of not less than $275,000,000, without which the most recent tax-reduction measure would not have been made possible. The Republican Party will continue to reduce our national debt as rapidly as possible and in accordance with the provision of existing laws and the present program.

TAX REDUCTION

Wise administrative management under Republican control and direction has made possible a reduction of over a billion eight hundred million dollars a year in the tax bill of the American people. Four separate tax reduction measures have been enacted, and millions of those least able to pay have been taken from the tax rolls.

Excessive and uneconomic rates have been radically modified, releasing for industrial and pay-roll expansion and development great sums of money which formerly were paid in taxes to the Federal Government.

Practically all the war taxes have been eliminated and our tax system has been definitely restored to a peace-time basis.

We pledge our party to a continuation of these sound policies and to such further reduction of the tax burden as the condition of the Treasury may from time to time permit.

TARIFF

We reaffirm our belief in the protective tariff as a fundamental and essential principle of the economic life of this Nation. While certain provisions of the present law require revision in the light of changes in the world competitive situation since its enactment, the record of the United States since 1922 clearly shows that the fundamental protective principle of the law has been fully justified. It has stimulated the development of our natural resources, provided fuller employment at higher wages through the promotion of industrial activity, assured thereby the continuance of the farmer's major market, and further raised the standards of living and general comfort and well-being of our people. The great expansion in the wealth of our Nation during the past 50 years, and particularly in the past decade, could not have been accomplished without a protective tariff system designed to promote the vital interests of all classes.

Nor have these manifest benefits been restricted to any particular section of the country. They are enjoyed throughout the land either directly or indirectly. Their stimulus has been felt in industries, farming sections, trade circles, and communities in every quarter. However, we realize that there are certain industries which can not now successfully compete with foreign producers because of lower foreign wages and a lower cost of living abroad, and we pledge the next Republican Congress to an examination and where necessary a revision of these schedules, to the end that American labor in these industries may again command the home market, may maintain its standard of living, and may count upon steady employment in its accustomed field.

Adherence to that policy is essential for the continued prosperity of the country. Under it the standard of living of the American people has been raised to the highest levels ever known. Its example has been eagerly followed by the rest of the world, whose experts have repeatedly reported with approval the relationship of this policy to our prosperity, with the resultant emulation of that example by other nations.

A protective tariff is as vital to American agriculture as it is to American manufacturing. The Republican Party believes that the home market, built up under the protective policy, belongs to the American farmer, and it pledges its support of legislation which will give this market to him to the full extent of his ability to supply it. Agriculture derives large benefits not only directly from the protective duties levied on competitive farm products of foreign origin but also, indirectly, from the increase in the purchasing power of American workmen employed in industries similarly protected. These benefits extend also to persons engaged in trade, transportation, and other activities.

The tariff act of 1922 has justified itself in the expansion of our foreign trade during the past five years. Our domestic exports have increased from 3.8 billions of dollars in 1922 to 4.8 billions in 1927. During the same period imports have increased from 3.1 billions to 4.4 billions. Contrary to the prophecies of its critics, the present tariff law has not hampered the natural growth in the exportation of the products of American agriculture, industry, and mining, nor has it restricted the importation of foreign commodities which this country can utilize without jeopardizing its economic structure.

The United States is the largest customer in the world to-day. If we were not prosperous and able to buy, the rest of the world also would suffer. It is inconceivable that American labor will ever consent to the abolition of protection, which would bring the American standard of living down to the level of that in Europe, or that the American farmer could survive if the enormous consuming power of the people in this country were curtailed and its market at home, if not destroyed, at least seriously impaired.

FOREIGN DEBTS

In accordance with our settled policy and platform pledges, debt settlement agreements have been negotiated with all of our foreign debtors with the exception of Armenia and Russia. That with France remains as yet unratified. Those with Greece and Austria are before the Congress for necessary authority. If the French debt settlement be included, the total amount funded is $11,522,354,000. We have steadfastly opposed and will continue to oppose cancellation of foreign debts.

We have no desire to be oppressive or grasping, but we hold that obligations justly incurred should be honorably discharged. We know of no authority which would permit public officials, acting as trustees, to shift the burden of the war from the shoulders of foreign taxpayers to those of our own people. We believe that the settlements agreed to are fair to both the debtor nation and to the American taxpayer. Our debt commission took into full consideration the economic condition and resources of the debtor nations, and were ever mindful that they must be permitted to preserve and improve their economic position, to bring their budgets into balance, to place their currencies and finances on a sound basis, and to improve the standard of living of their people. Giving full weight to these considerations, we know of no fairer test than ability to pay, justly estimated.

The people can rely on the Republican Party to adhere to a foreign-debt policy now definitely established and clearly understood both at home and abroad.

SETTLEMENT OF WAR CLAIMS

A satisfactory solution has been found for the question of war claims. Under the act approved by the President on March 10, 1928, a provision was made for the settlement of war claims of the United States and its citizens against the German, Austrian, and Hungarian Governments, and of the claims of the nationals of these Governments against the United States, and for the return to its owners of the property seized by the Alien Property Custodian during the war, in accordance with our traditional policy of respect for private property.

FOREIGN POLICIES

We approve the foreign policies of the administration of President Coolidge. We believe they express the will of the American people in working actively to build up cordial international understanding that will make world peace a permanent reality. We indorse the proposal of the Secretary of State for a multilateral treaty proposed to the principal powers of the world, and open to the signatures of all nations, to renounce

war as an instrument of national policy and declaring in favor of pacific settlement of international disputes, the first step in outlawing war. The idea has stirred the conscience of mankind and gained widespread approval both of governments and of the people, and the conclusion of the treaty will be acclaimed as the greatest single step in history toward the conservation of peace.

In the same endeavor to substitute for war the peaceful settlement of international disputes the administration has concluded arbitration treaties in a form more definite and more inclusive than ever before, and plans to negotiate similar treaties with all countries willing in this manner to define their policy peacefully to settle justiciable disputes. In connection with these, we indorse the resolution of the Sixth Pan American Conference, held at Habana, Cuba, in 1928, which called a conference on arbitration and conciliation to meet in Washington during the year, and express our earnest hope that such conference will greatly further the principles of international arbitration. We shall continue to demand the same respect and protection for the persons and property of American citizens in foreign countries that we cheerfully accord in this country to the persons and property of aliens.

The commercial treaties which we have negotiated and those still in the process of negotiation are based on strict justice among nations, equal opportunity for trade and commerce on the most-favored-nation principle, and are simplified so as to eliminate the danger of misunderstanding. The object and the aim of the United States is to further the cause of peace, of strict justice between nations, with due regard for the rights of others in all international dealings. Out of justice grows peace. Justice and consideration have been and will continue to be the inspiration of our Nation.

The record of the administration toward Mexico has been consistently friendly and with equal consistency have we upheld American rights. This firm and at the same time friendly policy has brought recognition of the inviolability of legally acquired rights. This condition has been reached without threat or without bluster, through a calm support of the recognized principles of international law, with due regard to the rights of a sister sovereign state. The Republican Party will continue to support American rights in Mexico as elsewhere in the world, and at the same time to promote and strengthen friendship and confidence.

There has always been, as there always will be, a firm friendship with Canada. American and Canadian interests are in a large measure identical. Our relationship is one of fine mutual understanding, and the recent exchange of diplomatic officers between the two countries is worthy of commendation.

The United States has an especial interest in the advancement and progress of all the Latin American countries. The policy of the Republican Party will always be a policy of thorough friendship and cooperation. In the case of Nicaragua we are engaged in cooperation with the Government of that country upon the task of assisting to restore and maintain peace, order, and stability, and in no way to infringe upon her sovereign rights. The marines now in Nicaragua are there to protect American lives and property and to aid in carrying out an agreement whereby we have undertaken to do what we can to restore and maintain order and to insure a fair and free election. Our policy absolutely repudiates any idea of conquest or exploitation and is actuated solely by an earnest and sincere desire to assist a friendly and neighboring state which has appealed for aid in a great emergency. It is the same policy the United States has pursued in other cases in Central America.

The administration has looked with keen sympathy on the tragic events in China. We have avoided interference in the internal affairs of that unhappy nation, merely keeping sufficient naval and military forces in China to protect the lives of the Americans who are there on legitimate business and in still larger numbers for nobly humanitarian reasons. America has not been stampeded into making reprisals but, on the other hand, has consistently taken the position of leadership among the nations in a policy of wise moderation. We shall always be glad to be of assistance to China when our duty is clear.

The Republican Party maintains the traditional American policy of noninterference in the political affairs of other nations. This Government has definitely refused membership in the League of Nations and to assume any obligations under the covenant of the league.

On this we stand.

In accordance, however, with the long-established American practice of giving aid and assistance to other peoples, we have most usefully assisted by cooperation in the humanitarian and technical work undertaken by the league, without involving ourselves in European politics by accepting membership.

The Republican Party has always given and will continue to give its support to the development of American foreign trade, which makes for domestic prosperity. During this administration extraordinary strides have been made in opening up new markets for American produce and manufacture. Through these foreign contacts a mutually better international understanding has been reached which aids in the maintenance of world peace.

The Republican Party promises a firm and consistent support of American persons and legitimate American interests in all parts of the world. This support will never contravene the rights of other nations. It will always have in mind and support in every way the progressive development of international law, since it is through the operation of just laws, as well as through the growth of friendly understanding, that world peace will be made permanent. To that end the Republican Party pledges itself to aid and assist in the perfection of principles of international law and the settlement of international disputes.

CIVIL SERVICE

The merit system in Government service originated with and has been developed by the Republican Party. The great majority of our public-service employees are now secured through and maintained in the Government-service rules. Steps have already been taken by the Republican Congress to make the service more attractive as to wages and retirement privileges, and we commend what has been done as a step in the right direction.

AGRICULTURE

The agricultural problem is national in scope and, as such, is recognized by the Republican Party, which pledges its strength and energy to the solution of the same. Realizing that many farmers are facing problems more difficult than those which are the portion of many other basic industries, the party is anxious to aid in every way possible. Many of our farmers are still going through readjustment, a relic of the years directly following the Great War. All the farmers are being called on to meet new and perplexing conditions created by foreign competition, the complexities of domestic marketing, labor problems, and a steady increase in local and State taxes.

The general depression in a great basic industry inevitably reacts upon the conditions in the country as a whole and can not be ignored. It is a matter of satisfaction that the desire to help in the correction of agricultural wrongs and conditions is not confined to any one section of our country or any particular group.

The Republican Party and the Republican administration, particularly during the last five years, have settled many of the most distressing problems as they have arisen, and the achievements in aid of agriculture are properly a part of this record. The Republican Congresses have been most responsive in the matter of agricultural appropriations, not only to meet crop emergencies, but for the extension and development of the activities of the Department of Agriculture.

The protection of the American farmer against foreign farm competition and foreign trade practices has been vigorously carried on by the Department of State. The right of the farmers to engage in collective buying and cooperative selling as provided for by the Capper-Volstead Act of 1922 has been promulgated through the Department of Agriculture and the Department of Justice, which have given most valuable aid and assistance to the heads of the farm organizations. The Treasury Department and the proper committees of Congress have lightened the tax burden on farming communities, and through the Federal farm-loan system there has been made available to the farmers of the Nation $1,850,000,000 for loaning purposes at a low rate of interest, and through the intermediate-credit banks $655,000,000 of short-term credits have been made available to the farmers. The Post Office Department has systematically and generously extended the rural free delivery routes into even the most sparsely settled communities.

When a shortage of transportation facilities threatened to deprive the farmers of their opportunity to reach waiting markets overseas, the President, appreciative and sensitive of the condition and the possible loss to the communities, ordered the reconditioning of Shipping Board vessels, thus relieving a great emergency.

Last, but not least, the Federal Tariff Commission has at all times shown a willingness under the provisions of the flexible tariff act to aid the farmers when foreign competition, made possible by low wage scales abroad, threatened to deprive our farmers of their domestic markets. Under this act the President has increased duties on wheat, flour, mill feed, and dairy products. Numerous other farm products are now being investigated by the Tariff Commission.

We promise every assistance in the reorganization of the marketing system on sounder and more economical lines and, where diversification is needed, Government financial assistance during the period of transition.

The Republican Party pledges itself to the enactment of legislation creating a Federal farm board clothed with the necessary powers to promote the establishment of a farm marketing system of farmer owned and controlled stabilization corporations or associations to prevent and control surpluses through orderly distribution.

We favor adequate tariff protection to such of our agricultural products as are affected by foreign competition.

We favor, without putting the Government into business, the establishment of a Federal system of organization for cooperative and orderly marketing of farm products.

The vigorous efforts of this administration toward broadening our exports market will be continued.

The Republican Party pledges itself to the development and enactment of measures which will place the agricultural interests of America on a basis of economic equality with other industries to insure its prosperity and success.

MINING

The money value of the mineral products of the country is second only to agriculture. We lead the countries of the world in the production of coal, iron, copper, and silver. The Nation suffers as a whole from any disturbance in the securing of any one of these minerals, and particularly when the coal supply is affected. The mining industry has always been self-sustaining, but we believe that the Government should make every effort to aid the industry by protection by removing any restrictions which may be hampering its development and by increased technical and economic research investigations which are necessary for its welfare and normal development. The party is anxious, hopeful, and willing to assist in any feasible plan for the stabilization of the coal-mining industry which will work with justice to the miners, consumers, and producers.

HIGHWAYS

Under the Federal aid road act, adopted by the Republican Congress in 1921, and supplemented by generous appropriations each year, road construction has made greater advancement than for many decades previous. Improved highway conditions is a gauge of our rural developments and our commercial activity. We pledge our support to continued appropriations for this work commensurate with our needs and resources.

We favor the construction of roads and trails in our national forests necessary to their protection and utilization. In appropriations therefor the taxes which these lands would pay if taxable should be considered as a controlling factor.

LABOR

The labor record of the Republican Party stands unchallenged. For 52 of the 72 years of our national existence Republican administrations have prevailed. To-day American labor enjoys the highest wage and the highest standard of living throughout the world. Through the saneness and soundness of Republican rule the American workman is paid a "real wage," which allows comfort for himself and his dependents and an opportunity and leisure for advancement. It is not surprising that the foreign workman, whose greatest ambition still is to achieve a "living wage," should look with longing toward America as the goal of his desires.

The ability to pay such wages and maintain such a standard comes from the wisdom of the protective legislation which the Republican Party has placed upon the national statute books, the tariff which bars cheap foreign-made goods from the American market and provides continuity of employment for our workmen and fair profits for the manufacturers, the restriction of immigration which not only prevents the glutting of our labor market, but allows to our newer immigrants a greater opportunity to secure a footing in their upward struggle.

The party favors freedom in wage contracts, the right of collective bargaining by free and responsible agents of their own choosing, which develops and maintains that purposeful cooperation which gains its chief incentive through voluntary agreement.

We believe that injunctions in labor disputes have in some instances been abused and have given rise to a serious question for legislation.

The Republican Party pledges itself to continue its efforts to maintain this present standard of living and high wage scale.

RAILROADS

Prompt and effective railroad service at the lowest rates which will provide for its maintenance and allow a reasonable return to the investor so they may be encouraged to advance new capital for acquired developments, has long been recognized by the Republican Party as a necessity of national existence.

We believe that the present laws under which our railroads are regulated are soundly based on correct principles, the spirit of which must always be preserved. Because, however, of changes in the public demands, trade conditions, and of the character of the competition, which even the greatest railroads are now being called upon to meet, we feel that in the light of this new experience possible modifications or amendments, the need of which is proved, should be considered.

The Republican Party initiated and set in operation the Interstate Commerce Commission. This body has developed a system of railroad control and regulation which has given to the transportation public an opportunity not only to make suggestions for the improvement of railroad service but to protest against discriminatory rates or schedules. We commend the work which that body is accomplishing under mandate of law in considering these matters and seeking to distribute equitably the burden of transportation between commodities based on their ability to bear the same.

MERCHANT MARINE

The Republican Party stands for the American-built, American-owned, and American-operated merchant marine. The enactment of the White-Jones bill is in line with a policy which the party has long advocated.

Under this measure, substantial aid and encouragement are offered for the building in American yards of new and modern ships which will carry the American flag.

The Republican Party does not believe in Government ownership or operation, and stands specifically for the sale of the present Government vessels to private owners when appropriate arrangements can be made. Pending such a sale, and because private owners are not ready as yet to operate on certain of the essential trade routes, the bill enacted allows the maintenance of these necessary lines under Government control till such transfer can be made.

MISSISSIPPI FLOOD RELIEF AND CONTROL

The Mississippi Valley flood, in which 700,000 of our fellow citizens were placed in peril of life, and which destroyed hundreds of millions of dollars' worth of property, was met with energetic action by the Republican administration.

During this disaster the President mobilized every public and private agency under the direction of Secretary Hoover, of the Department of Commerce, and Dwight Davis, the Secretary of War. Thanks to their joint efforts, a great loss of life was prevented, and everything possible was done to rehabilitate the people in their homes and to relieve suffering and distress.

Congress promptly passed legislation authorizing the expenditure of $325,000,000 for the construction of flood-control works, which it is believed will prevent the recurrence of such a disaster.

RADIO

We stand for the administration of the radio facilities of the United States under wise and expert Government supervision, which will—

First. Secure to every home in the Nation, whether city or country, the great educational and inspirational values of broadcast programs, adequate in number and varied in character; and

Second. Assign the radio communication channels—regional, continental, and transoceanic—in the best interest of the American business man, the American farmer, and the American public generally.

WATERWAYS

Cheaper transportation for bulk goods from the midwest agricultural sections to the sea is recognized by the Republican Party as a vital factor for the relief of agriculture. To that end we favor the continued development in inland and in intracoastal waterways as an essential part of our transportation system.

The Republican administration during the last four years initiated the systematic development of the Mississippi system of inland transportation lanes, and it proposes to carry on this modernization of transportation to speedy completion. Great improvements have been made during this administration in our harbors, and the party pledges itself to continue these activities for the modernization of our national equipment.

VETERANS

Our country is honored whenever it bestows relief on those who have faithfully served its flag. The Republican Party, appreciative of this solemn obligation and honor, has made its sentiments evident in Congress. Our expenditures for the benefit of all our veterans now aggregate $750,000,000 annually. Increased hospital facilities have been provided, payments in compensation have more than doubled, and in the matter of

rehabilitations, pensions, and insurance, generous provision has been made. The administration of laws dealing with the relief of veterans and their dependents has been a difficult task, but every effort has been made to carry service to the veteran and bring about not only a better and generous interpretation of the law, but a sympathetic consideration of the many problems of the veteran. Full and adequate relief for our disabled veterans is our aim, and we commend the action of Congress in further liberalizing the laws applicable to veterans' relief.

PUBLIC UTILITIES

Republican Congresses and administrations have steadily strengthened the Interstate Commerce Commission. The protection of the public from exactions or burdens in rates for service by reason of monopoly control, and the protection of the smaller organizations from suppression in their own field, has been a fundamental idea in all regulatory enactments. While recognizing that at times Federal regulations might be more effective than State regulations in controlling intrastate utilities, the party favors and has sustained State regulations, believing that such responsibility in the end will create a force of State public opinion which will be more effective in preventing discriminations and injustices.

CONSERVATION

We believe in the practical application of the conservation principle by the wise development of our natural resources. The measure of development is our national requirement, and avoidance of waste so that future generations may share in this natural wealth. The Republican policy is to prevent monopolies in the control and utilization of natural resources. Under the general leasing law, enacted by a Republican Congress, the ownership of the mineral estate remains in the Government, but development occurs through private capital and energy. Important for the operation of this law is the classification and appraisement of public lands according to their mineral content and value. Over 500,000,000 acres of public land have been thus classified.

To prevent wasteful exploitation of our oil products, President Coolidge appointed an Oil Conservation Board, which is now conducting an inquiry into all phases of petroleum production in the effort to devise a national policy for the conservation and proper utilization of our oil resources.

The Republican Party has been forehanded in assuring the development of water power in accordance with public interest. A policy of permanent public retention of the power sites on public land and power privileges in domestic and international navigable streams and one-third of the potential water-power resources in the United States on public domain has been assured by the Federal water powers act, passed by a Republican Congress.

LAW ENFORCEMENT

We reaffirm the American constitutional doctrine as announced by George Washington in his Farewell Address, to wit:

The Constitution, which at any time exists until changed by the explicit and authentic act by the whole people, is sacredly obligatory upon all.

We also reaffirm the attitude of the American people toward the Federal Constitution as declared by Abraham Lincoln:

We are by both duty and inclination bound to stick by that Constitution in all its letter and spirit from beginning to end. I am for the honest enforcement of the Constitution. Our safety, our liberty, depends upon preserving the Constitution of the United States, as our forefathers made it inviolate.

The people, through the method provided by the Constitution, have written the eighteenth amendment into the Constitution. The Republican Party pledges itself and its nominees to the observance and vigorous enforcement of this provision of the Constitution.

HONESTY IN GOVERNMENT

We stand for honesty in government, for the appointment of officials whose integrity can not be questioned. We deplore the fact that any official has ever fallen from this high standard and that certain American citizens of both parties have so far forgotten their duty as citizens as to traffic in national interests for private gain. We have prosecuted and shall always prosecute any official who subordinates his public duty to his personal interest.

The Government to-day is made up of thousands of conscientious, earnest, self-sacrificing men and women, whose single thought is service to the Nation.

We pledge ourselves to maintain and, if possible, to improve the quality of this great company of Federal employees.

CAMPAIGN EXPENDITURES

Economy, honesty, and decency in the conduct of political campaigns are a necessity if representative government is to be preserved to the people and political parties are to hold the respect of the citizens at large.

The campaign of 1924 complied with all these requirements. It was a campaign the expenses of which were carefully budgeted in advance, and which at the close presented a surplus and not a deficit.

There will not be any relaxing of resolute endeavor to keep our elections clean, honest, and free from taint of any kind. The improper use of money in governmental and political affairs is a great national evil. One of the most effective remedies for this abuse is publicity in all matters touching campaign contributions and expenditures. The Republican Party, beginning not later than August 1, 1928, and every 30 days thereafter—the last publication being not later than five days before the election—will file with the committees of the House and Senate a complete account of all contributions, the names of the contributors, the amounts expended, and for what purposes, and will at all times hold its records and books touching such matters open for inspection.

The party further pledges that it will not create, or permit to be created, any deficit which shall exist at the close of the campaign.

RECLAMATION

Federal reclamation of arid lands is a Republican policy, adopted under President Roosevelt, carried forward by succeeding Republican Presidents, and put upon a still higher plane of efficiency and production by President Coolidge. It has increased the wealth of the Nation and made the West more prosperous.

An intensive study of the methods and practices of reclamation has been going on for the past four years under the direction of the Department of the Interior in an endeavor to create broader human opportunities and their financial and economic success. The money value of the crops raised on reclamation projects is showing a steady and gratifying increase, as well as the number of farms and people who have settled on the lands.

The continuation of a surplus of agricultural products in the selling markets of the world has influenced the department to a revaluation of plans and projects. It has adopted a 10-year program for the completion of older projects and will hold other suggestions in abeyance until the surveys now under way as to the entire scope of the work are completed.

COMMERCIAL AVIATION

Without governmental grants or subsidies and entirely by private initiative the Nation has made extraordinary advances in the field of commercial aviation. Over 20,000 miles of air-mail service privately operated are now being flown daily, and the broadening of this service is an almost weekly event. Because of our close relations with our sister republics on the south and our neighbor on the north it is fitting our first efforts should be to establish an air communication with Latin America and Canada.

The achievements of the aviation branches of the Army and Navy are all to the advantage of commercial aviation, and in the Mississippi flood disaster the work performed by civil and military aviators was of inestimable value.

The development of a system of aircraft registration, inspection, and control is a credit to the Republican administration, which, quick to appreciate the importance of this new transportation development, created machinery for its safeguarding.

IMMIGRATION

The Republican Party believes that in the interest of both native and foreign born wage earners it is necessary to restrict immigration. Unrestricted immigration would result in widespread unemployment and in the breakdown of the American standard of living. Where, however, the law works undue hardship by depriving the immigrant of the comfort and society of those bound by close family ties, such modification should be adopted as will afford relief.

We commend Congress for correcting defects for humanitarian reasons and for providing an effective system of examining prospective immigrants in their home countries.

NATURALIZATION

The priceless heritage of American citizenship is our greatest gift to our friends of foreign birth. Only those who will be loyal to our institutions, who are here in conformity with our laws, and who are in sympathy with our national traditions, ideals, and principles should be naturalized.

NAVY

We pledge ourselves to round out and maintain the Navy in all types of combatant ships to the full ratio provided for the United States by the Washington Treaty for the Limitation of Naval Armament and any amendment thereto.

HAWAII—ALASKA

We favor a continuance for the Territory of Hawaii of Federal assistance in harbor improvements, the appropriation of its share of Federal funds, and the systematic extension of the settlement of public lands by the Hawaiian race.

We indorse the policy of the present administration with reference to Alaska and favor a continuance of the constructive development of the Territory.

WOMEN AND PUBLIC SERVICE

Four years ago at the Republican National Convention in Cleveland women members of the national committee were welcomed into full association and responsibility in party management. During the four years which have passed they have carried with their men associates an equal share of all responsibilities, and their contribution to the success of the 1924 campaign is well recognized.

The Republican Party, which from the first has sought to bring this development about, accepts whole-heartedly equality on the part of the women, and in the public service it can present a record of appointments of women in the legal, diplomatic, judicial, Treasury, and other governmental departments. We earnestly urge on the women that they participate even more generally than now in party management and activity.

NATIONAL DEFENSE

We believe that in time of war the Nation should draft for its defense not only its citizens but also every resource which may contribute to success. The country demands that should the United States ever again be called upon to defend itself by arms, the President be empowered to draft such material resources and such services as may be required, and to stabilize the prices of services and essential commodities, whether utilized in actual warfare or private activity.

OUR INDIAN CITIZENS

National citizenship was conferred upon all native-born Indians in the United States by the general Indian enfranchisement act of 1924. We favor the creation of a commission to be appointed by the President, including one or more Indian citizens, to investigate and report to Congress upon the existing system of the administration of Indian affairs and to report any inconsistencies that may be found to exist between that system and the rights of the Indian citizens of the United States. We also favor the repeal of any law and the termination of any administrative practice which may be inconsistent with Indian citizenship, to the end that the Federal guardianship existing over the persons and properties of Indian tribal communities may not work a prejudice to the personal and property rights of Indian citizens of the United States. The treaty and property rights of the Indians of the United States must be guaranteed to them.

THE NEGRO

We renew our recommendation that the Congress enact at the earliest possible date a Federal antilynching law so that the full influence of the Federal Government may be wielded to exterminate this hideous crime.

HOME RULE

We believe in the essential unity of the American people. Sectionalism in any form is destructive of national life. The Federal Government should zealously protect the national and international rights of its citizens. It should be equally zealous to respect and maintain the rights of the States and Territories and to uphold the vigor and balance of our dual system of government. The Republican Party has always given its energies to supporting the Government in this direction when any question has arisen.

There are certain other well-defined Federal obligations, such as interstate commerce, the development of rivers and harbors, and the guarding and conservation of national resources. The effort which, however, is being continually made to have the Federal Government move into the field of State activities has never had, and never will have, the support of the Republican Party. In the majority of the cases State citizens and officers are most pressing in their desire to have the Federal Government take over these State functions. This is to be deplored for it weakens the sense of initiative and creates a feeling of dependence which is unhealthy and unfortunate for the whole body politic.

There is a real need in the country to-day to revitalize fundamental principles; there is a real need of restoring the individual and local sense of responsibility and self-reliance; there is a real need for the people once more to grasp the fundamental fact that under our system of government they are expected to solve many problems themselves through their municipal and State governments, and to combat the tendency that is all too common to turn to the Federal Government as the easiest and least burdensome method of lightening their own responsibilities.

TELEGRAM OF NOTIFICATION TO HON. HERBERT HOOVER AND HIS REPLY

Mr. MOSES. Ladies and gentlemen of the convention, I desire to read to you the following telegram which, as permanent chairman of this convention, I addressed to the Hon. Herbert Hoover, notifying him of his nomination by the Republican National Convention for the office of President of the United States. My message to Mr. Hoover reads as follows:

KANSAS CITY, MO., *June 14, 1928.*

Hon. HERBERT HOOVER,

2300 S Street NW., Washington, D. C.:

The Republican National Convention, by a sweeping majority, which has since been made unanimous, amid great enthusiasm, has named you as its candidate for the Presidency in this campaign. No message of information which I have ever sent to anyone has given me as much satisfaction as this to you. I send it in the name of a united, enthusiastic, and militant party organization, which has turned to you as the inevitable leader in the contest which confronts us. It is not so much that we give you this nomination as that you have earned the right to it. Your training, your equipment, and, above all, your character make you the leader for whom the party has looked in order that there may be no halting in the progress of the United States under policies which are warmly approved by the people and to which you have contributed so much. The convention, still in session, would appreciate a message from you, and I hope that you may be able speedily to send it to us.

GEORGE H. MOSES,

Permanent Chairman Republican National Convention.

Mr. Hoover's message to the convention reads as follows:

WASHINGTON, D. C., *June 14, 1928.*

GEORGE H. MOSES,

Chairman Republican National Convention,

Kansas City, Mo.:

I have your telegram and I sincerely appreciate the confidence which the party has shown in me and the honor bestowed upon me.

You convey too great a compliment when you say that I have earned the right to the presidential nomination. No man can establish such an obligation upon any part of the American people. My country owes me no debt. It gave me, as it gives every boy and girl, a chance. It gave me schooling, independence of action, opportunity for service, and honor. In no other land could a boy from a country village, without inheritance or influential friends, look forward with unbounded hope.

My whole life has taught me what America means. I am indebted to my country beyond any human power to repay. It conferred upon me the mission to administer America's response to the appeal of afflicted nations during the war. It has called me into the Cabinets of two Presidents. By these experiences I have observed the burdens and responsibilities of the greatest office in the world. That office touches the happiness of every home. It deals with the peace of nations. No man could think of it except in terms of solemn consecration.

You ask me for a message.

A new era and new forces have come into our economic life and our setting among nations of the world. These forces demand of us constant study and effort if prosperity, peace, and contentment shall be maintained.

This convention, like those which have preceded it for two generations, has affirmed the principles of our party and defined its policies upon the problems which now confront us. I stand upon that platform. At a later date I shall discuss it fully, but in the meantime I may well say that under the principles the victory of the party will assure national defense, maintain economy in the administration of government, protect American workmen, farmers, and business men alike from competition arising out of lower standards of living abroad, foster individual initiative, insure stability of business and employment, promote our foreign commerce, and develop our national resources.

You have manifested a deep concern in the problems of agriculture. You have pledged the party to support specific and constructive relief upon a nation-wide scale backed by the resources of the Federal Government. We must and will find a sound solution that will bring security and contentment to this great section of our people.

But the problems of the next four years are more than economic. In a profound sense they are moral and spiritual. This convention has sounded a note of moral leadership.

Shall the world have peace? Shall prosperity in this Nation be more thoroughly distributed? Shall we build steadily toward the ideal of equal opportunity to all our people? Shall there be secured that obedience to law which is the essential assurance of life of our institutions? Shall honesty and righteousness in government and in business confirm the confidence of the people in their institutions and their laws?

Government must contribute to leadership in answer to these questions. The Government is more than administration; it is power for leadership and cooperation with the forces of business and cultural life

in city, town, and countryside. The Presidency is more than executive responsibility. It is the inspiring symbol of all that is highest in America's purposes and ideals.

It is vital to the welfare of the United States that the Republican Party should continue to administer the Government. It is essential that our party should be continued in organization and in strength in order that it may perpetuate its great principles in our national life.

If elected by my fellow countrymen, I shall give the best within me to advance the moral and material welfare of all our people and uphold the traditions of the Republican Party, so effectively exemplified by Calvin Coolidge.

HERBERT HOOVER.

ADDRESS OF MR. CLAUDE G. BOWERS, OF INDIANA AND NEW YORK, TEMPORARY CHAIRMAN OF THE DEMOCRATIC NATIONAL CONVENTION, AT HOUSTON, TEX., JUNE 26, 1928

The American Democracy has mobilized to-day to wage a war of extermination against privilege and pillage. We prime our guns against autocracy and bureaucracy. We march against the centralization which threatens the liberties of the people. We fight for the Republic of the fathers and for the recovery of the covenant from the keeping of a caste and class. We battle for the honor of the Nation, besmirched and bedraggled by the most brazen and shameless carnival of corruption that ever blackened the reputation of a decent and self-respecting people.

We stand for the spirit of the preamble of the Declaration that is made a mockery; for the bill of rights that is ignored; for the social and economic justice which is refused; for the sovereign rights of States that are denied; and for a return to the old-fashioned civic integrity of a Jackson, a Tilden, a Cleveland, and a Wilson. We stand for the restoration of the Government to the people, who built it by their bravery and cemented it with their blood.

We do not underestimate the enemy. The little gilded group that now owns and controls the Government can pour a golden stream into the slush fund and make no impression on the fortunes they have legislated into their coffers. The enemy enters the campaign unembarrassed by a debt—Harry Sinclair has paid that off. It enters the campaign with his money in its pocket and his blessing on its head.

For 40 years the party in power has conjured with the name of Lincoln, while following the leadership of Hamilton; and now, after eight years of successful privilege and pillage, it throws off the Lincolnian mask. It could hardly keep the Lincoln mask on its face and Sinclair's money in its chest.

Thus at Kansas City, where they dramatized the issue, it was not Lincoln but Hamilton who rode at the head of the procession.

TWO POLITICAL SCHOOLS

Thus they frankly base their policies on the political principles of Hamilton; and we go forth to battle for the principles of Thomas Jefferson. The issues are as fundamental as they were when Jefferson and Hamilton crossed swords more than a century ago. To understand the conflicting views of these two men on the functions of government is to grasp the deep significance of this campaign.

Now, Hamilton believed in the rule of an aristocracy of money, and Jefferson in a democracy of men.

Hamilton believed that governments are created for the domination of the masses, and Jefferson that they are created for the service of the people.

Hamilton wrote to Morris that governments are strong in proportion as they are made profitable to the powerful; and Jefferson knew that no government is fit to live that does not conserve the interest of the average man.

Hamilton proposed a scheme for binding the wealthy to the Government by making government a source of revenue to the wealthy; and Jefferson unfurled his banner of equal rights.

Hamilton wanted to wipe out the boundary lines of States, and Jefferson was the champion of their sovereign powers.

Hamilton would have concentrated authority remote from the people, and Jefferson would have diffused it among them.

Hamilton would have injected governmental activities into all the affairs of men, and Jefferson laid it down as an axiom of freedom that "that government is best which governs least."

Just put a pin in this: There is not a major evil of which the American people are complaining now that is not due to the triumph of the Hamiltonian conception of the State. And the tribute to Hamilton at Kansas City was an expression of fealty to him who thought that governments are strong in proportion as they are made profitable to the powerful; who proposed the plan for binding the wealthy to the Government by making government a source of revenue to the wealthy; who devised the scheme to tax the farm to pay the factory; and whose purpose was to make democracy in America a mockery and a sham.

Thus we are challenged once more to a conflict on the fundamentals, and a clear call comes to us to-day to fight anew under the Jeffersonian banner, with the Jacksonian sword, and in the Wilsonian spirit, and, crashing the gates of privilege, make Jeffersonian democracy a living force again in the lives and homes of men.

The friendly enemy at Kansas City has rendered a clarifying service by proclaiming Hamilton as its father and beau ideal. This ought to awaken the Lincolnians among Republicans to a realization of what are the fundamentals of their party's faith. It was Lincoln who said that "the principles of Jefferson are the definitions and the axioms of a free society." What a comment on the confusion of the public mind on the elementals of American politics when a great party is able to claim a joint parenthood in Abraham Lincoln and Alexander Hamilton!

Why, you can not believe with Lincoln in Democracy and with Hamilton against it.

You can not believe with Lincoln that "God loved the common people or He would not have made so many of them," and with Hamilton that the people are "a great beast."

You can not believe with Lincoln that the principles of Jefferson are "the definitions and the axioms of a free society," and with Hamilton that they are the definitions of anarchy.

You can not believe with Lincoln in a government "of the people, by the people, and for the people," and with Hamilton in a government of the wealthy, by the influential, and for the powerful.

There are Lincoln Republicans and Hamilton Republicans, but never the twain shall meet, not even at Kansas City, until you find some way to ride two horses going in opposite directions at the same time. We here propose to take our stand so uncompromisingly on the elemental principles of Jeffersonian Democracy that liberals and progressives may fraternize with us in a common fight against the common foe in the common interest of the average man and woman.

WILSONIAN DAYS

We enter the campaign no strangers to the public. The brilliant record of our eight years of power is as a splotch of glorious sunshine against the smutty background of eight years of privilege and crime. In those eight years we wrote more progressive and constructive measures into law than had been written by the opposition in 40 years of power.

One thing those eight years did—they buried beyond the reach of resurrection the ancient slander that the party of Wilson is incapable of constructive statesmanship.

They did one thing more—they destroyed the falsehood that Democracy means hard times.

They did another thing—they demolished the fallacy that the party that gave the Federal reserve system to the Nation is an enemy of business.

And those eight years did one thing more—they gave another immortal to the skies.

What a majestic figure was he who led us in those fruitful years! The cold, even light of his superb intellect played upon the most intricate problems of the times, and they seemed to solve themselves. He lifted the people to such heights of moral grandeur as they had never known before, and his name and purpose made hearts beat faster in lowly places, where his praise was sung in every language in the world. And when at length, his body broken but his spirit soaring still, he fell stricken while still battling for his faith there passed to time and to eternity and to all mankind the everlasting keeping of the immortal memory of Woodrow Wilson.

We submit that a political party that stands for that democracy which is inseparable from the liberties of men and has given a Jefferson, a Jackson, and a Wilson to the service of mankind has earned the right, in times like these, to the cooperation of independents and progressives in the struggle for the preservation of popular government and in the purging of the Nation of that corruption which has made America a byword and a hissing in the very alleys of the world.

BLACK HORSE CAVALRY

Sixteen years ago the late Senator Beveridge warned us of the "invisible government." That invisible government now feels strong enough to take on visibility. From the moment of the election of 1920 there was a mobilization of the black horse cavalry of privilege and pillage, and it cantered down Pennsylvania Avenue, up and down from one end to the other.

Strange creatures, unknown even to the Capitol, put in an appearance. Desk room was found for one of these in the Department of Justice. The best minds established a temple of the new patriotism in the little green house on K Street. Men who

were the very symbols of privilege, whose fortunes had been built on the favors of government, were put in possession of the instrumentalities of the State. Acting on the Hamiltonian theory that governments are strong in proportion as they are made profitable to the powerful, the foremost of these was put in a strategic public position that he might personally supervise the delivery of the goods.

The representatives of special interest hastened to the Capital with their receipts for campaign contributions, to be given a key to the Treasury and a guest card to the patriotic club on K Street, where "there was a sound of revelry by night." Within five months the conditions in Washington had become a scandal and a stench. The reign of privilege and pillage had begun.

PRIVILEGE ENTHRONED

The moment the bell rang these men set themselves to the task of undoing the work of Woodrow Wilson and to the commercialization of the Government. In the midst of the usual scandal they hurried a tariff law upon the statutes at a cost of from three to four billions a year to the consumers.

They found the Tariff Commission we created an embarrassment—they ignored it. It was not facts they sought. They had promises to keep. When a little later they found it convenient to have a complacent commission to find the facts they sought—they packed it. From that hour the acoustics of the commission have been exceedingly bad. The cries of the millions for relief can not be heard, but the dulcet whisper of the pig-iron industry was enough to bring a 50 per cent increase in its loot.

They found the Federal Trade Commission was mightily in the way—they packed it. They took the weapons we provided for the protection of the people against exploitation and they turned them over to the powers of pillage.

Thus privilege was speedily intrenched in every department of the Government; and privilege entered into the office of the Attorney General to spike the guns of justice; and privilege took possession of the strategic points in every department and commission; and when the machinery of this potential plutocracy was completed, seated there, at the control was the very personification of the erstwhile invisible government, looking after the interest of his flock.

My friends, it is a tragic thing when a government of a mighty people can be mortgaged to a little group that could be crowded into the directors' rooms of the Aluminum Co. of America. Under the rule of this régime the average man has had no more stake in the Government, for which he may be called upon to die, than if he had never touched our soil.

THE TRAGEDY OF THE FARMS

For example, what stake in government has the farmer of to-day? From the moment of the realization of the Hamiltonian state under the banner of the bloody shirt in the black and brutal days of reconstruction the American farmer has been but a hewer of wood and a drawer of water. During the 60 years of Jeffersonian supremacy the farmer was on an equality with every other industry, and it is no mere coincidence that his decline and degradation began with the triumph of the Hamiltonian state. In the Jeffersonian concept of society the farmer has a position of paramount importance, but in all the political writings of Hamilton the only reference to the farmer is a promise that in compensation for his submission to taxation for the benefit of others he may put his wife and children to work in the mills.

Thus, while the little group represented by Mr. Mellon has found fine plucking in the vineyard of the state, there have been nothing but thorns and thistles for the tillers of the soil. And the result is a condition of ruination that is a disgrace to our civilization. More than a million farms have been abandoned; more than two million men have been driven from the paternal acres by economic necessity within the year. The hammer of the auctioneer knocking down farm lands sounds like the continuous bombardment of a major battle in the West. Does the ruling caste want figures? Then take this: In five years of the Coolidge prosperity there has been a depreciation in the value of farm lands and equipment of $30,000,000,000.

And what does the ruling caste say to this? They call it "temporary depression." And what does it propose? They propose that the farmers shall become better business men.

Now, when it suits the pleasure of the privileged to legislate money into their coffers it is applauded by the claquers as patriotic statesmanship; but when the farmer demands his share in the unhappy game of paternalism they denounce him as a radical and a crank.

One day the head of the state by a scratch of the pen increased the tariff loot of the pig-iron industry by 50 per cent, and the very next day he delivered a homily to the farmers on the wickedness of expecting profit from a governmental act.

One day Mr. Mellon offered an argument against a farm relief bill; and the next day a Republican Senator by substituting the words "tariff" for "farm relief" and "duties" for "equalization fee," converted the Mellon argument into a devastating denunciation of the very processes through which much of the Mellon fortune has been made

One month ago the President of the United States bitterly denounced with contemptuous phrasing the revolving fund of a farm relief bill, and the very next day he heartily approved the revolving fund for the favored shipping interest.

And then, with millions of producers on the verge of bankruptcy and despair, they contemptuously kicked their case from court and adjourned the Congress with a cheer. Thus for eight long years they have stood in the midst of the wreckage of the farms and have done nothing—nothing to decrease the cost of transporting the farmers' produce to the marts; nothing to rehabilitate his lost markets across the sea; but they have added a billion a year to the cost of the things the farmer has to buy.

Now, we do not ask paternalistic privilege for the farmer, but we do demand that the hand of privilege shall be taken out of the farmer's pockets and off the farmer's throat. We propose to tear down the system of privilege and put the farmer on an absolute equality with every other industry. We do not propose that the most basic of industries shall longer be a doormat for all the others to wipe their feet upon as they enter the temple of privilege.

DEMOCRACY IN BUSINESS

Ah, but whenever we protest against the commercialism of government in the interests of business they say we are enemies of business. Well, history refutes them. Thomas Jefferson was not an enemy of business. He merely objected to the use of the instrumentalities of the state to make it possible for a few men to pick the pockets of their fellow men under the protection of the police.

Andrew Jackson was not an enemy of business. He discriminated between business and brigandage, and he was so much the friend of honest business that he fought to make it free.

Woodrow Wilson was not an enemy of business. During the eight years of his administrations we gave more intelligent legislative service to honest business than had been given it in 40 years before.

We defy them to name a Democratic President who was an enemy of business.

But we differ from those to whom Mr. Mellon is sacrosanct in our definition of a business man. In the case of every tax-reduction measure of the last eight years the Democratic minority in Congress has fought the battle of 95 per cent of the business men of this country against his 5 per cent.

We hold that the owner of a little shop, the proprietor of a store in an average town, is as much a business man as the barons of iron and steel. The man who owns and operates a ranch in Texas or Montana is as much a business man as the banker in New York. The men who till the soil and feed the Nation are better business men to the Jeffersonian than the most successful speculator in stocks and bonds. We are unable to accept the language of the opposition, for we are interested in the Babbitts, and they in the bulls and the bears.

We wage no war on big business if it be honest business; we find no fault with fortunes, however large, provided they are not accumulated through the misuse of governmental power. But we do protest against and war upon the commercialization of government that makes for corruption and crime.

CORRUPTION

Privilege and pillage are the Gold Dust twins of normalcy. The Wilson administration is a green spot bounded on one side by the Mulhall mess and on the other by an oil tanker flying a pirate's flag.

The last seven and a half years have been putrid beyond precedent. We make no charge—we follow the official record.

We have seen a governmental department designed for the legal protection of the people converted into a rendezvous for the barterers of illegal permits.

We have seen the agents of the Department of Justice sent forth at the Nation's cost and with the administration's sanction on the infamous mission of "framing" a United States Senator who had dared expose the criminality of its proceedings. Nothing more disgraceful blackened the days of the Federalist sedition law. A baser and more dastardly prostitution of the judicial processes has not shamed the story of a civilized nation since the unspeakable Jeffries sat upon the bench. And he died, deservedly, like a miserable felon in the tower.

We have seen the money appropriated for the care of the sick and wounded soldiers squandered on the pleasures of a drunken libertine. We have seen the Nation's oil reserves, set

aside by the prescience of Roosevelt and sacredly guarded by the honesty and wisdom of Wilson and Daniels, bartered away by a member of the Cabinet for a bribe in a little black bag.

"ADDITION, DIVISION, AND SILENCE"

Shameful as these things are, more shameful far has been the cynical silence and indifference of the high functionaries of the State to whom the people had a right to look for the protection of the Nation's property and the Nation's honor. We submit in no spirit of political flubdubbery that it is a shocking thing that we have waited vainly for seven years for one word, one syllable, one whisper of the mildest criticism of these criminals and crimes from a single representative of the administration.

They heard La Follette's denunciation of Teapot Dome—and were silent. They saw the various processes in the alienation of the Nation's property—and were silent. They heard the gossip of the Capital that buzzed for weeks and months—and were silent. There was not a man among them with enough will power or lung power to blow a police whistle.

Nay, more: When a warning of the impending crime was sent to a member of the Cabinet, but recently knighted by the golden wand, he sent the letter to Albert B. Fall, with this notation: "I should be glad to convey to this gentleman any reply you may suggest."

I sometimes think that the virtues of silence may be overdone. Sometimes silence may be golden—for the thief.

Many years ago a corruptionist de luxe phrased the shibboleth of the powers of pillage in these words: "Addition, division—and silence." When the pillagers got their loot there was addition, when the faithless public servants got their share, there was division, and from the men set by the people in the watch-tower to guard their treasures there has been the invaluable contribution of silence.

Imagine Andrew Jackson silent in the midst of such crimes; imagine Tilden; imagine Cleveland; imagine Wilson! Why, they would have thundered their denunciations from the loftiest station in the world and have scourged the rascals forth with scorpion whips tipped with consuming flame.

They tell us now, and some of our Republican papers dwell especially upon this, "All these things have been exposed and something has been done. Why talk about it now?" This is our answer: If an Attorney General of odorous memory no longer sits at the council table of the Nation's chief, it is because a Democratic Senator so exposed the crimes of his régime that public sentiment lashed him out; and if he was permitted to go without rebuke and to march out with all the honors of war, thank God it was not with the consent of the party of Woodrow Wilson.

And this is our answer: If the Nation's oil reserves have been restored it is because the inquisitorial genius of WALSH of Montana exposed the crime and forced the proceedings that brought the restitution of the Nation's stolen goods.

DIVISION OF THE SPOILS

And why the silence in the watch tower? Because the organization of the party of the men stationed there was a beneficiary of the crime. Not only did they know of the crime and maintain silence—they knew of the division of the spoils and knew that a goodly part was being used to pay the party debt.

What a picture for children to read some day in American history! We see the erstwhile chairman of the national committee of the régime in power laying aside his duties as an elder of the church to slink into the office of Sinclair to get the tainted bonds. We see him sneaking about like a receiver of stolen goods to men of means to persuade them dishonestly to contribute these to the party fund under cover. We see him sending a portion of these bonds to the dictator of the administration and the party, affectionately known as "Andy" in the records; and thus we know that the high functionaries of the State and party knew that the party was to be a beneficiary of the crime. And the revered head of the Treasury made no protest against his party taking its share out of the pot filled through the pillaging of the Nation's property. Silence was golden—for the party chest.

And thus the campaign deficits of the régime in power have been paid by Harry Sinclair, and now with pious platitudes that party enters another campaign free from debt—because there was a Teapot Dome.

And why this strange insensibility to the common instincts of honesty or honor? Now, bear in mind the Hamiltonian theory that governments are strong in proportion as they are made profitable to the powerful. There is no moral difference between selling legislation in advance for campaign funds and selling oil reserves, and it is not remarkable that he who practices the one may condone the other. Or that he who believes that giving money to a slush fund is "just like giving money to a church" should play the silence end in the tale of the tainted bonds in the game of "Addition, division, and silence."

And so we go forth to recover the Government from the hands of those who pillage by law as well as those who steal by stealth. Even as a minority we dragged these loathsome crimes to light. We exposed the stealing, the perjury, the silences of the sacrosanct. We forced the restitution of the Nation's stolen goods. We compelled the dismissal of Daugherty and the prosecution of Fall. Put us in possession of the Government and we will turn the light on every crack and crevice and cleanse the Augean stables from mow to manger.

We have no legislation to put upon the auction block. No Harry Sinclair has paid our party debt. We are free. We unfurl the Jeffersonian banner bearing Jefferson's device, "A good government is an honest government," and we invite all enemies of corruption to fight with us beneath its folds for the redemption of the violated honor of this Republic.

MYTHS

Now, they hope to drug the conscience of the Nation with the doped soothing sirup of a fake prosperity; and we want to know what prosperity they mean. They point to a few powerful corporations enjoying the pap of paternalistic privilege, and our answer is that you can not judge the prosperity of a people by the earnings of a privileged monopoly.

Many years ago Thomas Jefferson advised a friend impressed with the evidence of prosperity in the homes of the nobility in Paris and Versailles to go out into the country and look into the pots in the fireplaces of the peasants. That is our answer now.

Four million jobless men is not prosperity; a million abandoned farms is not prosperity; the utter ruin of the basic industry of America is not prosperity; the failure of 4,000 banks in the seven years of normalcy is not prosperity; 23,146 commercial failures in the year 1927 is not prosperity; and if this year's record is foreshadowed by the first four months, there will be 28,000 commercial failures in 1928.

The difference between the prosperity of the Hamiltonian "Nation" that they mean and the Jeffersonian Nation that we know is this: They could crowd their "Nation" into one corner of this vast hall, and the Nation that we know embraces cities and towns and the countryside, and 118,000,000 people in the homes of men. Their prosperity is a spotted thing—an evidence of disease; and we want to spread it like a healthy glow over every element and section of our population.

THE ANTIDEMOCRATIC STATE

My friends, never in a century has there been such a clear call to the American democracy to fight for the faith of our fathers, and never before has the control of government been so completely concentrated in the hands of a ruling caste as now. The dreams of the Hamiltonians have literally come true while the people slept. They wanted organized wealth in possession of the Government—and we have it. They wanted the sovereigfn rights of States denied—and we have it. They wanted bureaucratic agents swarming over the land like the locusts of Egypt—and we have it. They wanted government made profitable to the powerful—and we have it. They wanted through administration to make a mockery of democracy—and we have it. The Hamiltonian state is necessarily a temple of gold resting on the bowed backs of peasants in other people's fields—and we will soon have that too. They would deify dollars and minimize men, limit self-government and centralize power, cripple democracy, empower bureaucracy, welcome plutocracy—and we will soon have that, too.

Give the plunderbund but eight years more of such governmental cooperation and a combination of power companies will put a few men in control of the public utilities of a mighty empire. Make no mistake about it—that is the great Jacksonian struggle of to-morrow. And with that sinister possibility upon us the people must determine whether they will intrust their interest to those who believe that governments are strong in proportion as they are made profitable to the powerful or to the Jeffersonians, who believe that governments are created for the service of mankind. Once in possession and intrenched the plunderbund of the power monopoly can not be dislodged by the fighting force of a dozen Andrew Jacksons.

BACK TO THE FUNDAMENTALS

And so we are going back—back to the old landmarks of liberty and justice in this campaign. For the benefit of those who may have grown cynical or confused, let me suggest a text: "Saith the Lord, stand ye in the ways and see, and ask for the old paths, which is the good way, and walk therein, and ye shall find rest for your souls."

We are mobilized to lead the people back to the old paths of constitutional liberty and to the good way. We are going back—back to the old landmarks of liberty and equality, when ordinary men had rights that even privilege respected; when justice, not privilege, was the watchword of the State; when the preamble of the Declaration and the bill of rights had meaning; when the Nation embraced every section and every class, and before the Pittsburgh Bratiano had decided to make Rumanian peasants of American farmers to fill the coffers of a purse-proud caste.

Our principles have been written in the triumph of the people and baptized in the blood of our bravest and our best. Jefferson phrased them, Jackson vitalized them, Wilson applied them, and we go forth to battle for them now.

We face a foe grown arrogant with success. It were infamy to permit the enemy to divide us or divert us on the eve of such a battle. The issues in this campaign go to the determination of the future destiny of our institutions and our children. The call that comes to us is as sacred as the cause of humanity itself. From the grave at the Hermitage comes the solemn warning that no party ever won or ever deserved to win that did not organize and fight unitedly for victory, and we shall thus organize and fight. This is a unique campaign. The very precinct committeemen and the district captains become the minutemen of liberty in the reassertion of the principles of freedom.

And we shall win because our cause is just. The predatory forces before us seek a triumph for the sake of the sacking. Their shock troops are the Black Horse Cavalry, whose hoofbeats have made hideous music on Pennsylvania Avenue during the last eight years. They are led by money-mad cynics and scoffers—and we go forth to battle for the cause of man. In the presence of such a foe "he who dallies is a dastard and he who doubts is damned." In this connection we close debate and grasp the sword. The time has come. The battle hour has struck. Then to your tents, O Israel!

ADDRESS OF HON. JOSEPH T. ROBINSON, OF ARKANSAS, PERMANENT CHAIRMAN OF THE DEMOCRATIC NATIONAL CONVENTION AT HOUSTON, TEX., JUNE 27, 1928

Ladies and gentlemen of the convention, responsibility as well as the honor associated with the chairmanship of this convention is fully recognized. The duty to serve with patience and impartiality is readily acknowledged. The primary task of a permanent chairman is not to define principles or suggest policies. That has been well done by the temporary chairman, Mr. Bowers, in a brilliant and forceful address. My chief duty is to assist in conducting the business of the convention. I shall, however, avail myself of the privilege which custom has established and make brief mention of some subjects of general political interest.

Never before have the representatives of the National Democratic Party assembled under such impressive conditions. We are face to face with a notable political crisis. The exercise of sound judgment and common sense in the nomination of candidates and the demonstration of loyalty to accepted party principles constitute a sane way in which to harmonize our differences, and are essential to success in the approaching campaign.

When this convention has nominated its candidate there will be no doubt of his eligibility to serve as President of the United States under the Constitution of this great Republic.

The Democratic Party has an issue that has not materially changed since the days of Thomas Jefferson. The necessity for political reform is greater now than ever before. Since its birth our party has safeguarded the rights and privileges of the masses. It has championed personal liberty and opposed centralization. Its founder sought to protect the unselfish citizen against the abuse of laws and governmental agencies for private profit.

Jackson aroused the masses to the menace of plutocracy. Cleveland voiced resentment at the abuse of the taxing power to enrich certain groups and the exploitation of the public. Wilson defined anew the democratic ideals of justice and equality. From its formation the Democratic Party has sought to define as the fundamental or primary function of government equal rights and opportunities for all citizens.

In this campaign the Republicans cunningly seek to win their way back into the public favor by advancing false issues. The national administration during the last seven years is indefensible from any standpoint. For corruption and inefficiency it is equaled only by the prostitution of power in States dominated by the Republican Party.

The oft-repeated assertion by our adversaries that Democrats can not be trusted to promote sound business is totally false. What other period since our Government was established compares favorably with the eight years of Woodrow Wilson's administration? The boldest champion of the opposition can not recall a time when real prosperity was more general. Labor was profitably employed; industry operated on full time; and agriculture was on an equality with all other businesses.

The boasted prosperity of the Republican administration is a sham prosperity. It does not compare with that enjoyed during Democratic control. The Secretary of the Treasury, in his annual report for 1927, admits that conditions during that year were not so good as during the previous year. The President's industrial conference board asserts that prosperity in the United States is confined to giant corporations. The Bureau of Foreign and Domestic Commerce examined 100,000 business concerns during 1927 and reported 34,000 of them not making any profit whatever. The Commissioner of Internal Revenue states that three-fifths—only three-fifths—of the corporations engaged in the manufacture of textiles and a similar percentage of those engaged in the manufacture of leather goods reported net income for the year 1925. The record of commercial and bank failures discloses the falsity of this Republican claim of unusual prosperity. In 1919, under Mr. Wilson's administration, only 50 State banks and 4 national banks failed with aggregate liabilities of less than $12,000,000. In 1925, 361 State banks and 103 national banks went into receivership with aggregate liabilities exceeding $175,000,000. Mark the figures for 1926; 772 State banks became insolvent and their total liabilities exceeded $226,000,000.

The figures for 1927 are not complete, but they disclose insolvent State banks during that year whose liabilities exceed $200,000,000. The annual value of agricultural products decreased $1,500,000,000, comparing the year 1924 with 1927. The Bureau of Labor Statistics revealed a decrease of 20 per cent now, compared with the labor employment during the year last past. The depressed condition of agriculture is of common knowledge. This greatest of all industries has been steadily declining since Wilson's administrations ended. Everyone knows, though some may not admit, that agriculture has been going backward since Wilson's administrations ended. Never before has there existed such discontent among farm producers. They justly attribute their distress to the policies of the Republican Party. Why should farmers be required to sell their products on the open market of the world and to buy what they consume from trusts and monopolies which arbitrarily fix the prices of their commodities, an unjust and oppressive system, made possible by excessive tariff duties?

The importance of this issue and these facts is emphasized by the repeated refusal of the administration to grant substantial relief. Farmers are awake to this, and they are ready, if we afford them the opportunity, to right their wrongs through political action. The Republican Party has betrayed the farmers of the United States, and now seeks to deceive them again with new false promises.

The only plank for specific relief in the Kansas City platform is increased tariff duties, which experience shows can not be made effective. The equality of agriculture may be promoted by reducing the tariff on manufactured articles consumed by farmers by a system of export expansion or by recognition, if you please, of the principle of what is known as the McNary-Haugen bill, twice vetoed by the President of the United States. The farm population will not vote for Mr. Hoover. He has led the forces opposed to adequate and substantial measures for the improvement of living conditions on the farm and has boldly challenged the advocates of such measures.

Does a fair survey of facts justify the claim of the Republican Party that such exceptional prosperity has prevailed during the administrations of President Harding and President Coolidge which would invite disaster to change political control next November? To ask the question is to answer it.

Gentlemen, property would certainly be safer with the Democrats in power. There would be no danger of its being stolen by Government agents. Mr. Bowers in his notable address to the convention discussed the corruption which has disgraced the executive department during the present and the preceding administration. Corruption is the red danger signal of revolution. Such a saturnalia of crime has never before been witnessed. The Democratic Party is entitled to make an issue of honest government in the interest of the public.

The bombastic boasts of the chairman of the Kansas City convention and the stupefying verbosity and reckless perversion of the Republican platform in the declaration that the foreign policies of the Harding and Coolidge administrations are characterized by confusion and inconsistency—the confusion resulting from ignorance, the inconsistency originating in moral irresponsibility. In what other way can be explained the agreement not to fortify our possessions in the Pacific Ocean, the destruction of new battleships in the name of disarmament, and the immediate building of inferior types of vessels? How can be accounted for the whitewashing of

corruption in high places, the sale of the machinery of the Republican Party to the pampered beneficiaries of corrupt bargains with unfaithful Cabinet officers?

The foreign policy of President Wilson's administration was decisive. It commanded respect and honor for the United States throughout the world. It contemplated cooperation with other powers in the promotion of international peace and in the avoidance of war. Who can define, who could comprehend the foreign policy of either the Harding or the Coolidge administration? What is the position now of the United States in the opinion of mankind? What is their attitude with respect to great international problems? Our Government is unpopular; our flag is regarded with suspicion and contempt. Nothing has been done and little is promised that contemplates the promotion of friendly and intimate relations with other peoples. In Wilson's time the United States led the world on all of the highways of human progress; our flag was a symbol of glory wherever uplifted into light.

Prompted by the malice or the ignorance of his immediate officers President Harding abandoned that leadership and President Coolidge does not choose to attempt its resumption.

There are too many subjects of vital interest about which Democrats agree to justify breaking up over questions about which there have always been differences of opinion. Prompted solely by the desire to promote harmony and concerted action, I respectfully suggest that it is my opinion that no wet plank should be incorporated in our platform. The Democratic Party is not a prohibition party, and neither is it an antiprohibition party. Many people believe that prohibition is an economic and moral measure. Others believe that it invites and encourages lawlessness, and they advocate substantial changes in the laws and Constitution. The fear that this convention may attempt to commit the party to a wet platform has alarmed many Democrats, particularly southern Democrats, who favor the continuance of prohibition because of the evidence of its value in the social and economic progress of the country.

Democrats are united for the suppressing of corruption and for honesty in governmental affairs. We stand as one in favor of the enforcement, in good faith, of the Constitution and all laws. We stand for the protection of honest business men against the unfair and oppressive methods of monopoly. We favor relief, too long delayed, for the great agricultural interests of the Nation, to which the Republican Party has brought only bankruptcy and ruin. Respecting these important subjects there should be no division among Democrats.

We of the South are happy to have this national convention assemble in this beautiful, typically warm southern city. It has been said that Democrats may be relied upon to offset the blunders and heal the self-inflicted wounds of the Republican Party. Let us here disappoint the expectation of our adversaries and realize the dreams and hopes of millions of faithful Democrats throughout this Nation who look to us for the exercise of prudence and wisdom.

We must demonstrate willingness to enter into honorable compromises and to make personal sacrifices. In no other way can the best interests of this Nation and the Democratic Party be promoted. Jefferson gloried in the Virginia statute of religious freedom. He rejoiced in the provision of the Constitution that declares no religious test shall ever be required as a qualification for office or trust in the United States.

When this convention has performed its tasks, nominated its candidates, and adopted its platform, let us advance with measured tread and irresistible energy and force to the overthrow of the forces which have corrupted and which are dominating this great Government.

Ladies and gentlemen of the convention, the Chair asks your assistance in the orderly conduct of the business of this body. When an adjournment is taken to-day we will meet back here promptly and the business of the convention will proceed at the hour to which we have adjourned. We have much business to attend to, and it is respectfully requested that delegates and their guests observe the sound of the gavel. I thank you.

PLATFORM ADOPTED BY THE DEMOCRATIC NATIONAL CONVENTION AT HOUSTON, TEX., JUNE 28, 1928

We, the Democratic Party in convention assembled, pause to pay our tribute of love and respect to the memory of him who in his life and in his official actions voiced the hopes and aspirations of all good men and women of every race and clime, the former President of the United States, Woodrow Wilson. His spirit moves on and his example and deeds will exalt those who come after us as they have inspired us.

We are grateful that we were privileged to work with him and again pay tribute to his high ideals and accomplishments.

We reaffirm our devotion to the principles of Democratic government formulated by Jefferson and enforced by a long and illustrious line of Democratic Presidents.

We hold that government must function not to centralize our wealth but to preserve equal opportunity so that all may share in our priceless resources, and not confine prosperity to a favored few. We, therefore, pledge the Democratic Party to encourage business, small and great alike; to conserve human happiness and liberty; to break the shackles of monopoly and free business of the Nation; to respond to popular will.

The function of a national platform is to declare general principles and party policies. We do not, therefore, assume to bind our party respecting local issues or details of legislation.

We, therefore, declare the policy of the Democratic Party with regard to the following dominant national issues:

THE RIGHTS OF THE STATES

We demand that the constitutional rights and powers of the States shall be preserved in their full vigor and virtue. These constitute a bulwark against centralization and the destructive tendencies of the Republican Party.

We oppose bureaucracy and the multiplication of offices and officeholders.

We demand a revival of the spirit of local self-government without which free institutions can not be preserved.

REPUBLICAN CORRUPTION

Unblushingly the Republican Party offers as its record agriculture prostrate, industry depressed, American shipping destroyed, workmen without employment; everywhere disgust and suspicion, and corruption unpunished and unafraid.

Never in the entire history of the country has there occurred in any given period of time, or indeed in all time put together, such a spectacle of sordid corruption and unabashed rascality as that which has characterized the administration of Federal affairs under eight blighting years of Republican rule. Not the revels of reconstruction nor all the compounded frauds succeeding that evil era have approached in sheer audacity the shocking thieveries and startling depravities of officials high and low in the public service at Washington. From Cabinet ministers, with their treasonable crimes, to the cheap vendors of official patronage; from the purchasers of seats in the United States Senate to the vulgar grafters upon alien trust funds and upon the hospital resources of the disabled veterans of the World War; from the givers and receivers of stolen funds for Republican campaign purposes to the public men who sat by silently consenting and never revealing a fact or uttering a word in condemnation, the whole official organization under Republican rule has become saturated with dishonesty defiant of public opinion and actuated only by a partisan desire to perpetuate its control of the Government.

As in the time of Samuel J. Tilden, from whom the Presidency was stolen, the watchword of the day should be, "Turn the rascals out." This is the appeal of the Democratic Party to the people of the country. To this fixed purpose should be devoted every effort and applied every resource of the party; to this end every minor difference on nonessential issues should be put aside and a determined and a united fight be made to rescue the Government from those who have betrayed their trust by disgracing it.

ECONOMY AND REORGANIZATION

The Democratic Party stands for efficiency and economy in the administration of public affairs, and we pledge:

(a) Businesslike reorganization of all the departments of the Government.

(b) Elimination of duplication, waste, and overlapping.

(c) Substitution of modern businesslike methods for existing obsolete and antiquated conditions.

No economy resulted from the Republican Party rule. The savings they claim take no account of the elimination of expenditures following the end of the World War, the large sums realized from the sale of war materials, nor its failure to supply sufficient funds for the efficient conduct of many important governmental activities.

FINANCE AND TAXATION

(a) The Federal reserve system, created and inaugurated under Democratic auspices, is the greatest legislative contribution to constructive business ever adopted. The administration of the system for the advantage of stock-market speculators should cease. It must be administered for the benefit of farmers, wage earners, merchants, manufacturers, and others engaged in constructive business.

(b) The taxing function of governments, free or despotic, has for centuries been regarded as the power above all others which requires vigilant scrutiny, to the end that it be not exercised for purposes of favor or oppression.

Three times since the World War the Democrats in Congress have favored a reduction of the tax burdens of the people in face of stubborn opposition from a Republican administration; and each time these reductions have largely been made for the relief of those least able to endure the exactions of a Repub-

lican fiscal policy. The tax bill of the session recently ended was delayed by Republican tactics and juggled by partisan considerations so as to make impossible a full measure of relief to the greater body of taxpayers. The moderate reductions afforded were grudgingly conceded, and the whole proceeding in Congress, dictated as far as possible from the White House and the Treasury, denoted the proverbial desire of the Republican Party always to discriminate against the masses in favor of privileged classes.

The Democratic Party avows its belief in the fiscal policy inaugurated by the last Democratic administration, which provided a sinking fund sufficient to extinguish the Nation's indebtedness within a reasonable period of time without harassing the present and next succeeding generations with tax burdens which, if not unendurable, do in fact check initiative in enterprise and progress in business. Taxes levied beyond the actual requirements of the legally established sinking fund are but an added burden upon the American people, and the surplus thus accumulated in the Federal Treasury is an incentive to the increasingly extravagant expenditures which have characterized Republican administrations. We, therefore, favor a further reduction of the internal taxes of the people.

TARIFF

The Democratic tariff legislation will be based on the following policies:

(a) The maintenance of legitimate business and a high standard of wages for American labor.

(b) Increasing the purchasing power of wages and income by the reduction of those monopolistic and extortionate tariff rates bestowed in payment of political debts.

(c) Abolition of logrolling and restoration of the Wilson conception of a fact-finding Tariff Commission, quasi judicial and free from the Executive domination which has destroyed the usefulness of the present commission.

(d) Duties that will permit effective competition, insure against monopoly, and at the same time produce a fair revenue for the support of Government. Actual difference between the cost of production at home and abroad, with adequate safeguard for the wage of the American laborer, must be the extreme measure of every tariff rate.

(e) Safeguarding the public against monopoly created by special tariff favors.

(f) Equitable distribution of the benefits and burdens of the tariff among all.

Wage earner, farmer, stockman, producer, and legitimate business in general have everything to gain from a Democratic tariff based on justice to all.

CIVIL SERVICE

Grover Cleveland made the extension of the merit system a tenet of our political faith. We shall preserve and maintain the civil service.

AGRICULTURE

Deception upon the farmer and stock raiser has been practiced by the Republican Party through false and delusive promises for more than 50 years. Specially favored industries have been artificially aided by Republican legislation. Comparatively little has been done for agriculture and stock raising, upon which national prosperity rests. Unsympathetic inaction with regard to this problem must cease. Virulent hostility of the Republican administration to the advocates of farm relief and denial of the right of farm organizations to lead in the development of farm policy must yield to Democratic sympathy and friendliness.

Four years ago the Republican Party, forced to acknowledge the critical situation, pledged itself to take all steps necessary to bring back a balanced condition between agriculture and other industries and labor. To-day it faces the country not only with that pledge unredeemed but broken by the acts of a Republican President who is primarily responsible for the failure to offer a constructive program to restore equality to agriculture.

While he has had no constructive and adequate program to offer in its stead, he has twice vetoed farm-relief legislation and has sought to justify his disapproval of agricultural legislation partly on grounds wholly inconsistent with his acts making industrial monopolies the beneficiaries of Government favor. And in indorsing the agricultural policy of the present administration the Republican Party in its recent convention served notice upon the farmer that the so-called protective system is not meant for him, that while it offers protection to the privileged few it promises continued world prices to the producers of the chief cash crops of agriculture.

We condemn the policy of the Republican Party which promises relief to agriculture only through a reduction of American farm production to the needs of the domestic market. Such a program means the continued deflation of agriculture, the forcing of additional millions from the farms, and the perpetuation of agricultural distress for years to come, with continued bad effects on business and labor throughout the United States.

The Democratic Party recognizes that the problems of production differ as between agriculture and industry. Industrial production is largely under human control, while agricultural production, because of lack of coordination among the 6,500,000 individual farm units and because of the influence of weather, pests, and other causes, is largely beyond human control. The result is that a large crop frequently is produced on a small acreage and a small crop on a large acreage, and measured in money value it frequently happens that a large crop brings less than a small crop.

Producers of crops whose total volume exceeds the needs of the domestic market must continue at a disadvantage until the Government shall intervene as seriously and as effectively in behalf of the farmer as it has intervened in behalf of labor and industry. There is a need of supplemental legislation for the control and orderly handling of agricultural surpluses, in order that the price of the surplus may not determine the price of the whole crop. Labor has benefited by collective bargaining and some industries by tariff. Agriculture must be as effectively aided.

The Democratic Party in its 1924 platform pledged its support to such legislation. It now reaffirms that stand and pledges the united efforts of the legislative and executive branches of Government, as far as may be controlled by the party, to the immediate enactment of such legislation and to such other steps as are necessary to establish and maintain the purchasing power of farm products and the complete economic equality of agriculture.

The Democratic Party has always stood against special privilege and for common equality under the law. It is a fundamental principle of the party that such tariffs as are levied must not discriminate against any industry, class, or section. Therefore we pledge that in its tariff policy the Democratic Party will insist upon equality of treatment between agriculture and other industries.

Farm relief must rest on the basis of an economic equality of agriculture with other industries. To give this equality a remedy must be found which will include among other things:

(a) Credit aid by loans to cooperatives on at least as favorable a basis as the Government aid to the merchant marine.

(b) Creation of a Federal farm board to assist the farmer and stock raiser in the marketing of their products as the Federal Reserve Board has done for the banker and business man. When our archaic banking and currency system was revised after its record of disaster and panic under Republican administrations, it was a Democratic Congress in the administration of a Democratic President that accomplished its stabilization through the Federal reserve act creating the Federal Reserve Board with powers adequate to its purpose. Now, in the hour of agriculture's need the Democratic Party pledges the establishment of a new agricultural policy fitted to present conditions, under the direction of a farm board vested with all the powers necessary to accomplish for agriculture what the Federal Reserve Board has been able to accomplish for finance, in full recognition of the fact that the banks of the country, through voluntary cooperation, were never able to stabilize the financial system of the country until Government powers were invoked to help them.

(c) Reduction through proper Government agencies of the spread between what the farmer and stock raiser gets and the ultimate consumer pays with consequent benefits to both.

(d) Consideration of the condition of agriculture in the formulation of Government financial and tax measures.

We pledge the party to foster and develop cooperative marketing associations through appropriate governmental aid. We recognize that experience has demonstrated that members of such associations alone can not successfully assume the full responsibility for a program that benefits all producers alike. We pledge the party to an earnest endeavor to solve this problem of the distribution of the cost of dealing with crop surpluses over the marketed units of the crop whose producers are benefited by such assistance. The solution of this problem would avoid Government subsidy to which the Democratic Party has always been opposed. The solution of this problem will be a prime and immediate concern of a Democratic administration.

We direct attention to the fact that it was a Democratic Congress in the administration of a Democratic President which established the Federal loan system and laid the foundation for the entire rural credits structure which has aided agriculture to sustain in part the shock of the policies of two Repub-

lican administrations; and we promise thoroughgoing administration of our rural credits laws so that the farmers in all sections may secure the maximum benefits intended under these acts.

MINING

Mining is one of the basic industries of this country. We produce more coal, iron, and copper than any other country. The value of our mineral production is second only to agriculture. Mining has suffered like agriculture and from similar causes. It is the duty of our Government to foster this industry and to remove the restrictions that destroy its prosperity.

FOREIGN POLICY

The Republican administration has no foreign policy; it has drifted without plan. This great Nation can not afford to play a minor rôle in world politics. It must have a sound and positive foreign policy, not a negative one. We declare for a constructive foreign policy based on these principles:

(a) Outlawry of war and an abhorrence of militarism, conquest, and imperialism.

(b) Freedom from entangling political alliances with foreign nations.

(c) Protection of American lives and rights.

(d) Noninterference with the elections or other internal political affairs of any foreign nation. This principle of noninterference extends to Mexico, Nicaragua, and all other Latin-American nations. Interference in the purely internal affairs of Latin-American countries must cease.

(e) Rescue of our country from its present impaired world standing and restoration to its former position as a leader in the movement for international arbitration, conciliation, conference, and limitation of armament by international agreement.

(f) International agreements for reduction of all armaments and the end of competitive war preparations, and in the meantime the maintenance of an Army and Navy adequate for national defense.

(g) Full, free, and open cooperation with all other nations for the promotion of peace and justice throughout the world.

(h) In our foreign relations this country should stand as a unit, and to be successful foreign policies must have the approval and the support of the American people.

(i) Abolition of the practice of the President of entering into and carrying out agreements with a foreign government, either de facto or de jure, for the protection of such government against revolution or foreign attack or for the supervision of its internal affairs, when such agreements have not been advised and consented to by the Senate, as provided in the Constitution of the United States, and we condemn the administration for carrying out such an unratified agreement that requires us to use our armed forces in Nicaragua.

(j) Recognition that the Monroe doctrine is a cardinal principle of this Government promulgated for the protection of ourselves and our Latin-American neighbors. We shall seek their friendly cooperation in the maintenance of this doctrine.

(k) We condemn the Republican administration for lack of statesmanship and efficiency in negotiating the 1921 treaty for the limitation of armaments, which limited only the construction of battleships and ships of over 10,000 tons. Merely a gesture toward peace, it accomplished no limitation of armament, because it simply substituted one weapon of destruction for another. While it resulted in the destruction of our battleships and the blue prints of battleships of other nations, it placed no limitation upon construction of aircraft, submarines, cruisers, warships under 10,000 tons, poisonous gases, or other weapons of destruction. No agreement was ratified with regard to submarines and poisonous gases. The attempt of the President to remedy the failure of 1921 by the Geneva conference of 1928 was characterized by the same lack of statesmanship and efficiency and resulted in entire failure.

In consequence the race between nations in the building of unlimited weapons of destruction still goes on, and the peoples of the world are still threatened with war and burdened with taxation for additional armament.

WATER POWER, WATERWAYS, AND FLOOD CONTROL

The Federal Government and State governments, respectively, now have absolute and exclusive sovereignty and control over enormous water powers, which constitute one of the greatest assets of the Nation. This sovereign title and control must be preserved, respectively, in the State and Federal Governments, to the end that the people may be protected against exploitation of this great resource and that water powers may be expeditiously developed under such regulations as will insure to the people reasonable rates and equitable distribution.

We favor and will promote deep waterways from the Great Lakes to the Gulf and to the Atlantic Ocean.

We favor the fostering and building up of water transportation through improvement of inland waterways and removal of discrimination against water transportation. Flood control and the lowering of flood levels are essential to the safety of life and property and the productivity of our lands, the navigability of our streams, the reclaiming of our wet and overflowed lands. We favor expeditious construction of flood-relief works on the Mississippi and Colorado Rivers and such reclamation and irrigation projects upon the Colorado River as may be found feasible.

We favor appropriations for prompt coordinated surveys by the United States to determine the possibilities of general navigation improvements and water-power development on navigable streams and their tributaries and to secure reliable information as to the most economical navigation improvement in combination with the most efficient and complete development of water power.

We favor the strict enforcement of the Federal water power act, a Democratic act, and insist that the public interest in water-power sites, ignored by two Republican administrations, be protected.

Being deeply impressed by the terrible disasters from floods in the Mississippi Valley during 1927, we heartily indorse the flood control act of last May, which recognizes that the flood waters of the Mississippi River and its tributaries constitute a national problem of the gravest character and makes provision for their speedy and effective control. This measure is a continuation and expansion of the policy established by a Democratic Congress in 1917 in the act of that year for controlling floods on the Mississippi and Sacramento Rivers. It is a great piece of constructive legislation, and we pledge our party to its vigorous and early enforcement.

CONSERVATION AND RECLAMATION

We shall conserve the natural resources of our country for the benefit of the people and to protect them against waste and monopolization. Our disappearing resources of timber call for a national policy of reforestation. The Federal Government should improve and develop its public lands so that they may go into private ownership and become subjected to taxation for the support of the States wherein they exist. The Democratic administration will actively, efficiently, and economically carry on reclamation projects and make equitable adjustments with the homestead entrymen for the mistakes the Government has made and extend all practical aid to refinance reclamation and drainage projects.

TRANSPORTATION

Efficient and economical transportation is essential to the prosperity of every industry. Cost of transportation controls the income of every human being and materially affects the cost of living. We must, therefore, promote every form of transportation to a state of highest efficiency. Recognizing the prime importance of air transportation, we shall encourage its development by every possible means. Improved roads are of vital importance not only to commerce and industry but also to agricultural and rural life. The Federal Government should construct and maintain at its own expense roads upon its public lands. We reaffirm our approval of the Federal roads law enacted by a Democratic administration. Common carriers, whether by land, water, or rail, must be protected in an equal opportunity to compete so that governmental regulations against exorbitant rates and inefficiency will be aided by competition.

LABOR

(a) We favor the principle of collective bargaining and the Democratic principle that organized labor should choose its own representatives without coercion or interference.

(b) Labor is not a commodity. Human rights must be safeguarded. Labor should be exempt from the operation of antitrust laws.

(c) We recognize that legislative and other investigations have shown the existence of grave abuse in the issuance of injunctions in labor disputes. No injunctions should be granted in labor disputes except upon proof of threatened irreparable injury and after notice and hearing, and the injunction should be confined to those acts which do directly threaten irreparable injury. The expressed purpose of representatives of capital, labor, and the bar to devise a plan for the elimination of the present evils with respect to injunctions must be supported and legislation designed to accomplish these ends formulated and passed.

(d) We favor legislation providing that products of convict labor shipped from one State to another shall be subject to laws of the latter State as though they had been produced therein.

UNEMPLOYMENT

Unemployment is present, widespread, and increasing. Unemployment is almost as destructive to the happiness, comfort, and well-being of human beings as war. We expend vast sums of money to protect our people against the evils of war but no governmental program is anticipated to prevent the awful suffering and economic losses of unemployment. It threatens the well-being of millions of our people and endangers the prosperity of the Nation. We favor the adoption by the Government, after a study of this subject, of a scientific plan whereby during periods of unemployment appropriations shall be made available for the construction of necessary public works and the lessening, so far as consistent with public interests, of Government construction work when labor is generally and satisfactorily employed in private enterprise.

Study should also be made of modern methods of industry and a constructive solution found to absorb and utilize the surplus human labor released by the increasing use of machinery.

ACCIDENT COMPENSATION TO GOVERNMENT EMPLOYEES

We favor legislation making fair and liberal compensation to Government employees who are injured in accident or by occupational disease and to the dependents of such workers as may die as a result thereof.

FEDERAL EMPLOYEES

Federal employees should receive a living wage based upon American standards of decent living. Present wages are in many instances far below that standard. We favor a fair and liberal retirement law for Government employees in the classified service.

VETERANS

Through Democratic votes, and in spite of two Republican Presidents' opposition, the Congress has maintained America's traditional policy to generously care for the veterans of the World War. In extending them free hospitalization, a statutory award for tuberculosis, a program of progressive hospital construction, and provisions for compensation for the disabled, the widows, and orphans, America has surpassed the record of any nation in the history of the world. We pledge the veterans that none of the benefits heretofore accorded by the Wilson administration and the votes of Democrat Members of Congress shall be withdrawn; that these will be added to more in accordance with the veterans' and their dependents' actual needs. Generous appropriations, honest management, the removal of vexatious administration delays, and sympathetic assistance for the veterans of all wars is what the Democratic party demands and promises.

WOMEN AND CHILDREN

We declare for equality of women with men in all political and governmental matters.

Children are the chief asset of the Nation. Therefore their protection through infancy and childhood against exploitation is an important national duty.

The Democratic Party has always opposed the exploitation of women in industry and has stood for such conditions of work as will preserve their health and safety.

We favor an equal wage for equal service, and likewise favor adequate appropriations for the women's and children's bureau.

IMMIGRATION

Laws which limit immigration must be preserved in full force and effect, but the provisions contained in these laws that separate husbands from wives and parents from infant children are inhuman and not essential to the purpose or the efficacy of such law.

RADIO

Government supervision must secure to all the people the advantage of radio communication and likewise guarantee the right of free speech. Official control in contravention of this guarantee should not be tolerated. Governmental control must prevent monopolistic use of radio communication and guarantee equitable distribution and enjoyment thereof.

COAL

Bituminous coal is not only the common base of manufacture, but is a vital agency in our interstate transportation. The demoralization of this industry, its labor conflicts and distress, its waste of a national resource and disordered public service demand constructive legislation that will allow capital and labor a fair share of prosperity with adequate protection to the consuming public.

CONGRESSIONAL ELECTION REFORM

We favor legislation to prevent defeated Members of both Houses of Congress from participating in the sessions of Congress by fixing the date for convening the Congress immediately after the biennial national election.

LAW ENFORCEMENT

The Republican Party, for eight years in complete control of the Government at Washington, presents the remarkable spectacle of feeling compelled in its national platform to promise obedience to a provision of the Federal Constitution which it has flagrantly disregarded, and to apologize to the country for its failure to enforce laws enacted by the Congress of the United States. Speaking for the National Democracy, this convention pledges the party and its nominees to an honest effort to enforce the eighteenth amendment and all other provisions of the Federal Constitution and all laws enacted pursuant thereto.

CAMPAIGN EXPENDITURES

We condemn the improper and excessive use of money in elections as a danger threatening the very existence of democratic institutions. Republican expenditures in senatorial primaries and elections have been so exorbitant as to constitute a national scandal. We favor publicity in all matters affecting campaign contributions and expenditures. We shall, beginning not later than August 1, 1928, and every 30 days thereafter, the last publication and filing being not later than five days before the election, publish in the press and file with the appropriate committees of the House and Senate a complete account of all contributions, the names of the contributors, the amounts expended, and the purposes for which the expenditures are made, and will at all times hold open for public inspection the books and records relating to such matters. In the event that any financial obligations are contracted and not paid our national committee will similarly report and publish, at least five days before the election, all details respecting such obligations.

We agree to keep and maintain a permanent record of all campaign contributions and expenditures and to insist that contributions by the citizens of one State to the campaign committees of other States shall have immediate publicity.

MERCHANT MARINE

We reaffirm our support of an efficient, dependable American merchant marine for the carriage of the greater portion of our commerce and for the national defense.

The Democratic Party has consistently and vigorously supported the shipping services maintained by the regional United States Shipping Board in the interest of all ports and all sections of our country, and has successfully opposed the discontinuance of any of these lines. We favor the transfer of these lines gradually to the local private American companies when such companies can show their ability to take over and permanently maintain the lines. Lines that can not now be transferred to private enterprise should continue to be operated as at present and should be kept in an efficient state by remodeling of some vessels and replacement of others.

We are unalterably opposed to a monopoly in American shipping and are opposed to the operation of any of our services in a manner that would retard the development of any ports or sections of our country.

We oppose such sacrifices and favoritism as exhibited in the past in the matter of alleged sales, and insist that the primary purpose of legislation upon this subject be the establishment and maintenance of an adequate American merchant marine.

ARMENIA

We favor the most earnest efforts on the part of the United States to secure the fulfillment of the promises and engagements made during and following the World War by the United States and the allied powers to Armenia and her people.

EDUCATION

We believe with Jefferson and other founders of the Republic that ignorance is the enemy of freedom and that each State, being responsible for the intellectual and moral qualifications of its citizens and for the expenditure of the moneys collected by taxation for the support of its schools, shall use its sovereign right in all matters pertaining to education.

The Federal Government should offer to the States such counsel, advice, results of research, and aid as may be made available through the Federal agencies for the general improvement of our schools, in view of our national needs.

MONOPOLIES AND ANTITRUST LAWS

During the last seven years, under Republican rule, the antitrust laws have been thwarted, ignored, and violated so that the country is rapidly becoming controlled by trusts and sinister monopolies formed for the purpose of wringing from the necessaries of life an unrighteous profit. These combinations are often formed and conducted in violation of law, encour-

aged, aided, and abetted in their activities by the Republican administration, and are driving all small tradespeople and small industrialists out of business. Competition is one of the most sacred, cherished, and economic rights of the American people. We demand the strict enforcement of the antitrust laws and the enactment of other laws, if necessary, to control this great menace to trade and commerce, and thus to preserve the right of the small merchant and manufacturer to earn a legitimate profit from his business.

Dishonest business should be treated without influence at the National Capitol. Honest business, no matter its size, need have no fears of a Democratic administration. The Democratic Party will ever oppose illegitimate and dishonest business. It will foster, promote, and encourage all legitimate business enterprises.

CANAL ZONE

We favor the employment of American citizens in the operation and maintenance of the Panama Canal in all responsible positions above the grade of messenger and favor as liberal wages and conditions of employment as prevailed under previous Democratic administrations.

ALASKA-HAWAII

We favor the development of Alaska and Hawaii in the traditional American way through self-government. We favor the appointment of only bona fide residents to office in the Territories. We favor the extension and improvement of the mail, air mail, telegraph and radio, agricultural experimenting, highway construction, and other necessary Federal activities in the Territories.

PHILIPPINES

The Filipino people have succeeded in maintaining a stable government and have thus fulfilled the only condition laid down by the Congress as a prerequisite to the granting of independence. We declare that it is now our duty to keep our promise to these people by granting them immediately the independence which they so honorably covet.

PORTO RICO

We favor granting to Porto Rico such territorial form of government as would meet the present economic conditions of the island and provide for the aspirations of her people, with the view to ultimate statehood accorded to all Territories of the United States since the beginning of our Government, and we believe any officials appointed to administer the government of such Territories should be qualified by previous bona fide residence therein.

PUBLIC HEALTH

The Democratic Party recognizes that not only the productive wealth of the Nation but its contentment and happiness depends upon the health of its citizens. It therefore pledges itself to enlarge the existing Bureau of Public Health and to do all things possible to stamp out communicable and contagious diseases and to ascertain preventive means and remedies for these diseases, such as cancer, infantile paralysis, and others which heretofore have largely defied the skill of physicians.

We pledge our party to spare no means to lift the apprehension of diseases from the minds of our people and to appropriate all moneys necessary thereto to carry out this pledge.

TELEGRAM OF NOTIFICATION TO HON. ALFRED E. SMITH AND HIS REPLY

Mr. ROBINSON of Arkansas. The following telegram has been sent to Gov. Alfred E. Smith notifying him of his nomination for President of the United States by the Democratic National Convention:

HOUSTON, TEX., *June 28, 1928.*

GOV. ALFRED E. SMITH,
Albany, N. Y.:

You have received 849¾ votes on the first ballot and have been declared the nominee of the convention. Receive my congratulations and best wishes for your election.

JOSEPH T. ROBINSON, *Chairman.*

Governor Smith's telegram of reply was read to the convention by Hon. PAT HARRISON, as acting chairman of the convention, in the place of Mr. ROBINSON:

EXECUTIVE MANSION,
Albany, N. Y., June 29, 1928.

Hon. JOSEPH T. ROBINSON,
Permanent Chairman Democratic National Convention,
Hoston, Tex.:

I received your message on behalf of the convention. With a deep sense of responsibility and a fervent prayer for the guidance of Divine Providence I accept the call of my party to lead it in the national campaign. I can think of no greater privilege in this world than to serve our country. My gratitude to the convention for its expression of confidence in me I can not adequately express in this telegram. I will have to make it manifest by single-minded devotion to the United States and her people in every section.

The happiness and welfare of the millions of men, women, and children who constitute the Nation were the great driving force behind the doctrine enunciated by the immortal Jefferson, given life by him, and carried through by Cleveland and Wilson. I am convinced that our platform voices that doctrine. I stand committed to the platform and will welcome an opportunity to reorganize and make more efficient the agencies of government, to the end that the burden of taxation may be lightened.

Our platform lays at rest the absurd claim insidiously put out by Republican propaganda that the Republican Party has a monopoly upon the mechanics of prosperity. Our platform in its tariff and financial policy gives assurance to every legitimate business man, wage earner, farmer, and taxpayer that prosperity will not only be conserved but fairly distributed among all. The definite declaration of the convention to aid agriculture and the planks dealing with labor problems are sound, progressive, and sincere, as is also the party commitment to the development of our water power without alienating our God-given resources. Our plank on foreign policy states the simple truth that the divine command to "Love thy neighbor as thyself" contains no limitation and was intended to apply as between nations.

The equal and even enforcement of the law is the corner stone upon which rests the whole structure of democratic government. If it is the will of the people of this Nation that I am to take an oath as President of the United States to protect and defend our Constitution and laws, I will execute that oath to the limit of my ability without reservation or evasion.

It is well known that I believe there should be fundamental changes in the present provisions for national prohibition, based, as I stated in my Jackson Day letter, on the fearless application to the problem of the principles of Jeffersonian democracy. While I fully appreciate that these changes can only be made by the people themselves through their elected legislative representatives, I feel it to be the duty of the chosen leader of the people to point the way which, in his opinion, leads to a sane, sensible solution of a condition which I am convinced is entirely unsatisfactory to the great mass of our people.

Common honesty compels us to admit that corruption of law-enforcement officials, bootlegging, and lawlessness are now prevalent throughout this country. I am satisfied that without returning to the old evils that grew from the saloon, which years ago I held and still hold was and ought always to be a defunct institution in this country, by the application of the democratic principles of local self-government and State rights we can secure real temperance, respect for law, and eradication of the existing evils.

In my formal acceptance of your nomination I shall give to the people of the country my views in full upon all of the issues of the campaign. In the way I know that you can do it, give the delegates my warmest thanks for the confidence they have reposed in me, and my assurance that, with their support, I confidently expect to lead the historic Democratic Party to victory in November.

ALFRED E. SMITH.

GEORGE ROGERS CLARK SESQUICENTENNIAL COMMISSION

The VICE PRESIDENT. The Chair, in pursuance to Senate Joint Resolution 23, appoints as the Senate member of the George Rogers Clark Sesquicentennial Commission the Senator from Indiana, Mr. WATSON, the Senator from Ohio, Mr. FESS, and the Senator from Tennessee, Mr. MCKELLAR.

STATE BANK & TRUST CO. OF FAYETTEVILLE, TENN.

Mr. MCKELLAR. Mr. President, the Senator from Colorado [Mr. PHIPPS], who objected to our returning to Calendar 1086, a few moments ago, says he now has no objection. I therefore ask that the Senate proceed to the consideration of House bill 5894, for the relief of the State Bank & Trust Co. of Fayetteville, Tenn.

The VICE PRESIDENT. Is there objection?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

RIO GRANDE BRIDGE, TEX.

Mr. SHEPPARD. Mr. President, from the Committee on Commerce I report back favorably without amendment the bill (H. R. 13778) authorizing Alex Gonzales, his heirs, legal representatives, and assigns, to construct, maintain, and operate a bridge across the Rio Grande near the town of Ysleta, Tex.

I ask for the immediate consideration of the bill.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

AMENDMENT OF GENERAL LEASING ACT

Mr. ODDIE. Mr. President, I ask unanimous consent to return to Calendar 702, which was passed over, that being House bill 10885.

Mr. KING. Let the bill be reported.

The Chief Clerk read the bill.

The VICE PRESIDENT. Is there objection?

Mr. BRUCE. I would like to have some explanation of that.

Mr. ODDIE. This bill has been passed by the House and favorably reported on by the department. It is a bill which clarifies the language of a previous enactment.

Mr. BRUCE. I have no objection.

Mr. BINGHAM. Let the bill be read.

The Chief Clerk read the bill.

Mr. SMOOT. May I ask the Senator how this got on the calendar?

Mr. ODDIE. It was passed by the House and came over here as a House bill, and it is on the calendar now.

Mr. SMOOT. It should have gone to a committee.

Mr. ODDIE. It has been passed on by the committee.

Mr. SMOOT. The calendar does not show that it ever went to a committee.

Mr. SMITH. What is the number of the bill?

Mr. SMOOT. It is House bill 10885. It is a rather strange proceeding. The calendar shows that on April 3, 1928, the bill was read twice and placed on the calendar. It did not go to a committee at all.

The VICE PRESIDENT. At the time the bill came over from the House there was a Senate bill on the calendar in identical terms, and the House bill was substituted for the Senate bill. This bill was passed on April 4, 1928. Then the Senator from New Mexico [Mr. BRATTON] entered a motion to reconsider the vote by which the bill was passed.

Mr. PITTMAN. It is a substitute bill, is it not?

The VICE PRESIDENT. It is.

Mr. PITTMAN. Let it be passed.

Mr. BINGHAM. I ask that the bill be read.

Mr. WALSH of Montana. Mr. President, I ask if the Senator from Nevada will explain the purport of this bill.

Mr. ODDIE. Mr. President, the adoption of the new language will make a uniform rule and uniform language for all minerals subject to prospecting except oil and gas.

Section 24 of the act of February 25, 1920, provides for a royalty "of not less than one-eighth of the amount of value of the production." The new potash act provides for a royalty of "not less than 2 per cent of the quantity or gross value of the output of potassium compounds and other related products, except sodium, at the point of shipment to market," the exception as to sodium obviously being because of the higher minimum royalty for sodium in said section 24. The proposed draft provides the same minimum royalty for sodium as for potash compounds, thus doing away with the exception and making more practicable and profitable the mining and sale of sodium compounds as a by-product of potash mining operations.

Mr. WALSH of Montana. Does the provision in regard to sodium mean the same as that in regard to potash?

Mr. ODDIE. They do not under the present law. This simplifies the matter. It applies to a small area in my State, and I hope the objection will be withdrawn.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

ONE MONTHS' EXTRA PAY FOR SENATE EMPLOYEES

Mr. ROBINSON of Arkansas. Mr. President, I ask unanimous consent for the immediate consideration of the resolution which I send to the desk, and I ask for its adoption.

The VICE PRESIDENT. The clerk will read.

The resolution was read.

Mr. BLEASE. Mr. President, is there any provision in the resolution for one months' extra pay for the pages?

Mr. ROBINSON of Arkansas. I do not believe there is any provision under which the pages would be paid.

Mr. BLEASE. I think these little boys ought to have an extra month's pay.

Mr. ROBINSON of Arkansas. I have no objection to amending the resolution to that effect.

The resolution was agreed to.

Mr. ROBINSON of Arkansas subsequently said: Mr. President, a few moments ago the Senate passed a resolution, which I offered, authorizing the payment of a month s extra salary to the clerks of Senators and the clerks and messengers of the standing committees and the pages of the Senate. I am now advised that there is no fund out of which that payment can be made. I desire to move a reconsideration of the vote whereby the resolution was agreed to, with a view to offering two amendments to it. I ask unanimous consent that I may be permitted to move such reconsideration.

The PRESIDING OFFICER (Mr. ROBINSON of Indiana in the chair). Is there objection. The Chair hears none, and it is so ordered.

Mr. ROBINSON of Arkansas. I ask that the resolution may be changed from a simple Senate resolution to a joint resolution.

The PRESIDING OFFICER. In the absence of objection it is so ordered.

The joint resolution (S. J. Res. 166) to pay certain employees of the Senate and committees a sum equal to one month's compensation of each thereof, was read the first time by its title and the second time at length, as follows:

Resolved, etc., That the Secretary of the Senate be, and he is hereby, authorized and directed to pay to clerks, assistant clerks, additional clerks, and messengers to Senators, and to clerks and messengers of the standing committees of the Senate, and Senate pages now borne upon the pay rolls of the Senate, for extra services rendered during the first session of the Seventieth Congress, a sum equal to one month's compensation at the rate said clerks, assistant clerks, additional clerks, and messengers are now receiving.

Mr. ROBINSON of Arkansas. I now move to add at the end of the resolution the amendment which I send to the desk.

The PRESIDING OFFICER. The amendment proposed by the Senator from Arkansas will be stated.

The LEGISLATIVE CLERK. At the end of the resolution it is proposed to strike out the period and insert a comma and the following words:

and the sum of $100,000, or so much thereof as may be necessary, is hereby appropriated, out of any money in the Treasury not otherwise appropriated, for making such payments.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

The joint resolution was reported to the Senate as amended and the amendment was concurred in.

The joint resolution was ordered to be engrossed for a third reading, read the third time, and passed.

NAVIGATION OF THE COLORADO RIVER

Mr. HAYDEN. Mr. President, I ask unanimous consent to have printed as a Senate document certain documents and other papers which I have assembled relative to navigation on the Colorado River.

The VICE PRESIDENT. Is there objection? The Chair hears none, and it is so ordered.

EQUITABLE USE OF THE WATERS OF THE LOWER COLORADO RIVER AND THE RIO GRANDE (S. 163)

The VICE PRESIDENT laid before the Senate the following message from the President of the United States, which was read, and, with the accompanying papers, ordered to lie on the table and to be printed:

To the Senate:

I transmit herewith the report from the Secretary of State in response to Senate Resolution No. 181, adopted by the Senate on April 20, 1928, requesting to be furnished with certain information regarding the equitable use of the waters of the lower Colorado River and the Rio Grande.

CALVIN COOLIDGE.

THE WHITE HOUSE, *May 22, 1928.*

COMPARISON OF APPROPRIATIONS AND ESTIMATES, 1928–29

Mr. WARREN. Mr. President, authority was given me by the Senate as chairman of the Committee on Appropriations to present certain tables with reference to appropriations and estimates for the fiscal years 1928 and 1929.

Before proceeding with this brief statement I desire to pay a sincere tribute to my coworker on appropriations for many years, Hon. Martin B. Madden, late chairman of the House Committee on Appropriations, who has passed on to his reward. He was my friend, and to claim him as one's friend meant much. We worked together for many years and helped adjust many hotly contested matters, such as must necessarily arise in appropriation work, and always with the warmest mutual affection. I miss him. Our Committees on Appropriations have lost a courageous, honest, and loyal helper.

ESTIMATES FOR 1929 REDUCED $9,331,779.05

Table A shows the appropriations for the fiscal year 1929 to be $9,331,779.05 less than the estimates submitted by the Bureau

of the Budget. This fine result has been accomplished only with a great amount of hard, laborious effort on the part of both Committees on Appropriations, the Bureau of the Budget, and all others connected with the work. I desire to thank each member of my committee for his loyal support in accomplishing this result. I could wish for no abler help. Congress has reduced the estimates of the Budget during the last seven years, as follows:

First estimates	$312,361,792.27
Second estimates	10,741,504.15
Third estimates	9,024,637.08
Fourth estimates	12,596,495.90
Fifth estimates	6,716,064.34
Sixth estimates	7,752,939.03
Seventh estimates	9,331,779.05
Total reduction in the seven sets of estimates	368,525,211.82

Table B shows the total appropriations made during the first session of the Seventieth Congress to be $4,628,045,035.09—an increase of $478,542,508.44 over the appropriations made during the second session of the Sixty-ninth Congress. The appropriations made during the second session of the Sixty-ninth Congress were $4,149,502,526.65. To this sum should be added $120,000,000, the amount of appropriations carried forward to the first deficiency bill for the fiscal year 1928 on account of the failure of the second deficiency bill for the fiscal year 1927 and the public buildings appropriation bill at the second session of the Sixty-ninth Congress, which would make the total appropriations made during the second session of the Sixty-ninth Congress $4,269,502,526.65, and deducting a similar sum from the $4,628,045,035.09 made during the first session of the Seventieth Congress reduces this sum to $4,508,045,035.09. Thus the appropriations made during the first session of the Seventieth Congress are $238,542,508.44 in excess of the appropriations made during the second session of the Sixty-ninth Congress. This result, when carefully analyzed, is nothing more nor less than what has been anticipated for some time.

In my remarks on the question of increased appropriations at the close of the second session of the Sixty-eighth Congress I called attention to what I believed then to be a fact—that reductions in appropriations could not reasonably be looked forward to in the very near future, and that I believed we were then at rock-bottom figures, as our appropriations had been gradually coming down since the World War and we were at that time practically on a genuine peace basis. Prosperity and good times demand increased as well as new governmental functions. We have reduced our gross public debt outstanding from $18,873,852,065.05 of May 31, 1927, to $17,755,711,829.98 of May 31, 1928, a decrease of $1,118,140,235.07. We have reduced the interest on the public debt for the fiscal year 1929 the sum of $50,000,000.

Everything considered by a careful survey of the whole field, this session of Congress has made a splendid record for saving public money.

I desire to present certain deductions from the increase of appropriations, amounting to $238,542,508.44 as above referred to, made during the first session of the Seventieth Congress over appropriations made during the second session of the Sixty-ninth Congress, to which I invite the fair consideration of all concerned, which are as follows:

Government life-insurance fund, Veterans' Bureau $74,500,000.00

(This permanent annual appropriation enables the Director of the Veterans' Bureau to carry out the provisions of the act entitled "An act to authorize the Director of the United States Veterans' Bureau to make loans to veterans upon the security of adjusted-service certificates.")

Settlement of war claims act of 1928 ..... 50,000,000.00

(This appropriation provides for the provisions of the act entitled "An act to provide for the settlement of certain claims of American nationals against Germany, Austria, and Hungary, and of nationals of Germany, Austria, and Hungary against the United States, and for the ultimate return of all property held by the Alien Property Custodian.")

Public buildings $24,635,083.56

(This appropriation provides for the construction of public buildings in the District of Columbia and throughout the United States under the provisions of the public buildings act, approved May 25, 1926, as amended. This is the first public buildings act for some years, and the reasons for the construction of each building are based on sound facts touching population, postal receipts, congestion in existing Federal buildings, amount of rentals paid, and the adequacy and suitability of present quarters.)

Increase of the Navy 24,300,000.00

(This increase is to speed up the work on ships heretofore authorized by law and now under construction, in order that all of same may be practically completed within the fiscal year 1930.)

Increase in aviation of the Army, Navy, Post Office, and Commerce 21,732,818.00

(This increase is to keep pace with the rapidly growing demands of our Army and Navy and to meet their mapped-out five-year programs; to transport our mail by airplanes by the Post Office Department; and to enable the Department of Commerce to provide lighted airways for the Post Office Department as well as for commercial uses.)

Civil-service retirement fund 19,950,000.00

(This appropriation enables our Government to meet the liabilities which have accrued against it in connection with the retirement of civil employees.)

Postal Service 15,250,000.00

(This appropriation includes $7,500,000 for carrying out the provisions of the merchant marine act, 1928, in relation to the transportation of foreign mail, and the balance is on account of the increased demand for better and larger postal facilities due to increasing population, good times, and general prosperity.)

Flood control of the Mississippi River and tributaries 15,000,000.00

(This appropriation is to meet the requirements of the act entitled "An act for the control of floods on the Mississippi River and its tributaries, and for other purposes.")

Military post construction $10,299,975.00

(This appropriation is to better the housing conditions of the Army, which at present are deplorable.)

Purchase of triangle properties in the District of Columbia 9,680,000.00

(This land is to be used for sites for Government buildings authorized by law. The construction of said buildings will greatly reduce the rent expenses of the Government and also provide permanent buildings for those activities of the Government now housed in temporary war-time structures.)

Cape Cod Canal bonds 6,230,000.00

(This appropriation provides for the payment of the 50-year first-mortgage bonds of the Boston, Cape Cod & New York Canal Co., as authorized in the act approved Jan. 21, 1927.)

River and harbor work 5,886,310.00

(This increase is to facilitate work in order to more efficiently maintain the channels of our rivers, deepen harbors, etc.)

Flood relief in the States of New Hampshire, Vermont, and Kentucky 5,197,294.00

(This provides for the repair of roads and bridges damaged by the floods of 1927.)

Eradication of pink bollworm 5,000,000.00

(This emergency appropriation is to carry out the provisions of the joint resolution entitled "Joint resolution to provide for the eradication of pink bollworm and authorizing an appropriation therefor," approved May 21, 1928.)

Ammunition storage 3,108,159.00
(This makes provision to better protect our population in reference to the storage of high explosives.)
Mount Vernon Highway 2,500,000.00
(This meets the provisions of the act entitled "An act to authorize and direct the survey, construction, and maintenance of a memorial highway to connect Mount Vernon, in the State of Virginia, with the Arlington Memorial Bridge across the Potomac River at Washington.")
Foreign Service building program 2,000,000.00
(This enables the United States to better house the activities of our Government abroad, and is in accordance with the provisions of the "Foreign Service buildings act, 1926.")

TABLE A.—*Comparison of Budget estimates and appropriations, Seventieth Congress, first session*

Title of act	Budget estimates, Seventieth Congress, first session	Appropriations, Seventieth Congress, first session	Increase (+) or decrease (−), appropriations compared with Budget estimates
Regular acts, fiscal year 1929			
Agriculture, Department of	$138,129,839.88	$139,138,793.88	+$1,008,954.00
District of Columbia	[1] 37,693,686.00	37,625,208.00	−68,478.00
Independent offices	527,553,802.00	527,593,111.00	+39,309.00
Interior Department	[2] 273,165,839.00	272,656,039.00	−509,800.00
Legislative establishment	18,072,146.86	17,746,893.26	−325,253.60
Navy Department	361,264,907.00	362,145,812.00	+880,905.00
Departments of State, Justice, Commerce, and Labor:			
State	13,950,955.14	13,955,955.14	+5,000.00
Justice	26,874,742.50	26,759,342.50	−115,400.00
Commerce	38,071,460.00	38,136,960.00	+65,500.00
Labor	10,960,840.00	10,968,340.00	+7,500.00
Total	89,857,997.64	89,820,597.64	−37,400.00
Treasury and Post Office Departments:			
Treasury	301,510,218.00	296,392,018.00	−5,118,200.00
Post Office	768,050,042.00	764,950,042.00	−3,100,000.00
Total	1,069,560,260.00	1,061,342,060.00	−8,218,200.00
War Department:			
Military	309,781,755.00	309,601,568.50	−180,186.50
Nonmilitary	82,080,258.00	88,915,653.00	+6,835,395.00
Total, War Dapartment	391,862,013.00	398,517,221.50	+6,655,208.50
Total, regular annual acts	2,907,160,491.38	2,906,585,736.28	−574,755.10
Deficiency acts			
First, 1928	200,774,524.89	200,936,947.54	+162,422.65
Second, 1928	155,672,204.34	146,017,757.74	−9,654,446.60
Total, deficiency acts	356,446,729.23	346,954,705.28	−9,492,023.95
Total, regular annual and deficiency acts	3,263,607,220.61	3,253,540,441.56	−10,066,779.05
Miscellaneous relief, claims, and other acts (estimated)	[3] 65,000.00	[4] 800,000.00	+735,000.00
Total, regular annual, deficiency, and miscellaneous	3,263,672,220.61	3,254,340,441.56	−9,331,779.05
Permanent and indefinite appropriations	1,373,704,593.53	1,373,704,593.53	
Grand total	4,637,376,814.14	[5] 4,628,045,035.09	−9,331,779.05

[1] Exclusive of $42,500 for Freedmen's Hospital transferred to Interior appropriation bill.
[2] Includes $550,000 transferred from first deficiency and $42,500 from District of Columbia estimates and exclusive of $222,000 transferred to first deficiency bill.
[3] House Document No. 149, Water Boundary, United States and Mexico.
[4] Estimated.
[5] Classification of foregoing appropriation by fiscal years:

1929	$4,322,148,922.06
1928	283,409,395.22
1927 and prior years, including judgments and audited claims	22,486,717.81
Total	4,628,045,035.09

TABLE B.—*Comparison of appropriations made during the first session of the Seventieth Congress with those of the second session of the Sixty-ninth Congress*

Title of act	Appropriations, Sixty-ninth Congress, second session	Appropriations, Seventieth Congress, first session	Increase (+) or decrease (−), first session Seventieth Congress compared with second session Sixty-ninth Congress
Regular annual acts			
Agriculture	$128, 511, 739. 00	$139, 138, 793. 88	+$10, 627, 054. 88
District of Columbia	36, 282, 385. 00	37, 625, 208. 00	+1, 342, 823. 00
Executive office and independent offices	512, 903, 808. 00	527, 593, 111. 00	+14, 689, 303. 00
Interior	260, 305, 020. 00	272, 656, 039. 00	+12, 351, 019. 00

[1] Approximated.
[2] Revised in Budget in December, 1927.

TABLE B.—*Comparison of appropriations made during the first session of the Seventieth Congress with those of the second session of the Sixty-ninth Congress*—Continued

Title of act	Appropriations, Sixty-ninth Congress, second session	Appropriations, Seventieth Congress, first session	Increase (+) or decrease (−), first session Seventieth Congress compared with second session Sixty-ninth Congress
District of Columbia	$2, 542, 000. 00	$2, 720, 000. 00	$+178, 000. 00
Total permanent and indefinite	[2] 1, 344, 952, 508. 00	[3] 1, 373, 704, 593. 53	+28, 752, 085. 53
Grand total	4, 149, 502, 526. 65	4, 628, 045, 035. 09	+478, 542, 508. 44
Postal Service (regular annual and deficiency acts)	755, 336, 200. 00	776, 974, 541. 45	+21, 638, 341. 45
Grand total, exclusive of Postal Service, from postal revenues	3, 394, 166, 326. 65	3, 851, 070, 493. 64	+456, 904, 166. 99

[2] Revised in Budget in December, 1927.

[3] Exclusive of $15,050,042 included in the Budget statements as a permanent appropriation to cover estimated deficiency in postal revenues for 1929. This sum is included in the total of the Post Office appropriation act and to include it again in the total of the permanent appropriations would constitute a duplication.

INVESTIGATION OF THE TARIFF COMMISSION

Mr. REED of Pennsylvania. Mr. President, this morning the Senator from Arkansas [Mr. ROBINSON] presented a majority report from the select committee appointed to investigate the Tariff Commission. At that time I obtained unanimous consent to file the views of the minority, which would follow the majority report immediately in the printing of the CONGRESSIONAL RECORD. I now ask leave to submit the views of the minority.

Mr. ROBINSON of Arkansas. The report which I filed was ordered to be printed; but I have no objection to printing it in the CONGRESSIONAL RECORD.

Mr. REED of Pennsylvania. Neither the majority report nor the views of the minority are long, and I think they both ought to be printed in the CONGRESSIONAL RECORD.

Mr. ROBINSON of Arkansas. Very well. I ask unanimous consent that the report submitted by me may be printed in the RECORD, with the views of the minority submitted by the Senator from Pennsylvania, and with the additional views of the Senator from Wisconsin if filed in time.

Mr. REED of Pennsylvania. And if the majority report shall be printed as a Senate document, then I ask that the views of the minority be printed in the same document.

The VICE PRESIDENT. Without objection, it is so ordered.

The views of the minority, submitted by Mr. REED of Pennsylvania, will be found on page 10552.

Mr. REED of Pennsylvania. I wish to add that the former Senator from New York, Mr. Wadsworth, is not present in Washington to-day, but I think I know his views sufficiently well to say that if here he would join in the views which I have just filed.

ORLA W. ROBINSON

Mr. BARKLEY. Mr. President, I ask unanimous consent that the Committee on Military Affairs be discharged from the further consideration of House bill 7324, to clarify the military record of Orla W. Robinson, and that the bill be passed.

Mr. REED of Pennsylvania. What is that bill?

Mr. BARKLEY. I will explain it to the Senator.

Mr. REED of Pennsylvania. What is the calendar number?

Mr. BARKLEY. It is not on the calendar. This man served an enlistment in the Army, his enlistment expired, and he enlisted a second time. During his second enlistment he was charged with theft, tried by court-martial, and convicted. After his conviction he enlisted again in the United States Marine Corps and served a full term, and received an honorable discharge. It has developed now that by reason of the fact that he would not, as is said, "squeal" on his companions in the Army, he was convicted wrongly. Affidavits are in the report from his comrades establishing his innocence. He has been an honorable citizen for many years, is a prominent minister of the Methodist Church in Kentucky, and desires to have his record cleared. It does not involve any financial matter in any way.

Mr. REED of Pennsylvania. I object.

Mr. REED of Pennsylvania subsequently said: Mr. President, I want to say a word about the motion of the Senator from Kentucky to discharge the Committee on Military Affairs from the further consideration of the bill to which he refers. We have approximately 900 bills now in the committee. If the Senate did this for one, they must do it for all, because every Senator who has introduced one of those relief bills obviously must believe in its propriety or he would not have introduced it. I hope the Senate will set its face firmly against that policy.

Mr. BARKLEY. A parliamentary inquiry.

The VICE PRESIDENT. The Senator will state it.

Mr. BARKLEY. Is it in order to move to discharge the committee from the consideration of this bill and to bring it before the Senate?

The VICE PRESIDENT. Such a motion would not be in order.

THE CALENDAR

The VICE PRESIDENT. The calendar under Rule VIII is in order.

The first bill on the calendar was the bill (S. 2787) providing for the appointment of governors of the non-Christian Provinces in the Philippine Islands by the Governor General without the consent of the Philippine Senate.

Mr. LA FOLLETTE. Over.

The VICE PRESIDENT. The bill will be passed over.

AMENDMENT TO THE CONSTITUTION

The joint resolution (S. J. Res. 1) proposing an amendment to the Constitution of the United States prohibiting war, was announced as next in order.

Mr. LA FOLLETTE. Let that go over.

INTERSTATE COMMERCE IN COTTONSEED OIL

The bill (S. 1414) for the prevention and removal of obstructions and burdens upon interstate commerce in cottonseed oil by regulating transactions on futures exchanges, and for other purposes, was announced as next in order.

Mr. PHIPPS. Let that go over.

The VICE PRESIDENT. The bill will be passed over.

BILL PASSED OVER

The bill (S. 1728) placing service postmasters in the classified service was announced as next in order.

Mr. PHIPPS. Let that go over.

The VICE PRESIDENT. The bill will be passed over.

The bill (S. 1462) for the adoption of the Columbia Basin reclamation project, and for other purposes, was announced as next in order.

Mr. SMOOT. Let that go over.

The VICE PRESIDENT. The bill will be passed over.

The bill (S. 1266) to create in the Bureau of Labor Statistics of the Department of Labor a division of safety was announced as next in order.

Mr. KING. Let that go over.

The VICE PRESIDENT. The bill will go over under objection.

UNITED STATES CODE OF LAWS

Mr. WALSH of Montana. Mr. President, I inquire whether it would be in order now to ask for the consideration of a House bill?

Mr. SMOOT. It would.

Mr. WALSH of Montana. I ask unanimous consent for the present consideration of the bill (H. R. 13621) authorizing a preparation and publication of a supplement to the Code of Laws of the United States.

The PRESIDENT pro tempore. What is the calendar number?

Mr. WALSH of Montana. It is not on the calendar.

Mr. REED of Pennsylvania. What kind of a bill is this?

Mr. WALSH of Montana. On Saturday we passed a bill which provided for the codification of the laws of the present Congress, a supplement to the United States Code of Laws.

The bill provides for the publication and printing of that codification. It also provides for a continuation of the committee doing this work after the conclusion of this session, and provides likewise for the printing of the codification of laws for the District of Columbia.

Mr. REED of Pennsylvania. How many copies does the resolution authorize to be printed?

Mr. WALSH of Montana. I take it that it calls for the same number as the original measure called for. The provisions of section 7 of the bill cover that question.

Mr. LA FOLLETTE. Mr. President, can the Senator inform the Senate what was done in the House with the amendment adopted by the Senate to the bill to which he refers?

Mr. WALSH of Montana. I am advised by the chairman of the House committee that the amendment of the Senate was agreed to.

Mr. LA FOLLETTE. I am very gratified that it has been done.

Mr. SMOOT. Mr. President, I want to ask the Senator if it has been the custom in the past for Congress to do the printing for the District of Columbia?

Mr. WALSH of Montana. I am unable to say so, but I should assume that is the case, because they are the laws of Congress. I should add that the provisions of the bill in relation to the printing of this supplemental number are the same as the provisions in relation to the printing of the original Code of Laws.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill (H. R. 13621) authorizing a preparation and publication of a supplement to the Code of Laws of the United States.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

CIVIL ACTIONS IN UNITED STATES COURTS

Mr. COPELAND. Mr. President, I ask to have printed in the RECORD resolutions adopted at the annual meeting of the Broome County Bar Association with reference to Senate bill 3151.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

ANNUAL MEETING OF BROOME COUNTY BAR ASSOCIATION MAY 12, 1928

By Mr. F. J. Meagher:

Resolved, That the report of the committee on judiciary and law reform expressing its disapproval of United States Senate bill No. 3151 be, and the same hereby is, adopted; and further

Resolved, That the secretary of the Bar Association be, and he hereby is, instructed to transmit a copy of the said report and of this resolution to Hon. ROYAL S. COPELAND and Hon. ROBERT F. WAGNER, Members of the United States Senate from the State of New York, and to Hon. JOHN D. CLARKE, Representative in Congress of the thirty-fourth congressional district of the State of New York.

To the Broome County Bar Association.

GENTLEMEN: The president of the bar association has brought to the attention of the committee on judiciary and law reform United States Senate bill 3161 introduced in the United States Senate by Senator Norris and so far as relates to the matter in hand it provides:

"*Be it enacted, etc.*, That the first paragraph of section 24 of the Judicial Code (sec. 41, U. S. C.), as amended, is amended to read as follows: First. Of all suits of a civil nature at common law or in equity brought by the United States or by any officer thereof authorized by law to sue."

As the law now stands, this paragraph 1 of section 24 of the Judicial Code, in addition to the provisions above quoted, also provides for the bringing of actions in the United States district courts by a citizen of one State against a citizen of another State in cases involving the sum of $3,000, or more.

Your committee understands that the object of the law as it now stands was to overcome what prejudice might exist against a resident of one State in bringing an action against a resident of another State in the State courts. Your committee believes that this provision is just.

The amendment to this section which your committee calls to your attention is for the purpose of eliminating this provision now available by a citizen of one State against a citizen of another State.

Your committee is of the opinion that no need exists for restricting the present privileges granted to citizens to enter the United States courts, and recommends that this association express its disapproval of this proposed bill to the Senators of the State of New York and to its Representative in Congress from the thirty-fourth congressional district.

Dated May 12, 1928.

BURR M. MAASHER,
J. L. GREGORY,
C. ADDISON KEELER,
WILLIAM L. LEWIS,
THOMAS J. KEENAN,
Committee on Judiciary and Law Reform.

INTERNATIONAL BOUNDARY WATER LEVELS

Mr. SCHALL. Mr. President, I asked unanimous consent to print several newspaper articles and editorials pertaining to and growing out of my opposition to special interests' desire of my State to raise the international boundary water levels between Minnesota and Ontario, and I also desire to have printed, and ask unanimous consent therefor, several newspaper articles and editorials, including a newspaper statement of mine in reference to this international boundary water question and the enforced payment of back income taxes by these same special interests, all of which, together with their machinations, misstatements, and false charges in reference to myself are, in my opinion, of interest to the people of Minnesota.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

[From the Atwater (Minn.) Republican Press, Friday, May 4, 1928]

TOM SCHALL'S speech before the United States Senate on the conservation of our natural resources is well worthy of a Senator from the State of Minnesota. He may be blind, but nevertheless he sees more than many of us who have full use of our eyesight. He is brilliant. Senator SCHALL'S greatest faculty is his unflinching courage in boldly opposing the forces that would dry up our lakes and streams and eventually break down the forests, which are the property of our people. The fish, birds, and other wild life belong to the people as a whole and should be so regarded. TOM SCHALL does not take into consideration either wealth or power when he decides to do battle. What the Senator says is sometimes pretty mean stuff, because it is dangerously close to the truth. (Maple Lake Messenger.)

[From the Milan (Minn.) Standard, Friday, May 4, 1928]

Whatever faults Senator SCHALL may have, the one act of his in compelling the Backus-Brooks outfit to pay $3,160,000 in taxes, which they probably would never have been called upon to pay had it not been for him, ought to have careful consideration when Mr. SCHALL'S enemies begin their active campaign to unseat him in 1930. (Madison Independent Press.)

If it hadn't been for the $3,160,000 in back taxes, we wonder how much would have been known about the alleged faults of Senator SCHALL.

[From the St. Paul Dispatch, Friday, March 30, 1928]

BACKUS BEHIND MAGNUS DRIVE, SCHALL AVERS—LABORITE PLAYS "MAN FRIDAY" IN "SMOKE SCREEN" ATTACK, SENATOR CHARGES—DAM ISSUE CALLED MOTIVE—STATEMENT QUESTIONS SINCERITY OF OUSTER MOVE LAUNCHED AS POLITICS HUM

Senator THOMAS D. SCHALL, in a statement issued to-day, charged that efforts of former Senator Magnus Johnson to reopen the United States Senate contest over his election are in reality another attack on him by E. W. Backus, millionaire Minneapolis lumberman.

The attack, he charged, is "only another smoke screen of Backus to cover up the real issue in Minnesota, blocking of Backus interests' efforts to destroy the grandeur of Minnesota's north woods country by building his power dams on Canadian boundary waters."

SENATOR SCHALL'S CHARGES

Senator SCHALL also charges in his statement:

"That Mr. Backus paid Johnson's campaign expenses and a salary while he was running on the Farmer-Labor ticket against a Republican.

"That he [SCHALL] had advance information that an effort would be made to get 'another smear investigation before the Senate to make slanderous charges against me under congressional immunity.'

"That he has received information that Backus is making arrangements to charter a special train to take Minnesota and possibly North Dakota delegates to the Republican convention in Kansas City.

"That Mr. Backus is aligning himself with Presidential Candidate Lowden on a farm-relief record only to 'take unto himself a popular Minnesota issue, the McNary-Haugen bill, in order to divert attention

from that other great Minnesota issue—conservation of natural resources.'

"I notice by Thursday evening's St. Paul and Minneapolis papers that Magnus Johnson expects to revive the charges against me, contending that he has new evidence. I am not at all surprised," said Senator SCHALL.

SAY HUGHES ALSO WROTE

"On my return to Minneapolis last Thursday I was advised that Donald Hughes (Minneapolis attorney for Johnson) had also written Senator SHIPSTEAD and wanted this contest reopened. It is very peculiar that this should come about at this time, when the political pot is boiling in Minnesota, the question of national politics being uppermost in the minds of the public.

"The United States Senate disposed of this case. In the face of that a group of State senators who were controlled by E. W. Backus reopened this matter in the last Minnesota Legislature. They had the widest latitude to present evidence, but nothing was produced. It was a packed committee, with the exception of one, Mr. Johnson, of Ivanhoe, of State senators under the dominating influence of E. W. Backus, and if there was any evidence you can rest assured they presented it.

"The Minnesota State Senate, after a thorough investigation lasting many weeks, was forced to exonerate me completely. Because of the stand I took against E. W. Backus on the tax question some years ago, when I introduced a resolution in Congress which forced him to pay $3,218,000 back taxes for the corporation which he represents and several hundred thousand dollars more on his personal taxes, and because for many years I have been vitally interested in protecting the public's interest in the matter of water power in the northern part of the State, and because I have at various times on the floor of Congress in the last five years stated my unalterable position against his water-power projects, and because I saw fit to give expression through the press so the public might thoroughly understand how necessary it is at this time to conserve our natural resources and expose the movement back of it to take away from the people their rightful heritage, I am being hounded by such men as Magnus Johnson and others of his kind. It was shown before the investigating committee of the State senate, on Mr. Backus's own testimony, that he and Magnus Johnson were on very close terms.

"Besides wanting to smear me, they wanted this purposeless investigation of me to distract the public attention from the fact that grave charges were flying about that there was a shortage in the office of the State treasurer and an investigation was being demanded.

"Also, there was a demand for an investigation of a member of the securities commission appointed by the governor. Since the legislature adjourned, this member, Andrew E. Nelson, through the efforts of the United States attorney, has been indicted, tried, and convicted of aiding a $1,000,000 fraud scheme of C. A. Cochran, and has been sentenced to 20 years in Leavenworth prison.

"The State senate set up a smoke screen of trying TOM SCHALL, and tried to smear me while they were covering up the State administration."

CALLS BACKUS INSTIGATOR

"This attack is not an attack by Magnus Johnson, but by E. W. Backus, brought covertly through Johnson as Backus's man 'Friday.' This he has been since Backus hired him 'by the month and expenses' to run as a Farmer-Laborite against J. A. O. Preus, a Republican, for the United States Senate.

"Backus knows at last that the issue I have fought for for years has become a pulsing State issue, that the 30,000 or 40,000 sportsmen and organized conservationists in the State are up in arms against Backus's dam and power projects. He is afraid of this aroused sentiment.

"For years every time I shouted about it I got a bucket of cold water. Now the people of Minnesota know the peril of his program. The Izaak Walton League, World War veterans, and many other veterans and sportsmen's organizations and the Federation of Women's Clubs are mobilizing to protect our northern resources in their natural beauty against the encroachment of private interests.

"I am in Backus's way and he will use any methods to get rid of me."

LISTS MAGNUS'S "CONTESTS"

"As for Magnus, he has had lots of contests. He had a milking contest when he was in Washington, but he said they gave him a dry cow and he lost that.

"He had a woodchopping contest, but they gave him a dull ax, and he lost that. He had a marble contest, but he claimed somebody pushed him, and he lost that.

"Now he is out for another contest. This time again he has a dry cow, a dull ax, and again somebody is pushing him—and he will lose this.

"BOTH FOR HAUGEN BILL"

"I have charged in the Senate that Backus has said he would spend $500,000 to beat me. Why is he so bitterly opposed to me? I am for the McNary-Haugen bill; have been one of its staunch supporters, and now, so is he. His attack is simply another smoke screen to cover up the real issue closest to his heart, blocking of his efforts to build power dams in the northern boundary waters and destroy our natural resources.

"It is strange that at this time these charges against me, twice discredited and thrown out, should be revived, and the only reason I can see is that Mr. Backus sees that the political situation requires some sort of a smoke screen to cover up his political manipulations at the present time because of his control of the majority of the State delegation to the National Republican Convention.

"At St. Paul last Friday night and Saturday it was amusing to see how these Minnesota State senators ran to him at his beck and call. They were just errand boys.

"My understanding is that he expects to control the majority of Minnesota delegates to the Kansas City convention and also the statement has come to me that he is now arranging for a special train, which will be under his jurisdiction, for the delegates from North Dakota and Minnesota to the Kansas City convention.

SINCERITY QUESTIONED

"These charges of his man Johnson are not actuated by sincere motives. They are purely political.

"Mr. Johnson was very anxious a few weeks ago to secure from the United States Senate $2,500 which he claims he had coming to him. He said he was broke. Where does he get the support to carry on the nefarious program which he is again undertaking to put over?

"I have information that Magnus Johnson was in the pay of Backus when he made the race for the United States Senate against Preus. That he was in the pay not only so far as his campaign expenses were being paid or guaranteed, but that he also was being paid a salary so that he would not lose his time if he was defeated. Magnus himself told this to members of the Farmer-Labor Party when they tried to get him to drop out and leave the way for Fritsche and Lindbergh to run, I am reliably informed.

"At the previous smear investigation, Backus testified under oath that I was not his friend, that I had made him pay the Government more than $3,000,000 in back taxes, and that he thought me unwise in that before I made the tax fight on the floor of Congress I should have sent for him and said 'I want to talk to you about this.'

"Backus tried to have Magnus, his man Friday, appointed to the International Joint Boundary Commission which would study and report on his request for the privilege of building his power dams. He went to the President of the United States and asked for the appointment. Why did he do this?

BLAMES BIG INTERESTS

"One does not have to analyze it very carefully in order to be satisfied in his own mind that the big interests that are trying to control the natural resources of the northern part of the State are vitally interested and therefore make every effort to prejudice the minds of the people against me. Let them continue. It is making me thousands of friends, and the people of Minnesota are beginning to understand why they have made all these malicious attacks the past few years."

MOST DISTINGUISHED BLIND MAN IN ALL THE WORLD, SAYS WELLS ABBOT—NOTED CHICAGO NEWSPAPER MAN GIVES HIS IMPRESSIONS OF FIGHT AGAINST SCHALL—MONEY MEANS NOTHING TO BLIND MAN—CAN NOT SEE WHY MINNESOTA CITIZENS FIGHT SENATOR, WHO HAS RISEN TO HEIGHTS UNDER PHYSICAL HANDICAP—INTERESTING ARTICLE

By Wells Abbot

It is a strange thing to an outsider to come into the State of Minnesota, examine its political situation, and note the weave of the fabric. One good woolen thread runs through, flanked on either side by what appears to be shoddy.

When Senator THOMAS D. SCHALL was elected to the Senate the interests concluded that here was an easy mark. Furthermore, the Senator was blind—he couldn't see. It apparently occurred to them that here was a person who could be bent to their bidding without much difficulty.

A blind man, however, has this peculiarity: You can show him a $1 bill and a $1,000 bill and he can't tell the difference. It's all paper to him, and since it is all paper, it begins to lose its value.

Shut your eyes for five minutes and imagine yourself shut out from all the world—grope your way around your own house after you try this experiment. You will begin to understand how the material things that would interest other men begin to lose their value. There remains only the necessity for the simple, necessary things of life, and in the case of a high-minded, educated, public-spirited man there remains also in a greater measure the sense of justice, honesty, and decency.

This bothered the interests. Here was a Senator who would not budge; here was a Senator who could not be bought; here was a Senator who could not see a $1,000 bill; and lastly, here was a Senator who was honest, who had fought his way up from the ranks of the people,

who had their interest at heart, and who, apparently, intended to fight the battle of the people as opposed to the interests of great financial groups.

WHAT TO DO?

Various shrewd minds decided that the best way to ruin a Senator like this and to discredit him was to have recourse to the old-fashioned "mud slinging."

So they began to sling gobs of mud with the intention of choking off this one voice in the Minnesota political wilderness; but the more mud they threw, the louder SCHALL yelled. It was not exactly like talking candy from a baby. Then, as the records show, this public servant forced the issue—compelled court hearings and won a decided victory, much to the chagrin of certain wealthy men whose money had always smoothed the path for them and who were not used to being licked.

There is something petty, mean, and small in the mind and the heart of any man who will maliciously try to blacken the character of an honest public servant to further his own end.

Instead of getting behind such a man as SCHALL enthusiastically, instead of helping him and praising him, these financial interests made their contribution in the form of mud pies.

GREATEST IN THE WORLD

There can, of course, be no doubt of the fact that Senator SCHALL is to-day the most distinguished blind man in all the world.

No other man to-day, carrying his terrific handicap, has reached the heights of achievement or the place in our Republic that SCHALL has.

This should be a matter of pride to every Minnesotan with a drop of manhood or womanhood in their veins.

Here is sheer achievement, sheer grit, sheer ability finding its way from nothing to a place in the sun. What more striking example of heroic Americanism does the history of our country contain?

How many other men similarly afflicted have tightened the muscles of their jaws, have girded up their loins, and have determined to go on to victory as SCHALL has?

To the outsider there is something heroic and epic in the figure of SCHALL. It surprises those on the outside to contemplate the persecution of this man who will not be bought and will insist on serving the people.

However, apparently a prophet is always without honor in his own country.

Which brings me to another striking incident.

THAT DAM QUESTION?

Some three years ago Senator SCHALL again raised his voice against the building of dams in the upper Minnesota country. He contended that the benefit of private interests here would destroy a vast natural beauty spot, would harm the settlers of the region by flooding them out without compensation, and that the whole proposed scheme was meant purely for private benefit.

Remember this was three years ago. No one can ever tell me again that the American public is deaf—it only took them three years to hear the constant admonition of Senator SCHALL. This isn't bad, considering the length of time required for gaining the ear of the populace according to other historical events.

Three years Senator SCHALL fought this alone. He was the recipient of much mud. What he will ever do with all the mud thrown at him I haven't the faintest idea. Maybe he will start a subdivision—a muddy subdivision should be a good place to live for political cat's-paws who do the bidding of great financial interests and find themselves out in the cold by a fortunate act of justice.

It strikes me as I write this that justice, too, is blind; perhaps there is some analogy here between the mythical figure and the figure of the Senator weighing the balance impartially.

But to get back to the issue of the dams in northern Minnesota. When the dams were opposed by Senator SCHALL there were many loud and fervent damns, with the different spelling, uttered by the gentlemen whose interest dams would have served best.

The writer recalls an ancient truism which ran something like this, "That truth crushed to earth would rise again."

Senator SCHALL knew that eventually the inevitable spirit of justice would send him aid, and his faith has not gone unrewarded.

LEGION JOINS FIGHT

The American Legion has now taken up this fight, and Senator SCHALL heartily welcomes this powerful ally to stand shoulder to shoulder with him and fight against the despoilation of one of the greatest beauty spots of Minnesota.

It seems to the writer, after a somewhat casual survey into the persecution of Senator SCHALL, that if he were one of the men who had opposed the Senator and had lost as thoroughly in the courts of justice as they have, he would go and find himself a nice, large, warm hole, and he would crawl inside and proceed to pull the hole in after him. For the life of me I can not understand how such men can face the eyes of the citizens of Minnesota in broad daylight without feeling uncomfortable enough to melt.

WAS MAGNUS A DOUBLE CROSSER?

Everybody admires the man in public life who takes a stand for the principles in which he honestly believes. If you are a radical and an office holder is a stanch conservative; honestly believes in his conservative views and adheres to them all of the time, you have respect for that conservative.

On the other hand, if you are a conservative and a radical is in office who honestly believes in his program and is consistent in advocating it, you will admire that radical, even though you may disagree with him.

But most all Americans despise the straddler and double crosser in politics.

It was with considerable amazement that tens of thousands of voters who had been identified with the Farmer-Labor Party learned from the sworn testimony of E. W. Backus, multimillionaire Republican and business partner of William F. Brooks, Minnesota national Republican committeeman, that Magnus Johnson, self-styled Farmer-Labor leader and Progressive, had been recommended for appointment to the international joint commission by Mr. Backus.

Blandly, the man, a single one of whose properties is worth $84,000,000, sat on the witness stand, and—under oath—told how he went to President Coolidge and asked the Nation's Chief Executive to put Magnus Johnson, Farmer-Labor Senator, into that $10,000-a-year job.

Blandly, when questioned by Tom Davis, attorney for Senator SCHALL, Mr. Backus admitted that this commission would have an important bearing on the finances of his companies, because water levels are to the Backus-Brooks companies what oats are to a working farm horse.

Mr. Backus did more for Magnus Johnson than merely write a letter to the President, recommending Magnus for this important job.

Backus made a personal visit to Coolidge and made this request.

And Magnus Johnson, even then sitting in the United States Senate by virtue of the money and organization work of the Nonpartisan League and labor unions, was a frequent caller on Mr. Backus and Mr. Brooks. Magnus often went to the offices of these industrial powers "to pay them a little visit." Magnus became much better acquainted with Mr. Backus at Washington, when Backus was at the Capitol to push through the Lake of the Woods treaty, which causes overflow waters on lands of northern Minnesota settlers, wiping out their holdings in some cases, without a chance to collect damages. Magnus helped put this treaty through the Senate. And by a queer freak of politics the very counties which suffered the most from overflow gave Magnus his biggest vote. Verily, the voter is played for a sucker in many ways.

The progressive farmers of Minnesota and the organized industrial worker will want Magnus to explain to them why he was so chummy with Ed. Backus and Bill Brooks.

What was the Farmer-Labor leader doing in the offices of the Republican overlords so often?

Why did Magnus help put the Lake of Woods treaty across?

Why did E. W. Backus select Magnus Johnson for a $10,000-a-year job on the international joint commission and take the trouble to personally ask the President to appoint him?

Why is Magnus Johnson, who poses as the common people's friend, "lick spittling" around Backus, and so interested in besmirching the 12-year unassailable record of TOM SCHALL on behalf of the plain people?

The comparison is more startling when you note the statement of TOM SCHALL on May 19, 1924, on the floor of Congress, while still a Member of the House. SCHALL had no hesitancy in throwing the following challenge in the face of Minnesota's political overlords:

"The Backus crowd not only holds a strangling grip upon Minnesota's financial resources, but their ramifications extend into Canada, and are therefore international. A few years since, as a short cut to control of the Ontario government, they put over the Farmer-Labor ticket for the purpose of securing great concessions in timber and water power. They have not been negligent in seeking to grab control of such a movement in Minnesota. They are vitally interested in the international boundary waters treaty between Canada and the United States. They have for years, regardless of anyone's rights, been pursuing a ruthless course in the construction of water-power dams.

"Then, too, there is a little matter of several millions of dollars of income taxes due to the Government of the United States, which Backus is vitally interested in escaping. I have introduced House Resolution 301 to investigate this tax steal, and in case I am the Republican candidate for the United States Senate I want it understood that I am in no way connected with this boodling, reactionary gang, and if I am elected to the United States Senate I shall be as free as I have been during my 10 years' service in the House. No clique, gang, corporation, organization, or person has a 5-cent piece invested in the office I hold."

The tremendous onslaught and persecution to besmear TOM SCHALL since his election to the Senate demonstrates beyond all doubt that he has been true and is still unbroken, fighting the lone fight against an army of hirelings, barrels of money, and unlimited resources. TOM SCHALL, though blind, clearly foresaw what would happen when he began the fight against this dominating force, when over three years ago, on the floor of the House, he said:

"The people have trusted me in ever-increasing, overwhelming majorities for 10 years, and I would fail in respect to myself and to my people and to my God if I shirked this disagreeable, dangerous, unwelcome, imminent, and imperative duty of exposing to the people of Minnesota the long, grisly fingers that are reaching in to control their national politics.

"I know that I shall avail but little against the tremendous din of paid claquers, subsidized press, and carefully manipulated but misguided campaign organizations.

"I realize that it is a futile battle between the weak and strong. It is the scheme of the old selfish political plunder gang, headed by Backus, with their hands in almost every business of our State, holding in contempt assessors, county commissions, as well as income-tax officers, with a well-known trend of ruthlessness in their operations, well greased with their millions of ill-gotton gain filched from the Commonwealth against a humble, blind Representative of the people."

Magnus says he is going to run for the Senate again in 1930 against TOM SCHALL. All right, Magnus, this is a free country and you can run if you desire. But before you get the votes of the farmer and city worker who so loyally supported you in the past you must explain this connection with the men who are financially interested in politics and who are the political overlords of the Republican Party in Minnesota.

And that is going to be some job even for Magnus. The wood-sawing, cow-milking, marble-shooting and other contests you indulged in at Washington will not seem so difficult after the voters get a crack at you, Magnus. Some people are asleep, but a great majority will never reconcile the wheel horse of the Farmer Labor Party sleeping in the same stable with E. W. Backus and Bill Brooks.

Mr. Backus's testimony in the hearing proved almost every statement that TOM SCHALL has made. It was hard to believe at the time SCHALL made his fight single handed. But truth is truth. We did not credit it all when TOM SCHALL'S lone voice was raised in the political wilderness of protest. But Mr. Backus's testimony has brought out the truth.

We apologize to TOM SCHALL for doubting.

SCHALL EARNED SALARY

What is a public servant worth? What is a United States Senator who honestly performs his duties worth?

What was Senator SCHALL'S fight on the Backus-Brooks tax matter worth?

Backus said under oath and the records show that the Government collected about $3,160,000 because of SCHALL'S good work in this one matter. The interest on this sum at only 3 per cent would pay the President's salary of $75,000 every year for all time to come.

A Senator draws $10,000 a year in salary. His clerk hire and other expenses makes the total per year for a Senator, including salary, about $15,000 each 365 days.

If you figure what SCHALL saved the Government on this tax matter and divide the $3,160,000 by $15,000, you will easily see that SCHALL earned his salary and office expenses for 211 years by this one courageous act.

On the other hand, if SCHALL had been playing with big business, if he had "sent for" Ed. Backus, as Backus testified he should have done, the people could have lost SCHALL'S salary for 211 years just as easily, and practically nobody would have been the wiser. These tax matters are generally secret. Which kind of a Senator do you prefer?

TOM SCHALLS are scarce in public life. Give them all the credit and honors possible.

INVESTIGATION SHOWS PLOTTERS EXPECTED $30,000 TO FRAME CASE AGAINST BLIND MAN; THEY FAIL—SENATOR SCHALL MADE SPEECH IN CONGRESS WHICH FORCED BACKUS-BROOKS COMPANIES TO PAY $3,160,000 OF BACK TAXES; SINCE THAT EVENT FOUR ATTEMPTS MADE TO UNSEAT HIM; UNITED STATES SENATE AND MINNESOTA SENATE VOTE UNANIMOUSLY TO CLEAR SCHALL; SENATOR SHIPSTEAD SAID HE HAD NO QUARREL TO FIND WITH VERDICT; THE LEADER REVIEWS CASE TO SHOW MINNESOTA READERS WHAT IS CAUSE OF THESE ATTEMPTS AGAINST BLIND SENATOR

The Minnesota Leader has been making an investigation into the SCHALL inquiry, which was held before a committee of the Minnesota State Senate last spring.

Over a period of several months the Leader editor has been closely inspecting the typewritten testimony, all of which was under oath.

The story reveals a most amazing story of political intrigue and developed a determined effort to "get" Senator THOMAS D. SCHALL out of office because Senator SCHALL was independent and honest enough in his views to compel one of the biggest corporations in the Northwest to pay $3,160,000 of back income taxes.

By doing this TOM SCHALL placed in the Treasury of the United States enough money to pay his salary and expenses for 211 years. By keeping this money in the Treasury, less than two-thirds of 1 per cent interest on the money would pay the salary of his successor until judgment day.

Sensational testimony was developed in the investigation last spring by several witnesses, who claimed there was a plot to collect $30,000 from interests in Minnesota, if they could unseat the blind Senator.

BACKUS IS NAMED

This testimony brought out the name of Edward W. Backus, head of the Backus-Brooks Co., and other immense corporations, a partner of William F. Brooks, national Republican committeeman from Minnesota, as being interested in this plot. Mr. Backus took the stand in his own defense and declared that 10,000 other big business men were as bitterly opposed to SCHALL as he was.

Elsewhere in this issue is a review of his testimony, which every person in Minnesota should read carefully, because it gives the astounding political and economic philosophy of a man, only a part of whose assets are valued at $84,000,000.

It also reveals the animus behind the persecution of a man, who will not bow to the multimillionaires for orders.

Backus testified that SCHALL "was very foolish" as he should have "sent for Backus," before he started action to make the Backus-Brooks interests pay millions of back taxes.

OTHERS MENTIONED

The testimony also brought in the names of William Oppenheimer, personal attorney for Backus; Walter F. Rhinow, former adjutant general for Minnesota, and recently appointed head of the State crime commission by Gov. Theodore Christianson; also Abe Hertz, disbarred St. Paul lawyer, now under indictment in United States court for perjury; also Frank A. Day, former lieutenant governor, and now a State senator from Fairmont; also Magnus Johnson, former United States Senator; Henry Teigan, Magnus's former secretary; Lieut. Gov. W. I. Nolan; Gov. Theodore Christianson; and a number of lesser lights.

If SCHALL had been unseated, under the State law Governor Christianson could have gone outside the State line, Lieutenant Governor Nolan could have appointed Governor Christianson as Senator, and Nolan automatically would have become governor.

SCHALL TRIED FOUR TIMES

That the enemies of TOM SCHALL are extremely vindictive; that the campaign against him is backed heavily with plenty of money; that Schall's enemies will not stop at anything in their effort to discredit him, is evidenced by the fact that since November, 1924, when he was elected United States Senator, at least four efforts have been made to discredit him.

The blind Senator's enemies started after him when the 1924 primary showed he was the Republican nominee for Senator. A contest was instituted then, but was dismissed by the Hennepin County court at Minneapolis because the contestants had nothing on which to base their case. So ended chapter 1.

In the November, 1924, election SCHALL defeated Magnus Johnson. Powerful Republican commercial interests apparently financed an effort, which seemingly came from the Magnus Johnson camp, to contest the election.

GRAND JURY INVESTIGATION

First the Hennepin County grand jury investigated the election at Minneapolis. Floyd B. Olson, county attorney, and a running mate of Magnus Johnson on the Farmer-Labor ticket in 1924, was in charge of the investigation. After exhaustive hearings, the grand jury voted no indictments. So ended chapter 2.

Not satisfied with this, however, Magnus Johnson retained Donald Hughes, a Minneapolis lawyer, who had previously represented members of the Ku-Klux Klan convicted of criminal libel against Minneapolis officials. Hughes drew up contest papers and went to Washington to try and discredit SCHALL. Mr. Hughes admitted while on this mission that he was receiving $100 a day and expenses. No announcement has been made concerning who paid this huge sum of money, for Hughes spent months on the case.

The United States Senate Elections Committee appointed three of the Nation's ablest lawyers to hear this contest. They were Senators GOFF, NEELY, and DENEEN.

Again hearings were held. Many witnesses were called to Washington, and Hughes was given more than a year to dig up evidence and report it to the committee. Finally, after he had exhausted every resource, the subcommittee turned in a unanimous report exonerating Senator SCHALL. The full elections committee of 31 Senators did the same.

And when the matter was voted on by the full membership of 96 Senators not a single Senator, Republican, Democrat, or Farmer-Labor, voted against SCHALL.

WHAT SHIPSTEAD SAID

Senator HENRIK SHIPSTEAD, from Minnesota, Farmer-Labor, said on the floor:

"I have read the record, and I have no quarrel to find with the findings of the committee."

So ended chapter 3.

Realizing their efforts to unseat SCHALL through the United States Senate had been futile, other means were sought to smear him, and

thereby make an opening to reopen the case in the United States Senate, for only that body has the power to unseat.

The enemies apparently decided to look for some way to connect SCHALL with bootlegger activities in the 1924 campaign. They tried and failed. For there was no connection. Finally they reached Arthur N. Jacobs.

In the primaries a group of SCHALL'S friends had organized a Schall volunteer committee. Almost every state-wide candidate has these groups of friends who, unofficially, try to help.

The evidence shows by a dozen witnesses that contrary to SCHALL'S many-times expressed wish, Jacobs on his own initiative opened offices at the West Hotel. With the acuteness of the born mountebank, he assumed the functions and called himself manager of this volunteer committee.

Evidence showed that SCHALL was against these headquarters and tried to have them closed. It was also shown that Jacobs had access to SCHALL'S law offices, but insisted on opening offices elsewhere, so he might cover his dealings and keep from SCHALL'S notice his constant sale to bootleggers of pretended influence with SCHALL.

VARIOUS BANK ACCOUNTS

Evidence also proved Jacobs had a bank account in his own name, one in his wife's name, and another account in a Minneapolis bank was carried by Mrs. Louise Neeley of thousands of dollars Jacobs had given her. Jacobs, though married, gave Mrs. Neeley about $7,000 and carried on an affair that was notorious. Letters were at the trial from Jacobs to Mrs. Neeley, all addressed "Sweetheart mine."

There was a fourth bank account in the name of the Schall Volunteer Committee, in which less than $5,000 had been deposited. It was shown conclusively by checks and accounts that of all the money collected from the bootleggers, every cent went for dresses, entertainment, and gifts to four women. Jacobs testified that his own account contained money secured from his job as a Veterans' Bureau investigator, which paid $200 a month, and about $100 a month from his paper, the Harpoon. Yet the totals he deposited in 18 months were almost $36,000. Jacobs tried to explain this huge sum by saying kited checks were mainly responsible, but did not succeed.

Testimony of the help showed he paid no bills, except a few absolutely necessary to keep the office open, and that he repeatedly told "Sweetheart mine" "that we are going to get in every dollar we can and pay no bills we can postpone. If SCHALL is elected, I will be sitting fine. If he is defeated, he will be through, and we will have our pile."

SHOOK DOWN POSTMASTERS

After election Jacobs went around the State, part of the time with a woman, shaking down postmasters and promising them various favors if they would take wholesale subscriptions to his paper.

Hearing of this vicious practice, Senator SCHALL turned the evidence over to Washington postal authorities and issued a statement, mailing it to every postmaster and newspaper in the State, declaring that Jacobs had no authority from him for such action, and that while he had been an ardent supporter, never had been his manager.

On July 20, 1925, over a year previous to SCHALL'S so-called "repudiation statement," which Jacobs alleges as the reason for his betrayal of SCHALL, Jacobs expressed his enmity to Senator SCHALL in a letter to "Sweetheart mine." Jacobs did this because the Senator refused to aid him in a nefarious and dishonest scheme which would have made Jacobs a "small fortune."

This letter, admitted in evidence, contained this statement:

"Ye gods, girl, it seems that the best 10 years of my life that I gave to him were given for naught. He is not measuring up. * * * I am back where I was 10 years ago, building up my Harpoon, but this time for A. N. Jacobs and not for TOM SCHALL. I went to Washington, like a beggar on horseback, to have TOM help me on a proposition that would have made me a small fortune. The day I arrived TOM left for Minneapolis and I was left high and dry at Washington. TOM won't march with me.

"With love, believe me,

"Your own J."

PERTINENT QUESTION

After this letter had been read Tom Davis, attorney for SCHALL, asked Jacobs if the J. signed to the "Sweetheart mine" letter meant "Judas, Jackass, or Jacobs."

This letter shows clearly the working venom of dissatisfaction in Jacobs's failure to exploit the office of Senator for his dishonest purposes. The obligations and duties of that high office were entirely beyond his comprehension. Evidently he saw in it an opportunity for loot and nothing more.

When SCHALL'S letter of warning went throughout the State, Jacobs snatched eagerly at it as an excuse to join the "smearers."

Because he could no longer sell pretended SCHALL influence he set about to sell the protection, friendship, and confidence the Senator had given him for 10 years. Judas-like he went back on former sworn statements of his own and swore exactly the opposite at the investigation. He admitted that his former sworn statement had been for love to SCHALL, but he was under oath last spring as a declared enemy of SCHALL.

SOLD OUT A FRIEND

Evidence showed that for 10 years he had been nurtured, helped, and befriended by the then Congressman who had placed confidence in him, allowing Jacobs office space, telephones, and secured a job for him that paid $2,400 a year, and would enable him to devote part of his time to the Harpoon, Jacobs's paper.

Jacobs never knew SCHALL until the Congressman's second campaign, when Jacobs volunteered to help. At that time the Harpoon had only a few hundred circulation, but because of Jacobs's apparent friendship for the blind Congressman his circulation leaped to thousands. Later, because of lack of regularity of issuing, and because of carelessness in keeping his word, this circulation dwindled.

Continuing his dickering with SCHALL'S enemies, the evidence showed that Jacobs, drew up a statement of various imaginary charges, he falsely claimed he could prove against the Senator. Jacobs sent his attorney, Irving Frisch, to William Oppenheimer, of St. Paul, personal attorney for E. W. Backus, multimillionaire. He sent F. Corneaby to E. W. Backus for two interviews.

The statement was delivered to Oppenheimer, who in turn sent it to Backus. Corneaby testified three of them were asking $10,000 each for "Helping to get SCHALL."

THE DEATHBED CONFESSION

But truth prevailed. Corneaby was taken seriously ill, and doctors declared it undoubtedly would be fatal, and that he had not many days to live.

Corneaby was given the last rites of his church by the priest, and Corneaby then decided to make a clean breast of things.

His dramatic deathbed confession was the turning point of the hearing.

Some power greater than earthly had reached in and frustrated the well-laid plans of these conspirators.

The testimony is set forth in some detail in this issue. Read all of it.

ANOTHER UNANIMOUS VICTORY

Before a committee that originally was 4 to 1 against the blind Senator they proved conclusively that the trumped-up charges were nothing but malicious gossip and that there was no evidence that Senator SCHALL was connected in any way with the bootlegger activities.

All of the senators signed the report, which finished with this paragraph:

"That the evidence, taken as a whole, is not sufficiently clear, convincing, and satisfactory to enable the committee to find that the charges contained in the resolution have been proven."

The committee, after more than five weeks of wide-open hearings, was forced by the lack of evidence to unanimously make this report.

The Minnesota State Senate with 67 members voted unanimously to confirm this report and again exhonerated Senator SCHALL. So ended chapter 4 to "get" SCHALL. Before the investigation this same senate voted 54 to 8 to hold these hearings, although everybody knows it was a waste of Minnesota taxpayers' money, as the United States Senate only has the jurisdiction. The Minnesota State Senate could no more unseat a United States Senator than the council of St. Cloud could unseat an alderman at Crookston.

CHAPTER V IS COMING

Now the blind Senator's enemies are threatening another case at Washington. Magnus Johnson has recently visited Senator DENEEN at Chicago to talk about reopening the matter at Washington.

These conspirators are not satisfied with having spent more than $50,000 of the taxpayers' money in the former United States Senate hearing. They are not satisfied with having spent hundreds of dollars in the Hennepin County grand-jury hearing; they are not satisfied with having spent thousands of dollars of your money in the recent legislative investigation.

They want to continue a case in which the United States Senate and Minnesota State Senate have both by unanimous votes declared Senator SCHALL innocent.

Any citizen can file a contest petition in the United States Senate without much cost. Poor old Magnus can again be the petitioner, and thus the conspirators can throw all the mud they want and be immune from criminal libel. They can again get publicity on the allegations in their petition and the newspapers can again print all this alleged evidence for the purpose of belittling and smearing TOM SCHALL and defeating him for reelection in 1930, when he comes up again.

MYSTERY

What the deal is—why Magnus should again visit Senator DENEEN to reopen the case—who is furnishing the huge amounts of money in all these proceedings is hard to say. The Leader is printing extracts from the testimony—read it all and judge for yourself. The Leader does know that E. W. Backus is a hard fighter; we are sure that certain fellows are getting a meal ticket off this agitation. But right will win

in the long run and the people are going to know what this is all about if they read the sworn testimony in this issue.

The Leader knows that when the facts are made public the people will rally to the blind man who has thrown down the gantlet at the feet of Backus, Brooks, and the other political overlords. We know the voters of this State will not be misled by an organized propaganda of papers, books, or speakers.

Politics is a great game. If you play with the big millionaires and let them milk the people to their heart's desire, you will go along without any trouble.

LOOK OUT, IF YOU ARE RIGHT

But if you show you really represent the rank and file, if you make a big corporation pay $3,160,000 of back income taxes, as TOM SCHALL did, then look out. You will be persecuted.

Because of the fact that SCHALL in his 12 years of congressional life has always voted for the interests of labor and the farmers; because he has stood up in the Halls of Congress and dared to be a right-thinking, honest-acting representative of the people, the Leader—nonpartisan in its politics—is devoting the principal space in this issue to a review of the Minnesota hearing testimony.

Read it all—then use your own judgment. When you have studied this testimony—and it was all under oath—you will see that TOM SCHALL is not only an ideal United States Senator, but is material for the Presidency or Vice Presidency of these United States.

No reward within the power of the Nation's people is too great for an honest, conscientious, public servant, who does his duty in the face of threats and obstacles heaped up by hands that would encompass ruin, if possible.

TOM SCHALL is not only consistently honest, but has consistently fought a good fight against tremendous odds, against powerful enemies, who would perhaps make him rich if he had "seen" their ways.

He is a poor man to-day—but a distinguished man. And if he has no wealth, he at least has a clean conscience and a clean heart, and he can stand before the people of Minnesota and say:

"I have served you loyally, faithfully, honestly."

What more could any man say?

HERE ARE DETAILS OF CONSPIRACY—PLOT REVEALED BY SWORN EVIDENCE—A. N. JACOBS, WHO HAD BEEN A SCHALL WORKER, WAS SHAKING DOWN POSTMASTERS; SCHALL REPORTED THIS TO AUTHORITIES; JACOBS SENDS FRANK CORNEABY TO SEE MULTIMILLIONAIRE BACKUS; LUMBERMAN TURNS CORNEABY OVER TO HIS LAWYER, WILLIAM OPPENHEIMER; FALSE STATEMENT IS PREPARED BY CONSPIRATORS, WHO EXPECTED $30,000 FROM ENEMIES OF SENATOR TOM SCHALL; WITNESSES ALSO NAME GOV. THEO. CHRISTIANSON, MAGNUS JOHNSON, HENRY TEIGAN, MAGNUS'S SECRETARY, FRANK DAY, AND OTHERS—READ ALL THE SWORN TESTIMONY ABOUT PLOT TO OUST SENATOR WHO FORCED BIG CORPORATION TO PAY MORE THAN $3,000,000 TO UNITED STATES GOVERNMENT

Connecting links of the giant effort to oust THOMAS D. SCHALL from the United States Senate are now available to the voters of Minnesota. These facts that are presented in this paper are from the official reporter's transcript of the evidence in the investigation last spring before the Minnesota State Senate.

The first mystery was this—that the Minnesota State Senate, by a vote of 54 to 8, ordered the investigation. It was natural for the 20 Farmer-Labor senators to vote for this inquiry. As a political proposition it would aid their cause to throw mud upon a Republican Senator.

But the 30 or more Republicans who voted for the inquiry have no such easy time to explain away their actions. Needless to say, William F. Brooks, himself a State senator, a millionaire, and a partner of E. W. Backus in the Backus-Brooks Co. and other companies, was apparently not an active mover in asking for the inquiry. Brooks, however, is a dominant figure in the Minnesota State Senate. As Republican national committeeman in Minnesota, he controls the campaign funds. His immense wealth and political prestige with the President and national administration, make it easy for him to gain favorable hearings for what he advocates.

CORNEABY REVEALS PLOT

When the taking of testimony for Senator SCHALL was begun the public was startled by the disclosures. And it remained for one of the men, who had been in the plot to expose all of its horrible details. Fortunately for right and justice this man, who had been expected to be a star witness against Senator SCHALL, was taken seriously ill, and physicians advised him that he might live but a few days. Then the priest administered the last rites of his church and advised the witness, Frank Corneaby, to make a clean breast of the conspiracy.

Barely able to hobble on a cane, Corneaby's testimony was given before a crowded Senate Chamber and a story of the plot was told, so amazing that its truth seemed impossible. But to the surprise of everybody, every detail of the story was borne out by succeeding witnesses.

Briefly, Corneaby's story was:

"That he was broke; that Arthur N. Jacobs, star conspirator against SCHALL, succeeded in interesting him in the plot to oust Senator SCHALL; that Jacobs sent Corneaby to see E. W. Backus, millionaire lumberman; that Backus saw Corneaby at the Backus office late at night; the next night both Mr. and Mrs. Corneaby visited Backus at his office; Backus heard the proposed evidence; said he did not have time to take this matter up, and referred Corneaby to Backus's lawyer, William Oppenheimer, of St. Paul."

WANTED $30,000 TO GET SCHALL

Corneaby then had more conferences with Jacobs. Frisch and Corneaby went to see Oppenheimer, but Corneaby stayed outside. Frisch said Oppenheimer wanted a written statement of proposed evidence. Jacobs, Frisch, and Corneaby dictated a 17-page closely typewritten statement of alleged evidence they could uncover against Senator SCHALL. Frisch took it to Oppenheimer's home and gave it to him. It was expected by the conspirators that they would get $10,000 each for testifying and building up the case against the blind Senator. Corneaby was then checked out of the conferences because he had been talking too much; Jacobs, who had not worked for many months, came occasionally to Corneaby's house and gave him money.

Corneaby also talked about the case to Gov. Theodore Christianson; to Walter F. Rhinow, former adjutant general and recently appointed by Governor Christianson as head of the State commission to coordinate information on criminals; also talked to Frank A. Day, Magnus Johnson, Henry Teigan, Donald Hughes, Abe Hertz, Victor Lawson, and others.

Magnus Johnson gave Corneaby money, as did W. F. Rhinow.

Ed. Corneaby, a brother of Frank, substantiated many of these details and told of efforts by conspirators to get him into the plot. He also told that Rhinow offered him a job on the prohibition force if he would help get SCHALL.

OFFERS LAUGHLIN $2,000

James Laughlin, who was injured in France, and has spent many months in Government hospitals because of an injured spine, was an important witness. He told of being present at conferences in the law offices of Frisch and hearing the details of the plot to get SCHALL. Laughlin had ridden with SCHALL in the 1924 election. The conspirators wanted him to testify; he was offered $2,000; when he said he knew nothing unfavorable about SCHALL he was told that he ought to think of something unfavorable for $2,000.

Oscar Johnson, former Federal prohibition agent, who had worked in the campaign, also corroborated these witnesses.

BACKUS CORROBORATES CORNEABY

But it remained for E. W. Backus and William Oppenheimer to offer the surprise corroboration.

Backus admitted that he had met Corneaby at his office late at night. The next night Mr. and Mrs. Corneaby again came up; that the SCHALL matter was thoroughly discussed; that Corneaby had told him of the move to oust SCHALL and talked at length on proposed evidence.

Backus then admitted that he had turned Corneaby over to his lawyer, William Oppenheimer, of St. Paul.

Oppenheimer, under oath, corroborated Corneaby's story. He told of Frisch coming to his office and telling him they could get up evidence against SCHALL; that he told Frisch to draw up the matter in writing; that Frisch later brought him a typewritten statement of the proposed testimony to Oppenheimer's house, where the lawyer was sick.

But here Backus and Oppenheimer had an amazing tale. Oppenheimer says he never read this typed statement of the proposed evidence; says he mailed it to Backus or sent it to him by messenger.

Backus, under oath, told the committee that he carried this typed statement of 17 pages around for two months; that he never read any part of it; that he had it in his portfolio and had carried it to Toronto, Ontario, and other places but had never even peeked at its contents.

Oppenheimer also swore he never even read any part of it.

Then when these gentlemen were subpœned as witnesses, they suddenly thought of the typed statement; Backus gave it back to Oppenheimer, and Oppenheimer brought it to the hearing, where Senator SCHALL'S lawyers insisted it be read into the record for the purpose of showing how asinine all the charges were, and how gullible Frisch and Jacobs must have thought Backus and Oppenheimer were.

It was this statement that was more or less the foundation of the contest and Senator SCHALL'S lawyers knocked the props out from under the contest by the testimony of Corneaby, Oppenheimer, and Backus. The entire conspiracy was bared. In this issue is the amazing story of how TOM SCHALL made the Backus companies pay millions of dollars in back taxes. Read all of this.

THE TESTIMONY

Following are excerpts from W. Frank Corneaby's testimony. The numbers in parentheses are the page numbers from the official testimony, all under oath.

Page 618, Corneaby tells of meeting Jacobs. Then Corneaby goes on as follows:

"A. He [Jacobs] took me into Frisch's office; he said, 'Frank, do you want to make some money?' I said, 'You're damn right I do,' and

he said, 'I have a darn good chance for you to make some money if you will be game.' He said, 'SCHALL is no good and Andy Rahn is no good,' and he said 'I have been working for a year to get them, in conjunction with Mr. (Magnus) Johnson and Mr. Teigen (Magnus's secretary);' and he said, 'This is a damn good chance for you to even up your score against SCHALL.' He said, 'I have been up to see Backus, and I want you to call him up and make an appointment, and you tell him the story.' We made up a story together.

"Q. (By Tom Davis.) What story did you make up?—A. The story Senator SCHALL was absolutely responsible for all the bootlegging business; that he got every dollar of that money, and that I had perjured myself at Washington in order to enlist his aid in a pinch.

"Q. Now, Mr. Corneaby, who told you this—Mr. Jacobs?—A. Absolutely.

"Q. And he asked you to go and see Mr. Backus?—A. Yes, sir; he did.

"Q. Did you go and see Mr. Backus?—A. I called Mr. Backus about 5.30 in the evening, and he told me to meet him in his office, 1100 Builders Exchange, at 9.30 that night, and I went up there.

"Q. When was that?—A. Around January, well, between the 7th and 10th."

TALKS TO BACKUS

That Backus would spend $250,000 to beat SCHALL was brought out in the Corneaby testimony, on pages 620 and the pages immediately following.

"Q. Did you talk to Mr. Backus?—A. I told Mr. Backus the story as Jacobs and I agreed on and he said, 'Well, Frank, I have had a chance to patch up my difficulty with Senator SCHALL, but after that damn dirty dog made the speech he did against me on the floor of the House I won't have a damn thing to do with him. What I am mostly interested in is that tax matter of ours. I have to have some information about that.' Then I said, 'Well, Mr. Jacobs can give you the low-down on that.' He said, 'That is what I am mightily interested in. I am a mighty busy man, minding my own business; I have not time to put into a proposition of this kind, but I have several intimate friends very interested in this matter who hates the life out of SCHALL. For my own part, if I ever thought he had a chance to be elected the way he did I would have spent $250,000 to defeat him. Another thing, if he is out of the United States Senate and there is a Senator there favorable to our interests, more than likely that tax matter can be adjusted.' Well, that is about all our conversation. Then he told me he would see me in a day or two again.

"Q. Did you meet him again?—A. Yes, sir; I did. In the meantime, I went to Jacobs and told him what I had done, and he said, 'Good; that is fine.' He said, 'You call him again and go there tonight.' I called Mr. Backus again the very next day, and I went to see him again that night, and my wife went with me to the same office of Mr. Backus. He said, 'Frank, from what you have told me and from what I have heard from other people, it seems like there is a mighty good chance to rid the State of SCHALL. As I told you I am a mighty busy man and have not the time to put in this thing.' He said, 'You go home and I will give you a call.'

"The next night—I think around 6 in the evening—he called me up and said, 'Frank Corneaby?' And I said, 'Yes, sir.' And he said, 'This is Mr. Backus talking.'

"I want you to go over to the firm of Oppenheimer, Dickson, Hodgson, Brown & Donnelly and see Mr. Oppenheimer and tell him you are the man I was speaking to him about to-day. We came back to Frisch's office. We called Mr. Oppenheimer immediately.

"Q. Who called Mr. Oppenheimer?—A. Mr. Frisch called Mr. Oppenheimer.

"Q. Who is Mr. Oppenheimer?—A. Mr. Backus's personal attorney.

"Q. Go ahead.—A. We made the appointment for 11 o'clock that morning, and I accompanied Mr. Frisch over to the Merchants National Bank Building, St. Paul.

"Q. Did Mr. Frisch, sitting here, attorney for Arthur Jacobs, go with you?—A. That is the gentleman, right there."

FRISCH DOES NOT DENY IT

Frisch sat for five weeks at these hearings before the Minnesota State Senate committee as attorney for Arthur Jacobs. He was present while all these accusations of taking part in this dastardly conspiracy were hurled into his face. He never took the stand to deny these allegations. On the contrary, he admitted his visit to Oppenheimer; admitted that he had helped draw the statement of alleged evidence; admitted he delivered this statement to Oppenheimer; and near the close of the hearings Frisch had the effrontery to try and get the SCHALL lawyers to agree with him to put in a huge bill for attorney fees against the taxpayers of the State of Minnesota. This the SCHALL lawyers refused to do. All of them served without pay, and purely because they felt the case was a persecution against the blind Senator and wanted justice done.

Corneaby then told of the visit to Oppenheimer's office by Frisch, as set forth on page 624 of the transcript. After coming back from St. Paul Corneaby's testimony was—

"Q. What was done?—A. We agreed to hire a special stenographer and get out a synopsis of the testimony.

"Q. Did you get such a thing out?—A. We did.

"Q. After it was gotten out, do you know what was done with it?—A. Yes, sir; I do.

"Q. What was done with it?—A. Mr. Jacobs and myself both told Mr. Frisch the morning he carried it over to Oppenheimer not to deliver it without a guarantee of $10,000 a piece" (p. 625).

Corneaby then told of Frisch going to Oppenheimer's house and delivering the transcript. Oppenheimer corroborated this in his statement.

On page 627 we find this answer by Corneaby:

"A. No. Mr. Frisch told me Mr. Oppenheimer was Mr. Backus's personal attorney. Then after that I had a couple of friends—Oscar Johnson and James Laughlin. I was bragging what we were going to do and what was going to happen to SCHALL. I was to come out of this thing with $10,000. Oppenheimer got wind of this. Mr. Jacobs told me with my talking I killed the deal, scared them off. They said they had been working on this thing a year, Frank, a solid year, and he (Jacobs) said we are not going to tell you anything more, but we are still going to cut you in (give Corneaby his share)."

SEES RHINOW

Corneaby, on pages 629 and 630, tells of seeing Walter F. Rhinow.

"Q. What did he (Rhinow) say; I want what he said?—A. He said when they got done with SCHALL he will not have any power to remove him or place him or any other Federal officer in this State."

SEES SENATOR FRANK DAY

On page 630 Corneaby told of seeing Frank A. Day, of Fairmont, a State senator:

"Q. What did Mr. Day say to you?—A. Mr. Day took my letters and telegrams I handed him and said, 'I want to keep these a couple of days, Frank.' And he said, 'I have a couple of powerful Republican friends interested in this matter, but they don't believe that they can get enough on SCHALL. Now, it might be if I show him these letters perhaps something can be done to unseat the son of a gun.'"

SEES GOVERNOR CHRISTIANSON

On page 631 Corneaby tells of another visit:

"Q. Did Mr. Jacobs suggest you should see anybody else in an official position in this State?—A. I believe Mr. Jacobs told me to go to the governor.

"Q. What did he say when he told you to go and see the governor?—A. 'Go to the governor,' he told me, 'and tell him that story and perhaps he will give you a job.'

"Q. Did you go and see the governor of this State?—A. I certainly did.

"Q. When did you see the governor?—A. Hard for me to say. I can't remember. Middle of January, or some time in January.

"Q. Before you appeared before this committee?—A. Yes. I have been sick since the last of January, off and on. Out of bed one day, then flat on my back for a week. Hard to say exactly. I think I got this strike on the 28th day of January, if my doctor's records are correct."

JACOBS HAD FOUR WOMEN

"Q. Now, Mr. Corneaby, this money collected from bootleggers, you gave to whom?—A. Mr. Jacobs and myself.

"Q. You testified last evening Mr. Jacobs spent some of this money on a woman. How do you know that?—A. Seen him do it.

"Q. Did he give her money at different times?—A. Many times.

"Q. Who was this woman?—A. Louise C. Neeley and other women in four different parts of town. I can give their addresses.

"Q. Did he give money to more than one woman?—A. He certainly did; yes, sir.

"Senator CARLEY. Not all at the same time.

"A. No; certainly not.

"Mr. CARLEY. He took them on, one at the time?

"A. He could handle them too."

WOMAN CORROBORATES THIS

Later in the hearing Louise C. Neeley took the stand and was subjected to a gruelling examination by attorneys on both sides. The testimony had shown that Jake had received in the neighborhood of $6,000 as his end of the bootlegger moneys. Mrs. Neeley produced canceled checks, and the bank records were brought in, and it was conclusively shown that every dollar of these thousands were spent by Jacobs for taxicabs, liquor, big dinners, and that he deposited and gave to Mrs. Neeley in all about $7,000.

The investigation committee was shown by bank records and checks that not one dollar of the bootlegger's money went into the SCHALL campaign; every penny was squandered by Jacobs in wanton licentiousness and lavish entertainment.

Jacobs, the supposed friend of SCHALL, was spending thousands of dollars on his evil pleasures, while the blind Senator was daily making five or six speeches throughout the State, going night and day to get his messages to the people and without a dollar at times to wage his campaign.

SCHALL HAD NO KNOWLEDGE

On page 637 and following pages comes this important testimony:

"Q. Now, then, did you ever have any talk with Jacobs with reference to Senator SCHALL or his knowledge of this transaction you and Jacobs were carrying on?—A. Yes; I did.

"Q. Tell this committee what he said to you and what you said to him.—A. Never at any time tell Senator SCHALL what we were doing about collecting money. He would immediately put a stop to it.

"Q. Did he tell you that more than once?—A. Many a time; yes, sir."

Senator L. P. Johnson, of Ivanhoe, then asked Corneaby:

"Q. Did you ever hear Mr. Jacobs make any similar statements to any others of the people connected there?—A. Yes, sir, I did.

"Mr. JOHNSON. More than once?

"A. Yes, sir; more than once."

Chairman W. A. Blanchard asked this—

"Q. Who were they?—A. Mrs. Neeley, Talbot, two stenographers, Marie and one Ethel, I do not know their last names."

WITNESSES VERIFY THIS

(Corneaby's statement on this important matter was corroborated by four witnesses, who testified that Jacobs had cautioned them not to let SCHALL know that bootlegger money was being collected, otherwise they would all lose any future moneys that might come in.)

A HELL OF A TIME

Jacobs ran riot with the money he was collecting, while the blind Senator was making the fight of his life, not knowing what was being done in Minneapolis.

Page 640 gives this information:

"Q. Now, then, do you know anything about what Jacobs did with that money, spending it about headquarters?—A. Yes, sir; I do.

"Q. What did he do?—A. Gave a party every single night.

"Q. Where?"

[EDITOR'S NOTE.—Jacobs, although trying to oust SCHALL, admitted under oath that SCHALL had never set his foot inside these headquarters; that he was out in the State campaigning all of the time. All of the witnesses on both sides agreed that SCHALL had never been in the headquarters.]

HOW MONEY WAS SQUANDERED

"A. At the West Hotel headquarters. He would telephone down to the cafe for big steaks. Frisch was in on them occasionally, most all of the time, and it was seven or eight people, dinners running all the way from $10 to $20 every night. He bought plenty of liquor, a lot of liquor. At one time when Mr. Jacobs got real good and intoxicated he put some money in an envelope and gave it to Harry Shartin, clerk at the West Hotel, and told him to hold it for him. Next morning when Mr. Jacobs sobered up, he did not remember what he did with the money. He tore the headquarters all to pieces looking for it. Searched every place. Asked everybody if anybody had seen the money. Nobody had seen it. One day I went to the little lunch stand in the lobby with him at the West Hotel and Mr. Shartin said to Jacobs, 'Don't you want this envelope?' Jake tore the envelope open and said, 'Jesus, I thought I lost that.' There was the money. It was a big wad of bills. I made a grab for some. I grabbed $200 and kept it. That is the truth."

"Q. Do you know how much was in that envelope?—A. I think the donation from Stubskins, $2,000 (p. 641).

"Q. Now, Mr. Corneaby, was there money spent for taxicabs?—A. Well, we had a Cadillac touring auto company there. We all would not walk a block. Jump into a Cadillac auto livery, no matter where we were going. We had them going all the time."

SHAKEDOWN POSTMASTERS

Corneaby on page 646 and following pages told of riding with Jacobs around Minnesota collecting subscriptions to Jacobs's paper. The testimony showed that Jacobs collected more than $1,000 a week from postmasters, "shaking them down" on various pretexts, according to the testimony. Corneaby received one-third of this.

When TOM SCHALL heard what Jacobs was doing he turned the evidence over to the Washington authorities and issued a statement repudiating Jacobs. This statement is what Jacobs claims caused him to turn against SCHALL and enter into a conspiracy to get him out of the United States Senate. Corneaby testified that he caught Jacobs cheating him on the division of the spoils, and that at Hallock he choked Jacobs and they then parted company, until Jacobs met Corneaby later out of money and induced him to enter into the conspiracy against SCHALL.

Jacobs also warned Corneaby not to let SCHALL know they were collecting from postmasters. Page 651 shows this—

"Q. While traveling, did he ever say you must not let TOM SCHALL know?—A. That was an understood fact. When we first went out he told me that.

"Q. What did he say?—A. 'It is a ripe time for postmasters to kick in. Their appointments are coming up about this time. They will be nice and ripe for picking. Don't let SCHALL know. Don't be a damn fool, Frank.' I was not."

WOULD PACK COMMITTEE

This witness's testimony also was to the effect that the conspirators were working to get a committee against SCHALL appointed in the Senate. Pages 655 and following pages indicate that Abe Hertz, indicted St. Paul lawyer, was an intimate friend of Lieut. Gov. W. I. Nolan. Hertz claimed he could talk to Nolan and get a hostile committee against SCHALL. There was testimony along this line, and this was denied by the lieutenant governor when he took the stand. He claimed no influences had been brought to bear on him but that Hertz did try to talk to him about the committee, as did Magnus Johnson.

Corneaby told of meetings in Frisch's office (p. 657) at which five, six, or seven people were present when the personnel of the committee to investigate SCHALL was discussed. We find this:

"A. Teigen said they wanted Jim Carley for chairman of the committee on account of his guts, account of the way he handled the special Republican slush fund investigation a few years back. That seemed agreeable to everybody. Mr. Larson or Mr. Johnson or Senator Blanchard's name was not mentioned at that time, but Senator Lawson was. He was going to be a member of that committee. The day after the resolution was passed Mr. Frisch and Mr. Hertz came into the office, and practically the same people were there.

"Chairman BLANCHARD. Can you say definitely who were there?

"A. Oscar Johnson, James Laughlin, Mr. Hertz, Mr. Jacobs, and myself.

"Q. Mr. Davis, was Mr. Teigen there?

WANTED BLANCHARD

"A. No, sir; he was not. Jacobs said it's all off, they won't stand for Carley. He is on the committee, but they are not going to make him chairman. Senator Brooks and Lieutenant Governor Nolan want Senator Blanchard on that committee as chairman on account of his special hatred for Senator SCHALL, and he said Senators Larson and Johnson were last-minute choices, Senator Johnson for the reason he spoke on the floor of the Senate in favor of Senator SCHALL. That would show to the public and people of this State this was a fair, impartial committee."

[EDITOR'S NOTE: This alleged conversation took place before the personnel of the committee was announced. Subsequently Blanchard was made chairman, and Senators Carley, Johnson, Larson, and Lawson were the other members.]

$10,000 WAS CHEAP

"Q. Why are you lying to other people?—A. In order to get $10,000.

"Q. Are you silly enough to believe that anybody in this State would give you $10,000?—A. After Mr. Backus said he would have spent $250,000 if he ever thought SCHALL would have a chance to be elected, and if he had a favorable Senator it would save his taxes, I thought $10,000 was damn cheap" (p. 661).

CORNEABY GETS MONEY

On this same page Corneaby related how Jacobs and Frisch came to his house several times when he was ill and gave him large sums of money. (More about this on p. 662.) This was done while several outsiders were at the house. This was not denied by Jacobs or Frisch. Jacobs, under oath, admitted that Frisch had paid the money.

Page 664 is revealed, where an affidavit was drawn to "get" LaFayette French, United States district attorney, and Abe Hertz tried to get Frank Corneaby to sign it, but he refused. This was at Frisch's office.

HIRED BY BROOKS

Corneaby in his evidence (666 and 667) revealed where he had been hired by Senator W. F. Brooks in 1924 to spy on SCHALL.

Senator L. P. Johnson is questioning Corneaby:

"Q. You testified yesterday you were working for TOM SCHALL, Christianson, and the supreme court judges before the primary in putting up cards throughout the State? (NOTE.—This testimony showed Corneaby had been paid money by Mrs. Theo. Christianson and also by the attorney in charge of the sitting supreme court judges' campaign. The evidence was undisputed that he had been working also for Governor Christianson and the judges.)—A. Yes, sir.

BROOKS HIRED HIM AS SPY

"Q. Were you at one time employed by anyone to watch Senator SCHALL and report?—A. I certainly was.

"Q. Who was that?—A. By Senator William F. Brooks, Republican national committeeman.

"Q. When was that?—A. That was during the general election of 1924.

"Q. Were you on a salary?—A. $25 a week, paid through A. W. Strong, of the Strong, Scott Manufacturing Co."

[EDITOR'S NOTE: According to Mr. Backus's testimony, Mr. Strong, a big Minneapolis business man, was treasurer of a Republican volunteer committee. Strong received at least $100,000, and no doubt many times that, in the 1924 campaign. Backus testified he himself had contributed $15,000 to this fund.]

"Q. How long did you work?—A. Four weeks.

"Q. What were your duties?—A. Supposed to report back to Harry Clarkson on the activities of Senator SCHALL.

"Mr. DAVIS. Who is Clarkson?

"A. Private secretary to Senator Brooks."

[EDITOR'S NOTE: All of this testimony was given by Corneaby, who believed at that time he had but a few days to live. Practically everything of importance was corroborated by other witnesses. And the committee to investigate, which was 4 to 1 hostile against SCHALL, finally returned a verdict that "the charges brought in the resolution had not been proven by the evidence." Even Senator Victor Lawson, of Willmar, who introduced the resolution to investigate, signed the report exonerating SCHALL.]

E. W. BACKUS TRIED TO HAVE MAGNUS JOHNSON APPOINTED ON JOINT COMMISSION BY PRESIDENT COOLIDGE—STRANGE POLITICAL STRATEGY OF MULTIMILLIONAIRE, WHO TRIES TO HAVE FARMER-LABOR SENATOR GIVEN A $10,000 SALARY JOB WHICH HAD IMPORTANT BUSINESS DEALINGS WITH BACKUS INTERESTS; BACKUS IS PARTNER OF WILLIAM F. BROOKS, REPUBLICAN NATIONAL COMMITTEEMAN FOR MINNESOTA; MAGNUS WAS FREQUENT VISITOR AT BACKUS-BROOKS OFFICES; WHY WAS SO-CALLED "PROGRESSIVE" AND FARMER-LABOR LEADER SO INTIMATE WITH REPUBLICAN OVERLORDS AND MILLIONAIRES? SWORN TESTIMONY IS GIVEN BELOW

One of the most amazing political alliances in the history of America was revealed at the SCHALL hearings, when E. W. Backus, multimillionaire lumberman and bank director, and partner of State Senator William F. Brooks, Republican national committeeman, revealed while under oath that he had personally visited President Coolidge in the spring of 1925 and urged the President to appoint Magnus Johnson, then a Farmer-Labor Senator, to the International Joint Commission.

This position pays $10,000 a year for a term of 10 years and is a job that means much to the Backus-Brooks interests. The commission supervises water levels of international waters, such as Rainy Lake, Lake of the Woods, and others, where the Backus interests have tremendous holdings.

Why a partner of the Republican National Committeeman should ask the appointment of a Farmer-Labor Senator to this highly important place is one of the mysteries that will probably remain unsolved. A fine running story of this political paradox could be written, but the story is so almost unbelievable that the Leader will merely quote extracts from the sworn testimony of Mr. Backus and let the reader draw his own conclusions.

The following are extracts from the official stenographer's report of the Minnesota hearings for Wednesday morning, April 13, 1927.

The numbers in parentheses after the testimony indicate the pages of the official transcript where this testimony may be found.

By Senator James Carley:

"Q. Some statement has been made before the committee or suggestions that you advocated or had something to do with, or had some talk with relation to, the appointment or the securing of the appointment of Senator Magnus Johnson on the International Boundary Commission?—Answer by Mr. BACKUS—That is what they term the "International Joint Commission."

"Q. What is that commission?—A. That is a tribunal, three members appointed by the Dominion of Canada and three members of the United States Government, to deal with boundary disputes. Their jurisdiction amounts in brief to about this: Anyone who wishes to change the level of a river or water, a lake or river, must first submit the question to the International Joint Commission for adjudication. That exists on all boundary waters from the Pacific to the Atlantic, takes in Milk River, Lake of the Woods, Rainy River, Pigeon River, Detroit River, and St. Lawrence (p. 1858).

"Q. What is there to that suggestion that there was some talk of Magnus Johnson being appointed on that?—A. There is some truth in it; yes, sir (p. 1859).

"Q. Go ahead and state what it is.—A. This International Boundary Commission is a tribunal created, I think, in 1909. In 1912, 1913, 1914, 1915, and 1916 they had under consideration the matter of the levels of Rainy Lake and the Lake of the Woods. In these earlier considerations they confined their efforts largely to the level of the Lake of the Woods. That was brought about by the settlers in Minnesota, on the south end of the Lake of the Woods, claiming damages for overflow in seasons of high water.

"Senator Nelson, I think, was largely interested in having this international joint commission or tribunal created (p. 1859). The Canadian Government did not know just how to handle the question of damages in Minnesota, and that matter proceeded to a point where an agreement was reached between the two countries.

"Q. A treaty between the United States and Canada?—A. Yes; a treaty was formulated and passed the Dominion Government and sent to the United States Senate for ratification. Under the terms of this treaty the settlers and property owners at the south end of the lake in Minnesota were to be awarded certain damages for overflow, and we were—our companies were—interested in the south end of the lake, at what is called Norman Dam. The Government, however, had operated that dam for about 30 years, and there was no responsibility placed upon our company, but in this treaty, when the treaty was formed and sent to the United States Senate, it dragged along and dragged along, until finally the interior board of Canada asked me to see if I could not have the treaty acted upon so they could make a settlement with the United States and the United States in turn with the damaged property owners. So in the latter part of 1924 and early in 1925 I took the matter up actively and went to Washington in person with my attorney to carry out the request of the Canadian Government to have this treaty ratified by the United States Senate and signed by the State Department (p. 1860).

"While there I came in contact frequently with the then Senator, Magnus Johnson, and Senator SHIPSTEAD, and was, you might say, in daily consultation with both of them until the end of that session, when the agreement was had with the committee having this matter in charge that it would be ratified and the treaty signed.

"At the end of this work and before the adjournment of Congress that term, Magnus Johnson came to me one day and said, 'A very influential friend of mine in the South had been to President Coolidge and suggested to him that I (Magnus) be given the appointment to fill the vacancy on the international joint commission.'

"Q. (By Tom Davis.) Magnus came to you and said——

"WITNESS (Mr. Backus). In one of our conferences about the Lake of the Woods treaty—and this treaty is what they term the Lake of the Woods treaty—in our talk Senator Johnson had shown me communications from State Senator Landby and others who had been importuning him to get this matter fixed up, and telling of a trip with Congressman Wefald from Warroad to Kenora (p. 1861) to see our plants in operation at Kenora. Anyway, we became quite well acquainted, as I stated this morning. He said, as I stated, a very influential friend of his in the South had seen the President and asked the President to give Senator Johnson the appointment on that vacancy on the International Joint Commission, and this southern friend said the President indicated he would like to do this.

"Senator CARLEY. Like to appoint him?

BACKUS REPAYS MAGNUS

"WITNESS. Like to appoint him if he could do so consistently, and he asked me if he would be obliged to look for opposition from me in this matter. While I told him frankly I did not think I would have very much to say about the matter, but the way he had handled himself in assisting in putting through this Lake of the Woods treaty, getting that cleaned up, I would not oppose his application; in fact, would even go to the President and ask him to give it to him.

"So I went to the President and suggested it might be a good political move, as long as it was a nonpolitical appointment, to give it to Senator Johnson.

"Q. He was not appointed?—A. No, I am sorry to say; not appointed * * * because it would have been a God's blessing to Senator SCHALL if it had been made.

"Senator SCHALL. If I had agreed to that appointment there would never have been a contest, would there, Mr. Backus?

"Mr. BACKUS. I do not believe there would (p. 1863)."

MEANT MONEY TO BACKUS

After Senator Carley finished questioning Mr. Backus, Tom Davis then took up the train of examination. Mr. Davis developed the fact that the Backus-Brooks interests were financially interested in the decisions of the International Joint Commission. Note how long it took to get Mr. Backus to admit that fact.

Page 1866 of the official record reveals these questions and answers:

"Q. With reference to the joint commission, the joint commission has the duty of fixing water levels between the two countries; that is one of the duties?—A. Any party wishing to construct a dam, or works of any kind, in the river, which will change the level of the river or lakes, must be submitted to the International Joint Commission.

"Q. Now, then, your company, the Minnesota & Ontario Paper Co., and your other companies are naturally interested in water levels at different times, are they not?—A. They happen to be interested in the level of the Lake of the Woods, Rainy Lake, and the water above Rainy Lake.

"Q. They would have to submit these matters to the International Joint Commission?—A. That is true.

"Q. They would vote adversely or favorably for whatever they would consider their best interests (p. 1866)?—A. Whose best interests?

"Q. Companies that apply for differences in the levels?—A. In part; yes.

"Q. In other words, if the Backus-Brooks wanted to maintain a different level than there was, and felt it was to their interests to do so, either in running its business or otherwise, they would apply to the International Joint Commission?—A. They might.

"Q. They would have to before they could change the level? They could not change the level without the consent of the commission?—A. That is true.

"Q. Men on that commission would have considerable to say as to the ultimate determination of that?—A. Yes; they would have to either approve or disapprove.

"Q. I will ask if your company has not had considerable litigation over water levels in northern Minnesota?—A. More or less; yes.

"Q. That litigation is brought about because of the differences with settlers up North, to some extent, is it not?—A. Yes, sir.

"Q. And, of course, if the joint commission fixed the water levels, that, of course, would be the act that would bar claiming damages—the thing having been done by the joint commission there would be a defense on the part of your company?—A. I can not answer that yes or no. I will have to explain that.

"Q. I wish you would.—A. In changing the levels, of course, it goes without saying until you get to high water there would be no complaint on the part of anybody. If levels were to be changed so it would be higher than high-water mark, then the International Joint Commission, or a tribunal which they would create or appoint, would first adjust the damages for the increased level with the property owners and then after the settlement was made the decision of the commission that would say the water should be held at a foot or two above high-water mark and damages to property owners, if any, adjusted and settled—then that level could be maintained without further damages (p. 1868).

"Mr. DAVIS. The treaty with Canada did raise the water level provided in the treaty?—A. On the Lake of the Woods?

"Q. (By Tom Davis.) In my understanding of your business interests in the northern part of the State, your companies would have considerable to do with the joint commission in fixing of water levels?—A. More or less; yes.

"Q. And that decision of the commission would affect either favorably or adversely your interests in that locality?—A. Yes; to a greater or lesser extent.

"Q. And by your interests I mean your financial interests. You understand that?—A. I do" (p. 1869).

MAGNUS CALLS OFTEN ON BACKUS

That Magnus Johnson was at least an occasional visitor to Mr. Backus's office in Minneapolis was disclosed on page 1870 by the following testimony:

"By Tom Davis:

"Q. In the month of January or February this year (1927) did you see Magnus Johnson in your office?—A. When?

"Q. January or February or March?—A. This year? I think so—yes.

"Q. Did he not call on you and talk to you about this resolution that was going to be introduced? (Mr. Davis in this question refers to the Minnesota State Senate resolution to investigate Senator SCHALL.)—A. I am not sure. He drops into our office occasionally when he is in Minneapolis.

"Q. He dropped in there during the months of February and March this year?—A. I think so; yes.

"Q. Did he not discuss and tell you a resolution would be introduced in the senate regarding SCHALL?—A. If he did not tell me before, he told me after it was introduced.

"Q. In one of his visits with you?—A. Yes. (See p. 1870.)

"Q. Magnus called how many times, would you say, in January, February, and March, this year? Called at your office and had talks with you?—A. I could not say, but three or four, maybe three or four, maybe four or five."

[EDITOR'S NOTE: These were the months the investigation of Mr. SCHALL was pending and being tried before the Minnesota Senate. Evidence was introduced at the hearing claiming that Mr. Backus was consulted by Frank Corneaby and his wife. Evidence was also introduced by three witnesses that Corneaby, Jacobs, and Frisch expected to collect $10,000 each for their efforts to unseat Senator SCHALL.]

On page 1877 Tom Davis again questions Mr. Backus on his interest in having Magnus Johnson appointed to this big job, which affected Backus's financial interests. Here is the official sworn testimony:

"Mr. DAVIS. You do know as a practical matter of politics, do you not, if you, through your influence, would appoint a man upon a commission, that man, whether he wanted to or not, would naturally be inclined to favor your interests?

"Mr. BACKUS. All things being even, he would. * * *"

"By Tom Davis (p. 1878):

"Q. Don't you know from your knowledge of politics in this country, Mr. Backus, frequently the fact that men in high political power have appointed men on commissions, all things being equal, have favored this man who brought about their appointments?—A. It is; but I think it is wrong.

"Q. Knowing it is all wrong, and knowing Magnus Johnson was not a Republican, you went to the President and urged his appointment on this commission, did you not?—A. I did not particularly urge it.

"Q. Didn't you urge it?—A. I told him I thought it would be a good move.

"Q. You did urge it?—A. I did not urge it hard.

"Q. You urged it hard enough to say you thought it would be a good move; you would like to see him appointed?—A. I think it would be a good move. I would like to see him appointed."

[EDITOR'S NOTE: Other extracts from Mr. Backus's sworn testimony are recounted in other columns of this issue. Be sure to read his testimony on taxes and get the philosophy of the domineering rich, who believe they should escape taxation, and why.]

Various Minnesota railroad union officials, who have been fighting Senator SCHALL, should find out how their national officials stand in regard to their support of the blind Senator.

The Leader editor recently received a letter from W. N. Doak, national vice president of the Brotherhood of Railroad Trainmen, one of the Nation's largest and most influential railroad organizations. Under date of October 4, 1927, from Cleveland, Ohio, Mr. Doak writes the following to the Leader editor at 1209 West Twenty-second Street, Minneapolis, Minn.:

"The opportunity has been afforded me to read an issue of the Minnesota Leader of September 1, and to note your able defense of Senator THOMAS D. SCHALL. After having served as the national legislative representative for the brotherhood at Washington for more than 10 years, and having been associated with Senator SCHALL both while in the House and Senate, and being able to testify to his splendid record in behalf of working people, I wish to personally express my appreciation for your defense of Senator SCHALL, as I believe he is worthy of the most earnest consideration at the hands of the press and the public generally.

Sincerely yours,

W. N. DOAK,

Assistant to President Brotherhood of Railroad Trainmen.

TOM SCHALL'S offer of $1,000 reward to anyone who can point to one place in his record of 12 years where he has voted against labor or the farmer or against the interest of the people still holds good. His record is unassailable, as is evidenced from the testimony of the best known labor leaders of America as well as the most prominent statesmen of this generation. We quote a few of them, as follows:

"SCHALL'S record is 100 per cent for labor." (W. R. Doak, vice president of Railroad Brotherhood.)

"Has always championed by voice and vote the interests of the laborer." (Frank Morrison, secretary American Federation of Labor.)

"TOM SCHALL is a fighter—fearless, honest, able, and eloquent." (Senator HIRAM JOHNSON.)

"SCHALL is governed by what he believes to be in the best interests of the people." (C. A. Lindbergh, former Congressman sixth district, Minnesota.)

"A careful, painstaking, and conscientious representative of the people." (Rev. James S. Montgomery, D. D., formerly of Minneapolis, now Chaplain of the House.)

"We of the House owe a debt of gratitude to our colleague SCHALL for the example he has set us of cheerful, helpful, and efficient service. If Mr. SCHALL had two good eyes, he could not be more efficient in the discharge of his duties." (Hon. Frank Mondell, former Republican floor leader.)

"Mr. SCHALL'S high recognition among his colleagues is not due to a sense of pity, but because of his ability, his industry, his devotion to his cause in public service, his constancy on the job have impressed his personaltiy upon each Member." (Dr. SIMEON D. FESS, United States Senator from Ohio.)

"I believe in TOM SCHALL with all my heart." (Theodore Roosevelt, former President.)

[From the Daily Star, April 21, 1928]

MR. RINES AND THE BURST BUBBLE

Henry Rines, State comptroller and chairman of the State board of administration and finance, otherwise known as the Big Three, is the 1928 world's champion glutton for punishment.

Cuffed on the ear three times in as many months by court decisions that the Big Three can not run the University of Minnesota or the highway commission, through the control of their expenditures, Chairman Rines blithely writes Mr. Babcock, the highway commissioner, to the effect that Mr. Rines's certificate that funds are available must hereafter accompany contracts awarded in order to make them valid.

Even though Mr. Rines is unconvinced that Governor Christianson's project of saving money and increasing efficiency in the State government by making himself dictator of Minnesota has blown up with a dull plop and that everybody knows it, this seems a poor time to try to tie up road construction while the argument is being settled.

Incidentally, it must be rather embarrassing to the governor to have Mr. Rines, who is his agent as chairman of the Big Three, continue to call attention to the burst bubble just as the State campaign is getting under way. (Daily Star, April 21, 1928.)

[From the Minneapolis Tribune, Monday, April 16, 1928]

THE COURT AGAIN SAYS, "THOU SHALT NOT PASS"

Those who believe that an adult and literate electorate like that of Minnesota's needs neither a regent nor a dictator will note with pleasure that the "Big Three's" pretensions to power were given another jolt in two decisions handed down last week by Judge McNally.

It should be remembered that the "Big Three" are simply the governor's puppets. When the campaign for the centralization of the State's finances in the hands of the governor was on the people were beguiled by such persuasive phrases as economy and the elemination of waste. They failed to see the larger implications. Had the attempts of the "Big Three" to extend their authority been successful the governor's power would have been vastly expanded. Control of the purse strings in this day and age means actual control.

The university regents and the State highway commissioner, for example, would have been unable to put into execution their own policies if these policies had chanced to collide with the policies of the governor. The way would have been open to a virtual czardom in Minnesota. With such an inflation of the gubernatorial prerogative, the whole theory underlying the State constitution would have been flouted, the ideas of the founders of Minnesota perverted, and a plan of government more nearly resembling that of a Latin-America dictatorship than that of an American State would have been introduced. Possibilities for despotism without parallel (save for the President's war powers) in American political life would have been injected into the office of the Governor of Minnesota.

The courts have now delivered no fewer than three resounding blows against this movement to make Minnesota an untitled monarchy. In February Judge Hanft ruled that the governor, through the "Big Three," could not gobble up the university. Last week Judge McNally, in two decisions, ruled that the "Big Three" could not override the State highway commissioner in the running of his own department. The courts are saying, "Thou shalt not pass" to this movement to turn Minnesota into the personal domain of a feudal lord. We surely may heave a sigh of grateful relief over the fact that we have alert and virile courts, with a strong sense of constitutional intent and a keen regard for the essence of the democratic principle. If the people of Minnesota were morons or as politically incompetent as the inhabitants of Haiti, no doubt something could be said in favor of the advisability of establishing a dictatorship in this State. And if Minnesota were a nation, and engaged in a war of life and death, again, no doubt, a good case could be made out for a dictatorship as an emergency measure. But since no emergency exists, since the people of Minnesota are not, so far as is known, either mentally bankrupt or morally irresponsible, the prejudice in favor of a diffused and departmentalized State government foundationed in a representative American Constitution and functioning in harmony with the established precepts of American democratic precept is likely to survive for some little time yet.

COMMITTEE TO NOTIFY PRESIDENT

Mr. CURTIS and Mr. ROBINSON of Arkansas appeared in the middle aisle, and Mr. CURTIS said:

Mr. President, your committee appointed to join a similar committee from the House of Representatives to inform the President that the Congress had completed its work and was ready to adjourn unless he had something further to communicate to them, beg leave to report that they have performed that duty. The President has advised your committee that he has nothing further at this time to communicate to Congress and extends his hearty congratulations to the House and Senate for their work during the session.

DISTRICT COURT OF THE CANAL ZONE

Mr. SMITH. Mr. President, I have received communications through a Senator from the Secretary of War in reference to Order of Business 1186, Senate bill 3938. I would like to state that the reason why this bill has not been taken up is because I think it is a matter of such importance, referring to the present alleged confused situation in the Canal Zone, that a full hearing ought to be had, and for that reason I did not push the passage of the bill in the Senate. The Senate committee had reported it favorably. The Senator from New Jersey [Mr. EDGE], who is chairman of the Committee on Interoceanic Canals, came to me and made a statement as to what had been transmitted to him by the Secretary of War. I want to state that from the evidence given to me and submitted to the Committee on the Judiciary I think it is necessary that Congress take cognizance of the situation and see that it is cleared up. Complaint has come that it is practically a military government over the entire Canal Zone and that it is imperialistic rather than Republican or Democratic. The parties making the allegation and witnesses to the affair are persons of high character and good standing.

Mr. EDGE. Mr. President, will the Senator yield?

Mr. SMITH. I yield.

Mr. EDGE. I understand the Senator proposes to have the bill remain on the calendar?

Mr. SMITH. Oh, yes, it is to remain on the calendar, and when it comes up in December next I shall take occasion to ask that the bill then, if necessary, be referred back to the Committee on the Judiciary for them to take testimony in reference thereto.

The PRESIDENT pro tempore. Without objection that order may be entered now.

Mr. SMITH. I do not care to have the bill taken from the calendar now. I will exercise my privilege in that respect when we meet in December.

ADDRESS BY HON. JOHN SHARP WILLIAMS

Mr. STEPHENS. Mr. President, Jefferson Davis, the sole President of the Confederacy, was born June 3, 1808, so his birth date will come next Sunday. As Congress will adjourn before that time, I shall ask permission at this time to have printed in the RECORD a brief statement with reference to the exercises that were held at the Vicksburg National Park, Vicksburg, Miss., on October 13, 1927.

The Confederate veterans of Mississippi were holding their annual reunion. At that time a memorial to Jefferson Davis, which had been placed in the national park, was unveiled. The master of ceremonies was Hon. Harris Dickson, of Vicksburg, the noted writer. The National Government was represented by Gen. B. F. Cheatham, who delivered an address and accepted the statue on behalf of the United States.

On that occasion Hon. John Sharp Williams, formerly a Member of the Senate, delivered an address. Senator Williams is not only a great Mississippian but a great American. He made such an impression upon the country and had such a long, varied, and useful service that, although he has retired to private life, every few days, as I meet people from all sections of the country, inquiries are made of me about him. So I feel that any utterance of his will be of interest to the public. Not only because of this, but because of the subject of his address on that occasion, I ask unanimous consent that his speech be printed in the RECORD.

The PRESIDING OFFICER. Is there objection? There being no objection, it is so ordered.

The speech of Hon. John Sharp Williams is as follows:

MEMORIAL TO JEFFERSON DAVIS

Mr. Chairman, your excellency, General Cheatham, Union and Confederate veterans, ladies and gentlemen, somebody has said that the sublimest spectacle which can be presented by man to humanity is that of a "great man greatly falling with a falling state." Surely it may be said with historic truth that Jefferson Davis presented this picture to his beloved Southland and to the world. Whatever faults of temperament or policy critics may find in him, he indubitably possessed the virtues of sincerity, honesty, loyalty to friends and principles and a cause; courage to endeavor; fortitude to bear defeat and suffering; unvarying truthfulness and self-devotion. If these be the cardinal and foundation virtues for man to possess, or to admire in other men during this earthly existence, as I think they are, they were all impact in Mr. Davis.

The Southern Confederacy had but one President. That "storm-cradled nation that rose and fell" itself went down in ruin and ashes seemingly, "its people's hopes were dead," even before the expiration of the six-year term of office of that "one chosen one."

There is nothing in the character or bearing of that one for any son of the South, or of the North, to be ashamed of.

There are many things in him, as in the history of that short and bloody struggle, on both sides, for all sons of both sections to commemorate as glorious and as worthy of the American people at their best.

It is harder for the successful majority of a people, once divided into angry and warring parts, to do justice to the political leaders of the defeated minority than it is to praise its military and naval heroes.

The genius of Stonewall Jackson, the nobility of Robert E. Lee, have long since received unstinted praise from former foes, as from all the world. Even Raphael Semmes, after deep and loud cursing, has had justice done his enterprise and intelligence as a "sailorman."

Justice is beginning to be done by northern writers to the character, ability, and memory of Jefferson Davis. Gamaliel Bradford—his antagonistic heredity and environment considered—has done it nobly well. Captain Schaff, of the northern army, in his Life and Personality of Jefferson Davis, pays admiring tribute to him. The first book to come from the North, seeking to portray him as he was, and entitled "The Real Jefferson Davis," was written by Landon Knight, of Ohio. It pays a generous tribute to his private character and public record.

The southern side of "the War between the States" is as much a part of the history of our United States as the northern side of it.

It is a mistake of fact to say that the Southern States rebelled against or even fought against the United States.

The plain, palpable, historical truth is that two groups of the theretofore United but temporarily disunited and subsequently reunited States were at war with one another. The fact that, in order to avoid confusion in battle and otherwise, the minority group had perforce to assume for their new union a new name and a different flag, and that the majority group naturally retained the old name has led to the confusion of ideas and of things.

Every drop of blood inherited by Jefferson Davis and by most of our soldiers who fought under him was of the blood once shed, or offered to be shed, for the independence of the colonies and the establishment of "the old union." He had himself been an officer in its Regular Army and later, during the Mexican War, an officer in its Volunteer Army. He retained to the day of his death an intense devotion to the memory of "the old service." He carried over this devotion to the old and voluntary union of all the States to the new union or confederation of his part of those States—"the Confederate States of America." He became, by virtue of his office as President of this group, the commander in chief of its armies and officially therefore one of its soldiers. Upon this fact and his ante-bellum Army service rests the claim to erect here on United States property this monument, a claim generously accorded by the Federal Government of these States against the major part of which he had waged relentless war in behalf of the independence of the minor part of them.

Waged war, relentless, until the fabric which he commanded had hopelessly collapsed and he himself had become a prisoner of war. After the first natural ebullition of war passion and hate, he was unconfessedly but really treated as a prisoner of war. That is what his release on bail and the subsequent dismissal of the "treason" charge actually meant.

When helpless and shackled—and then only—did he cease the struggle against "the stars in their courses," and like Robert E. Lee—also a prisoner, though on parole—advised his followers to cease unavailing resistance and to reconcile themselves, as best they might, to the new order of things. Worthily had he borne his part in that brilliant and heroic southern defense. Most worthily did he bear his part in that overwhelming defeat—worse than defeat—that collapse by exhaustion of all a people's resources, including the decimation of its man power.

In every act and thought he had borne witness to the eternal truth that "it is better to have loved and lost than not to have loved at all," better to have fought and lost than not to have fought at all.

He had loved the old Union of all the States; he had loved the new union of that part of the States to which his State had adhered; he had performed honest, brave, brilliant, and enduring service for both.

In retirement—not pardoned and not seeking pardon—he sought to explain "the why" and "the what" of it all, in order that the motives, the deeds, and suffering of those he had led might become a part of the understanding of the world; nor is his Rise and Fall of the Confederacy a book of small value, either as history or as literature or as constitutional law, though naturally written from the viewpoint of counsel for the defense.

His fate was not as fortunate as was that of the other Chief Magistrate of the other group of our American Commonwealth—his great antagonist, Lincoln—who died assassinated in the very afterglow of the hour of victory and before the radical part of his party could attempt his impeachment as they did attempt that of his successor, for trying, without his popularity, to carry out his policies.

American history will not be written accurately until it frankly records that for a short period—short in time, though long in suffering, heroic deeds, and high courage—these States and this people had contemporaneously two Governments and two Presidents—Abraham Lincoln and Jefferson Davis. They were born in homes within present long-distance artillery fire of one another—in Kentucky, a State which sought to be a "neutral" State in a "War between the States," a thing impossible, and succeeded only in seeing her sons fight and die on both sides.

The family of Davis, being slaveholders, when it migrated went farther south; that of Lincoln, being too poor to own slaves, when it migrated went farther north, where environment was more inviting to white labor. Both were of southern blood. Each proved fitted to the environment which directed and made destiny for him. Each devoted to the policies he came in time to espouse and to the people he came in time to love all that was in him.

No two disunited and warring parts of a people ever furnished two opposing chieftains of sincerer purposes, cleaner life, or more persevering fortitude.

It is given to men to be true if only they will; it rests with God to order results.

In that fierce war between the cause of community, self-government, and independence on the one side and the cause of what had, by historical evolution, come to be "the sanctity of the Union," on the other side, the cause of the one chieftain—Lincoln—could hardly by any fault of his own, however gross, have been lost, and the cause of the other could by no now conceivable virtue of his own have been won. All that either could do was to give himself—body, mind, and soul to the utmost—for the right, "as God gave it to him to see the right." This both did without stint.

No southerner now would impeach the character of Lincoln, and no "generous soul," to use a phrase of Demosthenes, will now deny that Jefferson Davis is the outstanding American instance, in civil life, of "a great man greatly falling with a falling State."

He was worthy to be associated in his people's hearts with "the sword of Lee," with the military genius of Stonewall Jackson, and with the enduring fortitude of that southern soldiery which "with tattered uniforms, bare feet, and bright muskets bore on their bayonets" for four years the southern cause. He was worthy to be associated in history with those other Americans who finally overwhelmed them.

He was "a man faithful unto death." Indeed, so prone was he never to desert a friend, a principle, or a cause that his enemies in the South—and let it be remembered that he had bitter, though not many, enemies there—gave to his faithfulness the name of "obstinacy." Landon Knight even falls into this error. Courage at its best he had; physical, mental, political, and moral courage; courage of initiative to dare, courage of fortitude to suffer. For him success did not entail recklessness nor defeat despair.

He was great as a soldier. Buena Vista early illustrated it, and his military counsels during the war, as General Lee himself testified before Congress, confirmed it. He was a great Senator. He was a great War Secretary. He was at times a great orator; witness his farewell address to the United States Senate and the Richmond speech near the close of the war, which "fired the southern heart" to renewed effort.

In private life, in all its relations, he was as nearly blameless as mere man can be. Especially was he so in the difficult relation of master and slave—the most difficult of all relations for the master. In his justness, humaneness, and consideration for his slaves he was exemplary. He bore that part of "the white man's burden" as only the noble white man can. The northern writers whom I have cited all bear witness to that, and all here in Mississippi who knew him knew that he was "a good master."

What was, in his mind—because it is by what is in a man's mind that you must judge him—what was, then, in his mind, the cause to which he so stubbornly sacrificed his health and for which he would so gladly have given his life? Was it slavery? Then it is indeed a "lost cause." But there are in God's providence no lost causes—permanently lost—except unfit causes, just as there are in nature no survivals of the unfit.

Was secession the cause? It was only the allegedly "constitutional remedy" resorted to to assert the cause.

Behind all the talk about slavery as a condition and about secession as a remedy there laid in the minds of the southern men, and even more in the minds of the southern women, of that generation, as anyone may know who will seek their feeling and thought in their private and public utterances, the cause of white racial supremacy.

That was, in their minds, the real cause—the thing menaced. That cause it was which, in the slave States, was thought—mistakenly, as we now know—to be inextricably involved in the maintenance of slavery, unless abolition were accompanied by the deportation of the negro race, and for that nobody was ready—South or North. Deportation spelled, then, to southern minds, agricultural ruin. To northern minds, national bankruptcy.

The cause of white racial supremacy, which was thought to involve, and does involve, white racial life, is not a "lost cause." It is a cause triumphant. It was never as safe as now since the Missouri compromise discussion, which Thomas Jefferson, himself an emancipationist, said "broke upon his ears like the alarm of a fire bell in the night." What war failed to avert, the slow but sure processes of human thought and experience—North and South—under difficulties at times seemingly insuperable, have finally averted, and averted, let us hope, for good and forever.

The white man's family life, his code of social ethics, his racial integrity—in a word, his civilization—the destruction of which in the slave States was dreaded as the involved racial result of the abolition of slavery without deportation, are safe. All the dire results, which had been seen at our very doors in Haiti and San Domingo and other West Indies and in Mexico, have been avoided by us. They were averted because, first, of the shoulder to shoulder touch, the stern resolution, and the discipline which four years of war and hardship had implanted in the old easy-going and pleasure-loving southerners; and because, second, of the respect for southern courage and endurance which the war had taught the northern people; and because, third, of the sympathy for the South in her humiliation and poverty under negro and carpetbag rule, which sympathy was at last aroused in "generous souls" of late foes. How narrowly averted these dreaded results were and how dangerously and long the white man's civilization was menaced in the South few now realize.

My friends, this man—this Jefferson Davis—was no pygmy among men; he was a giant.

Long may this bronze endure as a memorial to him and as a monument to the magnanimity of a great people, reunited and never again

to be disunited and determinedly oblivious of past hatreds and bloody arbitrament of differences.

This monument by the Father of Waters, in the historic "Siege City" of Vicksburg, on the soil of his beloved adopted State, to "the Greatest Mississippian," can neither add to nor subtract from his fame, but it can be and will be a witness of the opinion of true men that it is not success nor failure which measures the worth of a man, but that brave endeavor, honest purpose persevered in, and forgetfulness of self are the essentials which fill the measure of God's demand and give the standard for true men's judgments. May such ever be our rule of final judgment of one another in this "Republic of lesser Republics," consecrated to one flag, one government, one civilization, now and forever.

PUBLIC UTILITY PROPAGANDA

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the RECORD an article from the New York Times with reference to water-power and public-utility propaganda.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

USE SCHOOLS TO BEAT SMITH'S POWER PLAN—UTILITIES SUPPLY BOOKS FAVORING THEM, PUBLICITY MAN REVEALS TO TRADE COMMISSION—$227,000 SPENT SINCE 1922—ARMY OF SPEAKERS AND FLOOD OF LITERATURE LET LOOSE IN DRIVE AGAINST STATE OWNERSHIP

(Special to the New York Times)

WASHINGTON, May 28.—Water-power and public-utility propaganda spread broadcast throughout New York State and infiltrating into the high schools of the State was the subject of searching inquiry to-day when the Federal Trade Commission turned to New York in its investigation of publicity methods of public-utility companies.

Judge Robert E. Healy, chief counsel of the commission, questioned Fred W. Crone, director of the New York State Committee on Public Utility Information, and Charles H. B. Chapin, secretary of the Empire State Gas and Electric Association.

Mr. Crone's testimony was that more than $227,000 had been spent since 1922 to conduct an information bureau the activities of which included distribution of pamphlets opposing Governor Smith's projected State water-power development.

The bureau, Mr. Crone said, also distributed textbooks for use in the high schools of the State, issued a monthly news bulletin with items and editorials intended for voluntary reproduction in newspapers of the State, and furnished public-utility speakers to schools, colleges, chambers of commerce, Rotary and Kiwanis Clubs, and other organizations.

TWO BOOKLETS CIRCULATED

Mr. Crone, a former newspaper and advertising man, testified that 47 gas and electric companies, members of the Empire State Gas and Electric Association, supported the New York State Committee on Public Utility Information. It was organized in 1922 with himself as first director.

His office accounts, introduced in evidence in the examination, which is being conducted with Judge Edgar A. McCulloch as presiding commissioner, showed expenditures for salaries, office rent, literature, and distribution averaging $30,000 a year. With cost of printing pamphlets in the past year, the aggregate expenditures since 1922 exceeded $227,000, the accounts showed.

Two booklets were published purporting to state the attitude of the State's public utilities with respect to water-power development.

One, entitled "White Power in New York State," attained a circulation of 196,000 among newspapers, libraries, public officials, college professors, commercial and banking houses, and civic organizations Mr. Crone testified. The other, entitled "River Regulation in New York State," had a circulation of 40,000.

While the committee circulated many of these booklets, most of them were distributed through member companies, according to Mr. Crone.

ADMITS OPPOSING SMITH WAS AIM

He testified that the private power companies of the State opposed Governor Smith's power-development plans, and admitted, upon close questioning by Judge Healy, that the object of the literature was to oppose the movement.

The 1927–28 balance sheet of the committee showed that the printing of the water-power booklets cost $13,884.

Inquiring into distribution of public-utility literature among high schools of the State, Judge Healy obtained from Mr. Crone an estimate that 106,000 copies of two textbooks, "Know New York State" and "Servants of Progress," were distributed among 491 high schools.

Most of these were sent from New York headquarters upon receipt of replies from circulars distributed to all high-school principals Mr. Crone testified.

Ten thousand copies of Servants of Progress were distributed in connection with certain public-relations activities of the Westchester Lighting Co. and the Consolidated Gas Co., said Mr. Crone.

The witness said that the textbooks had been prepared by him and were intended to present the case for privately owned utilities "in a matter-of-fact light." He said the utilities had found comparatively little understanding among the public of State regulation, and therefore the books undertook to bring this out.

WHY SCHOOLS GOT THE BOOKS

He was asked by Judge McCulloch the object of circulating the books among high-school children, and replied that he believed that the information was something the children ought to know.

The Association of State Railroad and Utilities Commissioners had advocated teaching this subject in all schools, even in grade schools, he said.

Asked why utility companies should undertake to do the teaching, Mr. Crone said he thought it was mutually advantageous. He admitted that most of the material was favorable to the utility companies and admitted, too, that one of the objects was to "get over" utilities ideas.

The cost of publishing the two textbooks was given as about $3,500. Mr. Crone declared that he could not tell what parts of the State received the greatest distribution, but said they went to many different places.

The subject of textbooks recurred during the afternoon session while Mr. Crone was concluding his testimony. Judge Healy inquired into a survey of textbooks used in New York City schools made by Mr. Crone at the behest of Fred R. Jenkins, chairman of the educational committee of the National Electric Light Association.

According to documentary evidence introduced, J. B. Sheridan, manager of the Missouri Committee on Public Utility Information, who had been appointed chairman of the survey, had written from St. Louis asking Mr. Crone to survey and report on the textbooks on civics, economics, and sociology used or approved for use in the New York public schools.

CRONE'S REPORT ON TEXTBOOKS

Mr. Crone's report, apparently part of a nation-wide survey, was one of the documents produced. It had been taken from his files by an investigator for the Federal Trade Commission.

"The object of the surveys," said Mr. Sheridan in his letter to Mr. Crone, "is to accurately inform ourselves of the nature of the matter dealing with the public-utility industry in these textbooks, to take up the matter of revising, rewriting, and bringing up to date the textbooks with the proper authorities."

Mr. Crone's report reviewed 25 textbooks used in New York City public schools. In his covering letter he said there was no uniformity in the books used throughout the State or in New York City.

"Among school-teachers in the larger cities," said the letter, "and especially in New York City, there is a considerable proportion of the so-called liberals and radicals.

"In New York City this is so much the case that during the war it was found necessary to apply a sort of patriotism test and varieties of repression (with resultant protests against invasion of personal liberty and freedom of speech and the like). And since the war there have been many criticisms of the brand of oral instruction furnished by members of this element, including a recent one that teachers on the public pay roll were using the school auditoriums to lecture, teach, or talk on matters subversive of the foundation principles of American Government."

FOURTEEN BOOKS CALLED "UNFAIR"

The individual reviews of the books covered many typewritten pages. Fourteen of the 25 books were termed "unfair."

The unfavorable or favorable comment ranged from the elementary economics text, Description of Industry, by Prof. Henry C. Adams, formerly of the University of Michigan, which was said to contain a "vicious attack on monopolies" and a "strong demand for Government ownership and operation of utilities" to a civics textbook, The Community and the Citizen, by Arthur W. Dunn, of the United States Bureau of Education, which was highly indorsed as "fair."

During Mr. Crone's testimony Judge Healy took occasion to introduce a textbook by Edward Hungerford, The Story of Public Utilities, which, the witness testified, the State association talked about distributing, but had not done so. He understood it was being used in the schools of Rochester.

When Mr. Chapin was on the stand later he said a Mr. Scobell and F. W. Fisher, information director of the Rochester Gas & Electric Corporation, called upon Chairman W. A. Prendergast, of the State public-service commission, to ask him to help obtain wider distribution of his book and to use his influence to have more public-utilities courses taught in the State schools.

Mr. Chapin added that this did not develop into anything so far as he knew.

1,000 ON BULLETIN LIST

Mr. Crone said that his information bureau's monthly bulletin of news articles and editorials was distributed to about 1,000 newspapers, banks, business houses, engineers, and others. He admitted its purpose was to obtain newspaper reproduction of items, but he would not agree that the influencing of editorial opinion was one of the objects. He said that much of the matter was reprinted by the newspapers.

Asserting that his bureau had always urged local companies to advertise as liberally as possible in the newspapers, Mr. Crone said he believed that $28,000,000 to $38,000,000 was spent annually for advertising by the State utilities. This was substantially more than the amount of advertising done five years ago, he added, and credited his bureau with stimulating at least part of the increase.

Judge Healy pressed the point that perhaps this was one avenue by which the utilities believed they could get more of their news matter in the newspapers.

Mr. Crone vigorously denied this, declaring that this idea made him "blamed mad." He said he was sure editors were able to distinguish advertising matter.

Among companies which have public relations officers who issue their own press statements, Mr. Crone said, were the New York Edison Co., Consolidated Gas Co., Brooklyn Union Gas Co., Niagara Falls Power Co., Rochester Gas & Electric Co., and Mohawk Hudson Power Co.

THREE THOUSAND FOUR HUNDRED AND SEVENTY-NINE SPEECHES SINCE NOVEMBER 1

Inquiring next into the activities of the speakers' bureau conducted by the New York State Committee on Public Utility Information, Judge Healy produced statistics from the bulletin to show that from 55 to 179 speakers had been engaged in each of the past six months in making public-utility addresses throughout the State.

Since November 1 they have fulfilled 3,479 speaking engagements before audiences aggregating 331,468 persons. These speeches resulted in more than 450 columns of newspaper space, it was shown.

Mr. Crone said that a check on the news reports of the speeches was always made by his office, which subscribed to more than 200 newspapers, or through the managers of the local utilities in the towns where the speeches were made.

A speakers' handbook containing suggested topics and quotations from various men in public life was introduced in evidence, after Mr. Crone said that he had prepared it.

Present during most of the examination of Mr. Crone were Judge Stephen B. Davis, director of the Joint Committee of National Utilities Associations; J. S. S. Richardson, director of information of the joint committee; P. H. Gadsden, of Philadelphia; E. H. Rosenquest, president of the Westchester Lighting Corporation; C. W. Person, advertising manager of the American Gas Association; and George F. Oxley, director of information of the National Electric Light Association.

CHAPIN ADMITS FIGHT ON SMITH

The examination of Mr. Chapin was comparatively short. He testified that member companies supported the Empire State Gas & Electric Association through pro rata assessments and that its annual expenditures were about $32,000 or $33,000.

He was asked to identify items in his account books, several of them showing that the expenses of various Cornell professors had been paid by the association for addresses at its recent convention.

The minutes of the association were examined by Judge Healy.

He interrogated Mr. Chapin about a statement in one of the minutes that members of the women's committee of the association should join the League of Women Voters in order to maintain a close check on its statements and publications which had to do with questions of public ownership.

Judge Healy asked whether this was urged in order to offset the influence of the League of Women Voters.

Mr. Chapin replied that this probably was so, but he refused to agree with Judge Healy that any organized system of espionage was contemplated.

He admitted that the water-power pamphlets about which Mr. Crone had testified were intended to fight Governor Smith's program of water-power development. He said his association was in no way connected with the distribution of propaganda against the Boulder Dam project and declared that it had nothing to do with State legislation.

HERBERT HOOVER

Mr. STEPHENS. Mr. President, I ask unanimous consent to have printed in the RECORD some correspondence recently had by me with the Secretary of Commerce, Hon. Herbert Hoover.

There being no objection, the correspondence was ordered to be printed in the RECORD, as follows:

APRIL 2, 1928.

Hon. HERBERT HOOVER,
Secretary of Commerce, Washington, D. C.

DEAR MR. SECRETARY: The Washington Post under date of March 31, 1928, carried an article the headlines of which read as follows:

"Hoover changes racial policy in Census Office. Colored clerks now in all departments; administrative position sought."

The article reads as follows:

"Colored clerks in the Census Bureau yesterday sought to learn why they have been brought up from the basements and other segregated sections where they have worked for years and placed in all departments of the bureau on equal terms with other workers. It was learned that the order to abolish segregation and racial discrimination in the department came at the order of Herbert Hoover, Secretary of Commerce.

"The Secretary was visited by Neval H. Thomas, president of the Association for Advancement of Colored People, and by Robert J. Nelson, the executive director of the Civil Liberties Bureau of Colored Elks, who described conditions in the department to him. His order for removal of the alleged discrimination, following an investigation, came just in time to present to the view of E. W. B. Curry, negro editor, of Springfield, Ohio, a satisfied group of negro clerks.

"Curry, who made a trip here yesterday from Ohio because his candidacy as a Hoover delegate to the Republican National Convention had been injured by charges that the Department of Commerce here was honeycombed with racial segregation, returned to the Buckeye State satisfied that he could safely run as he had planned. It is understood that negro Elks, encouraged by the situation at present, have asked Secretary Hoover for an administrative position in the department of vital statistics in connection with their national health program."

In the Times-Herald, under date of April 1, 1928, there is an article on the same subject. It reads:

"EQUALITY PLEA WON BY COLORED ELKS

"Segregation of the colored clerks in the Census Bureau has been abolished by order of Secretary Hoover, and all these clerks have been placed on an equal basis with their white fellow workers.

"This change came about as a result of a protest to Secretary Hoover by Neval H. Thomas, president of the Association for the Advancement of Colored People, and Robert J. Nelson, executive director of the Civil Liberties Bureau of the Negro Elks.

"E. W. B. Curry, colored editor, of Springfield, Ohio, came to Washington to see Secretary Hoover about the alleged discrimination, but found that Hoover's order had already abolished segregation.

"He is running as a Hoover delegate in Ohio. The negro Elks, it is said, encouraged by the situation, will ask Secretary Hoover for an administrative position in the vital statistics bureau in connection with the national health program."

My information is that for several years there has been a division in the Bureau of Census in which only negroes were employed, and that there has been a segregation of the races in every department of the bureau.

The effect of these articles is to place the whole burden of this action on you and to charge that it was taken for political reasons.

By this order members of the two races and of the two sexes will be caused to work side by side in the offices. They will be brought into intimate contact. Having authorized this, it would not be surprising if the request for "an administrative position" shall be granted. This will mean that white men and women will have a negro as their superior officer in that department.

This was an unfortunate action. It creates a situation that can add nothing to the happiness of any of the employees, regardless of race. It will lower the morale of those affected and, therefore, will lessen their efficiency. You have a great reputation as an administrative official. You must know that the efficiency of a worker depends in no small degree upon his state of mind, and the conditions under which he works.

The feeling between the races, which is instinctive, will be increased. That there is a very strong feeling against social equality can not be denied. This is a long step in the direction of that which is so distasteful and hateful to so many. It is to be doubted that the better negroes in the service have sought to have this action taken.

So far as I know, no one has ever sought to have the negro division abolished. So far as I know, there has been no demand for this change except that coming from negro politicians outside the service. That such action could be taken for personal political advantage is almost beyond belief; yet it seems to be true. This action will not prove helpful to either race and it is, in reality, a grave injustice to both.

I have written that my earnest protest against this order may be registered. What I have said expresses my thoughts in very feeble language; but I trust that it may be beyond doubt that every instinct that, as a white man, I possess, and every feeling of interest I have in the welfare of the two races and in the work of the department, is very much aroused over this matter.

Very respectfully yours,

H. D. STEPHENS,
United States Senator.

THE SECRETARY OF COMMERCE,
Washington, April 7, 1928.

The Hon. H. D. STEPHENS,
United States Senate, Washington, D. C.

MY DEAR MR. SENATOR: I have your letter of April 2. The articles which you mention are in large degree foolish untruths. If such action as was taken is against the interest of either the white or colored employees, they have a full right to present the matter to me. I have received no complaint from either group.

Yours faithfully,

HERBERT HOOVER.

APRIL 10, 1928.

Hon. HERBERT HOOVER,
Secretary of Commerce, Washington, D. C.

MY DEAR MR. SECRETARY: Answering my letter making protest against your recent order, by which there is no longer a segregation of the races in the Bureau of the Census, you wrote as follows:

"I have your letter of April 2. The articles which you mention are in large degree foolish untruths. If such action as was taken is against the interest of either the white or colored employees, they have a full right to present the matter to me. I have received no complaint from either group."

This is the full text of your letter. I note that you say, "The articles which you mention are in large degree foolish untruths." This is a very general statement. You do not specify the "foolish untruths" contained in the articles. Of course, you do not designate as a "foolish untruth" the statement that you issued the order referred to. That is beyond denial.

You may refer to the activities of the heads of certain negro organizations, the pressure that they are said to have brought to bear on you, and the interest displayed by a negro who is running as a "Hoover delegate" in Ohio. Those statements may not be exactly accurate. I do not know. However, I am informed that at least one of the negroes referred to in the articles appeared in the room where the negro employees had been assigned to places by the side of white men and women, and that he was all grins and congratulated them on the recognition that had been given them.

But their accuracy is a matter not of the slightest importance. What I am interested in—what every decent white person in and out of the bureau is interested in—is the fact that the order was made. The order may not have been made for political purposes. But it occurs to me that it would be more to your credit to assign the issuance of the order to political reasons than to assign it to any other.

You say, "If such action as was taken is against the interest of either the white or colored employees, they have a full right to present the matter to me. I have received no complaint from either group." This begs the question. It is rather a disingenuous statement. "A full right" to complain! Of course, any person who can write or talk can voice a protest. But what would be the result? It is so easy to separate one from the service. A good position has often been lost for a smaller offense than protesting the action of a superior. So, Mr. Secretary, you should not offer as a defense for your action the fact that you have received no complaint.

I am informed that members of both races, under present conditions which were inaugurated by you, are compelled to use the same necessary accommodations provided there. White women and negro women are forced to use the same wash rooms and toilets. You may have received "no complaint"; but your knowledge of human nature and your sense of decency and propriety must cause you to know that the breasts of many of the employees in the bureau are seething with unuttered protests against the condition that you have brought about. You can not justify your action by saying that "no complaint" has been made by either group of employees.

This criticism is not a political one. It is made in the interest of decency and of the welfare of the Government. History can not be trifled with. Whenever there has been a step toward social equality between the races, dire results have followed, and both races have suffered. I can look upon this action of yours only as a step toward social equality, and I can only fear the results that may ensue.

Again I protest this order, and again I appeal to you to rescind it. If you should do so, every true friend of the negro, every white person loyal to the white race, will approve of your change of mind and action in this regard.

Very respectfully,

H. D. STEPHENS.

CIVILIAN ASSISTANTS, GOVERNOR GENERAL PHILIPPINE ISLANDS

The PRESIDENT pro tempore. The clerk will state the next bill on the calendar under Rule VIII.

The bill (S. 2292) providing for the employment of certain civilian assistants in the office of the Governor General of the Philippine Islands, and fixing salaries of certain officials, was announced as next in order.

Mr. KING. Let the bill go over.

Mr. BINGHAM. Mr. President, notwithstanding the objection of the Senator from Utah, I move that the Senate proceed to the consideration of the bill.

On a division the motion was agreed to, and the Senate, as in Committee of the Whole, proceeded to consider the bill.

Mr. KING. Mr. President, the Senator from Connecticut [Mr. BINGHAM] by motion has placed before the Senate a measure which I regard as inimical to the best interests of the Filipinos. The present administration has definitely determined to deny independence to the Filipinos and to subject them for an indefinite period to control by the United States. The Jones Act promised liberty and independence to the Filipinos, and under the administration of President Wilson measures were enacted which gave to the Filipinos a large measure of independence and wide latitude in the control of their internal affairs. The people of that far-off land welcomed the promises made by the United States that they should have independence and addressed themselves with sincerity and ability to the problems and responsibilities before them, in order that they might be prepared to take over the Government of their country when the United States withdrew therefrom.

It is unnecessary to state that the Philippine Islands belong to the Filipinos and not to the United States; that the Filipinos desire independence, and while appreciating what the United States has done for their country, they are unwilling to be governed by an alien race. That they have made extraordinary progress is conceded by all. That they are competent to govern themselves I think they have fully demonstrated.

For a number of years capitalistic and other elements in our country have protested against the United States withdrawing from the Philippine Islands and have insisted that we must retain indefinite control over the Filipinos. There has been considerable propaganda for the purpose of showing that the Philippine Islands were rich in resources and that the United States could derive great profit by retaining control over the same. There have also been loud protestations, many of which I believe have been insincere, that the United States purely in the interests of the Filipinos and by reason of its altruistic mission in the world must remain indefinitely in the Philippine Islands. The measure now before us is one of a series which have, as I am advised, the support of the administration, all calculated to fasten American control upon the Philippine Islands, and to further restrict the Filipinos in the government and control of their domestic affairs. I am opposed to all these measures and shall do what I can in a proper way to prevent the passage of either of them.

But it is not my intention, Mr. President, to occupy the time at my disposal in the further discussion of the Philippine question.

I had hoped prior to adjournment to find opportunity to discuss the resolution which I offered some time ago dealing with the situation in Haiti and which called for an investigation by the Committee on Foreign Relations of the course of the United States in overthrowing the Haitian constitution and subjecting the Haitian people to military rule by the United States. However, the opportunity was not presented, but when Congress meets in December I shall urge the committee to make a searching investigation of conditions in Haiti with a view of reporting measures that will compel the withdrawal of American military forces from Haiti and the turning back to the Haitian people their own country and the surrendering into their hands all political authority.

Mr. President, in my opinion the Senate has paid too little attention to foreign affairs and to the foreign policy or lack of policy upon the part of this administration. It is difficult to determine what the foreign policy of the United States is, either with respect to the Republics to the south of us or with respect to countries in other parts of the world. The course of this and the preceding administration toward Latin America has not been characterized by wisdom or statesmanship. The Monroe doctrine has been misinterpreted, and efforts to apply it have filled some countries with apprehension and many people with resentment. The Monroe doctrine, in my opinion, must be reexamined and restated in order to win the confidence and good will of our southern neighbors, and in order that a solid foundation may be laid for the development and continuity of cordial relations between this Republic and all countries directly concerned in the interpretation and application of this doctrine.

THE ARMENIAN QUESTION

Mr. President, I did not take the floor, however, to discuss the Monroe doctrine or our relations with Latin America, but rather to invite the attention of the Senate to the Armenian question, and to what I consider the derelictions of this Government in dealing with Armenia and the Armenians. The Armenian question will be brought to our attention again if a treaty is negotiated with Turkey. Indeed, this question, not having been settled or determined, is in the pathway of this Nation and the allied nations, and calls for consideration and for the application of the principles of justice and morality in the final settlement of the same.

Mr. President, the Senate has been so occupied in the consideration of domestic problems that it has, in my opinion, failed in the discharge of its duty in regard to a number of foreign questions. No nation, particularly one occupying the position of the United States, can claim isolation or avoid contacts with the world which will result in the assumption of obligations. The World War brought the United States into intimate relations with many nations and peoples. It united in a common

cause the New World with countries and peoples of Europe and Asia. Races and peoples in far-off Greece, Asia Minor, and Syria became allies of this Government, and the war united our country with the allied and associated powers in the great contest which involved the greater part of the world. Certain objectives were sought by the United States and the nations and peoples associated with it in the world struggle.

Among the objectives sought were the expulsion of the Turks from Europe, the restoration to Greece of territory which the Hellenic peoples had occupied from prehistoric times, the establishment of an independent Armenian state within territory which had been occupied by the Armenian race for 3,000 years. For centuries the Armenians had been the victims of Turkish misrule, and the cruelties and massacres to which they had been subjected had often aroused Christian nations and led to futile demands that the Turkish Government should cease its barbarities and inhuman treatment of Christian peoples.

During the World War and immediately thereafter this Government, as well as the nations associated with it in the great conflict, solemnly announced that when peace treaties were written the Armenian race should no longer be subjected to Turkish rule, and that an independent Armenian state should be set up. When Turkey and the central powers were defeated the allied nations and Turkey entered into the treaty of Sevres. There were written into this treaty provisions for the redemption of the promises made by the allied and associated powers. An Armenian state was set up, and soon thereafter the Armenian Republic was recognized as a de facto and de jure Government by the United States as well as by the allied nations. Subsequently the Kemalists repudiated the treaty of Sevres and joined with the bolsheviks of Russia for the purpose of crushing the Armenian Republic. The solemn pledges made in behalf of the Armenian Republic and the Armenian people by the United States and the allied nations were disregarded, and these powerful states stood impotently by while hundreds of thousands of Armenians were butchered, and the rest of that heroic and suffering people, with the exception of those who resided in Constantinople, were driven from their homes into the deserts and into other lands.

For many years the American people have known of the atrocities committed by the Turks against the Christians within the Turkish Empire. The American people have contributed millions of dollars to relieve the sufferings of the Armenians and the Greeks who were victims of Turkish barbarity, and to care for the tens of thousands of orphan children whose parents had been massacred by the Turkish Government and the Turkish people.

Mr. President, the Armenian question is not settled; the Armenian question is not dead. Neither this Government nor the allied nations can ignore or disregard this question. The conscience of the civilized world may be dulled for the moment, but it will be quickened into a vital force which will not be arrested until a great wrong has been redressed and the rights of the Armenian Republic and the Armenians have been vindicated. The tragic history of Armenia under Turkish rule, culminating in the massacre of a million Armenians during and following the World War and the expulsion of a million more from their homes, can not be forgotten, and the Armenian question will never be settled until the solemn promises made by the allied nations and this Government to the Armenians, who were their allies in the World War, have been redeemed.

Mr. President, it is the view of many Americans that the policy of this administration toward Armenia and the Armenians has not only been cynical, but unfriendly and hostile. Professing deep solicitude for the Armenians, and promising that "everything should be done to preserve to them the rights which the treaty of Sevres undertook to bestow," and declaring certain conditions as a sine qua non to the acceptance by the United States of a new treaty with the Kemalist régime, a treaty was negotiated at Lausanne in 1923 which can not be characterized other than as shameful and highly discreditable to the administration in power. It was a base betrayal of the promises made to the Armenians and an ignoble, if not cowardly, abandonment of obligations which the United States owed to the Armenian Republic and the Armenian people.

The record of the proceedings at Lausanne, the statements contained in the Turkish papers, the conduct of intriguing oil interests there at work, not only give color to but in the eyes of many justify the charge that the Lausanne treaty was immoral and bartered away the rights of the Armenians in the interest of a privileged group of oil corporations. In the interest of historical accuracy and that no injustice may be done to the principal allied nations, it is proper that I state that they upon various occasions sought to carry out the pledges and promises made to the Armenians, and to which I have referred. Between 1919 and 1923 there were four notable examples of their efforts to fulfill the solemn pledges made by them to Armenia, but I regret to say that their plans met with obstruction at the hands of the United States. Their first effort was defeated by the unfortunate though well-intentioned intervention of the United States; the second by the inexcusable negligence of the Senate of the United States; the third by the highly reprehensible if not hostile conduct of the State Department for several years past; and the fourth, still pending, is threatened again by the hostile and cynical interposition of the State Department.

First. In February, 1919, months before the emergence of Kemal, the Versailles Peace Conference took up the consideration of the Armenian case, fully resolved and prepared to settle it once for all; but the Government of the United States, lacking full information but with the best of intentions, advised the conference that it desired to take a part in the settlement of the Armenian question, and promised a definite answer in August or September of that year. Respecting the wish of the United States, the Allies deferred action. Owing, however, to the partisan controversy which developed in this country over the Versailles treaty, this Government was unable to give to the Allies the answer as promised.

Second. This delay in the settlement of the Armenian case, imposed by this Government upon the Allies, led to a serious situation in Armenia, which was menaced by the bolsheviks and the growing unrest in Turkey. The Kemalist movement was assuming definite proportions which threatened the peace of the Near East and the provisions of the treaty of Sevres. Accordingly, as shown by a letter from the Secretary of State under date of September 5, 1919, the original of which I have in my possession, the Allies again formulated definite plans to send troops and arms and munitions to Armenia.

This situation produced genuine concern in the United States, particularly in view of the promises which had been made by our Government in behalf of the Armenians, and on the 8th day of September, 1919, a resolution was offered in the Senate by Senator Williams recommending the lending to Armenia by the United States of the measures of help which the Allies were prepared to give.

This resolution was referred to a subcommittee of the Senate of which Senator Harding was chairman, and it began hearings upon the same in October, 1919, with the understanding, as shown by statements made by the committee, that a report would be made to the Senate in November. In December, 1918, Senator Lodge offered a resolution in the Senate declaring that, in the opinion of the Senate, Armenia, including the six Provinces of Turkish Armenia, Cilicia, Russian Armenia, and certain other territory, should be independent and that efforts should be made to aid Armenia.

This resolution was referred to the subcommittee which was considering the resolution offered by Senator Williams. The action of the Senate in referring these resolutions to a subcommittee, and the statements that the subcommittee would promptly report upon the same, together with the course which our Government indicated it would pursue, resulted in the abandonment of the allied plan to which I have referred. Unfortunately, delays occurred which under the circumstances were inexcusable, and it was not until May 14, 1920, that the committee reported. This delay of a year and a half produced grievous and most serious results, and the situation in the Near East and particularly in Turkey got out of hand.

It is believed by many that the interposition of our Government and the action and delay of the Senate as above mentioned, and the resultant effects upon the plans of the Allies to protect Armenia brought the Kemalists into existence and afforded them opportunity to organize resistance and to enter into direct contact with the bolsheviks, with the result that in the latter part of 1920, by concerted action upon the part of the bolsheviks and Kemalists, the Armenian Republic which had been established was overthrown.

Third. At the Lausanne conference of 1923, on December 12, the principal Allies, pursuant to prior agreement, submitted to the Turkish Government a plan for the setting up of an independent Armenia, apart from the Armenian Republic, which was then under the military control of the soviet government. But the American delegation at the conference failed to support such plan, thus giving aid to the Turks in their opposition to its execution. No sufficient reason has been assigned for this most extraordinary conduct upon the part of the American delegation. It has been charged that their support of the Turks and their abandonment of the Armenians was the result of an understanding between them and the Kemalists which culminated in certain oil concessions being made to American corporations.

There is evidence to support the view that the American delegation resisted the claims of Great Britain to the Mosul oil fields and demanded an interest therein in behalf of American oil corporations, and that the Turks supported the American delegation and the latter gave aid and comfort to the Turks in their opposition to setting up an independent Armenian state as demanded by the British delegation.

It is clear from the facts that have come to light, and from the statements made by persons present at the conference, that the Armenian case was bartered away; that the Armenians were betrayed; that the American oil companies through the persistent efforts of the American delegation obtained a considerable interest in the British Petroleum Co. which claimed to own the Mosul oil fields. There was much talk by the American delegation and our State Department in regard to the "open door" in the territories freed from Turkish rule, but the "open door" as it appears was understood to mean that American oil companies should obtain an interest in the oil fields of Mesopotamia.

In this connection I invite the attention of Senators to a formal letter dated March 24, 1928, accompanied by a supporting brief which I am advised was filed with the Senate Committee on Foreign Relations, and copies of which I understand have been received by Members of the Senate.

Fourth. The allied nations, however, notwithstanding the faithless course of the State Department and the Armenian delegation, were unwilling to fix the boundary between Turkey and Armenia and left it undefined. They recognized that the Armenian Republic was still a distinct political and corporate entity; that President Wilson, at the request of Turkey and the allied nations, had fixed the western boundary lines of the Armenian Republic, and their position was that they could not and would not determine the rights of Armenia without her consent, and would not recognize the claimed boundaries of the Kemalist Turkish state which sought to incorporate therein Armenian territory. Moreover, the treaties negotiated at Lausanne, by their terms would expire in July, 1928, and the allied nations, quite naturally it is assumed, would again take up the Armenian case when new treaties were negotiated with Turkey.

I submit that the conduct of the State Department and the American delegation at the Lausanne conference in view of the solemn promises made by our Government in behalf of the Armenians, is not consistent with international obligations or international honor. Inded, in my opinion, the action of our representatives at that conference, subjects the United States to the charge of punic faith, and the abandonment of allies who had associated themselves with the United States in the World War. And it is to be noted that on November 29, 1927, apparently in anticipation of the affirmative action by the Allies in behalf of Armenia and in the interests of the Armenians, and with the apparent purpose of frustrating the same, the Department of State on the day when there arrived at the port of New York the Kemalist representative from Angora, made a public statement that there was no such country as Armenia, and that the former Armenian Republic was already divided between Turkey and Russia.

As Senators know, there was allotted to the Armenian Republic by the arbitration of President Wilson four Provinces in Turkish Armenia. According to the statement of the chairman of the board of directors of the Standard Oil Co. within these Provinces are to be found vast oil deposits even more valuable than those of Mosul. Are the Standard and Gulf refining companies which secured an interest in the Mosul oil fields when Armenia's cause was abandoned at Lausanne, coveting these oil lands which rightfully belong to the Armenian people? The plain meaning, therefore, of the above statement emanating from the Department of State, is that the title to the Armenian oil lands had reverted through the alleged demise of the Armenian Republic, to Kemal.

Is it to be inferred, therefore, that the Standard Oil and the Gulf Refining companies, which secured at the Lausanne conference large interests in the Mosul oil fields, are free to obtain a concession from the Kemalist régime for the exploitation of the oil lands, which in justice and in equity as well as legally, belong to the Armenian people? The State Department had apparently forgotten that these lands in which valuable oil fields exist had been occupied by the Armenians for nearly 3,000 years, and that the Turks during and following the World War had slaughtered a million Armenian men, women, and children living in said territory, and had driven away a million more.

It is to be hoped that the State Department did not intend formally to advise the Turks that they need pay no attention to the Armenian cause and to the Allies in any efforts by them to aid Armenia, and that in so far as the present Government of the United States is concerned, the Armenian case was a closed incident. It is to be hoped that this Government will not forget that nearly a million refugees and exiles are now wandering in the various countries in the Near East, in Greece, Syria, Mesopotamia, Persia, Georgia, and Azerbaijan; that they are homeless and helpless, and that this present policy toward the Armenians will support the Kemalist régime in its purpose to forever dispossess the Armenians of their ancestral territory and of property of the value of more than $5,000,000,000 of which they have been deprived. In the statement above referred to as emanating from the Secretary of State, it was asserted that the Armenian diplomatic representative in 1920 was not formally received by this Government; that he had withdrawn voluntarily, and that this Government could not be expected to resurrect Armenia. It must have been known to the State Department, because it is a fact that the Armenian diplomatic representative was formally received by Hon. Bainbridge Colby, then Secretary of State; but he could not be received by the then stricken President; that he did not withdraw, but later became fatally ill and died; that the Senate by resolution unanimously adopted on May 14, 1920, extended congratulations to Armenia upon her recognition by the United States; and that Armenia was not asking this Government for any physical or material help, but was only asking that the United States, which was in part responsible for her plight, shall refrain from being a party to the spoliation of her lands and the destruction of her rights.

It may be illuminating to place in contrast Armenia's attitude toward her allies, of which the United States in fact, if not technically, was one, with the attitude of the administration toward Armenia.

First. In 1914 there were approximately 2,000,000 Armenians in Turkey and the same number in Russia.

In August, 1914, the National Congress of Armenians, then sitting at Erzerum, was offered autonomy by Turkey, guaranteed by Germany, if Armenians of Turkey and Russia would actively assist Turkey in the war; they replied that Armenians of Turkey would do their duty individually as Ottoman subjects; they could not, however, as a nation, work for the cause of Turkey and her allies. Following this refusal, the Turks seized upon the intervention of non-Ottoman Armenians on the side of the Allies as an excuse, and butchered 800,000 noncombatant Armenians.

Second. From the beginning of the war, Armenians fought in the Caucasus, in Palestine, and on the western front.

Following the defection of Russia, they took over the Caucasus front, in the interest of the Allies, and prevented the Central Powers from reaching the Baku oil fields for eight long months, contributing thereby, according to Ludendorff, to the breakdown of the western front. This exertion by them shortened the duration of the war, of which America, like the Allies, became a beneficiary.

Third. Following the emergence of Kemal, as a result of our own policy, the Kemalists and the bolsheviki sought to establish physical contact, but the Armenian Republic was in the way.

In July and August, of 1920, while the Kemalists were harassing the Armenian Republic from the southeast, the bolsheviki sent two ultimata to the Armenian Government, demanding the passage of bolshevist troops over the Armenian railways to join hands with the Turks, who were fighting the Greeks in the region of Smyrna, 700 miles away from Armenia. But the Armenian Government rejected these bolshevist ultimata; it said that Greece was an ally of Armenia, and Armenia could not, with honor, place herself in the position of betraying her own ally. Belgium had a powerful foe to contend with; Armenia, far removed from European nations, had two sinister and puissant enemies crushing her, but she kept faith.

Whereupon the Turks and the Reds simultaneously invaded Armenia in the latter part of September, and on October 14 Moscow for a third time sent an ultimatum to her, demanding acquiescence in the terms of the two preceding ultimata.

Fully realizing the hopelessness of her position, Armenia again refused to comply with the demands of the bolsheviki.

On July 13, 1921, after eight months' struggle, the Armenian Government was ousted from Armenia, as the Belgian Government was ousted from Belgian soil, and one part of the Armenian Republic was forced into the soviet confederation, and the other is still occupied by the Turks.

Resolute fidelity and extraordinary courage marked the conduct of the Armenian Republic. It is that republic which the Armenians had set up by their own exertions that the Department of State and its representatives forgot and deserted at Lausanne.

Armenians lost in the World War, in actual fighting upon many battle fields, more than 100,000 men, or double the number of Americans killed in battle, and their material losses are

estimated at $5,000,000,000, which represent the equivalent, relatively and proportionately, of $600,000,000,000 for the United States, or $200,000,000,000 more than our estimated national wealth.

On June 3, 1924, I offered a resolution for a hearing by the Committee on Foreign Relations to inquire into certain facts connected with the negotiation of the Lausanne treaty. On June 6, 1924, the Hon. James W. Gerard made a formal application to the late Senator Lodge, urging action upon my resolution, but the Secretary of State, in a long letter to Senator Lodge, opposed it.

Again, on April 16, 1928, I offered a similar resolution. This resolution is now before the Committee on Foreign Relations.

I find in the New York Times of May 15, 1928, that former Ambassador Gerard, by a telegram to the President, dated May 8, expresses the hope that my resolution for a public hearing upon the Lausanne treaty will not be opposed by the Department of State.

Also, I have since received copies, in common with other Senators, of two letters to the President by Vahan Cardashian, member of the New York bar, dated, respectively, April 17 and May 7, urging either a hearing or submission of the points at issue between the United States and Armenia to the Permanent Tribunal of Arbitration at The Hague for adjudication.

I hope that the resolution which I have offered may receive the attention of the Committee on Foreign Relations. Its voice in foreign affairs has influence in this Republic. It was designed by the fathers of the Republic that it should be a factor in determining the foreign policies of the Republic. It should take cognizance of the statements contained in the resolution, and if our Government has been delinquent in its duty to Armenia, as I assert that it has, and if a treaty was negotiated at Lausanne which was tantamount to a betrayal of Armenia or was influenced by American corporations seeking oil concessions in Mosul or elsewhere, these facts should be ascertained. This Republic should under no circumstances desert an ally or be guilty of punic faith in its dealings with even the humblest or the weakest people in the world.

One other matter I desire to briefly mention. It relates to the Kemalist representative now in the United States. I have received and I am advised that other Senators have received copies of a resolution, accompanied by a supporting paper, requesting the President to hand to this representative his passport. While it is true that an ambassador is accredited to the President who must judge of his qualifications, yet a representative of a foreign government is received by the President not in his private capacity, but as Chief Executive of the United States and in the name and on behalf of the people of the United States.

There are some who believe that if the statements contained in the paper referred to are true, then he no longer should be accepted as the representative of the Kemalist régime. Indeed, it is believed by many that the United States should for the present at least receive no ambassador or representative from Turkey. When the United States entered the World War Turkey promptly severed diplomatic relations with this Government, denounced the capitulatory features of the existing treaty, and, indeed, indicated that the treaty was abrogated. Senators will remember that the administration in negotiating the Lausanne treaty insisted that it was necessary to have a treaty with Turkey in order that diplomatic relations might be resumed. When the Lausanne treaty was sent to the Senate and during the long controversy over the same, which culminated in its rejection, the State Department insisted that it was imperative that the treaty be ratified in order that diplomatic relations with Turkey might be resumed. Immediately after the rejection of the treaty by the Senate, the State Department, contrary to its former position, sought by a modus vivendi to accomplish substantially what it claimed it desired under the terms of the Lausanne treaty.

The action of the State Department in this regard can not be commended; indeed, there is an element of insincerity in it. In harmony with this volte face action of the department Mr. Grew was sent as ambassador to Turkey, and Kemal sent a representative to the United States. I have protested against this action of the State Department. When the treaty was defeated the executive department, if it desired contacts with Turkey and to receive her into the circle of nations with which this Republic sustains diplomatic relations, should have taken steps to negotiate a new treaty. Failing that course, no modus vivendi was proper and no diplomatic relations with Turkey should have been resumed.

HAITI AND AMERICAN RULE

Mr. ODDIE. Mr. President, will the Senator yield?

Mr. KING. For what purpose?

Mr. ODDIE. Just for the purpose of presenting something for the RECORD to follow the speech of the Senator from Utah. I want to present for the RECORD a translation of the message of President Borno, of Haiti, to the head of the council of state on April 18, 1928. That is a most important document. It promises elections in 1930, and forecasts an American withdrawal from the Republic in 1936. It also refutes many of the accusations which have been made against the American occupation.

Mr. KING. Mr. President, the Senator has been for several years an apologist for Borno and the military régime which this Government has forced upon Haiti. Apparently he desires to govern foreign countries by American bayonets——

Mr. ODDIE. I resent that statement of the Senator from Utah. It is wholly erroneous, and I will ask——

Mr. KING. The Senator is speaking in my time, and I have not yielded.

Mr. ODDIE. I ask that there be printed in the RECORD a statement I made in the United States Daily on May 12, 1927, on my return from Haiti.

Mr. KING. I decline to yield at this time for that purpose.

Mr. BLACK. Mr. President, I ask the Senator from Utah if he will not yield for me to ask unanimous consent for the consideration of a bill that can be disposed of in 30 minutes.

Mr. KING. That would be entirely improper. The Senator from Connecticut secured consent for the consideration of a bill, and it is now before the Senate. Of course, it will not pass, and I intend holding the floor until adjournment unless a short executive session is desired.

Mr. BLACK. The Senator from Connecticut has agreed, if it is all right with the other Senator.

The PRESIDING OFFICER. The Senator from Utah will proceed. He has the floor.

Mr. KING. Mr. President, the Senator from Nevada [Mr. ODDIE] stated that he desires that the RECORD shall contain a statement made by Borno, the so-called President of Haiti, which "will refute accusations made against the American occupation." He also desires to have inserted in the RECORD an article prepared by him which appeared in the United States Daily a year ago.

His statements compel me to briefly discuss the Haitian situation. I declined to yield for the Senator to insert in the RECORD the matters referred to, knowing that he will have full opportunity to do so when I yield the floor. The Senator exhibited some feeling when I referred to his defense of the American bayonet rule in Haiti. It is known that the Senator upon a number of occasions has justified the seizure of Haiti by the United States in 1915 and the continued occupation of that country by our military forces. He has attempted to justify, I submit, whatever has been done by the United States in Haiti, which includes the waging of war against the Haitians, the suppression of their constitution, the forcing upon the people of that country of an American-made constitution—the violation of the terms of which is well known to all—and the appointment of a military officer to have supreme control, under our State Department, of a once independent nation. I am familiar with the statement made by the able Senator after he visited Haiti in 1927 and the defense which he there made of American occupation. He now states that the manifesto of Mr. Borno, who is the puppet President of Haiti, foreshadows American withdrawal in 1936.

Mr. President, undoubtedly public opinion will force the United States at an early date to withdraw its armed forces from Haiti and permit the Haitian people to set up their own government under their own constitution, and to freely determine their own domestic and foreign policies. The State Department undoubtedly perceives that the American people will not much longer tolerate the imperialistic course which our Government has pursued toward the Haitian people. It is quite likely, acting under the instructions of our State Department, General Russell, who is the ruler of Haiti under the State Department, has indicated or intimated to the so-called president, Mr. Borno, who is but a shadow and who possesses no real power, that within a few years American military forces will be withdrawn from Haiti.

Mr. President, I have upon a number of occasions expressed my disapproval of the course of our Government in seizing Haiti and subjecting the Haitian people to an alien military rule, and I have demanded that our troops be withdrawn and that the Haitian people be permitted to vitalize or restore their old constitution, which we destroyed, or ordain another, and to set up their own form of government. I have offered a resolution, and it is now pending before the Committee on Foreign Relations, which directs that committee to consider the charges made in the resolution and report their findings to the Senate, together with such measures as will permit the Haitian people to set up and establish their own government, and which will provide for the withdrawal from Haiti of our military forces.

Mr. President, more than a century ago the Haitian people achieved their independence and set up a republican form of government. From that time until 1915 the Haitian people maintained their independence, sustained diplomatic relations with the great powers of the earth, and for many years prior to 1915 were recognized as a de facto and de jure government by the United States. During this period, notwithstanding internal revolutions, Haiti discharged her obligations to all governments and demonstrated, though a weak and feeble State, and though the people were backward and many illiterate, her capacity to maintain herself and govern her people. Like many Latin American states there were frequent changes in administration, occasional revolutions, and conditions not in consonance with the critical views of the people of some other countries. In 1915, without any sufficient reason, the United States sent war vessels into Haitian ports and landed thousands of marines upon Haitian shores.

The Haitian Government was overthrown and a constitution prepared in the United States was forced upon the Haitian people by the armed forces of the United States. The national legislature, consisting of two bodies corresponding to the Senate and House of Representatives of the United States, was dispersed by American bayonets, and since then has never been permitted to assemble. A President, so called, was named by the United States, and he was succeeded by Borno, who was named by our Government. He has been represented by the United States as the real President and executive officer, and the fiction is preserved that the Haitian people are governing themselves.

In conquering Haiti our armed forces killed more than 3,000 Haitians. We set up a military government and have maintained it ever since. It is not supported by the Haitian people. If our marines were withdrawn Borno would go with them, because he does not represent the Haitian people and is regarded by them as a foe to the interests of Haiti and a servile agent of a foreign power. There is no legislative body and the so-called laws which are promulgated either emanate from the American military commander or our State Department or are approved by them before being made public.

The Haitian people have been deprived of the opportunity to hold elections or to control their own local or domestic affairs. There is no freedom of speech or of the press; the independence of the judiciary has been destroyed; judges have been removed and their places filled by others who are supposed to be amenable to the wishes of the governing power. The Haitian people have no voice in the laying of taxes, the collection of revenue, or the expenditures for governmental purposes.

The Haitian people are almost entirely dependent upon the products of the soil, small parcels of which they hold in severalty. Because of the limited area of their country and the large population which had to be sustained, they believed it to be unwise to permit aliens to acquire land, and accordingly by their constitution prohibited it. This constitution we destroyed and the one we forced upon them contained a provision permitting the acquisition of Haitian lands by aliens. Under this new constitution American corporations have acquired large holdings. This situation has aroused the fears of the Haitian people, and many thousands have left Haiti and sought homes in Cuba and other near-by countries.

The Haitian people, speaking through one of their organizations, known as the Union Patriotique, has appealed to the United States against the military occupation and the military rule to which the Haitian people are subjected. In an appeal made to the United States they declared:

> The American Government continues to rule the country behind a nominal government. In order to subjugate the nation and silence the voice of the Haitian patriots, it has resorted to all means of violence and oppression.
>
> A council of state, whose members are appointed and subject to dismissal by the pseudo-president of Haiti, has modified 13 and suppressed 9 articles of the constitution in violation of all legal and constitutional procedure. This, in fact, amounts to abolition of the constitution itself, all guarantees of rights and democratic principles being wiped out.

They declare—

> The Government has practically wiped out the supreme court, and that the pretended amendments which it is forcing upon the people are for the purpose of destroying the competency of the judiciary and legalizing the autocratic course of the Government in suppressing free speech, liberty of the press, and constitutional guarantees.

This organization, speaking for the Haitian people, demands an investigation, with the hope that the Government of Haiti will be restored to the Haitian people.

Mr. President, I have received many letters from Haitian people. Most of them, however, have been forwarded to me by channels other than those controlled by the Haitian Government. It has become apparent to the Haitian people that some communications sent through the ordinary postal channels are interfered with or intercepted. A system of espionage prevails and the fears and suspicions obtaining under an autocratic military régime exist among the Haitian people.

Mr. Rayford W. Logan in a recent article appearing in the Nation shows the pitiable condition existing in Haiti. I ask permission to have inserted without reading several paragraphs from this article.

The PRESIDING OFFICER. Without objection, it is so ordered.

The matter referred to is as follows:

> Any "orderly future development" of the country undeniably depends in great measure upon the means of communication. No past development has received such laudatory press comments as the American-built roads. No present aspect of the situation causes more deception to the visitor, or holds out less hope for future improvement. Instead of the magnificent macadamized roads which one must inevitably expect after reading any report, one finds dirt roads covered with broken, unrolled stones which the first rain washes away. Streams have to be forded in hundreds of places. The roads are constantly being repaired. Mail is often delayed by impassable roads. The rapid depreciation of automobiles makes traveling unusually expensive. Means of communication with the interior are practically nonexistent. The railroad from Port au Prince to St. Marc is a joke, the street car used within the capital a curiosity.
>
> In the midst of such blundering it is refreshing to observe the splendid work of the Marine Medical Corps. Many doctors in remote country districts are unselfishly devoting themselves to improving sanitary conditions and to eradicating yaws, a disease closely akin to syphilis, if it is not really syphilis. Nothing but praise is due these men who are showing what can be accomplished by really efficient officials, imbued with a sympathetic spirit.
>
> If the operation of the administrative departments is resulting in confusion, the social and economic life is degenerating into chaos. Misery stalks throughout Haiti; starvation is threatening the masses; the "elite" is in many instances living beyond its means. The most tangible evidence of this misery is the continued and increased emigration to Cuba. Over two hundred thousand Haitians have definitely deserted the coffee fields for the sugar plantations across the water. Agents still round up laborers as in the halcyon days of European emigration, pay the emigrant tax of $9.85, and ship them to Santiago. In the region of Les Cayes women are doing road work for the American Travaux Publics. A plantation that formerly produced seventy-eight sacks of coffee now produces only eight. Since the vast majority of emigrants are men, the question of marriage is rapidly becoming an almost impossible problem. One distinguished diplomat, a man of moderate expression, declared that "It is really a slave trade that the American occupation winks at and even encourages." For 5 per cent of this emigrant tax, just as of any other tax, fattens the expense account of the office of the financial adviser. No phase of the Haitian situation demands investigation more than this emigration scandal. One wonders how this "orderly future development" will be possible when almost 10 per cent of the total population has already been forced to seek a doleful existence in a foreign country.
>
> A stupendous increase in the cost of living menaces those who remain. On the surface there is apparent wealth. But automobiles, traffic cops, one-way streets, and parking signs will not pay the mortgages which have permitted many Haitians to buy their cars. An augmentation of 19 per cent in the salaries of government employees is not sufficient to meet a doubling in the cost of living. Then what about the ordinary laborer who has not had this petty increase?
>
> His situation is described by M. Dantes Bellegarde, an authority on social questions, in the July-August Bulletin of the Haitian Chamber of Commerce.

The best paid laborer earns 30 cents a day, or in a year with 294 working-days, allowing 3 weeks without employment		$88.20
Food, alcohol, and tobacco, at $0.20 a day	$72	
Rent, $1 a month	12	
Clothing for the year	2	
		86.00
Bank account at the end of the year		2.20

> His food is at best a little codfish or rice and red beans. Meat at 25 cents a pound is obviously as rare as in a vegetarian's diet. It is not an uncommon sight to see a worker satisfy himself for his noonday meal by sucking some sugar cane or drinking a little rum.
>
> In the sordid shack which he rents on the water's edge "there is no ventilation, no sunlight; the most revolting promiscuity assembles every night in one room—men, women, and children—the sick and the well. When a contagious disease breaks out in these miserable agglomerations, it develops rapidly and soon spreads to the rich sections." His clothing is frequently a flour sack. It is easy to imagine the condition of the food and raiment of the $7-a-month teacher. It is not surprising that tuberculosis increases.

Disregarding this situation, the financial adviser forced through a new tariff law, which has resulted in still higher prices. Foodstuffs particularly are more expensive. Codfish, one of the principal elements of the poor people's diet, is now taxed 6 cents a kilogram. The most unfortunate augmentation, however, falls upon flour. Haiti produces no wheat, but consumes an amazing quantity of bread. In 1923–24 Haiti imported 41,329,095 kilograms of wheat. Yet the financial adviser raised the duty from $0.028 to $0.040 a kilogram. The tariff on butter, of which 290,361 kilograms were imported in 1924, has gone up 57 per cent; pure lard and cottolene 83 per cent. As a result, the factory of St. André, profiting by the driving out of its competitors, has already increased the price of this product. Salt fish suffered an increase of about 25 per cent, ham 54 per cent, smoked fish almost 100 per cent, and salt meat 341 per cent.

But the most incredible innovation is, this Haitian tariff strikes from the free list agricultural implements and schoolbooks. Neither are produced in Haiti. No comments could possibly make more evident the present muddle and mess. The new tariff protects industries that do not exist and can not be developed. It increases the revenue, although one of the proudest boasts of the financial adviser is the fact that the interest on the American loan lies snugly—and idly—in the National City Bank six months before it is due. His whole aim is to be able to report, as he recently did, that the revenue for the last three months was so many million gourdes higher than for the corresponding period last year. The next report should show an even greater increase. But it will not show how many more Haitians are enjoying meatless and fishless days, how many children are not in school, nor how many more farms have been abandoned.

Judged from the present situation, then, the "orderly future development" of the island means absorbing Haitian administrative departments, lavishly spending money on American experts of dubious value, dividing Haitians into those working for the occupation and those working for the Haitian Government, driving out the population, impeding academic education and agricultural development, raising the cost of living, lessening American prestige, and increasing Haitian hostility. The British mess in Mesopotamia is paralleled by the American haze in Haiti.

Mr. KING. I call the attention of the Senate to a report upon conditions in Haiti submitted by American investigators, one of whom is Prof. Paul H. Douglas, of the University of Chicago. Another is Miss Emily Greene Balch, of Wellesley, Mass., one of the really great women of the United States. Their report is found in a book entitled "Occupied Haiti," published in 1927, and is the result of a visit to Haiti and a dispassionate investigation of conditions there found. They state that the problem in Haiti consists—

not in individual instances of misused power, but in the fundamental fact of the armed occupation of the country.

They also state that—

Yet this country, the "independent sovereignty" of which is solemnly recognized by the United States, as well as by all other countries, and which is a full member of the League of Nations, has been occupied by the United States by force of arms, kept down by force of arms, and administered for 11 years, at a very considerable money cost to ourselves as taxpayers and a much heavier cost, both in the world at large and more especially in Latin America, to our standing as a respecter of the liberties of others.

On page 32 it is stated that—

It is obvious that as a matter of fact the real power in Haiti is exercised not by the Haitian officials, but by the American occupation.

On the same page it is stated that—

The United States also effectively controls all legislation in this "sovereign and independent" State. Proposed laws must be submitted to the American Legation and to the American high commissioner before they can be enacted by the council of state, now acting in lieu of an elected national assembly.

Let me add at this point that the so-called council of state consists of 21 persons named by the so-called President of Haiti. They are his clerks, relatives, wife's relatives, and his supine and servile followers, if not of the American occupation.

The report further states that—

The occupation is thus essentially supreme and that the military character of the occupation is quite evident.

Reference is made to Brig. Gen. John H. Russell, who controls the marines and who is the so-called "high commissioner to Haiti." The report says:

General Russell is therefore at once the representative of the State Department and of the Navy, and even though he makes the legation his headquarters and appears as a civilian our occupation is nevertheless a thinly disguised military control. * * * American approval is needed for the enactment of laws, the revenues of the country are collected under the supervision of Americans, and the budget is drawn up by the American financial adviser. * * * The control over the gendarmerie is in American hands, as are also the services of health and public works and agriculture.

An examination of this report will convince even those who are wedded to imperalistic policies that Haiti has lost her independence and is subjected to American military control. Professor Douglas, in articles appearing in the Political Science Quarterly for June and September, 1927, reviews conditions in Haiti and supports, I submit, the charges which I made in the resolution now before the Foreign Relations Committee and the statements which I am now making. He points out, as does the report which I have referred to, the control by certain banking interests of the United States of the fiscal affairs of Haiti. I submit that an examination of the facts immediately preceding the military occupation of Haiti and the facts that transpired thereafter will justify the conclusion that American financial interests have played an important part in those movements and are largely responsible for the present military control of Haiti. Haitian bonds have been issued under American occupation to the extent of nearly $30,000,000, which are held by American banking interests. American corporations have been formed to acquire Haitian lands and operate sugar factories and other business enterprises. It may be interesting to my Republican friends to know that Mr. Harding, in a campaign speech at Marion, Ohio, declared that if elected President he would—

not empower an Assistant Secretary of the Navy to draft a constitution for helpless neighbors in the West Indies and jam it down their throats at the points of bayonets borne by United States marines; nor will I misuse the power of the Executive to cover with a veil of secrecy repeated acts of unwarranted interference in the domestic affairs of the little republics of the Western Hemisphere, such as in the last few years have not only made enemies of those who should be our friends but have rightfully discredited our country as their trusted neighbor.

Our Republican friends have forgotten his preelection promises.

Professor Douglas, in one of the articles referred to, states that the—

American occupation controls the Haitian Government and that it is distinctly disingenuous for members of our State Department to argue, as they have at times done, that such acts as the failure to call for the congressional elections have rested solely upon the decision of the Haitian Government. The plain truth of the matter is that if our State Department wanted to have such elections held it could have them called. The fiction of an independent Haitian Government has enabled our officials to divert responsibility for certain actions to the Haitians.

Professor Douglas states that for some time he favored a policy of "gradual withdrawal" from Haiti, but "in recent months the case for an early termination of the occupation has been greatly strengthened." He then states that he has reached the conclusion that—

the program of gradual withdrawal would not furnish a sufficient guaranty of the ultimate intentions of the members of our State Department, who have at present such great power in determining our foreign policy.

Professor Douglas then states that he favors the United States permitting elections by the Haitian people at an early date to prepare a new constitution and elect a President, and that when this is done our military forces be withdrawn. He says there is good reason for the withdrawal of American troops as soon as a Haitian Congress can be elected. He adds:

The slopes of imperialism are slippery. Our recent experiences have indicated that America may well be at a point where it must decide whether it shall be an empire or a democracy. It will be difficult to be both. Finally, and perhaps most important of all, a continuance of an imperialist policy will inevitably unite Latin America, and perhaps even Europe as well, against us. Its ultimate consequences might easily be disastrous. A violent wrench is needed to break through the web in which the advocates of our newer "manifest destiny" are entangling us.

Mr. President, the course which our Government should pursue is clear. We should permit the Haitian people to hold an election for delegates to a constitutional convention at which they may form a constitution. There should be a free election, without the shadow of American authority and without the fear of American bayonets. When their constitution has been formed and the officials provided therein have been elected, then our armed forces should be withdrawn. Haiti belongs to the Haitians, not to us. It is their country, not ours. We are provoking their resentment by remaining and are arousing antagonisms in Latin America which honeyed words and pious protestations will not eradicate.

CONTINENTAL TRADING CO.

During the delivery of Mr. KING's speech——

Mr. BRATTON. Mr. President, will the Senator yield?

Mr. KING. I yield to the Senator from New Mexico.

Mr. BRATTON. May I have the attention of the Senator from North Dakota [Mr. NYE], the chairman of the Committee on Public Lands and Surveys? On yesterday the chairman of that committee filed some observations expressing his views with respect to the testimony taken by that committee under Senate Resolution 101, commonly called the Teapot Dome or the Continental Trading Co. matter. I think there are one or two statements made by the chairman of the committee that are not supported by the evidence. I desire to call them to his attention and to the attention of the Senate.

I call attention to page 6, where this language is found:

> Witness after witness has testified before the committee to the effect that he has not confined his contributions to any one political party.

Mr. President, I am unable to agree with the chairman of the committee in that conclusion; and I do not want the testimony to stand, as adjournment approaches, without question. As I recall, not more than two witnesses testified to any substantial contributions made under circumstances other than direct personal friendship between the contributor and some local candidate on the opposite ticket. If I am correct in that, I think the general statement contained in the report that "witness after witness" testified that his contributions had not been confined to any one political party is inaccurate, and is open to a misinterpretation.

Further in the same paragraph the chairman makes this statement:

> Doheny, once prominently mentioned as a candidate for Vice President on the Democratic ticket, has been liberal with his contributions to both parties.

In that connection the observation should be made that a question arose during the proceedings had by this committee some two or three years ago with respect to the exact amount of the contribution made by Mr. Doheny during the campaign of 1920. As I now recall, Mr. Doheny testified that he contributed $75,000 to the Democratic Party; and Mr. White, the chairman, testified that Mr. Doheny's contribution amounted to $34,000. I believe the chairman will make the statement that his inquiry into that subject matter has confirmed the statement made by Mr. White and has established the incorrectness of the statement made by Mr. Doheny.

Mr. NYE. Mr. President——

The PRESIDING OFFICER (Mr. COUZENS in the chair). Does the Senator from Utah yield to the Senator from North Dakota?

Mr. KING. I yield to the Senator from North Dakota.

Mr. NYE. With reference to the last reference by the Senator from New Mexico, I am happy, I will say, to announce that it is the plan to summon the committee to-morrow to take up such little odds and ends of testimony as we want incorporated in the record of the proceedings of this investigation; but I shall not insist upon waiting until that time to announce that the investigation which was made into the truth of the assertion that Mr. Doheny had not contributed $75,000 is sustained by that investigation.

Mr. BRATTON. Mr. President, I felt confident that the chairman would make the manly statement in the manly way in which he has made it.

I now direct myself to a further statement made by the chairman:

> This is somewhat in keeping with the testimony of one witness, who declared his knowledge of one campaign which found the assistant treasurers of both major parties with offices together. This same witness, with still another, testified that in 1923 there was an agreement between the treasurers of the major parties to refrain from filing any report of campaign contributions received by them. Let it be noted, however, that one treasurer referred to, the second having since died, denied there had been any such agreement or understanding.

Mr. President, as to the testimony of the one witness who appeared before the committee and stated that he understood that the two treasurers entered into such an agreement, let it be definitely understood by the Senate that he stated only hearsay evidence. The treasurer of the Democratic committee, Mr. Wilbur Marsh, the only living witness—the treasurer of the Republican Party, Mr. Upham, having died—appeared before the committee and emphatically denied that he and Mr. Upham ever entered into such an agreement.

In view of the fact that there could be only two parties to the transaction, one of them being dead, with his lips sealed, and the other appearing before the committee and emphatically denying under oath that such an agreement was ever entered into, I think it should not be contended on the floor that such a fact was established, when the only testimony to that effect was admittedly and concededly hearsay only.

I think, Mr. President, that these explanations should be given in connection with the observations filed by the chairman of the committee.

Mr. NYE. Mr. President——

Mr. KING. Does the Senator still want the floor?

Mr. NYE. I do.

Mr. KING. I yield.

Mr. NYE. The Senator from New Mexico refers to the statement—

> Witness after witness has testified before the committee to the effect that he has not confined his contributions to any one political party.

To my mind, that is a very positive statement of fact; and I think if the Senator would take particularly that portion of the hearings conducted by a subcommittee in Chicago he would find that in that volume and in that hearing there was witness after witness who so testified. In addition to that we have, as I recollect offhand, the knowledge of Mr. Doheny's contributions to both parties. We have, too, knowledge that Mr. Sinclair has not confined his contributions to any one political party. We had the information given before the committee here in Washington by Mr. Patten, another Chicago man, that he had not confined his contributions to one political party.

I will say, though, that in the case of a great many of these persons the showing has been made that perhaps one has not divided his contributions so much among national parties and in national campaigns and in national politics as he has made a division in local and State politics.

Mr. WALSH of Montana. Mr. President——

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Montana?

Mr. KING. I yield to the Senator from Montana.

Mr. WALSH of Montana. Will the Senator give us the information afforded by the record with respect to the alleged contribution of Mr. Sinclair?

Mr. NYE. Mr. President, again I must confess that perhaps there has not been offered in evidence that direct testimony which will be offered to-morrow at the meeting that I have suggested. In my files as having been recently received, and I think which came to the attention of the Senator from Montana, though perhaps not, there was the revelation of a contribution in 1924 by Harry F. Sinclair of $3,000—I hope I am stating the accurate figures now—to the fund that was raised to bring the Democratic National Convention to the city of New York; but it seems to me that there is other evidence in the hearings of three or four years ago dealing with contributions by Harry F. Sinclair to both parties.

Mr. WALSH of Montana. Mr. President, of course I have not seen the evidence to which the Senator has referred as not having yet been submitted to the committee. This is the first intimation I ever had of any such contribution by Mr. Sinclair.

Mr. NYE. Are we confined to that?

Mr. WALSH of Montana. There was no testimony taken under the provisions of Resolution No. 101 of the contributions either by Mr. Sinclair or by Mr. Doheny. That testimony was given before the committee four years ago. At that time Mr. Sinclair testified that he had contributed during the campaign of 1920 to both campaigns. When Mr. White came upon the stand he testified that Mr. Sinclair had not contributed anything at all. Mr. Sinclair then came back on the stand and said that perhaps his contribution was to some local campaign.

Mr. NYE. But his first testimony was that he had contributed to both.

Mr. WALSH of Montana. His first testimony was that he had contributed to both campaigns; and Mr. White gave us the evidence concerning the contributions of Mr. Doheny, and he told us that Mr. Sinclair had contributed nothing, and Mr. Sinclair said that perhaps it was some local campaign.

Mr. NYE. Then, Mr. President, the Senator from New Mexico reads the following portion of the report which I have prepared, and which is concurred in by more than one member of the committee, I understand, though that will be definitely determined during the afternoon:

> This is somewhat in keeping with the testimony of one witness, who declared his knowledge of one campaign which found the assistant treasurers of both major parties with offices together. This same witness, with still another, testified that in 1923 there was an agreement between the treasurers of the major parties to refrain from filing any report of campaign contributions received by them.

Let it be noted, however, that one treasurer referred to, the second having since died, denied there had been any such agreement or understanding.

Mr. BRATTON. Mr. President, will the Senator yield for a question?

Mr. NYE. Before I am interrupted, if the Senator will permit, I should like to explain——

Mr. KING. I hope the Senators will conclude their colloquy soon.

Mr. NYE. The Senator has said that the testimony of only one witness was heard to that effect, when, as a matter of fact, the testimony of one Hipsley and one Leonard were to the same effect. I felt, however, in offering any record of that at all in my report of my views and observations, that it was in keeping with the facts as they had been developed.

Mr. BRATTON. Will the Senator yield?

Mr. NYE. I yield.

Mr. BRATTON. Will the Senator tell us from whom the committee received testimony to the effect that the treasurers officed together?

Mr. NYE. That testimony was from Mr. Hipsley and Mr. Leonard, taken in Chicago.

Mr. BRATTON. I do not recall that the committee ever had testimony from any source that the two parties officed together.

Mr. WALSH of Montana. Mr. President——

The PRESIDING OFFICER. Does the Senator from Utah yield?

Mr. KING. I yield for a question.

Mr. WALSH of Montana. Both of those witnesses were examined here, were they not?

Mr. NYE. They were.

Mr. WALSH of Montana. But this testimony was given in Chicago?

Mr. NYE. I am sure it was. I am going to find out.

Mr. BRATTON. Be that as it may, the Senator from North Dakota will concede the correctness of this statement that one of the then treasurers is dead, and that the other one denied emphatically under oath that any such agreement was ever entered into. The Senator concedes that?

Mr. NYE. That is true.

Mr. BRATTON. And that the only testimony the committee had, whether given by one witness or two witnesses, was based entirely on hearsay, to the effect that Mr. Upham told them so?

Mr. NYE. That is true. Let it be understood, in that connection, that the two who so testified were men who were very closely and intimately associated with Mr. Upham.

Mr. BINGHAM. Mr. President, has the Senator from Utah yielded the floor for an entirely different matter?

Mr. KING. I have not.

Mr. BINGHAM. By a vote, the Senate decided to take up a very important bill, which we have been trying for months to get up.

Mr. KING. I shall ask the Senators who have interrupted me, in view of the objection made by the Senator from Connecticut——

Mr. LA FOLLETTE. Mr. President, if the Senator will permit me, it seems rather unfair to the Senator from North Dakota to have a statement put into the RECORD and not full opportunity given him to answer it.

Mr. BINGHAM. I thought there had been full opportunity for all sorts of explanations.

Mr. NYE. There is only one thing. I hope to be permitted to get the record——

Mr. KING. I shall be glad to yield for a moment or two longer, if I will not lose the floor.

Mr. NYE. Will the Senator permit me, after I have been able to find it, to incorporate in the RECORD all the other testimony having to do with the matter?

Mr. KING. Certainly.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. NYE. The testimony relating to the assertion that the two assistant treasurers of the major national parties is found in the testimony of Earl G. Hipsley, page 720 of the committee hearings, and is as follows:

Mr. HIPSLEY. Not after what I had seen and known. One time a number of years ago the assistant treasurer of the Democratic National Committee and assistant treasurer of the Republican National Committee occupied the same offices in the McCormick Building.

The CHAIRMAN. We had one witness before us yesterday who testified he was the third partner in that arrangement and therefore was compelled to contribute to both parties so we have had some acquaintance with that.

Mr. HIPSLEY. Yes; I was reading in the papers.

Reference is made therein to the testimony of one other witness, who was Mr. George F. Getz, whose testimony is found on page 676, as follows:

The CHAIRMAN. Do you confine your contribution nationally to your party?

Mr. GETZ. Unfortunately I had two partners, one who was after me for the Democratic Party and one for the Republican Party. I was the working partner.

The CHAIRMAN. That will be all, Mr. Getz.

(Witness excused.)

The Senator from Montana [Mr. WALSH] and the Senator from New Mexico [Mr. BRATTON], who are voicing objection to the language of this report now, on yesterday in committee listened to the reading of this same language, which was then known to be prepared for report to the Senate, without voicing any objection.

AFFAIRS IN HAITI

Mr. ODDIE. Mr. President, I want to present for the RECORD a translation of the message of President Bornot, of Haiti, to the council of state on April 18, 1928. This is a most important document. It promises elections in 1930, and forecasts American withdrawal from the Republic in 1936. It also refutes in very clear language many false accusations which have been made against the American occupation.

The VICE PRESIDENT. Is there objection to the request of the Senator from Nevada?

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

[Translation]

MESSAGE TO THE COUNCIL OF STATE

PALACE OF THE LEGISLATURE.

Gentlemen of the Council of State, I have the honor to place in your hands a statement of conditions in the Republic; the course of my administration during the past year is clearly described in the several reports in which each secretary relates what has been done.

Abroad, a policy of absolute sincerity, inspired by a deep sense of our dignity and of justice, guided by a loyal comprehension of the higher and permanent interests of the Republic as well as of the States with which we maintain relations, has enhanced the prestige of Haiti and in particular has furthered with our nearest friend, the Dominican Republic, truly cordial negotiations whose consequences, favorable to both countries, will soon become apparent.

At home it may be stated in a general way that the program for the organization of the Republic has been happily continued, so that we may face the future with serenity. For the highly valued results thus far achieved we are wholly indebted to the sincerely friendly way in which the Haitian and the United States Governments have cooperated in meeting the reciprocal obligations defined in the treaty of 1915.

That treaty, whose letter and spirit have been misrepresented both in and out of Haiti by blind prejudice and the reactionary passions of nationalist extremists, has clearly proved its effectiveness in the restoration of our country in the spheres of order, labor, and also of true liberty. It is useless to make hypocritical protests against that treaty, which came to us when we were on the brink of a bloody chasm and saved us. It is useless to condemn it as contrary to the dignity and sovereignty of Haiti. The dignity and sovereignty of Haiti can not possibly consist in allowing political factions—whose recruits, by the way, belong to the minority—to have an absolute right to deliver the Republic to the plague of anarchy; to inflict upon the Nation, which at heart is peaceful and industrious, an intolerable régime of general confusion and corruption in the administration, of periodical destruction by fire of city and country property, and of physical and moral wretchedness for the masses of the people. The dignity and sovereignty of Haiti can not consist in the right to present to the civilized world in this twentieth century the unspeakable spectacle of scandalous slavery hiding behind deceitful appearances of universal suffrage and representative chambers.

American intervention came to aid us in putting an end to a painful situation which could only have ended in final failure—in the fulfillment of all the sarcastic prophecies of the foes of our race and in an offensive disavowal hurled at the heroic fathers of our independence. That intervention, which respects the liberty and independence of our country, presents for international law a case of one of the most beneficent applications of that high Christian duty of assistance and mutual aid which is as mandatory among nations as it is among men. It met the obvious interest—the physical and moral interest—of the Republic of Haiti; it also met the interest which the United States may freely avow that it has in establishing and maintaining in the Caribbean Basin, at the threshold of Panama, at the entrance to the canal, a régime of settled order calculated to prevent international conflicts, whose range can never be measured, and to enable that great nation of 120,000,000

people to guarantee the safety of an interoceanic highway of fundamental importance, the ownership and custody of which place upon it the most serious and unquestionable responsibility.

Eight years hence the cooperation will come to an end. My government's whole energy is directed toward bringing about a program of reforms intended to put the country on the normal path of civilized peoples, and thenceforth render unnecessary the exceptional assistance of the United States.

On May 15, 1930, when the constitutional office with which I am clothed comes to an end, the treaty of 1915 will have only six years to run. On the eve of that date my government, after laying the solid foundations of the economic and financial system of the republic, establishing, while awaiting the coinage of a national currency, a medium of exchange safe from the disastrous fluctuations of the market; inaugurating a customs policy more favorable to Haitian labor; developing means of communication, agricultural, and professional instruction, and the education of the young; establishing a judicial organization better calculated to promote the activities of the courts and to open a door to merit; after affording to real property, through measures that are now in course of preparation, that safety and stability without which loans on real property and agricultural lands can never be hoped for; after popularizing health measures, developing medical assistance throughout the land, both in the cities and among the country people, who have so long been neglected; and finally, after providing for the continuance of order under the ægis of national armed forces—perfected and furnished with an adequate staff of Haitian officers—my government, I say, will be in a position, before concluding its term of office, to begin, without fearing practical difficulties, to apply the constitutional provisions relative to the chamber and senate, and thus to afford its successor an opportunity to avail itself of the last years of the treaty to devote its efforts calmly and under the most favorable conditions to the education of the voting masses and to seeing to the regular functioning of the legislative chambers.

The council of state will then feel, with the great satisfaction of having shared courageously in the great work of national organization and contributed to the establishment of peace and prosperity in our beloved mother country, that the immense and noble task laid upon it by the constitution of 1918 has been accomplished.

I have the honor to renew to you, gentlemen of the council of state, the expression of my cordial esteem.

RELATIONS WITH HAITI

Mr. ODDIE. Mr. President, I submit for the RECORD a statement published in the United States Daily on my return from Haiti last May, giving an account of the conditions that I found there, and with which I am very familiar.

There being no objection, the statement referred to was ordered to be printed in the RECORD as follows:

OUR RELATIONS WITH HAITI

Statement by Hon. TASKER L. ODDIE, United States Senator from Nevada

I have just returned from a visit to Haiti where I had several cordial and interesting interviews with President Borno, a highly educated and interesting man, and a brilliant lawyer and patriot. I studied conditions throughout Haiti carefully, and noted with satisfaction and pride the splendid work being done by our occupation officials in improving the economic, physical, and mental conditions of the Haitian people, and in increasing the productiveness and welfare of the country.

For some years I have given the Haitian problem close study, and especially since the select committee of the Senate, of which I was a member, made a complete and thorough investigation of Haitian problems both in this country and in Haiti in 1922. I am supporting our temporary occupation of that country. I believe it was right for us to have gone to the assistance of Haiti in 1915, and I believe the work we are now doing in continuing our occupation of that country is right, and that we should not withdraw until our treaty, which obligates us to continue that occupation, expires in 1936.

Because of the close association between Haiti and the other Republics comprising Latin America and of the attacks on our country because of our temporary occupation of Haiti, and because our friendly relations with Latin America will become strained if these attacks are allowed to continue, and because of the falsity, viciousness and danger of these attacks, I feel that the American people should be given the benefit of the information I have acquired.

For over 100 years prior to our occupation of Haiti in 1915 the great mass of her people, about 95 per cent, lived in dense ignorance, misery, want, and disease. They were a people virtually kept in bondage, oppression, and subjection by dictators and leaders of constantly recurring revolutions. Banditry, pillage, murders, and atrocities were rampant, and all semblance of government, corrupt and unstable as it was, had crumbled. The finances of the country were in a deplorable condition. Lives and property of Americans and other foreigners were menaced. The French legation was violated, and there was grave danger of the seizure of the customs and the occupation of the country by a European nation, which would have given it a foothold on American territory and resulted in a violation of the Monroe doctrine.

The United States assumed its responsibility and performed its duty by landing and taking temporary control of the country when the final climax was reached in 1915, for the purpose of saving American lives, maintaining the Monroe doctrine, and of assisting in establishing a stable government.

A treaty with the new Government of Haiti was ratified May, 1916, which provided that the United States will, by its good offices, aid the Haitian Government in the proper and efficient development of its agricultural, mineral, and commercial resources, in the establishment of its finances on a firm and solid basis, in the preservation of domestic peace and security of individual rights, in the creation of an efficient urban and rural constabulary composed of native Haitians, in sanitation and public improvement, and when necessary to lend its aid for the preservation of Haitian independence and the maintenance of a government adequate for the protection of life, property, and individual liberty. This treaty has been lived up to by both the United States and Haiti. Our contractural obligations under it are clear and binding, and we are fulfilling them in a thoroughly creditable manner.

Under our occupation and with our assistance Haiti has purged itself of the notorious graft and corruption that existed for generations. It has stabilized its finances and currency, balanced its budget, materially increased its revenues, reduced its costs, and increased its business and economic efficiency, refunded much of its foreign debt, rejected over $36,000,000 of unjust, pressing claims against it. It has established peace and prosperity and law and order which had not been known for over a hundred years. It has established an efficient sanitary service, which has done great work in cleaning up the hitherto filthy cities and towns, and in clarifying and improving insanitary water systems and in draining disease-breeding marshes. It has created a progressive public-works service, which has built and repaired hundreds of miles of good roads, trails, and bridges, which have opened to production to the natives a large part of the hitherto inaccessible country.

It has improved its harbors and created an efficient lighthouse service. It has built streets and parks in the cities and towns, and is constructing irrigation works. It has established a technical service which has built 25 excellent agricultural schools throughout the country, and is building that many more. It has created a splendid agricultural experiment station, which is practically self-supporting, and which, with the schools, is educating the masses of the people and preparing the country for a greatly enlarged and diversified agricultural development. It has, through this agency, successfully introduced the growing of sisal in the arid and unproductive portions of the country. This crop will be profitable to the small landholders, and will furnish employment to many of the people who badly need it. It will be a competitor of the Yucatan sisal monopoly, which furnishes binder twine to the American farmers at excessive cost.

It has established 15 breeding stations and imported excellent stock for improving the miserable scrawny livestock on the island. It has recently distributed 600 good cows to the natives free throughout the country. It has created a veterinary service which held 1,500 clinics and treated 82,000 cases last year. It has created a forestry service for the purpose of reforesting the denuded areas. It has improved and humanized the frightful conditions hitherto existing in the prisons. It has created a splendid public health service which has worked miracles in improving the hospitals and eradicating the terrible prevalence of disease among the great masses of the people. It is holding a hundred medical clinics throughout the country districts every month at which thousands of the natives are treated free, with an enormous alleviation of human suffering and misery. It has established an eye, ear, nose, and throat service in the hospitals which last year treated 22,000 cases.

It has established excellent industrial schools in the cities, where vocational and manual training are taught—all of the foregoing through and only because of our occupation.

It is employing natives almost entirely in all branches of this great work, which is being directed by experts brought in by our occupation treaty officials. It is educating natives to positions of responsibility and leadership in all the departments as rapidly as possible, and is making of them able engineers, physicians, surgeons, nurses, accountants, and competent experts in various other lines, so they will be thoroughly competent and prepared to carry on this magnificent humanitarian, constructive work when the American treaty officials leave the country.

It has created, with our assistance and on our advice, an efficient native gendarmerie for police protection, which is not essentially a military organization. Its members act as advisers and friends to the people in the isolated sections. It was largely officered by our occupation officials at the start, but we have trained natives for this work until now a large part of the officers are natives. When we withdraw, it will be thoroughly trained and capable of preserving law and order and in carrying on the work of helping the natives as it is now doing.

Were we to withdraw our forces now, revolution, bloodshed, oppression, and subjection and a return to the former conditions of barbarism

and misery would quickly follow, and all the work we have accomplished in 12 years would be undone. We can not and will not allow such a calamity to come. Our treaty and humanitarian obligations will not permit us to neglect our duty in this manner.

Our policy is that of offering a helping hand to a worthy neighbor in trouble in order to help make that neighbor happy and prosperous.

We are not imperialistic and our purpose is to protect the sovereignty of the Republic and the Haitian territory for the Haitians. We do not want and will not take one inch of Haitian territory. We expect to withdraw on the expiration of the treaty.

We have heard and read many attacks on our occupation, with charges of imperialism, selfishness, and a desire to acquire Haitian rights and territory, and demands for our immediate withdrawal. These attacks and charges can be proved to be false and misleading in the extreme and inspired by vicious and un-American influences which are openly advising a boycott against the United States by Latin-American countries, and are attempting by insidious means to seriously injure her in the eyes of the world, and to create misunderstandings and ill feeling between her and her Latin-American neighbors. They are encouraged by certain Haitian politicians who desire a return to the former distressing conditions of bondage and oppression of the great masses of the people, in order that they might continue to exploit them to their own selfish purposes.

I desire to absolve a certain class of Haitians from blame for former conditions and a desire for their return. I refer to a large number of the substantial citizens, living mostly in the cities, who are a proud, highly cultured, and interesting people, but because they are a small minority and are law abiding have been unable to oppose the previous domination by the various revolutionary groups.

The great mass of the people are kindly and peace loving. Their ignorance and poverty have in the past generations made them submissive and the easy prey of their exploiters and oppressors. They fear and abhor a return to the former terrible conditions.

Certain Americans base their opinions and attacks on our Government and our occupation, and their demands for our immediate withdrawal, on these false charges. They are wittingly or unwittingly injuring the United States, and attempting to create misunderstandings between her and her Latin-American neighbors. They can be informed of the truth if they desire by familiarizing themselves with the records which are readily available.

Our Government is too sound and our people too intelligent and patriotic to allow these enemies from within and from without to damage us. The ideals and aspirations of our people are unselfish and noble. Our Government was born to a life of usefulness, high purpose and example, and it will not die.

ENROLLED BILLS AND JOINT RESOLUTIONS PRESENTED

Mr. GREENE, from the Committee on Enrolled Bills, reported that to-day they presented to the President of the United States the following enrolled bills and joint resolutions:

S. 126. An act for the relief of May Gorden Rodes and Sara Louise Rodes, heirs at law of Tyree Rodes, deceased;

S. 343. An act for the relief of Sallie Stapleford, Mrs. J. C. Stuckert, Mary E. Hildebrand, Kate Wright, Mary M. Janvier, Harry L. Gray, Frank D. Carrow, Harry V. Buckson, George H. Swain, Claude N. Jester, and Charles H. Jamison;

S. 363. An act for the relief of Louise M. Cambouri;

S. 433. An act for the relief of Harry C. Bradley;

S. 443. An act for the relief of Larry M. Temple;

S. 444. An act for the relief of H. C. Magoon;

S. 471. An act for the relief of Agnes McManus and George J. McManus;

S. 513. An act for the relief of the Hottum-Kennedy Dry Dock Co., of Memphis, Tenn.;

S. 652. An act for the relief of Edgar Travis, sr.;

S. 1297. An act for the relief of Alice E. Moore;

S. 1486. An act for the relief of the owners of the schooner *Addison E. Bullard;*

S. 1541. An act for the relief of George A. Robertson;

S. 1609. An act recognizing the heroic conduct, devotion to duty, and skill on the part of the officers and crews of the U. S. S. *Republic, American Trader, President Roosevelt, President Harding,* and the British steamship *Cameronia,* and for other purposes;

S. 1645. An act for reimbursement of W. H. Talbert;

S. 1769. An act for the relief of the legal representative of the estate of Haller Nutt, deceased;

S. 1825. To amend section 12 of the act approved June 10, 1922, entitled "An act to readjust the pay and allowances of commissioned and enlisted personnel of the Army, Navy, Marine Corps, Coast Guard, Coast and Geodetic Survey, and Public Health Service," as amended by the act of June 1, 1926 (44 Stat. L. 680), so as to authorize an allowance of 3 cents per mile, in lieu of transportation in kind, for persons using privately owned conveyances while traveling under competent orders, May 29, 1928;

S. 1981. An act for the relief of the owner of Dry Dock No. 6;

S. 2061. An act for the relief of W. H. Kaufman;

S. 2076. An act authorizing the allotment of Carl J. Reid Dussome as a Kiowa Indian, and directing issuance of trust patent to him to certain lands of the Kiowa Indian Reservation, Okla.;

S. 2336. An act for the relief of Nina MacDonald, Zenus V. Johnston, Margaret E. Thompson, Arthur L. Beaman, and May Fee;

S. 2438. An act for the relief of the firm of M. Levin & Sons;

S. 2673. An act for the relief of James E. Trussell;

S. 2738. An act for the relief of C. R. Olberg;

S. 2788. An act for the relief of Charlie McDonald;

S. 2894. An act for the relief of Robert O. Edwards;

S. 3030. An act for the relief of Southern Shipyard Corporation;

S. 3088. An act for the relief of Donald M. Davidson;

S. 3314. An act for the relief of John J. Fitzgerald;

S. 3632. An act for the relief of Commodore J. M. Moore, United States Coast Guard, retired;

S. 3794. An act for the relief of R. E. Hansen;

S. 3919. An act awarding a gold medal to Lincoln Ellsworth;

S. 3931. An act for the relief of Augusta Cornog;

S. 3942. An act for the relief of Maj. Charles F. Eddy;

S. 3954. An act to quiet title in the heirs of Norbert Boudonsquie to certain lands in Louisiana;

S. 3991. An act declaring certain designated purposes with respect to certain parts of Santa Rosa Island in Florida to be "public purposes" within the meaning of the proviso in section 7 of the act approved March 12, 1926, entitled "An act authorizing the use for permanent construction of military posts of the proceeds from the sale of surplus War Department real property, and authorizing the sale of certain military reservations, and for other purposes;

S. 4022. An act authorizing the Secretary of the Interior to lease land in Stanley County, S. Dak., to Henry A. O'Neil for a buffalo pasture;

S. 4183. An act authorizing the filling of a vacancy occurring in the office of district judge for the northern district of Illinois created by the act entitled "An act for the appointment of an additional circuit judge for the fourth judicial circuit, for the appointment of additional district judges for certain districts, providing for an annual conference of certain judges, and for other purposes," approved September 14, 1922;

S. 4315. An act authorizing and directing the Secretary of War to sell 3,304.8 square feet of the Fort Brown Military Reservation, Brownsville, Tex., to the Gateway Bridge Co.;

S. 4321. An act authorizing the Secretary of the Interior to dispose of two bridges on the San Carlos Indian Reservation, in Arizona, and for other purposes;

S. 4327. An act to relinquish the title of the United States to land in the claim of Seth Dean, situate in the county of Washington, State of Alabama;

S. 4344. An act granting the consent of Congress to the State Highway Commission of Arkansas to construct, maintain, and operate a bridge across White River at or near Clarendon, Ark.;

S. J. Res. 5. Joint resolution relating to the immigration of certain relatives of United States citizens and of aliens lawfully admitted to the United States;

S. J. Res. 130. Joint resolution suspending certain provisions of law in connection with the acquisition of lands within the Alabama National Forest;

S. J. Res. 155. Joint resolution authorizing the Secretary of War to receive for instruction at the United States Military Academy at West Point, Jose J. Jimenez, a citizen of Venezuela;

S. J. Res. 161. Joint resolution authorizing the President to invite representation of foreign governments to attend an international aeronautical conference on civil aeronautics in Washington on December 12, 13, and 14, 1928; and

S. J. Res. 164. Joint resolution to appoint a board of engineers to examine and report upon the dam to be constructed under H. R. 5773, the Boulder Dam bill.

BILL INTRODUCED

Mr. COPELAND (by request) introduced a bill (S. 4600) for the relief of Louie Osborne Ferson and Dr. Grace Osborne, which was read twice by its title and referred to the Committee on Claims.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Haltigan, one of its clerks, announced that the Speaker had affixed his signature to the following enrolled bills and joint resolutions, and they were signed by the Vice President:

S. 3942. An act for the relief of Maj. Charles F. Eddy;

H. R. 325. An act repealing existing law requiring the Postmaster General to report action taken on claims of postmasters;

H. R. 802. An act to correct the military record of Curtis P. Wise;

H. R. 3221. An act for the relief of Ross F. Collins;

H. R. 3241. An act for the relief of Seymour Buckley;

H. R. 3539. An act for the relief of Frank Murray;

H. R. 4380. An act for the relief of Martha Andrew Virginia Johnson;

H. R. 7354. An act to allow the Postmaster General to promote mechanics' helpers to the first grade of special mechanics;

H. R. 8628. An act for the relief of Amos Dahuff;

H. R. 9051. An act to amend section 1 of the act of February 22, 1875, entitled "An act regulating fees and costs, and for other purposes";

H. R. 10073. An act to change the name of Railroad Avenue between Nichols Avenue and Massachusetts Avenue;

H. R. 10166. An act to amend the Foreign Service buildings act, 1926;

H. R. 10244. An act to credit the accounts of Richings J. Shand, United States property and disbursing officer, Illinois National Guard;

H. R. 10435. An act providing for the extension of the time limitations under which patents were issued in the case of persons who served in the military or naval forces of the United States during the World War;

H. R. 11463. An act to fix the salaries of certain judges of the Territories and insular possessions of the United States;

H. R. 11758. An act authorizing the Secretary of War to grant a right of way for a levee through the Chalmette National Cemetery;

H. R. 11951. An act to amend the act entitled "An act for the relief of contractors and subcontractors for the post offices and other buildings and work under the supervision of the Treasury Department, and for other purposes," approved August 25, 1919, as amended by the acts of March 6, 1920, and February 27, 1926;

H. R. 11981. An act to authorize officers of the Medical Corps to account certain service in computing their rights for retirement, and for other purposes;

H. R. 12064. An act to discontinue certain reports now required by law to be made to Congress;

H. R. 12280. An act for the relief of Lula Lewis;

H. R. 12311. An act to provide for the payment of compensation of William J. Tilson;

H. R. 12605. An act to enable the Postmaster General to purchase and erect community mail boxes on rural routes and to rent compartments of such boxes to patrons of rural delivery;

H. R. 12938. An act for the relief of the State of Ohio;

H. R. 13048. An act for the relief of James Aloysius Manley;

H. R. 13182. An act authorizing the Secretary of the Navy, in his discretion, to deliver to the custody of the State of Alabama the silver service presented to the United States for the battleship *Alabama;*

H. R. 13318. An act authorizing the Val Verde County Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Rio Grande at or near Langtry, Tex.;

H. R. 13399. An act authorizing the Baltimore Gas Engineering Corporation, a Maryland corporation, its successors and assigns, to construct, maintain, and operate a bridge across the Kanawha River at or near Dunbar, W. Va.;

H. R. 13447. An act authorizing and directing the Secretary of Agriculture to establish and maintain a dairy and livestock experiment and demonstration station for the South, at or near Lewisburg, Tenn.;

H. R. 13621. An act to authorize preparation and publication of supplements to the Code of Laws of the United States with perfecting amendments, printing of bills to codify the laws relating to the District of Columbia and of such code and of supplements thereto, and for distribution;

H. R. 13644. An act authorizing the Secretary of Commerce to sell at private sale a portion of the Pointe Aux Herbes Lighthouse Reservation, La.;

H. R. 13777. An act authorizing the State of Louisiana and the State of Texas to construct, maintain, and operate a free highway bridge across the Sabine River at or near Burr Ferry, La.;

H. R. 13930. An act to authorize an appropriation for the American group of the Interparliamentary Union;

H. J. Res. 243. Joint resolution to provide for the striking of a medal commemorative of the achievements of Thomas A. Edison in illumining the path of progress through the development and application of inventions that have revolutionized civilization in the last century; and

H. J. Res. 307. Joint resolution to preserve for development the potential water power and park facilities of the gorge and Great Falls of the Potomac River.

BOULDER DAM

Mr. CURTIS. I ask unanimous consent that the unfinished business be laid before the Senate.

The VICE PRESIDENT. Without objection, the Chair lays before the Senate the unfinished business.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (S. 728) to provide for the construction of works for the protection and development of the lower Colorado River Basin, for the approval of the Colorado River compact, and for other purposes.

HERBERT HOOVER—A MAN OF TOIL AND TOLERANCE

Mr. SHORTRIDGE. Mr. President, I ask permission to have published in the RECORD an article appearing in the Times-Gazette of Redwood City, Calif., written by the editor and owner of that paper, Mr. D. E. O'Keefe, entitled "A man of toil and tolerance," relative to Secretary of Commerce Herbert Hoover.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Herbert Hoover was reared in an atmosphere of toil and tolerance. His father was a blacksmith, and his mother a Quaker preacher. Born in 1874, in West Branch, Iowa, he spent his early years among the simple, sturdy folk of that region. The lessons of tolerance and sympathy for the views of others, which the world has seen to be so deeply ingrained in the man's soul, are the natural outgrowth of those boyhood years.

His parents had both died before he was 8 years old, and he was reared by Quaker relatives on farms at West Branch, Iowa, and at Newburg, Oreg. He was only 13 years of age when he began to earn his living in the truck gardens near Portland; later he worked as an office boy at Salem and as a clerk in Portland. Meantime, he attended school, and being told of the new Stanford University in California, he prepared himself to enter it by attending night school.

Memories of Herbert Hoover will ever be a part of the traditions of Stanford University. He was the first student resident at the university's dormitory, and, being essentially a worker, he enrolled in the department of geology and mining. In the summer he found employment with various geological surveys, and when he graduated his first job was that of mine laborer in Grass Valley, Calif.

From mine laborer in 1895 to world-renowned mining engineer and industrial executive in 1913 is a long, hard climb. In between stretch 18 years of work, ambition, integrity, ability, and more work. In 1913 the concerns of which he was the executive engineer employed over 175,000 men, and no strike ever interrupted their operations during his administration. His profession had carried him to the ends of the earth; China, England, Russia, Burma, Mexico, Australia, Alaska; all felt the constructive, directing influence of the man. And he, in turn, broadened and enriched by the comprehensive knowledge gained from his observations and contacts, became fitted as few men have ever been fitted to understand the problems and needs of his country.

In 1914 Hoover was sent to Europe to interest foreign governments and industrial leaders as exhibitors in the Panama-Pacific Exposition to be held at San Francisco. When the war broke out he was in London, and there the American authorities sought his aid in relieving the situation of the many thousands of Americans stranded in Europe owing to the suspension of banks and dislocation of transportation. He organized the American relief committee and served as its chairman. Over 160,000 Americans were benefited by this work.

Hardly had he ceased his labors in Europe when in 1921 he was again called upon because of the great famine in Russia. The organization which he formed continued to minister to the Russians until late in 1923, when it was demobilized after having saved millions of lives.

From 1914 to 1923, nine years, Herbert Hoover had dedicated himself to the service of humanity, abandoning his profession and receiving no compensation, not even traveling expenses; his compensation lay in the knowledge of a great work well done. He brought to the problem of ministering to the World War's afflicted sufferers a vision and an understanding so practical and so sympathetic as to astonish the people of all nations.

What he did for the unfortunate sufferers in the Mississippi Valley catastrophe is too fresh in our minds to need repetition. He has, indeed, been "the man of the hour." Where there has been a big job to do Herbert Hoover has been drafted to do it. And he has ever brought to his work astonishing energy and ability and understanding—and he has always succeeded.

Selected to administer the Department of Commerce, a heretofore unimportant department of the Federal Government, he made it, in less than eight years, one of the principal factors contributing to our national progress and prosperity.

His youth, young manhood, world experience, and public service at home and abroad give him a fitness for the Presidency rarely found in a candidate for that high office.

He maintained always his legal residence in the United States, with his principal office in San Francisco, and he kept constantly in touch with his home country.

Understanding, as few men of our day do, our national needs, he advances sound plans for future development based upon sound economic principles in line with the best features of the platforms of the Republican Party from its beginning.

D. E. O'KEEFE.

THE POWER TRUST

Mr. NORRIS. Mr. President, I ask unanimous consent to have printed in the RECORD several articles by Paul Y. Anderson in the St. Louis Post-Dispatch, an editorial from the St. Louis Post-Dispatch, several editorials from the Washington Herald, a copy of the minutes of the national executive committee of the so-called Water Power Trust as brought out in the evidence before the Federal Trade Commission, and a general summary of educational and public-relations activities of the public-utility industry in Pennsylvania.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

[Article from the St. Louis Post-Dispatch, May 17, 1928]

POWER TRUST PUT TEXTBOOKS INTO MISSOURI SCHOOLS—FIVE SUCH WORKS PREPARED UNDER SUPERVISION OF ITS ST. LOUIS AGENT WERE USED—DIRECT BID TO UNIVERSITIES MADE—PROFESSORS FROM THREE MISSOURI COLLEGES HAD EXPENSES PAID TO KANSAS CITY CONFERENCE MARCH 16

By Paul Y. Anderson, a staff correspondent of the Post-Dispatch

WASHINGTON, May 17.—A thorough investigation of the propaganda which has been carried on in the high schools and colleges of Missouri by the public-utility companies of the State was promised to-day by Chief Counsel Robert Healy, of the Federal Trade Commission, who is conducting the inquiry into the activities of the Power Trust.

Representatives of the utility companies will be summoned to appear before the commission.

Healy's announcement followed the discovery yesterday that 690 high schools in Missouri are using five textbooks which were written by propaganda agents of the utility companies. Coupled with this was the disclosure that efforts had been made to "line up" college and university professors in the State by giving them the Power Trust viewpoint on utility problems, and that a widespread campaign had been waged through newspapers and public speakers to create sentiment against municipal ownership.

FIVE POWER TRUST TEXTBOOKS USED

Evidence showed that the utility companies of Missouri carry on their propaganda activity through a "committee on information," which has headquarters in St. Louis, and is under the direction of J. B. Sheridan, of St. Louis, a former newspaper man and sports writer.

It was testified that the five textbooks in use in the Missouri high schools were prepared under Sheridan's supervision.

In connection with the Power Trust's program for "lining up" professors and getting its propaganda into the colleges and universities, it was disclosed that the National Electric Light Association, composed of power companies throughout the country, created a "committee on cooperation with educational institutions" to deal with Missouri, Kansas, Iowa, and Nebraska. Sheridan is the Missouri member of this committee. The chairman is C. B. Macy, head of the Des Moines Electric Co.

SHERIDAN RECOMMENDED FOR POST

Sheridan's name was proposed by Thorne Brown, director of the Mid West division of the National Electric Light Association, who wrote to Macy last September 6, as follows:

"I suggest the name of J. B. Sheridan, of St. Louis, as a good selection for Missouri. I say this because Mr. Sheridan has had a good deal of contact with the Missouri University, and through his active management of public speaking in Missouri has come into contact with outstanding educators. He would, I am sure, like to serve on this committee. He so indicated to me at one time."

An interesting event in the campaign to give college and university professors the "right slant" on public-utility questions was a conference held at Kansas City last March 16, which was attended by three professors of economics from Missouri colleges and the Kansas City superintendent of schools. All those who attended had their expenses paid by the public-utility companies.

The meeting was carefully planned in advance by agents of the power companies. It was presided over by C. O. Ruggles, formerly dean of commerce at Ohio State University, but now employed by the power companies at a salary of $15,000 a year to conduct a survey of colleges and universities throughout the United States for the purpose of introducing courses sponsored by the public-utility companies.

Correspondence introduced at the hearing yesterday showed that the faculty lists were carefully scanned by the power companies before the invitations were sent out.

These invitations asked the educators to meet with "Dean Ruggles." They avoided any mention of his present employment, and it might have been concluded from them that he was engaged in research work on behalf of Ohio University. The closing sentence said: "Your expenses will be paid. It is recognized that many educators do not have traveling-expense accounts, hence donations have been made to cover the situation by public-utility companies. You need feel no embarrassment in this respect."

POWER TRUST PAID RAIL FARES

As a matter of fact, the evidence showed that the money came out of the regular propaganda appropriations of the National Electric Light Association. The total cost of the meeting was $1,200.

A telegram from Sheridan to Brown was introduced. Apparently it was in reply to one from Brown endeavoring to "get a line on" certain professors at Park and Westminster Colleges before inviting them. Sheridan wired back:

"Do not know men at Park and Westminster, and have special reasons for being dubious about making invitations too pressing."

This note of caution was in strong contrast with the attitude manifested in connection with the same event by Joe Carmichael, publicity director for the public utilities of Iowa. He testified on the preceding day that he was told to "round up" the professors of economics from four Iowa colleges for the meeting, and that he did it without ceremony.

"Those which could not be handled by me directly I reached through the managers of the local utility companies," he said. It had previously been shown that executives of the companies had ways of getting what they wanted in the schools by "working on" the members of the school board, who usually were men engaged locally in business.

OTHERS URGED CAUTION, TOO

There were others in the power companies' employ, however, who believed, with Sheridan, that wariness should be exercised in arranging for the Kansas City meeting. Brown was one of them. A few days before the meeting he wrote to Macy:

"It seems to me advisable that a meeting with these educators, many of whom have tendencies toward suspicion, should not be particularly loaded down with public-utility men. This is a matter of strategy."

The caution was obeyed, and when the meeting was held there were 11 educators present and only 4 utility men, in addition to Ruggles. Their names were contained in a gloating letter subsequently sent to the national headquarters of the National Electric Light Association, which stated that the results of the meeing had been "highly gratifying." They were L. E. Meador, Drury College, Springfield, Mo.; P. T. Nogenson, Missouri Valley College, Marshall, Mo.; E. M. Bainter, president of the Kansas City Junior College; I. I. Cammack, superintendent of schools of Kansas City; C. T. Hickok, Coe College, Cedar Rapids, Iowa; F. E. Walsh, Creighton University, Omaha; N. W. Bohlman, Drake University, Des Moines; F. S. Ross, State Teachers College, Emporia, Kans.; L. M. McDermott, Wesleyan University, Lincoln, Nebr.; C. E. Erkes, Morningside College, Sioux City, Iowa; and E. D. Strong, Grinnell College, Grinnell, Iowa.

UTILITIES BORE ALL EXPENSES

"All the expenses were borne by the Mid West division," stated the report to New York headquarters of the National Electric Light Association. "In the opinion of the utility men present it was money splendidly spent, because it represents the beginning of a plan valuable at once to the colleges and to the Central States companies."

Another report complained, however, that Dean Puckett, of the department of economics at Westminster College, had refused to attend, and it was intimated that his views on public-utility questions were not altogether as the companies would like them to be.

Heretofore virtually all the propaganda activities of the power companies in the schools have been confined to the public schools.

PLAY FOR CATHOLIC SCHOOLS

The advisability of extending them to the Catholic schools was advocated in a letter written from St. Louis last December 16 by C. M. Ripley, a paid lecturer employed by the power companies to deliver speeches over the country. Addressing one of the power executives, he said:

"The only Catholic audience which I have addressed was in the Middle West, and I believe we should do more of it. The Catholics are a big element in our country. The priest in charge of the meeting at Dubuque College (Iowa), where 700 high school students attended, hunted me up afterwards and complimented me on the speech and the pictures."

Brown was on the stand nearly all day yesterday. He testified that in addition to being publicity director for the National Electric Light Association in the Mid West division, he also supervised the work of the "information committee" maintained by the local utility companies in Nebraska. About 5,000 copies of two textbooks written by agents of the utility companies have been circulated in the public schools of Nebraska, he testified. Like other power-trust textbooks which the commission has examined, they contain passages designed to instill prejudice in the students' minds against municipal ownership of utilities.

CALLS UTILITIES CAMPAIGN "A CRIME AGAINST YOUTH"—J. W. CRABTREE, SECRETARY OF NATIONAL EDUCATION ASSOCIATION, DENOUNCES "DOCTORED" TEXTBOOKS IN SCHOOLS

WASHINGTON, May 17.—The dissemination of power-trust propaganda among the public schools and universities, by means of "doctored" textbooks, pamphlets, subsidized teachers, and other methods, as exposed before the Federal Trade Commission, was bitterly denounced by J. W. Crabtree, secretary of the National Education Association, in a letter yesterday to leading Iowa educators.

He called it "a crime against youth," declared the power propagandists were "making fools of professors," and demanded that something be done about it.

The letter, which was addressed, among others, to Walter A. Jessup, president of University of Iowa, said:

"Mr. Joseph Carmichael, director of the Iowa committee on public utility information, testified yesterday before the Federal Trade Commission that his committee had been able to have unsatisfactory textbooks thrown out and ones to their liking put in. He explained that they worked largely through the principals and superintendents.

"So right in your good State of Iowa, without your knowledge, and with the innocent help of college professors and superintendents, the power *lobby* has made its greatest progress in carrying out its program. It looks as if we have been caught napping.

"What are we going to do about it? It would seem to me that the State department, with the help of the State association, ought to look into this matter so far as Iowa is concerned. Remember that this questionable work, this making fools of professors and superintendents, and this crime committed against youth has been done by publicity committees, and that the real business men have been in ignorance of what was going on, just as you and I have been in ignorance of it all.

"The commission keeps asking witnesses as to the ethics of their program, as to the right or wrong of their method in going into the schools, and with their strong arm forcing their semipolitical views on the schools.

"Judge Healy asks whether they ever think of the right or wrong of it, or whether they think only of their own benefits."

GOVERNOR BAKER AIDED TO GET UTILITIES' BOOKS IN SCHOOLS—"YOUR PLAN MEETS WITH MY APPROVAL" THE THEN STATE SUPERINTENDENT WROTE IN 1922

Disclosures made in the inquiry of Federal Trade Commission at Washington into the activities of the power corporations develop that a propaganda campaign in the Missouri school was begun by the Missouri Committee on Public Utility Information in 1922 with the cooperation of Gov. Sam A. Baker, then State superintendent of schools.

J. B. Sheridan, manager for the committee, wrote to Baker suggesting that high schools be provided with the textbooks, or, as they were labeled, "bulletins," describing the activities of public utilities in the State. He asked Baker to supply him a list of the high schools with the names of the principals.

Baker replied with approval of the scheme in the following language: "Your plan for getting the material before the high schools meets with my approval, and I am sure that the teachers will be glad to use this material." He supplied the list of high schools with the names of the principals.

Thereupon Sheridan addressed the principals with a letter beginning: "Requests for information concerning the various phases of public-utility operation have become so numerous as to warrant the organization of the Missouri Committee on Public Utility Information as an agency through which the desired data may be secured."

FORMED IN MANY STATES

The source of the "so numerous" inquiries was not stated. The date, however, coincided with the birth of similar committees in almost every State of the Union, the inspiration of which was not so much "numerous inquiries" but the desire of public utilities as brought out before the Federal Trade Commission to appear in a favorable light before as many citizens as possible.

Sheridan linked the public utility propaganda with education in the following words in his letter to the principals: "If our civilization is to continue and progress to higher levels it will be because of the effects of one factor which did not exist in earlier times, namely, the universal use of manufactured power and the application of the physical sciences to the everyday affairs of human life. These are precisely the activities in which the public utilities are engaged, so that the contribution they are prepared to make to education takes on an aspect of general social importance."

Nearly 700 principals of high schools replied to Sheridan's letter with a request for the bulletins, which they were assured "could be relied upon to furnish accurate information," however one-sided. Sheridan closed with the suggestion that the study of the bulletins be supplemented with visits to local utilities where "the pupils will have opportunity to see and have explained to them many of the principles taught in the classroom."

SIX BULLETINS TO SCHOOLS

Six bulletins were prepared and dispatched to the high schools. They described the mechanics of the operation of the various utilities—electric, gas, street railways, and telephone—and in addition presented the problems of the utilities as the utilities would like to have the public see them.

One bulletin touching upon all utilities, entitled "A Half Century Miracle," contained the paragraph: "It is estimated that here are 100,000 separate owners of the public utilities in Missouri. These owners are individuals, firms, banks, insurance companies, and the like, which hold the stocks and bonds of the companies operating the utilities."

Nothing was said about the common stockholders, the relatively small group who get the cream of the profits by borrowing the money necessary to create the utilities from the public at from 4½ to 7 per cent and receiving from 7 to 8 per cent on that money. At that time the reorganization of the street railways in St. Louis had not been accomplished, with its financial set-up giving the owners of common stock a potential earning of 25 per cent on their investment.

PRAISES STREET-CAR SYSTEM

In the same bulletin there was comment on the street-car system of St. Louis. The bulletin assured the school boys and girls of rural Missouri: "The influence of relatively rapid electric street-car service in abolishing residential congestion by enabling the inhabitants to live out where they have abundant light and air is illustrated by the city of St. Louis.

Again the bulletin proclaims: "Food, clothing, shoes, furniture, and similar necessities of life have increased in cost in the last five years from 25 per cent to 110 per cent. The increase in cost to the users of the public-utility services has averaged close to 10 per cent." School boys and girls in St. Louis, if not those of the country, were aware of substantial increases in telephone, gas, and street-car rates.

The Missouri committee on public utility information also extends its propaganda to newspapers in a monthly publication, the Missouri Utility News. Newspapers are assured that the publication "is not intended as a publicity medium, but permission is given to any Missouri editor to reprint all or part of any article considered of news value."

Recent issues of the News have contained articles opposing the proposal that the Federal Government operate Muscle Shoals and to the bill in Congress for the development of the huge power of Boulder Dam by the Government instead of the Power Trust.

[From the St. Louis Post-Dispatch, Wednesday May 16, 1928]

SIX HUNDRED AND NINETY SCHOOLS IN MISSOURI USE BOOKS OF POWER TRUST—TESTIMONY AT HEARING DISCLOSES J. B. SHERIDAN, OF ST. LOUIS, HEADS PREPARATION OF PROPAGANDA—FIVE BOOKLETS GO TO 88,453 STUDENTS—553 ADDRESSES IN YEAR AND 7,167 COLUMN-INCHES IN PAPERS ON UTILITIES INTERESTS REPORTED

By Paul Y. Anderson, a staff correspondent of the Post-Dispatch

WASHINGTON, May 16.—Five propaganda booklets prepared by paid agents of the public utility companies now are being used as reference works in 690 of the 790 high schools in Missouri, the Federal Trade Commission discovered to-day in its investigation of the Power Trust.

The booklets were written under the direction of J. B. Sheridan, of St. Louis, a former newspaper man and sporting writer, but now chief publicity director for the combined public-utility corporations of Missouri.

According to a statement issued by the publicity bureau itself, the booklets are being studied by 88,453 high-school students in the State.

The disclosure of the Power Trust's invasion of the public schools of Missouri came as an unexpected incident in the commission's investigation of the trust practices in Nebraska. In the files of Thorn Brown, chief propaganda agent of the power interests in Nebraska, was found a copy of a letter from Brown to J. B. Sheridan, secretary of the Missouri committee on public utility information.

LETTER TELLS OF WORK

The letter acknowledged receipt of a circular from Sheridan, describing the Missouri committee's work in the schools and through the newspapers and speakers' bureaus.

The circular describing the Missouri committee's activities was never intended to reach the public. It was for the information of the utility companies which were supporting the committee, and was designed to impress on them that the committee had been very effective in disseminating propaganda favorable to them.

The circular bore the following title: "How the Missouri Committee on Public Utility Information Is Helping the Service by Telling the Utilities Story to Missouri."

The officers of the committee were named as follows: Chairman, Percy Redmund, Southwestern Bell Telephone Co.; treasurer, Herman Spoehrer, Union Electric Light & Power Co.; secretary, J. C. B. Sheridan, 1017 Olive Street, St. Louis; steering committee, J. C. Hillemeyer, Douglas Williams, and R. D. Lewis.

On the inside of the circular appeared a photographic display of five booklets, respectively entitled: "The Telephone," "Electricity," "The Electric Railways," "A Half-Century Miracle," and "Manufactured Gas." Underneath, in bold-face type, was the caption: "88,453 Missouri pupils study these utility booklets."

TO 690 OUT OF 790 SCHOOLS

Then followed the statement: "The utility educational service for schools, consisting of reference pamphlets on gas, electricity, telephone, and electric railways, has been distributed to 690 of the 790 high schools in Missouri, on request of principals and teachers. They serve as reference books on public utilities of the State.

"The 690 high schools using the service have an enrollment of 88,453 students, which is 97 per cent of the total enrollment of 90,831 students listed in the Missouri high-school directory.

"The booklet outlines the economies of public-utility operation, methods of financing and engineering, and the use of gas, electricity, the telephone, and electric railways. The committee has letters from 300 high-school teachers highly commending the utility information service."

TELLS OF NEWSPAPER STORIES

The Missouri bureau of the Power Trust, like those in other States, was proud of its success in getting its propaganda into the newspapers, as well as the schools. Thus, there appeared in the circular the following:

"Missouri newspapers have used 7,167 column inches or 100,339 agate lines, being 44¾ pages of news stories sent out by the committee in the 12 months ending November 1, 1927. This is an average of more than three and three-quarter pages of news every month."

In his letter Brown congratulated Sheridan on his success in getting favorable publicity into the Missouri newspapers.

"The circular sent out by you to member companies illustrating the completeness of your contact with Missouri newspapers was very interesting," he wrote. "I judge your contact is superior to ours, and that, in turn, is a matter of the personality of the director, no doubt.

TELLS OF NEBRASKA BOOKS

"We are just now distributing electricity books in the schools of Nebraska. I would certainly appreciate it if you can let me have a set of your own textbooks. Thus far we have issued electric and gas textbooks. The telephone people do not function with us, so that is out of the question. We will probably issue some sort of a text on the electric railway next."

The Missouri committee also established a speakers' bureau for spreading the public-utility gospel in the State. According to the circular, 553 public addresses on utility subjects were delivered last year in Missouri to audiences of 40,664, by speakers sent out by the public-utility companies.

Sheridan, and possibly other officers of the Missouri committee, will be summoned to appear before the commission to explain their tampering with public education, it was stated to-day by Robert Healy, chief counsel for the Trade Commission.

Brown's disclosures of the activity of the Power Trust in Nebraska schools rivaled in interest the evidence affecting St. Louis and Missouri.

Prior to entering the employ of the public utility companies Brown had been secretary and chairman of the Nebraska Railway Commission, which had regulatory powers over the public utilities. He did not discuss the ethics involved in accepting employment from the companies which he had previously regulated.

It was very soon developed that the Nebraska propaganda bureau of the power companies had a "textbook committee," the chairman of which was a sales executive of the Western Electric Co.

"What did the committee do?" Healy asked. "It wrote a textbook," was the reply.

"Did the committee write the book or did it employ a scholar or writer to do it?" "The members of the committee wrote it themselves," was the reply.

"Why did these people feel it was necessary to write a textbook?" Healy demanded. "Well, we felt that the information on public utilities contained in the existing textbooks was very meager."

Brown admitted that about 5,000 copies of the book were put into the schools of Nebraska, and that other copies were put in the public libraries.

AIM "WHOLLY ALTRUISTIC"

While the hearing room resounded with guffaws, Brown solemnly insisted that the main aim of the power companies in preparing and circulating the book was "to help the rising generation to a better understanding of public-utility problems."

"So your purpose was wholly altruistic?" Healy sarcastically inquired. "No doubt the power interests expected to benefit ultimately, through a better informed public opinion," was the reply.

"I hope you will be frank enough to admit that the companies which paid for these booklets and virtually forced them into the schools were not moved solely by a passion to improve education," Healy snapped. "Perhaps not wholly," was the prim answer.

[Editorial from the Washington Herald, Friday, May 4, 1928]

POWER TRUST IS SHAMELESS IN DEBAUCHING PUBLIC THOUGHT

It is not easy to recall so striking a case of debauching the public thought and demoralizing the community mind as is presented in the activities of the National Power Trust.

One reads that in Russia the bolshevist government has set about deliberately to educate a rising generation in the principles of communism and in hostility to all religion. But even that policy was deliberately adopted by a de facto government. Our American Power Trust has not yet been attested as quite a de facto government. It has made considerable advances in that direction but has not been accorded recognition.

"Let me write the songs of a nation, and I care not who makes its laws." A wise and astute observation; but how much stronger the boast that the Power Trust must have made: "Let me educate the youth of the Nation, and I will be able to snap my fingers at regulation, public ownership, and popular interest."

The country has need to think seriously on these revelations. That a single profit-mad business interest should reach the writers of textbooks, the teachers of economics, the leaders of public thought, in order to pervert judgments and mislead opinion, is a sinister thing.

The Power Trust seems to have hesitated at nothing. "Catechisms" of "sound doctrine" in the interest of private monopoly and corporate greed have been distributed with sardonic disregard for public interest, public morals, or any other consideration except exaggerated dividends.

Washington people have read about the employment by the Power Trust, in its literary activities, of a gentleman who had served as a member of the city's board of education. They have read of college professors, eminent economists, and distinguished literary men, receiving undercover fees to color their thought and writing. Small wonder that they are inquiring, What sort of economics, what stripe of sociology, will be taught in our public schools if the Power Trust establishes its proposed monopoly of public utility service!

[Editorial from the Washington Herald, Thursday, May 24, 1928]

POWER-TRUST PROPAGANDA FOR THE FOLKS BACK HOME

In several States the propaganda organizations of the Power Trust have introduced public-utility "catechisms" into the public schools, used as textbooks, to teach the youth of the country what they should think about the capitalization, earnings, charges, and services of the corporations which serve them with electric current. Here is a "catechism" for Congress, based on the revelations made by the Federal Trade Commission in its current investigation of the propaganda and lobby organizations of the utility companies:

Q. What is the Power Trust?—A. It consists of the united electric light and power companies, banded together into associations to control education, press, and legislation in the United States.

Q. What are the names of these associations?—A. The National Electric Light Association, the Joint Committee of National Utility Associations, and State utility information associations, covering 38 States.

Q. How do they operate?—A. Each association has a director and a staff, supplied by the electric-light corporations with money to carry on their propaganda and lobby activities.

Q. Where do the companies get the money to support these associations?—A. The companies collect the money from us in the form of rates.

Q. Are they allowed to do that with our money?—A. Certainly. The companies call it expenditures for "public relations," and they treat it as an operating expense.

Q. Then they tax us for money used to corrupt schools, press, and legislatures?—A. Certainly.

Q. How much do they spend a year for these purposes?—A. Each State association averages $20,000 to $30,000 a year. The National Electric Light Association has a budget of over $1,100,000 this year. The joint committee has had $400,000 handed to it since June 1, 1927, to defeat the Walsh resolution for a Senate investigation of the Power Trust and to beat Boulder Dam.

[Editorial from the St. Louis Post-Dispatch, Friday, May 18, 1928]

"A CRIME AGAINST YOUTH"

In the opinion of J. W. Crabtree, secretary of the National Educational Association, the power propaganda in public schools exposed in the power inquiry before the Federal Trade Commission is "a crime against youth."

It is, indeed. It is also an amazing revelation of the extent to which the utilities combine fears the consequences of its own methods. The magnates are so afraid of public ownership, so fearful something will happen to end the orgy of exploitation in which they are engaged, that they think it necessary to instill into the minds of the people in youth an impression that public ownership is an evil and terrible thing, inspired by communists and bolshevists.

It will both enrage and amuse the country, we imagine, to learn that a great industry is so frightened that it can hardly wait for the people to become old enough to think before they must be told what to think about public ownership of the utilities. In Missouri the propaganda

of the industry, carrying open warnings against public ownership and insidious thrusts at such projects as Muscle Shoals and Boulder Dam, are going out monthly to the press, and the bulletins of the utilities are going to 690 of the 790 high schools of the State. In Iowa public-school textbooks containing a good word for public ownership were removed by influence upon school boards and the pamphlets of the utilities substituted for them. In both States the press is being liberally fed upon this pabulum, while honoraria to university and college professors take not only the form of money but the publication of their books. Nebraska is carrying in her schools 5,000 textbooks written by agents of the utilities.

It will surprise the country to learn that school principals and superintendents could be such dupes as that. "Your plan for getting the material before the high schools meets with my approval, and I am sure the teachers will be glad to use it," fatuously wrote the present Governor of Missouri, Sam A. Baker, then superintendent of schools. He seems not to have had the slightest suspicion that the utilities had an ulterior design in asking so great a privilege as to make their pamphlets textbooks in the schools. Nor did teachers, so far as we know, protest against being used in this way. They seem to have acquiesced in the suggestion that public ownership is an evil without the *slightest misgiving* as to the purposes behind such a campaign. As a matter of fact, there has never been any more reason why the public utilities should furnish text matter to the schools than that political parties should do so, or that Wall Street, or the oil industry, or the Navy League, should in this way seek to influence public opinion.

The exposure ought to do good. It ought to arouse the schools to a better conception of their responsibility. That it will convince the country how bad is the conscience of the utilities there can be no doubt. The whole thing is damnable. It illustrates the depths to which our gross materialism has brought us. It is not that Missouri, Iowa, and Nebraska only are like this. The same thing is going on all over the country. That the utilities are not above wearing the guise of beneficence in so shameful a practice is shown by this paragraph from one of their Missouri pamphlets:

"If our civilization is to continue and progress to higher levels, it will be because of the effects of one factor which did not exist in earlier times, namely, the universal use of manufactured power and application of the physical sciences to the every-day affairs of life. These are precisely the activities in which the utilities are engaged, so that the contribution they are prepared to make to education takes on an aspect of general social importance."

However, its social importance is readily dwarfed by its political importance when its pamphlets, as those of Missouri do, ask if the farmers of Missouri want to be taxed for Boulder Dam, and when the whole text reeks with bias in favor of private ownership of the utilities.

Mr. Crabtree is right. It is "a crime against youth," as well as an offense against public decency. The educational authorities everywhere should immediately stop it.

UTILITY PRACTICES LIKELY TO BECOME CAMPAIGN ISSUE—CONDITIONS DISCLOSED MAY FURNISH SMITH WEAPON AGAINST HOOVER, WASHINGTON OBSERVERS BELIEVE—EVIDENCE OF PLAN TO HAMPER INQUIRY—APPARENT ATTEMPT TO CREATE PUBLIC HOSTILITY MAY BE INVESTIGATED—MISSOURI HEARING PLANNED

By Paul Y. Anderson, a Washington correspondent of the Post-Dispatch

WASHINGTON, May 21.—The Federal Trade Commission will resume its investigation of Power Trust activities May 28, and about June 10 it expects to inquire into the dissemination of propaganda in the high schools and colleges of Missouri by the public-utility companies. Evidence already before the commission indicates that the scheme for placing "doctored" textbooks in the public schools was unusually successful in Missouri.

In a private circular sent out to power executives by J. B. Sheridan, director of the Missouri committee on public-utility information, it was stated that the five textbooks written by agents of the utility companies were being studied by 97 per cent of the high-school students in the State. In no other State thus far investigated was the power propaganda in the schools so widespread and thorough.

POSSIBLE CAMPAIGN ISSUE

Meantime the likelihood that the condition disclosed by the investigation will become one of the major issues of the coming presidential campaign is occupying more attention in Washington even than the disclosures themselves. It is based first on the belief that Governor Smith will be the Democratic nominee, and second on his record of opposition to the Power Trust's schemes in New York State.

During the last four years that he has been governor his program for development and regulation of water power in his State has been blocked by a Republican majority in the legislature.

The present investigation has disclosed numerous activities on the part of the power interests to influence legislation in various States. It is believed that this would appeal strongly to Governor Smith as a campaign issue, especially since it has been attended by disclosures of a country-wide propaganda campaign in the schools and through the newspapers.

Secretary Hoover, who seems likely to be the Republican nominee, has never taken a stand on the water-power question, but his long experience as an engineer for similar corporations is presumed to have given him their viewpoint, and Vice President Dawes, generally considered as second choice for the Republican nomination, actually is a large stockholder in companies which have engaged in these questionable acts.

CONSUMER PAID FOR PROPAGANDA

The commission's investigation thus far has dealt almost entirely with propaganda and lobbying activity. The question of rates and financing is still to be opened. Already it has been disclosed, however, that under State regulation most of the utility companies were permitted to charge up the expense of conducting propaganda to "operating expenses" and were not required to take it out of their own earnings. In other words, the consumers and rate payers are being required to pay for the propaganda which is being fed to them and their children.

Evidence that propaganda is being used to hamper and discredit the investigation itself has been submitted to Chief Counsel Healy and may become a subject of inquiry. Washington correspondents this week received copies of an article from the Magazine of Wall Street—which they were invited to reprint—in which the investigation was held up as a menace to investors and a threat to general prosperity. Each copy was accompanied by the following note:

"This article by our Washington correspondent will be of great interest to your business-men readers. It is sent to you for immediate release.

PRESENT INQUIRY ATTACKED

"The commission's investigation, while it will be free from the partisan and persecutory bias that was bound to assert itself in a Senate committee investigation, will probably not be so utterly futile as Senator WALSH feared. One reason is Senator WALSH himself; other reasons are the Members of the 'left' group in the Senate, such as Senators NORRIS and LA FOLLETTE, with their leanings toward State socialism, and that section of public opinion represented by ex-Governor Pinchot, of Pennsylvania.

"The committee will be jealously and suspiciously watched and nagged at every step and will be sedulously supplied with abundant 'evidence' hostile to the utility companies."

HOLDING COMPANIES OUT OF CONTROL

The writer admits that control of the public utilities is falling into fewer and fewer hands through the pyramiding of stocks and the growth of holding companies, and also that it is virtually impossible for these companies to be reached by State regulation. The public, he fears, may become thoroughly aroused when these facts are realized, and may demand drastic Federal regulation of the profits. The dreadful consequences of such a development are set forth in the following language:

"Public-utility securities have become exceedingly popular, and their exceptional returns as well as their solidity have made them the most favored of income-yielding investments for millions of individuals as well as for such corporations as banks, trust companies, insurance companies, and others requiring dependability combined with satisfactory returns.

EFFORT TO SCARE POLICYHOLDERS

"It is not too much to say that the 50,000,000 life-insurance policyholders of the United States will be adversely affected by any action that may militate against the prosperity of the utility companies.

"Should the current investigation result in diminished prosperity for the utilities, or part of them, the effects on the general business life of the Nation would necessarily be far-reaching. Investors will suffer most. Consumers of gas and electric energy might benefit through lower rates if Federal regulation should cut off some of the revenue that now flows from operating to holding companies, but the consumer who is also an investor—and every investor is necessarily a consumer—would lose more as an investor than he would gain as a consumer. And it is a long, long way until Federal regulation will get back to local rates.

"But there is more than a question of a few dollars a year more or less to the average man. The rights of States, local freedom, are at stake as against the ever-growing central Federal power. More than that, it is a step toward socialism that is involved. The 'master minds' behind the demand for investigation and regulation have their eyes set on ultimate public ownership."

BOLSHEVIK! BOLSHEVIK!

Observers who noted the use of the word "socialism" in the final paragraph were quick to recall a letter recently introduced into the hearings before the commission. It was written by Rob Roy MacGregor, one of the chief propagandists employed by the power companies, and recommended certain tactics to be employed in campaigning against municipal ownership. It said:

"I would not resort to reason or logic, but would rather try to pin the bolshevik idea on my opponent."

Senators to whom copies of the article were shown were indignant. They declared the effort to have it broadcast to the newspapers of the country, through the Washington correspondents, obviously was an attempt to create public hostility to the investigation before it was fairly started. They were particularly wrathful over the writer's attempt to frighten insurance policyholders by suggesting that the investigation constitutes a menace to their investment.

The envelopes containing the copies of the article bore the return address of the Magazine of Wall Street. It is possible that the trade commission may call witnesses to ascertain whether the magazine acted on its own initiative or whether the expense of sending out the copies was borne by other interests.

[Article from the St. Louis Post-Dispatch, Tuesday, May 15, 1928]

UTILITIES OUSTED UNFRIENDLY BOOKS IN IOWA SCHOOLS—JOSEPH CARMICHAEL TELLS TRADE COMMISSION OBJECTIONABLE VOLUMES WERE SENT TO LIBRARY—PROFESSORS GOT PAY SOMETIMES—DRIVING FOLLOW-UP CAMPAIGN CARRIED OUT TO FORCE PROPAGANDA INTO COLLEGES

By Paul Y. Anderson, a staff correspondent of the Post-Dispatch

WASHINGTON, May 15.—An amazing recital of the spreading of Power Trust propaganda in Iowa was given on the witness stand before the Federal Trade Commission to-day by Joe Carmichael, publicity director for the combined public-utility companies of that State. He told the story blandly, and even cynically, as befitted an old newspaper man who had "gone over to the interests" for higher pay, but had no illusions about the character of his present work.

The methods employed by the power interests to get their propaganda home to the people of Iowa were nothing if not direct. Public-school textbooks which contained a good word for municipal ownership were removed from the schools by the exertion of influence on the school boards, and pamphlets written by the power propagandists were substituted for them.

Professors and instructors were brought under the influence of the power companies, and in some instances received money. One such professor engaged in writing a textbook, The Public and Its Utilities, was offered financial help in getting it published, and later the influence of the public-utility companies was employed to have the book used in the schools.

NEWSPAPERS USED

A constant stream of propaganda was fed to the public through 650 Iowa newspapers, and when their editors complained about giving so much free space to it, they received increased advertising from the local public-utility companies, often at an advance in rates.

In the course of Carmichael's testimony, he said he heard the public-utilities companies had caused a survey to be made of the textbooks used in the schools, colleges, and universities of Missouri, but had no other information on the point.

It was disclosed, however, that the power interests succeeded in promoting a "conference" of college and university professors at Kansas City last March, and the testimony indicated that it was attended by professors from Missouri, as well as those from neighboring States. This "conference" was presided over by C. O. Ruggles, former dean of engineering at Ohio State University, but now employed by the Power Trust at a salary of $15,000 a year to conduct a national survey of all textbooks which touch on the subject of public utilities.

Carmichael knew about the conference because he was instructed to "round up" several Iowa professors to attend it. Specifically, he was directed to see that the professors of economics at Drake University, Grinnell, Coe, and Morningside Colleges were present.

"Did you round them up?" inquired Chief Counsel Robert Healy of the commission. "I did," replied Carmichael.

"How did you manage it?" "Those I could not handle myself I reached through the managers of the local utility companies."

"Did the companies pay their expenses?" "I don't know."

SPENDS $27,000 A YEAR

Carmichael testified, when he took the stand, that he had been a newspaper man in Davenport for 20 years prior to 1922, when the Iowa Committee on Public Utility Information was organized by the combined utility companies of the State, and he was placed in charge of it. It spends about $27,000 a year, he said.

Two years after it was started, Carmichael instructed his assistant, Rodney Q. Selby, to make a survey of the public school textbooks in the State to determine whether they contained "unfair" allusions to the public utilities, and more especially to ascertain whether they contained references favorable to municipal ownership.

Selby, a former newspaper reporter, who appeared still to be in his twenties, sat at one side of the room during the testimony. The idea of his examining and passing judgment upon the public-school textbooks of a State seemed to strike listeners as amusing, and Selby obviously was embarrassed. Nevertheless, Carmichael testified that Selby's reports were sent to the managers of the local utility companies, who proceeded upon that information to have removed from the schools those books which Selby pronounced "unfair."

HOW IT WAS DONE

The process was afterward described by Carmichael in a letter to J. S. S. Richardson, chief of all the Power Trust propagandists in the country. Addressing him as "Dear Sandy," Carmichael wrote:

"We secured the names of all textbooks on civics and economics used in the high schools, academies, and colleges of Iowa. We then secured copies of these books and read them thoroughly. Where textbooks were grossly unfair and did not give the private ownership side of the utility question, we took the matter up with school officials either personally or through the local company managers. In practically every instance the objectionable books were removed. In some instances the managers or ourselves took the matter up with the superintendents, principals, or instructors in civics and economics. In other cases it was brought to the attention of the school boards.

"We continue to watch this matter closely and get reports on all new textbooks. We have the matter pretty well in hand but do not intend to let these bugs slip anything over on us."

"FOR USE IN SCHOOLS"

Having got rid of the "bad" books, the power companies now proceeded to substitute the "right kind." They had their propaganda bureau prepare two pamphlets, one on electricity and one on gas. Each pamphlet bore on the outside cover the following:

"This bulletin is prepared for use in the schools. It is particularly adaptable to work in English, civics, current topics, and debating classes."

"How did you get them into the schools?" Healy inquired of Carmichael. "We sent a copy of each one to every school-teacher, and offered to furnish as many additional copies as were requested for classroom work. We only sent them when they were requested."

"Do you mean to say that if no request was received you dropped the matter?" "No; we sent a follow-up letter."

"Was that all?" "No," continued Carmichael, grinning sourly, "If that didn't bring requests, we sent the bulletins to the managers of the local companies, and suggested that they do what they could to get them into the schools."

"After giving the teachers such a course of treatment as that, you would hardly say that their requests were made spontaneously, would you?" asked Healy. "Well, hardly," was the reply.

The bulletins, together with others of a more advanced nature, also were put into every college and university in Iowa, including the State university. Carmichael said this was accomplished largely through personal calls upon the deans and instructors. Carmichael frankly admitted that the main purpose of all the bulletins was to instill prejudice against municipal ownership of public utilities. The bulletins themselves made this perfectly clear.

Among the subheads in the bulletin dealing with electricity were these: "Benefits of large transmission systems," "Government regulation," "Why public utilities are built on borrowed money."

Under the heading, "Future management," the bulletin declared that the most important three factors in the success of public utilities were initiative and brains, private capital, and "inventive genius well paid."

As Carmichael blandly described how wires were pulled and influence was used to get this propaganda into the schools, Commissioner McCullough interrupted to say: "I was just wondering if the question of ethics ever occurred to you people. Did you ever stop to ask yourselves whether it was right or wrong to put your propaganda into the public schools?" "I thought of it," Carmichael replied. "I wouldn't want the minds of other children poisoned any more than the minds of my own children. But I believed that our statements were true, and that our information would be good for the children."

JUST A MATTER OF BUSINESS

"You were not doing it to help the children—you were doing it to help your own business," McCullough rejoined, to which Carmichael replied: "Of course, that is true."

"You thought that the textbooks were unfair because they gave only the municipal ownership side of the question?" interjected Healy. "Yes," said the witness.

"Didn't you think your bulletins were unfair because they gave only the private ownership side?" "No," was the surprising reply.

"Why not?" "Because we were hired to give that side of it, and it was no business of ours to look after the other side. The other people could do that."

HELPING BOOST CAR FARE

Two years ago the street-car company in Davenport threatened to abandon its lines unless it were allowed to increase the fare to 10 cents. In the midst of that situation Carmichael engaged Charles Darlington, a reporter on the Des Moines Capital, to write five articles describing the horrors of a street-car strike in Des Moines a few years previously, and depicting the plight of a city without street-car service.

These articles were published in a Davenport newspaper to impress the people of that city with the wisdom of submitting to the company's demands.

"How much did you pay him to write the articles?" inquired Healy. "Twenty-five dollars," replied the witness.

"You mean $25 each?" "No; I mean $5 each."

$80,000 IN FREE ADVERTISING

Carmichael next described the methods employed to get the "publicity stuff" of the utility company into the newspapers. He said the "stories" which the utility companies decided to have broadcast were sent directly to the offices of the press associations and sent by them to the newspapers, while "stories" with only a local connection were sent directly to the local papers, sometimes through the offices of the local utility companies. In one of Carmichael's reports he said the Power Trust materials used by the Iowa papers during the first six months of the information committee's existence would have cost the utility companies, if inserted as paid advertising, more than $80,000.

"All this was propaganda?" asked Healy. "Yes; it was," Carmichael bluntly replied.

"And the man who reads it in the newspapers had no idea it had been written by an employee of the utility companies?" "No; but the newspapers knew it when they printed it."

Healy inquired if some newspapers were not influenced to publish this matter by the paid advertising which they received from the local utility companies. Carmichael hesitated, and Healy asked him if the power companies which advertised in the newspapers did not enjoy better relations with their editors than the companies which did not. "Without exception," Carmichael admitted. "You see, news publishers believe in advertising, and naturally they have more respect for a man who advertises than for one who does not."

Healy then read from a letter in which Carmichael said: "The newspapers can hardly be expected to take a favorable attitude toward companies which fail to use paid advertising, while insisting upon free space." It added that since Carmichael took over the publicity job he had caused a total increase of 1,000 per cent in the advertising appropriations of the utility companies in Iowa.

"Is there any doubt in your mind that this helped you to get your publicity matter into the news columns?" Healy demanded. "No," was the succinct answer.

STRAIGHTENING OUT PUBLISHER

As a matter of fact, it soon was developed that Carmichael had been delegated to "straighten out" a publisher on that subject. It appeared from correspondence that Will V. Tufford, secretary of the Inland Press Association, recommended to the publishers of that association that when Power Trust publicity came to their offices they bundle it up and return it to its source. Tufford stated to members of the association that the publicity matter appeared to be mere free advertising.

Thereupon, Carmichael was instructed to call on Tufford, who lives at Clinton, Iowa, and "give him the right slant" on the situation. Carmichael did so.

"I pointed out to him," said Carmichael, "that the utility companies were buying a large amount of advertising space, and consequently could not be charged with seeking free space. I explained our idea, which was that when we had proper matter for advertising we bought space, but when we had information which we felt was news we expected to have it published in the news columns."

Carmichael reported that Tufford "got the right slant" immediately, and next year wrote to all publishers in the Inland Press Association, calling their attention to the increase in the volume of public-utility advertising.

Reverting to the question of subsidizing and giving employment to college professors, Carmichael testified that he had paid $300 to Prof. Arthur N. Ford, of the department of electrical engineering in Iowa State University for compiling tables which placed municipal ownership in unfavorable contrast with private ownership.

The dean of the engineering school in the State university is Prof. William G. Raymond. He sent several letters to the power interests intimating that he held "safe" views on public-utility subjects. Eventually he began the preparation of a textbook, The Public and Its Utilities. Carmichael discussed the book with him, and the chief publicity agent for the Illinois power interests offered financial assistance in getting it published. When the work was completed, Carmichael wrote that "all of our fellows have read the book and are greatly pleased with it."

"Is it in use in the schools of Iowa now?" inquired Healy. "I think it is used as a reference work," replied the witness.

"What efforts did you make to give it circulation?"

"We sent copies of it to the executives of all our member companies."

When Iowa University invited Prof. Charles E. Merriam, of Chicago University, to speak on economics, Carmichael wired to his Illinois colleagues to learn what sort of beliefs Merriam held. The answer was: "Be prepared for the worst. He is all wrong on the points in which we are interested."

[Editorial from the Washington Herald, May 15, 1928]

POWER-TRUST TACTICS

Every citizen of the country must find something ominous and sinister in the facts being uncovered by the Federal Trade Commission, in Washington, in their investigation of the Power Trust.

They have proved that the electric-power companies of the country are banded together into organizations, which collect huge funds to "influence" legislators, hire professors to give lectures and write textbooks, debauch the press of the country, and so poison the sources of information upon which the public must rely in order to learn what these monopolies are doing.

Not only the methods but the purposes of the organized power interests are being made abundantly clear. They intend to create a "public opinion" which will let the utilities charge such rates and give such service as they please.

The height of their insolence was attained in a "catechism" written by their press agent in Connecticut and used by 10,000 Connecticut school children until it was thrown out of the Connecticut schools last week, following the exposé in Washington.

Here is question 9 of that catechism and the answer, as taught to public-school children in this textbook:

"Question 9. What is the effect of adverse criticism upon utility service?—A. When the people in any community criticize adversely public utilities in their own city they are advertising their own city to outsiders as a poor place in which to live and are thereby retarding its growth."

Letters and telegrams flooding into the Federal Trade Commission show that the same debauchery of schools is going on in every State in the Union. Are the people going to stand for it?

[From testimony of P. S. Clapp]

EXAMINATION BY MR. HEALY

(Pages 1062 to 1072)

Q. We have here the minutes of the national executive committee of January 20, 1927, and I would like to read two paragraphs into the record instead of putting the entire exhibit in. It was—

"Resolved by the executive committee of the public relations section of the National Electric Light Association, That it is the sense of this committee that every effort should be made to discourage the advocacy of Government subsidy, ownership, or operation of electric service; and be it further

"Resolved, That we hereby express our unanimous conviction that the advocacy of Government subsidy or construction of facilities for rural electric service is unsound, uneconomic, unnecessarily discouraging to the efficient efforts now being made to extend rural service and as tending to disrupt those public relations so essential to progress."

Mr. HEALY. From the minutes of the executive committee meeting held February 3, 1926, I wish to read first this paragraph. I will ask Colonel Chantland to read it.

Colonel Chantland read as follows:

"Commenting on the general headquarters activities pertaining to the section, Managing Director Aylesworth stated that over 9,000,000 sets of the so-called Barton pamphlets to customers, 13 in a set, and 900,000 sets of pamphlets to security holders, 4 in a set, had been distributed by member companies, this being the largest distribution of a direct message to the public ever made. Approximately 10,000 copies of 'Niagara in Politics,' by Professor Mavor, have been sold and distributed. Mr. Aylesworth also 'stated that through the public-policy committee contributions have been made to Harvard University and Northwestern University. The fund for Harvard University of $30,000 a year for three years will be used for an investigation of regulation and also for the establishment of a case system dealing with that subject and, it is hoped, a report which will deal with the fundamentals of regulation. The fund for Northwestern University will be devoted to a consideration of Government ownership of every character. The other amount raised was the sum of $30,000 for the General Federation of Women's Clubs, upon application of Mrs. John D. Sherman, president of the General Federation, for part of the expense of a national home survey, both urban and suburban.' Mr. Aylesworth called attention to the weekly letter, Public Opinion, issued from headquarters and forwarded to all member company executives, this letter containing reproductions of articles, addresses, and editorials appearing in the press of the country and dealing with questions affecting the electric light and power industry. Mr. Aylesworth stated that headquarters would be glad to send copies of this weekly letter to editors of newspapers in communities served by member companies, provided the request is made direct by the editor of the newspaper. Mr. Aylesworth also spoke of a service just being started in the form of special letters containing a digest of legislative material of interest to the electric light and power industry.'"

• • • • • • •

"Mr. George F. Oxley, director of public information, reported as follows on the activities of the department:

"Headquarters has received many good reports from the distribution of the Barton pamphlets.

"About a year ago a book entitled 'Prosperity Through Power Development' was published by a special committee. That book comprised excerpts from the World Power Conference papers. More than 6,000 have been placed in libraries and distributed to prominent people.

"'Niagara in Politics' has about a 10,000 circulation up to date. The association has sold approximately 3,000 directly from headquarters. At the direction of the public-policy committee 5,243 were placed in college and public libraries and 808 were sent to that many leading newspapers for editorial and newspaper review notices. A total of 9,500 have been ordered by the association and a quantity still remains on hand and copies are available.

"'Political Ownership and the Electric Light and Power Industry' is being revised. Mr. Oxley stated that he had hoped to have the book ready before now, but that some of the sources of information have been rather slow in checking up the lists. The book will show an increase of between 175 and 250 additional communities which have abandoned municipal ownership either in the form of generating plant and distribution or generating plant or distribution system in the last year since the previous book was published. At the direction of the public-relations executive committee, Mr. Oxley said, the same distribution will be made as was made a year ago."

From the minutes of the executive committee of the public-relations national section of the National Electric Light Association, meeting of January 19, 1927, the following from pages 2 and 3:

"Mr. Sloan, chairman of the relations with financial institutions committee, reported that the model public-utility law has been modified and will be introduced in the present session of the New York Legislature.

"He called attention to the fact that a Mr. Heywood, a mechanical engineer and well-known writer, is willing to undertake a book on public relations. It is Mr. Heywood's idea not to make this a book of rules. He would make a study of the situation and be willing to devote an entire year to it. The book would be undertaken with the cooperation of the National Electric Light Association if the association decided that such a book should be written. Mr. Sloan recommended that a committee be appointed to discuss the matter with Mr. Heywood and see if in their opinion he has the proper qualifications.

"Chairman Jones stated that in his opinion there is a demand for a book on public relations, also that the committee ought to consider an educational course on this subject, and suggested that this was a matter that might be taken up after hearing the report of Mr. Niesz.

"Mr. Jackson, chairman of the cooperation with educational institutions committee, reported that a meeting of his committee had been held in Chicago January 4 and 5, with good attendance. He stated that the meeting was called primarily to get in touch with representatives of geographic divisions throughout the country. Before the meeting was held a questionnaire had been sent out in an effort to find out exactly what work was being carried on throughout the country, and the result of the questionnaire showed that no coordinated work was being done in the various divisions, and that, in fact, some had not appointed committees. The questionnaire did show, however, that some very efficient work is being carried on by the utilities themselves with educational institutions in some of the larger cities. A subcommittee was appointed to map out a definite program to be followed, so far as possible, throughout the country, and Mr. Jackson read the report of the subcommittee. Mr. Jackson stated that the report of the subcommittee had been unanimously adopted and that, as chairman of the committee, he was asked 'to report this action to the public-relations section executive committee and recommend that it be approved.'

* * * * * * *

"10. Organization: It is recommended that a contact representative be appointed by the utilities for cooperation with each educational institution carrying on definite instruction in the public-utility field. One such representative might act with all such institutions which are conveniently accessible to him. These contact representatives should report to geographical or State members of this committee, the exact lines of organization depending upon the extent of the activities in any area.

"RALPH HEILMAN, *Chairman.*
"C. O. RUGGLES.
"JOHN F. GILCHRIST.
"HUGH M. BLAIN.
"L. R. NASH.
"R. R. HERRMANN.
"T. D. CROCKER."

* * * * * * *

"Mr. Jones said that the committee was unalterably opposed to public ownership in any form, and that 'any encouragement of State ownership of rural lines is not in the interest of good public relations or in the interest of sound economics in the business.'"

* * * * * * *

Resolutions were passed, omitting the preambles, as follows:

"Now therefore be it—

"*Resolved by the executive committee of the public-relations section of the National Electric Light Association,* That it is the sense of this committee that every effort should be made to discourage the advocacy of Government subsidy, ownership, or operation of electric service; and be it further

"*Resolved,* That we hereby express our unanimous conviction that the advocacy of Government subsidy or construction of facilities for rural electric service is unsound, uneconomic, unnecessarily discouraging to the efficient efforts now being made to extend rural service, and as tending to disrupt those public relations so essential to progress."

Mr. CHANTLAND. And from the minutes of July 25, 1927, page 2, the third paragraph:

"Managing Director Paul S. Clapp was called upon for a report upon headquarters activities, which he discussed, and he also spoke of some of the problems pertaining to the industry, chief among which are the Boulder Dam and Muscle Shoals situation, which he referred to in detail, asking that every possible step be taken to inform the public regarding the true facts in connection with these subjects, and also that the Government be informed of the danger of intruding into the field of private industry."

By Mr. Healy:

Q. Will you identify Document No. 1002 for us, Mr. Clapp?—A. Document 1002 is a mimeograph letter from Mrs. Malicke, chairman of the women's committee, dated February 10, 1928, to chairmen of women's committees.

Q. On what subject?—A. It says, "A committee in the southeastern division prepared an interesting program and invited to it the mothers and wives of the company employees."

Q. The second page is addressed to "Chairmen of women's committees," and says: "The committee program for this year includes thorough study of the subjects of immediate interest to the utility industry." Then the subjects are enumerated; one is a proposed investigation of the electrical industry by the senatorial committee. One relates to the building and operating by the Government of a power plant at Boulder Dam, and the other is the Government operation of the power plant at Muscle Shoals.—A. Yes; that is right. This letter was sent out, evidently the two of them together.

[Penciled notation "Public Service Commission"]

GENERAL SUMMARY EDUCATIONAL AND PUBLIC-RELATIONS ACTIVITIES OF THE PUBLIC-UTILITY INDUSTRY IN PENNSYLVANIA 1925–26

In the business of maintaining a working contact with the educational institutions of this Commonwealth, the Public Service Commission cooperates with the Pennsylvania Public Service Information Committee. The committee was formed more than three years ago by representative executives of the foremost public utilities operating in Pennsylvania. Its functions, in general, are similar to those of identical committees operating in 36 other States.

In Pennsylvania the committee bureau has been in close touch with the commission from the outset. Many educational problems in which the commission was interested were carried forward toward solution by the committee with the aid of the commission. Members of the commission participated personally in completing educational plans as undertaken.

In the past year the educational and public-relations work in Pennsylvania, as specifically applied to public service, might be summarized as follows:

First. A course of 15 lectures on the public-utility business by authorities nationally prominent in the industry was completed at Temple University, Philadelphia. The lectures have been published for the information and guidance of those undertaking similar enterprises elsewhere.

The committee was directly instrumental in installing public-utilities courses in the University of Pennsylvania and Temple. It aided materially in the recent completion of a course on public-utility economics at the State College.

The public-service commission is in close cooperation with the committee in this work, and members of the commission have lectured on problems relating to regulation.

It is noteworthy that teaching the fundamentals and economics of public-utility endeavor is spreading with satisfactory rapidity in this country.

The interest in public service has been stimulated in several ways. Securities of public-utility companies are much in the public eye these days. The companies themselves are besieging the universities and colleges for men trained for public-utility work. Various State commissions and information committees are cooperating with the educational institutions in formulating curricula.

The University of Pennsylvania, Harvard University, Temple University, the University of Illinois, the University of Iowa, Northwestern University, and Indiana University are among those which have listed courses in public-utility management.

Others, including the University of Illinois, the University of Pittsburgh, Ohio State University, the University of Michigan, the University

of Tennessee, the University of Wisconsin, Johns Hopkins University, and the Massachusetts Institute of Technology are offering special courses in utility engineering.

Pennsylvania State College conducts an excellent correspondence course on public-utility economics and, I believe, Rutgers University in New Jersey is about a complete a similar course.

Second. The committee maintains a news service for the information of newspapers of the Commonwealth, selected newspapers outside the State, and the leading news associations. News of the industry—not of companies—is disseminated by the committee.

Third. That news service has been supplemented with the publication of nontechnical as well as technical booklets. The information therein contained is of exceeding informative value and was compiled from many statistical sources, including those available to the commission. The booklets are used widely in educational institutions. The circulation is among educators, librarians, public-utility executives, and State, county, and municipal officials.

Fourth. The information committee, in cooperation with the commission and other State authorities, recently completed a comprehensive survey of the textbooks on economics and civics in use in the Pennsylvania public schools. The survey was undertaken to ascertain whether material in the textbooks contained misinformation inimical to the business of public service. It was discovered that there is much misinformation being disseminated to pupils through the medium of obsolete and erroneously compiled textbooks.

The survey was prompted by reports that several textbooks on those subjects were obsolete and inaccurate in so far as they relate to the public-utility industry. They failed to set forth or take into account existing facts, so that misinformation was being conveyed to pupils.

The survey work was divided into three parts: Inquiry as to the books used, examination of the books for significant passages dealing with the public-utility industry, and the final listing of those books by counties and municipalities.

Similar work already had been done in Pennsylvania, Missouri, and Illinois, the modus operandi adopted there being of considerable assistance to Pennsylvania.

It was discovered that, while a considerable measure of misinformation was being conveyed to pupils in certain localities, use of the faulty textbooks was by no means general.

So far no adequate steps have been taken to correct the situation. One leading publishing house has agreed to avoid pitfalls in the future, but the dangerous textbooks already are in use. Only a constructive suggestion could really be effective with the publishers or the educators in the circumstances. Unless and until we have something better to offer in the way of a standard textbook, the existing ones will continue in use, though revision may be effected slowly.

Fifth. An educational subcommittee now has in course of preparation handbooks suitable for use in educational institutions of the State, specifically outlining the history and development of each branch of the public-utility industry, as well as the business of regulation.

Sixth. In Philadelphia and Pittsburgh, with the cognizance of the commission, the public utilities there operating have formed technical subcommittees of the information committee. In Philadelphia the technical subcommittee has functioned for over two years. Through coordination of effort on the part of the subcommittee and the city authorities satisfactory results, helpful to public relations, have been achieved.

There has been less interference with street traffic where subsurface structures are involved and better construction and operation have obtained in the matter of subsurface structures and overhead lines. The committee has made coordinate planning for local utilities possible.

The function of the technical subcommittees of the information committee in Philadelphia and Pittsburgh is to solve by cooperative and coordinating action vexing local problems of a technical nature which had baffled solution by individual effort.

The committee in Pittsburgh, though operating only a short time, already is obtaining effective results.

The work has progressed in Philadelphia to such an extent that the committee has become an important functionary in that community. There public-utility underground construction now is undertaken so that traffic interference is reduced to a minimum and with the smallest possible delay to the city's paving plans.

In the preparatory work for the present large-scale construction of the city's rapid-transit subway system it was through the technical committee that comprehensive study was made of the requirements of the public utilities in the space provided between the roof of the projected tubes and grade. Proper allocation of space followed in due course.

All of this has a distinct reference to upbuilding and sustaining good public relations. The work has received attention from municipal and utility executives of other cities as well as commendations from the Philadelphia departments of public works and city transit. Excellent relations have thus been established between the utilities' working forces and the city.

CONTINENTAL BAKING CORPORATION

Mr. NYE. Mr. President, I ask unanimous consent to have printed in the RECORD a statement issued by the Senator from Wisconsin [Mr. LA FOLLETTE] concerning S. Res. 258, introduced by him on May 28, 1928, calling for the prosecution of complaint against the Continental Baking Corporation.

The VICE PRESIDENT. Without objection, it is so ordered.

The statement is as follows:

I am, as my father before me was, much concerned over the combinations in the baking industry of this country tending toward the formation of a nation-wide Bread Trust. * * *

Whatever change may have come in the attitude of some Senators with regard to monopolies in general since the passage of the Sherman antitrust law and the Clayton Act, I feel sure no Senator would by word or act defend a bread monopoly.

I am entirely familiar with the course of events leading up to the unanimous adoption by the Senate on February 16, 1926, of the La Follette resolution for the investigation of the so-called Bread Trust, and with the events which have transpired since. * * *

The history of these events abundantly justifies the fears entertained by my father that a nation-wide Bread Trust was actually in process of formation. * * *

Contrary to the popular notion of the effect of the notorious "consent decree" in the Bread Trust case, neither the Department of Justice nor the Federal Trade Commission has done anything sufficiently adequate to the situation to allay the just fears that a nation-wide Bread Trust is still actually in the making. * * *

On June 30, 1926, I called the attention of the Senate to the public protest contained in the dissenting opinion which Commissioners Nugent and Thompson handed down in the case of the Federal Trade Commission *v.* the Continental Baking Corporation. * * *

I denounced the dismissal of the complaint of the Federal Trade Commission * * * as an "outrageous performance" and a "perversion of the instrumentalities of government." * * *

The following day, July 1, 1926, Senator WALSH of Montana introduced a resolution instructing the Judiciary Committee to make inquiry into the conduct of the Federal Trade Commission and the Department of Justice in regard to this matter. The resolution was unanimously agreed to. A subcommittee composed of Senators WALSH, BORAH, and DENEEN was appointed to carry out the resolution. This subcommittee has held hearings and made its reports.

These reports and the hearings upon which they are based in my judgment fully justify the position I took. * * *

The essential fact is that the Continental got off without any determination by the legal force of either the commission or the Department of Justice that it was in violation of the law as had been formerly charged by both branches of the service. He quoted the resolution from the original report drawn by Senator WALSH to accompany that report in which it is said "the dismissal contemporaneously of proceedings pending before the said commission and before the United States district court for the district of Maryland against the Continental Baking Co., charging it with violating section 7 of the Clayton Act, merits public reprehension and constitutes a dereliction of duty on the part of both branches of the service."

Samuel Untermyer, of New York, after a careful examination of the consent decree said: "The fundamental vice of the decree, as I see it, is in letting out the Continental which is in and of itself an illegal combination."

This considered statement by Mr. Untermyer buttresses my charge that the dismissal of the case against the Continental Baking Corporation made a farce of the proceedings against the Bread Trust by permitting the Continental, which had been denounced both by the Department of Justice and the Federal Trade Commission as an unlawful combination in restraint of trade, to go scot free and to continue its monopolistic course without any effective restraint.

It is chiefly by reason of this sinister fact that Senator WALSH in his proposed resolution heretofore quoted declares that "the dismissal contemporaneously of the proceedings pending before the said commission and before the United States District Court for the District of Maryland against the Continental Baking Co., charging it with violating section 7 of the Clayton Act, merits public reprehension and constitutes a dereliction of duty on the part of both branches of the service."

It is my deep conviction that we who represent here at the seat of government the rank and file of the people—especially those of us here in the Senate, where particular attention has been called to this matter—ought not to content ourselves with mere criticism of those two branches of the public service which have ignominiously laid down in this fight to frustrate the monstrous attempt to monopolize the Nation's bread. We ought to do everything possible not only to defeat this attempt but to have the just penalties of the law applied to the "unscrupulous" Continental Baking Corporation, caught red-handed in the act of violating not only the statute but the social law; caught with the illicit goods upon it; and, instead of leaving it behind a "smoke screen" to concoct further antisocial schemes, to bring and keep it out in the open, where every consumer may watch its every move.

The imminent danger of a nation-wide bread trust has by no means been dispelled. If at this moment the Bread Trust is not actually within our doors, with its greedy hands snatching at the American bread basket, the Bread Trust, armed cap-a-pie, is at our doors, slightly

concealed by the consent-decree "smoke screen," ready to jump in and go to its evil work with might and main at the first favorable opportunity.

Bear in mind that the Continental Baking Corporation, in the language of Commissioner Nugent, "alone is large enough to dominate the bread-baking industry of the United States." He says: "The latest available figures show the capitalization of the bread-baking industry as approximately $400,000,000, while the Continental's authorized capitalization is $600,000,000." We read in the petition of the Department of Justice, "Its charter is of the omnibus variety, granting it almost unlimited power to engage in all kinds of business * * * without restriction or limit as to amount" anywhere on earth. It now controls at least 93 baking plants, so distributed as to be capable of supplying their products to half the population of the entire country. It was alleged in the said petition that the Continental "is capable of acquiring additional competing plants to an indefinite number, thereby increasing the percentage of the total wholesale business."

"Unlimited power." The words are the words of the Department of Justice in the petition which it made indecent haste to convert into a "scrap of paper." Unlimited power over the breads of the American people left untouched or weakly handed over, by grace of the Department of Justice and the Federal Trade Commission, into the hands of the Continental Baking Corporation, which the present chairman of the Federal Trade Commission, Mr. Humphrey, has himself characterized as "an unscrupulous respondent."

If this matter is to be left permanently as it has been left since the consent decree was entered two years ago, it bodes ill for the future of our land. As an immediate step in the direction of preventing the formation of this dangerous monopoly, I propose that the Senate direct the Federal Trade Commission to reinstate its case against the Continental Baking Corporation, as provided in the resolution.

Objection may possibly be raised to this proposal by some of those who would join with me in criticism of the Federal Trade Commission. They may say it is useless to try to make the Federal Trade Commission perform its duty. My answer to this is that the responsible representatives of the people under our republican form of government must never act upon counsels of despair.

The Federal Trade Commission has done very badly in this matter. But the Federal Trade Commission remains a part of the machinery of our Government. We must do our utmost to make it function as it was intended to function. By so doing we shall either make it work, and so redeem itself in the eyes of those who now hold it in contempt, or we shall make it such a demonstration of itself that nobody of good sense or good morals would venture to defend it.

I believe that if the Senate directs the Federal Trade Commission to reinstate its case against the Continental Baking Corporation, with the informal suggestion that Col. A. B. Brindley be intrusted with the prosecution of the case, there is reasonable assurance that the commission will not repeat its past performance. With the attention of the public fastened upon it, as it is fastened upon it in its present investigation of the Power Trust lobby, we may expect the Federal Trade Commission to do its plain duty in this important matter involving the public interest.

AVIATION RULES OF CONNECTICUT

Mr. BINGHAM. Mr. President, I ask unanimous consent that there may be printed in the RECORD 17 aviation regulations rigid obedience to which will assure the minimum number of fatal accidents. These rules have been adopted by the State of Connecticut and, under the State aviation commissioner, since these rules were adopted and since the State aviation law went into effect practically no fatal accidents have occurred.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

SEVENTEEN AVIATION RULES WILL BE ENFORCED—RIGID OBEDIENCE TO REGULATIONS STARTING JUNE 1 IS EDICT OF KNOX TO INSURE SAFETY—APPROVED PARACHUTES REQUIRED IN ALL CRAFT—BOTH INSTRUCTORS AND STUDENTS MUST WEAR SAFETY DEVICES—ACCIDENTS TOUCHED ON

In harmony with the policy of making flying safe in Connecticut, the principle on which the State commission was founded at the time of its conception about a year ago, 14 aviation regulations formulated December 1, 1927, to which 3 have since been added, regulation No. 15, dated January 1, 1928, and regulations Nos. 16 and 17, dated May 21, 1928, will be rigidly enforced starting June 1, according to Capt. Clarence M. Knox, State aviation commissioner.

Of especial interest to aviation enthusiasts, both student and licensed pilot flyers, is the regulation applying to the wearing of parachutes.

The 17 regulations to be enforced by the department are as follows:

Regulation No. 1. No aircraft shall be flown in the State of Connecticut unless it shall have displayed on such aircraft a Federal identification mark.

Regulation No. 2. Any aircraft used by anyone desiring to obtain a Connecticut State pilot's license shall have been test flown for at least one-half hour since last overhaul of the airplane or motor.

Regulation No. 3. All pilots that have only a student pilot's license must fly solo; that is, two student pilots will not be permitted to fly together.

Regulation No. 4. No aircraft will be flown with more than the number of persons in it than the aircraft was designed for.

Regulation No. 5. Students under flying instruction and instructors must wear approved parachutes in good operating condition.

Regulation No. 6. All parachutes must be maintained by a licensed parachute mechanic; that is, bimonthly airing and repacking of parachute.

Regulation No. 7. For all photographic flights necessitating flying at altitudes less than set by law, the pilots must receive a special photographic permit from the commissioner of aviation for each such mission, which must be carried by said pilot upon such flight.

Regulation No. 8. A fire extinguisher of a design approved by the commissioner of aviation, and in good working order, must be carried at all times on every registered airplane.

Regulation No. 9. A first-aid kit must be carried on every registered airplane.

Regulation No. 10. All aircraft flown between one-half hour after sunset and one-half hour before sunrise must be equipped with electric landing lights and navigation lights and such lights shall be visible for a distance of 2 miles.

Regulation No. 11. All aircraft flown between one-half hour after sunset and one-half hour before sunrise must be equipped with at least one parachute flare.

Regulation No. 12. Safety belts for pilot and passengers must be used in all types of airplanes.

Regulation No. 13. When checking out an applicant for a Connecticut State pilots' license, the owner of the aircraft used and such applicant shall be jointly and severally liable for all damage to property or persons resulting from such checking out.

Regulation No. 14. No pilot shall fly in the State of Connecticut any aircraft of a class other than that class or classes indorsed on the pilot's license.

Regulation No. 15. Any pilot involved in any aircraft accident where there are witnesses availabe must obtain the name and address of at least one such witness.

Regulation No. 16. No aircraft shall be flown in the State of Connecticut for student instruction purposes unless it shall be equipped with an ignition (cut-out) switch in both front and rear cockpits.

Regulation No. 17. No aircraft shall be flown in the State of Connecticut for student instruction purposes unless it shall be equipped with an oil-pressure gauge in both front and rear cockpits.

PRESIDENTIAL APPROVALS

A message from the President of the United States, by Mr. Latta, one of his secretaries, announced that to-day, May 29, 1928, the President had signed and approved the following acts and joint resolutions:

S. 2370. An act to amend section 24 of the immigration act of 1917.

APPROVED BY THE PRESIDENT AT THE CAPITOL

S. 126. An act for the relief of May Gordon Rodes and Sara Louise Rodes, heirs at law of Tyree Rodes, deceased;

S. 343. An act for the relief of Sallie Stapleford, Mrs. J. C. Stuckert, Mary E. Hildebrand, Kate Wright, Mary M. Janvier, Harry L. Gray, Frank D. Carrow, Harry V. Buckson, George H. Swain, Claude N. Jester, and Charles H. Jamison;

S. 363. An act for the relief of Louise M. Cambouri;

S. 433. An act for the relief of Harry C. Bradley;

S. 443. An act for the relief of Larry M. Temple;

S. 444. An act for the relief of H. C. Magoon;

S. 471. An act for the relief of Agnes McManus and George J. McManus;

S. 513. An act for the relief of the Hottum-Kennedy Dry Dock Co., of Memphis, Tenn.;

S. 652. An act for the relief of Edgar Travis, sr.;

S. 1191. An act to amend an act of March 3, 1885, entitled "An act providing for allotment of lands in severalty to the Indians residing upon the Umatilla Reservation, in the State of Oregon, and granting patents therefor, and for other purposes";

S. 1297. An act for the relief of Alice E. Moore;

S. 1486. An act for the relief of the owners of the schooner *Addison E. Bullard;*

S. 1541. An act for the relief of George A. Robertson;

S. 1609. An act recognizing the heroic conduct, devotion to duty, and skill on the part of the officers and crews of the U. S. S. *Republic, American Trader, President Roosevelt, President Harding,* and the British steamship *Cameronia,* and for other purposes;

S. 1645. An act for reimbursement of W. H. Talbert;

S. 1769. An act for the relief of the legal representative of the estate of Haller Nutt, deceased;

S. 1825. An act to amend section 12 of the act approved June 10, 1922, entitled "An act to readjust the pay and allowances of commissioned and enlisted personnel of the Army, Navy, Marine Corps, Coast Guard, Coast and Geodetic Survey, and Public Health Service," as amended by the act of June 1, 1926 (44 Stat. L. 680), so as to authorize an allowance of 3 cents per mile, in lieu of transportation in kind, for persons using privately owned conveyances while traveling under competent orders;

S. 1981. An act for the relief of the owner of Dry Dock No. 6;

S. 1989. An act to amend the third paragraph of section 13 of the Federal reserve act;

S. 2061. An act for the relief of W. H. Kaufman;

S. 2076. An act authorizing the allotment of Carl J. Reid Dussome as a Kiowa Indian, and directing issuance of trust patent to him to certain lands of the Kiowa Indian Reservation, Okla.;

S. 2336. An act for the relief of Nina MacDonald, Zenas V. Johnston, Margaret E. Thompson, Arthur L. Beaman, and May Fee;

S. 2438. An act for the relief of the firm of M. Levin & Sons;

S. 2673. An act for the relief of James E. Trussell;

S. 2738. An act for the relief of C. R. Olberg;

S. 2788. An act for the relief of Charlie McDonald;

S. 2894. An act for the relief of Robert O. Edwards;

S. 3030. An act for the relief of Southern Shipyard Corporation;

S. 3088. An act for the relief of Donald M. Davidson;

S. 3314. An act for the relief of John J. Fitzgerald;

S. 3632. An act for the relief of Commodore J. M. Moore, United States Coast Guard, retired;

S. 3794. An act for the relief of R. E. Hansen;

S. 3919. An act awarding a gold medal to Lincoln Ellsworth;

S. 3931. An act for the relief of Augusta Cornog;

S. 3942. An act for the relief of Maj. Charles F. Eddy;

S. 3954. An act to quiet title in the heirs of Norbert Boudousquie to certain lands in Louisiana;

S. 3991. An act declaring certain designated purposes with respect to certain parts of Santa Rosa Island in Florida to be "public purposes" within the meaning of the proviso in section 7 of the act approved March 12, 1926, entitled "An act authorizing the use for permanent construction at military posts of the proceeds from the sale of surplus War Department real property, and authorizing the sale of certain military reservations, and for other purposes";

S. 4022. An act authorizing the Secretary of the Interior to lease land in Stanley County, S. Dak., to Henry A. O'Neil for a buffalo pasture;

S. 4183. An act authorizing the filling of a vacancy occurring in the office of district judge for the northern district of Illinois created by the act entitled "An act for the appointment of an additional circuit judge for the fourth judicial circuit, for the appointment of additional district judges for certain districts, providing for an annual conference of certain judges, and for other purposes," approved September 14, 1922;

S. 4315. An act authorizing and directing the Secretary of War to sell 3,304.8 square feet of the Fort Brown Military Reservation, Brownsville, Tex., to the Gateway Bridge Co.;

S. 4321. An act authorizing the Secretary of the Interior to dispose of two bridges on the San Carlos Indian Reservation in Arizona, and for other purposes;

S. 4327. An act to relinquish the title of the United States to land in the claim of Seth Dean, situate in the county of Washington, State of Alabama;

S. 4344. An act granting the consent of Congress to the State Highway Commission of Arkansas to construct, maintain, and operate a bridge across White River at or near Clarendon, Ark.;

S. J. Res. 5. Joint resolution relating to the immigration of certain relatives of United States citizens and of aliens lawfully admitted to the United States;

S. J. Res. 130. Joint resolution suspending certain provisions of law in connection with the acquisition of lands within the Alabama National Forest;

S. J. Res. 155. Joint resolution authorizing the Secretary of War to receive for instruction at the United States Military Academy at West Point Jose J. Jimenez, a citizen of Venezuela;

S. J. Res. 161. Joint resolution authorizing the President to invite representatives of foreign governments to attend an international aeronautical conference on civil aeronautics in Washington on December 12, 13, and 14, 1928; and

S. J. Res. 164. Joint resolution to appoint a board of engineers to examine and report upon the dam to be constructed under H. R. 5773, the Boulder Dam bill.

EXECUTIVE SESSION

Mr. CURTIS. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business. After 10 minutes spent in executive session, the doors were reopened.

APPRECIATION OF THE VICE PRESIDENT

Mr. JOHNSON. Mr. President, I ask unanimous consent to express to the Vice President who occupies the chair the appreciation and the graditude of every Senator upon this floor for his fairness, his impartiality, his ability, and his courage. [Applause on the floor and in the galleries, Senators rising in their places and applauding.]

ADJOURNMENT SINE DIE

The VICE PRESIDENT. The hour of 5.30 having arrived, the Chair, under the concurrent resolution of the two Houses, declares the Senate adjourned sine die.

NOMINATIONS

Executive nominations received by the Senate May 29 (legislative day of May 28) 1928

UNITED STATES ATTORNEYS

Oliver M. Loomis, of Indiana, to be United States attorney, northern district of Indiana, vice George L. Rulison, appointed by court.

Everett Greer, of Tennessee, to be United States attorney, eastern district of Tennessee, vice George C. Taylor, appointed district judge.

UNITED STATES MARSHAL

Frank E. Roselle, of Indiana, to be United States marshal, northern district of Indiana, vice Lewis C. Sheets, appointed by court.

POSTMASTERS

ARKANSAS

Mamie L. Glasco to be postmaster at Bigelow, Ark., in place of W. E. Glasco, resigned.

ARIZONA

Charles E. Hand to be postmaster at Winkelman, Ariz., in place of C. E. Hand. Incumbent's commission expired May 17, 1928.

James A. Metzger to be postmaster at Grand Canyon, Ariz., in place of J. E. Kintner, resigned.

Charles C. Rockwell to be postmaster at Gila Bend, Ariz., in place of E. M. McIntyre, resigned.

CALIFORNIA

Chauncey P. Wright to be postmaster at San Pedro, Calif., in place of C. P. Wright. Incumbent's commission expires June 5, 1928.

Elvira J. Brown to be postmaster at Denair, Calif., in place of H. B. Brown, deceased.

Clarence G. Carratt to be postmaster at Templeton, Calif., in place of D. L. Crawford, resigned.

COLORADO

Edwin C. Van Fradenburg to be postmaster at Manassa, Colo., in place of D. E. Daniels. Incumbent's commission expired December 18, 1927.

ILLINOIS

Thomas L. Conn to be postmaster at Lovington, Ill., in place of Nathan Williams. Incumbent's commission expired January 28, 1928.

Edwin C. O'Brien to be postmaster at Barry, Ill., in place of E. C. O'Brien. Incumbent's commission expired May 20, 1928.

INDIANA

Guy H. Walker to be postmaster at Rockport, Ind., in place of G. H. Walker. Incumbent's commission expired January 3, 1928.

IOWA

Albert L. Mensing to be postmaster at Lowden, Iowa, in place of L. H. Meier, removed.

Clara K. Todd to be postmaster at Moville, Iowa, in place of L. K. Bush, resigned.

KANSAS

Floyd W. Sellers to be postmaster at Towanda, Kans., in place of E. R. Bell. Incumbent's commission expired May 5, 1928.

KENTUCKY

Susie H. Curran to be postmaster at Bedford, Ky., in place of C. A. Bell. Incumbent's commission expired December 20, 1920.

Henry O. Hausgen to be postmaster at Anchorage, Ky., in place of H. O. Hausgen. Incumbent's commission expires June 6, 1928.

LOUISIANA

Mildred P. Prescott to be postmaster at Lutcher, La., in place of M. P. Prescott. Incumbent's commission expires May 29, 1928.

Esther E. Harlan to be postmaster at Swartz, La., in place of E. E. Harlan. Incumbent's commission expires June 5, 1928.

MASSACHUSETTS

Earle O. Meuse to be postmaster at Gilbertville, Mass., in place of J. E. Sullivan. Incumbent's commission expired May 20, 1928.

Annie K. Adams to be postmaster at Onset, Mass., in place of C. W. Adams, deceased.

MINNESOTA

Elizabeth K. Ries to be postmaster at Shakopee, Minn., in place of P. J. Schwartz. Incumbent's commission expired December 19, 1927.

MISSISSIPPI

Lamar Herrin to be postmaster at Moss Point, Miss., in place of D. G. Wiggins. Incumbent's commission expired January 10, 1928.

NEW HAMPSHIRE

Ruth C. Gordon to be postmaster at Canaan, N. H., in place of E. M. Allen, deceased.

NEW JERSEY

Julia A. Beer to be postmaster at Beachhaven, N. J., in place of A. P. King, resigned.

NEW YORK

Ethel M. Bluestone to be postmaster at Canaseraga, N. Y., in place of Adolph Bluestone. Incumbent's commission expired January 8, 1928.

Julia Enger, Toledo.

WEST VIRGINIA

Charles Ash, Glen Jean.

WISCONSIN

John C. Chapple, Ashland.

WYOMING

Elizabeth Murphy, Edgerton.
Neletta P. Howard, Manville.

REJECTION

Executive nomination rejected by the Senate May 29 (legislative day of May 28), 1928

DISTRICT JUDGE

Edgar J. Adams to be district judge, division No. 1, District of Alaska.

HOUSE OF REPRESENTATIVES

TUESDAY, *May 29, 1928*

(Legislative day of Monday, May 28, 1928)

The recess having expired at 12 o'clock noon, the House was called to order by the Speaker.

THE OZARKS OF MISSOURI

Mr. COCHRAN of Missouri. Mr. Speaker, I ask unanimous consent to extend my own remarks in the RECORD on the State of Missouri.

The SPEAKER. Without objection, it is so ordered.

Mr. COCHRAN of Missouri. Mr. Speaker, in the district in St. Louis which I have the honor to represent in this great body, the giant smokestacks of industry cast their shadows over office buildings and the homes of men and women who grind out daily the products of a great commercial city.

Business, labor, and those who take part in both sides of that economic feature in American life are matters of great interest to my district and to me.

But now I would like to call the attention of this House to a great stretch of rolling ranges and green-clad hills; to precipices and rock-covered slopes; to clear streams and gurgling rapids; to a great open space that lies just south and southwest of me in what is known as the region of the Ozarks.

I believe that this picturesque spot is one of America's greatest outdoor playgrounds, and I do not know whether Congress has ever really appreciated the beauty and the value of this magnificent area.

I know the Ozarks. My vacations since boyhood have been spent on the banks of its rivers or in the forests of its mountain sides, and I feel that I shall have contributed something in the way of information, that may lead to proper congressional recognition of this section in some future day, if I take the time to tell you of these wonderful hills.

Of course, to-day, buffalo grazing on wide plains has been chased from the Ozark region, and the deer and the elk have been hounded into narrow strips. But, with the exception of these two facts, all that has been written of the Ozarks for the past 100 years stands as true to-day as when written, and no eloquence now could in any way improve upon the magnificent tributes that have already been paid to this section of my State.

Any history of this Nation would be incomplete without a chapter devoted to the Ozarks. Every history that has been written has something in it concerning this wonderful region. Romances have been built around its rugged, picturesque characters and many a setting in fiction has been suggested or inspired by Ozark hills and valleys. It has played its part in every step of the evolution or development in American life.

I need not stop here to recount the history of those stirring episodes of the Civil War that took place in these hills. They have been adequately treated by able men in undying literature.

What I particularly desire to call to the attention of the House to-day is the peculiar adaptability of this wonderful area as an outdoor playground for all America, North, South, East, and West.

For many years it was difficult to reach the Ozarks; towns were small, the population sparse, and travel difficult. The great railroad trunk lines running to the south and to the west took the easiest course through these picturesque mountains, and their stations were for many years little better than water-tanks and cattle sheds.

But a few years back the Ozarks awakened to a realization of their own possibilities.

Here and there at the foot of great mountains or in the centers of plains cities have arisen and an industrial population is making new history in this area; always, however, with an eye to the preservation of the natural beauty of the Ozarks and looking forward always to the recognition by America of its wonderful playground facilities.

To-day great white-ribbon highways reach into this area from the industrial centers of St. Louis, Kansas City, Chicago, Indianapolis, Louisville, Cincinnati, Memphis, Dallas, Topeka, Oklahoma City, Joplin, and a number of other commercial centers.

Come out to Missouri now and I will show you a stream of cars chugging along into this great open space, and all during the coming summer the great industrial centers will pour their vacation population into the magnificence of this area.
